PROCEEDINGS AND DEBATES OF THE 97th CONGRESS, FIRST SESSION

HOUSE OF REPRESENTATIVES—*Monday, July 20, 1981*

The House met at 12 o'clock noon.

The Chaplain, Rev. James David Ford, D.D., offered the following prayer:

To get wisdom is better than gold; to get understanding is to be chosen rather than silver.—Proverbs 16: 16.

O God, grant us the right use of all the knowledge and information available to us that we may gain a heart of wisdom. While we pray for the skills and information so necessary for our tasks, so may we, too, learn to measure our facts and be prudent in our judgment that we act in ways that display true understanding for the needs of all people. In Your holy name, we pray. Amen.

THE JOURNAL

The SPEAKER. The Chair has examined the Journal of the last day's proceedings and announces to the House his approval thereof.

Pursuant to clause 1, rule I, the Journal stands approved.

MESSAGE FROM THE SENATE

A message from the Senate, by Mr. Sparrow, one of its clerks, announced that the Senate had passed with amendments in which the concurrence of the House is requested, a bill of the House of the following title:

H.R. 3420. An act to authorize appropriations for fiscal year 1982 for carrying out the Natural Gas Pipeline Safety Act of 1968 and the Hazardous Liquid Pipeline Safety Act of 1979, and for other purposes.

The message also announced that the Senate had passed joint resolutions of the following titles, in which the concurrence of the House is requested:

S.J. Res. 42. Joint resolution to authorize and request the President to designate September 20, 1981, as "National Ministers Day";

S.J. Res. 78. Joint resolution to provide for the designation of October 2, 1981, as "American Enterprise Day"; and

S.J. Res. 92. Joint resolution to authorize and request the President to designate the week of September 6, 1981, through September 12, 1981, as "Older Americans Employment Opportunity Week."

CONSENT CALENDAR

The SPEAKER. This is Consent Calendar day. The Clerk will call the first bill on the Consent Calendar.

PROVIDING CONVEYANCE OF CERTAIN LANDS TO CERTAIN PERSONS WHO PURCHASED LANDS IN EL DORADO NATIONAL FOREST

The Clerk called the bill (H.R. 2820) to provide that certain lands constituting part of the El Dorado National Forest be conveyed to certain persons who purchased and held such lands in good faith reliance on an inaccurate surveyor's map.

There being no objection, the Clerk read the bill as follows:

H.R. 2820

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SECTION 1. (a) Subject to section 2 of this Act, the Secretary of Agriculture shall convey to any person, all right, title, and interest of the United States in and to a portion of real property in the El Dorado National Forest, El Dorado County, California, if—

(1) such portion was depicted in the 1957 recorded surveyor's map of the Kyburz Mountain Resort Unit Numbered 1 Subdivision, El Dorado County, California, as being included in a lot with respect to which title to the remaining portion of such lot is held by such person, and

(2) such portion was determined, following surveys conducted under the auspices of the Forest Service in 1974 and 1976, and contrary to the map referred to in paragraph (1), to be a part of the El Dorado National Forest.

(b) Each person to whom property is conveyed pursuant to this Act shall reimburse the Secretary of Agriculture for all administrative expenses incident to such conveyance, and in addition shall pay to the United States the following:

(1) an amount equal to the acreage or fraction thereof of the property conveyed to such person, multiplied by the per-acre price for the remainder of the lot (exclusive of any improvements) referred to in paragraph (1) of subsection (a) of this section paid by such person or his predecessor in interest at the time of the original purchase of such lot after formation of the subdivision; and

(2) if such person elects to receive title to the mineral interests in the property conveyed, the fair market value thereof; but if such person does not so elect, all such mineral interests shall be reserved to the United States.

SEC. 2. A conveyance may be made under this Act to a person only if such person submits a written application to the Secretary of Agriculture within five years after the date of the enactment of this Act, together with such proof of title as the Secretary may consider appropriate.

SEC. 3. (a) For purposes of this Act, the term "1957 recorded surveyor's map", used with respect to the Kyburz Mountain Resort Unit Numbered 1 Subdivision, refers to the map of such subdivision which was filed in the Office of the County Recorder, El Dorado County, California, on October 3, 1957.

(b) For purposes of this Act, the Kyburz Mountain Resort Unit Numbered 1 Subdivision, El Dorado County, California, consists of a portion of the northwest quarter of section 27, and the northeast quarter of section 28, township 11 north, range 15 east, Mount Diablo Meridian, more particularly described in book 4, page 57, and book 5, page 41, of the El Dorado County Records of Survey.

SEC. 4. Subject to valid existing rights, all mineral interests retained by the United States pursuant to section 1(b)(2) of this Act are hereby withdrawn from all forms of entry or appropriation under the mining laws and from the operation of the mineral leasing laws of the United States.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

DIRECTING THE SECRETARY OF AGRICULTURE TO CONVEY CERTAIN NATIONAL FOREST SYSTEM LANDS IN NEVADA

The Clerk called the bill (H.R. 2218) to direct the Secretary of Agriculture to convey certain National Forest System lands in the State of Nevada, and for other purposes.

There being no objection, the Clerk read the bill as follows:

H.R. 2218

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That notwithstanding any other provision of law, the Secretary of Agriculture is directed to convey to the county of Douglas, Nevada, by quitclaim deed or other appropriate instrument, subject to the provisions of section 2 of this Act, all right, title, and interest of the United States in and to a certain tract of land and improvements thereon described as follows: Township 13 north, range 20 east, Mount Diablo base line and meridian, section 29, lot 3, block 1, north addition, town of Minden, county of Douglas, Nevada, containing 0.34 acre more or less.

SEC. 2. The county of Douglas, Nevada, shall, in consideration for the conveyance of the lands described in the first section—

(1) convey to the Secretary of Agriculture all right, title, and interest in and to a certain tract of land described as follows: That portion of the northwest quarter southeast quarter of section 8, township 13 north, range 20 east, Mount Diablo meridian, Douglas County, Nevada, beginning at the point on the northerly right-of-way line of Airport Road, said point bears south 7 degrees 35 minutes 52 seconds west, 14,708.02 feet from the northeast corner of section 32, township 14 north, range 20 east, Mount Diablo meridian; thence from the initial point south 89 degrees 43 minutes 16 seconds west along the northerly right-of-way line of said Airport Road 215.00 feet; thence north 0 degrees 16 minutes 44 seconds west, 145.88 feet; thence north 89 degrees 43 minutes 16 seconds east, 215.00 feet; thence south 0 degrees 16 minutes 44 seconds east, 145.88 feet to the point of beginning, containing 0.72 acre, more or less; and

(2) construct a warehouse on said tract of land of such design and quality acceptable to the Secretary of Agriculture.

SEC. 3. The lands acquired by the Secretary of Agriculture by this Act shall be added to the Toiyabe National Forest and shall be administered in accordance with the laws, rules, and regulations, applicable to the National Forest System.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

GRAIN SALES TO THE SOVIET UNION

(Mr. WEAVER asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. WEAVER. Mr. Speaker, once again the Reagan administration is interested in selling grain to the Soviet Union at below the cost of production. Our grain prices are plummeting due to a heavy surplus and bountiful crop in the works this year.

I beg and plead with the Reagan administration to set minimum prices on our grain so we no longer continue to subsidize the Soviet Union and all of the other wealthy nations in the world that buy our grain, and give the farmer, and the American taxpayer, a decent price on our grain and on our exports.

RECONCILIATION UPDATE

(Mr. PANETTA asked and was given permission to address the House for 1 minute, to revise and extend his remarks, and to include extraneous matter.)

Mr. PANETTA. Mr. Speaker, I would again like to present an update on reconciliation.

As of today, the following are completed conferences: Foreign Affairs has completed its conference; Post Office and Civil Service has completed its conference; Science and Technology on the Energy R. & D. element; the Veterans' Committee has completed its conference; and Education and Labor is virtually completed in terms of the Child Nutrition Conference.

Today the following committees are meeting: Energy and Commerce met this morning at 10 o'clock to discuss the health issue; Ways and Means is now meeting to discuss their conference agreements. Education and Labor will be meeting at 12 o'clock on the education elements of their conference. The Armed Services Committee will be meeting at 3 o'clock, and the House Committee on Banking and Urban Affairs will be meeting at 4 o'clock.

Tomorrow Interior and Insular Affairs, Energy and Commerce, Education and Labor will continue their conference meetings.

Mr. Speaker, we are entering the second week of the reconciliation conference. I would urge all Members to try to press as hard as possible to try to complete reconciliation by the end of this week.

I am inserting an update on the reconciliation conference prepared last Friday:

DAILY REPORT ON CONFERENCE ACTIVITY, JULY 17, 1981, 6 P.M.

TRAGEDY IN KANSAS CITY

(Mr. WINN asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. WINN. Mr. Speaker, what could be more harmless than a tea dance in a 1-year-old hotel in this country?

This last weekend, while I was in Kansas City, 113 people lost their lives in a horrible tragedy at the Hyatt Regency Hotel in Kansas City, Mo. Many of those who perished were from my congressional district, although others came from miles around to dance to the "big band sound."

I am not leveling any accusations at anyone. There is a thorough investigation being conducted by the mayor, by the developers, by the builder, the engineers that built the hotel. But when

some 113 people die, with probably more to perish, whenever 130 are still lying in hospitals in Greater Kansas City, then possibly we on a national basis would want to look at the codes that have been set up for the construction of all public buildings so that such disasters do not happen again in this country.

SOCIAL SECURITY CUTS

(Mr. OBERSTAR asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. OBERSTAR. Mr. Speaker, during the July work period I was in Grand Rapids, Minn., addressing a group of senior citizens and responding to a barrage of questions about the future of the social security system and the reconciliation bill the House had just passed. Of course, the questions dealt with the minimum benefit of social security. I responded very candidly, as the House had acted to repeal that minimum benefit.

People were shocked and astounded. After the question-and-answer session, an elderly woman, well into her eighties, came and tapped me on the shoulder. She asked me, "Is that for real? Do they really mean to take away my social security minimum? That is all I am getting. What is going to happen to me?"

I said, "You may be eligible for supplemental security income."

She said, "But I don't want to be on welfare. I want to have my dignity, and I can have that with this minimum benefit."

After reading in the Washington Post today a statement by the OMB that says, "The minimum benefit is a pure windfall for recipients," I just want to point out that that statement comes from people who are making at least $30,000 a year. They ought to go and stand in the senior citizen housing projects and the nursing homes of this country and find out what the real Americans think about that plan to end the minimum benefit.

DO WATER PROJECTS PAY THEIR WAY?

The SPEAKER. Under a previous order of the House, the gentleman from California (Mr. COELHO) is recognized for 15 minutes.

● Mr. COELHO. Mr. Speaker, many critics have asserted that Federal water projects are both wasteful and economically unsound. I agree that in this age of fiscal conservatism, it is more than advisable that the Federal Government be prudent in deciding which projects merit investment. An important consideration should be the ability of a Federal project to pay for itself and generate much needed Federal, State, and local revenues. Federal reclamation projects are good examples of such wise investments.

Since the 1902 Reclamation Act was approved by Congress, and projects subsequently developed, western water and power users have paid back about 85 percent of all the costs to the Federal Government. In addition, investments in Federal reclamation projects have returned tremendous amounts to the U.S. Treasury in the form of taxes. From 1940 to 1978, for example, western water projects generated about $25.6 billion in Federal tax revenues—in 1978 alone, $8.6 billion was generated in personal income. In fact, the Central Valley project generated $418.5 million in Federal, State, and local taxes in 1978, and was responsible for $2.689 billion in agricultural production. These figures are indicative of the huge benefit reaped by the entire Nation as a result of Federal reclamation projects.

To make a statement, therefore, that Federal water projects are wasteful and economically unsound is not accurate. A recent study done by J. Gorden Milliken, senior research economist for the Denver Research Institute at the University of Denver proves this out. Utilizing an analytical framework incorporating economic outputs from reclamation, including physical products (water and energy), service (recreation), and the economic output of spending, it was determined that Federal reclamation projects do pay their own way. In particular, the CVP was cited as a specific example of this type of sound economic investment.

I would like to submit Dr. Milliken's findings to the RECORD. I believe that his research sheds a great deal of light on this important issue.

DO WATER PROJECTS PAY THEIR WAY?

Fortune [1] magazine on February 23, 1981 published another example of a long series of articles attacking water projects as wasteful and economically unsound. The author, rehashing ancient arguments, attempted to expose federal reclamation projects, notably the Central Valley Project in California, as favored treatment at the expense of taxpayers elsewhere in the U.S. She states that the federal water bonanza is "undoubtedly huge" and that "subsidies, moreover, are a needless drain on the federal government when it is running huge deficits."

I don't intend today to comment further on that article, but instead to try explore the question, "Do water projects pay their way?"

A few years ago, our Institute was asked to develop an economic methodology for estimating the national economic impacts of the Federal Reclamation program. We ultimately devised a method that is, we believe, conservative and credible, and that provides accurate quantitative estimates of the direct and indirect economic impacts attributable to a multiple purpose water development project. A systematic methodology was designed to trace the direct and first-round indirect impacts of six basic outputs from Reclamation projects, and to collect and categorize these impacts into significant measures of economic activity.[2] We chose not to include the income and employment multiplier effects of second round and subsequent rounds of spending that are very important to the regional and local economies but are difficult to justify from a national viewpoint.

The methodology utilizes data from six basic project output measures available annually from normal reporting channels: direct agency spending, net crop output from agricultural irrigation, municipal water, industrial water, hydroelectric power, and recreation. From these data sources, economic impacts are traced through the national economy. Expenditure profiles which convert receipts into wages, profits, and purchased inputs were developed. Suppliers were subdivided into retail, wholesale, and manufacturing sectors, so that financial characteristics typical of each sector could be used in the analysis. The methodology generates several economic measures: increased business activity, employment, wages and personal income, corporate profits, Federal taxes (personal, corporate, and indirect), and state and local taxes.

The standardized, computer-based methodology that we developed can be applied to individual projects, to groups of projects in various geographic areas (states or regions) or to the impacts of the entire Reclamation program in the 17 Western States. Until now, it has been used for assessing impacts of the entire program. The assessment I will make today on the Central Valley Project will illustrate how the method can be applied to an individual project.

TYPES OF ECONOMIC OUTPUT FROM RECLAMATION

The outputs from the Reclamation program are varied in nature; they include physical products (water and energy), service (recreation) and the economic output of spending. All have a common attribute—they cause impacts to the economy. Several major types of output have been identified.

Reclamation spending: Each year, Reclamation receives Congressional appropriations, accruals from special river basin development funds and miscellaneous revenues. These funds are spent on direct wages to employees, payments to contractors for construction, operation, and maintenance, payments to suppliers for services, equipment and supplies, etc. This program output has a direct and immediate impact on the economy, but is often overlooked in economic impact analysis.

Agricultural water: The traditional and still predominant output is water for irrigated agriculture. Some of the crops produced are sold directly, some are sold to food processors, and some are fed to livestock. All of these aspects were considered in developing the model. In this study, it was assumed that the crop production from Reclamation projects, after subtracting the value of crops which would have been produced on these lands in the absence of the projects, was a net increase to the U.S. economy.

Municipal and industrial water: A growing function of Reclamation projects is supplying water for municipal and industrial use. Municipal water is sold to municipalities and special water districts for residential and commercial uses. In calendar year 1979, about 771 billion gallons were supplied for this purpose, and 18.9 million persons were served by Reclamation M&I water.

Hydroelectric power: Reclamation power operations generated 40 billion kilowatt hours in fiscal year 1979. Although much of this electricity is sold ultimately to consuming households, a large portion is sold to electroprocess industries. Conceptually in our model, these two functions have been

[1] Presented at the Spring Conference, Association of California Water Agencies, Anaheim, California, May 15, 1981.

[2] J. Gordon Milliken, Dean C. Coddington, Reuben A. Zubrow, Lucy B. Creighton, and Loretta C. Lohman, Economic Impact of Federal Reclamation Projects, January 1972, prepared by the Denver Research Institute, University of Denver, for the Bureau of Reclamation, U.S. Department of the Interior.

handled separately since industrial use is a factor of economic production rather than consumption.

Recreation, fish, and wildlife: Reservoirs, as well as other project features, provide a substantial quantity of recreational facilities to the public. The existence of these recreational facilities stimulates spending on supplies and equipment, the formation of service businesses, and the stimulation of recreational land development. In 1979, 67 million visitor-days of recreation activity were supplied. Expenditures by recreation-management agencies on fish and wildlife activities are included in the recreation category, as is spending by fishermen and hunters.

CAPITAL INVESTMENTS

The total economic activity stimulated by the Reclamation program results in and is made possible by capital investment. Capital outlays are made for:

Farm equipment and improvements;
Agricultural-related businesses;
Agricultural water district facilities;
Hydroelectric utilities;
M&I water district facilities;
Municipal water (utility) facilities;
Recreational facilities (campgrounds, docks);
Recreation businesses (marina, concessions);
Recreation area cabins and land development;
Land development;
Roads and highways;
Other service facilities;
Housing and so forth.

It is not practical to develop estimates for each type of capital outlay. Therefore, capital investment is estimated indirectly by applying national ratios from the entire U.S. economy to non-Federal economic activity attributable to USBR projects. Nationally, about 16 percent of the receipts from economic activity are invested in capital projects (facilities and equipment), and this percentage is adopted in this methodology.

Flood control: Flood control is another function served by Reclamation projects. However, in development of the methodology, we decided to eliminate the estimates of economic impacts of the flood control impacts of Reclamation structures. We recommend that these data be considered only qualitatively rather than as part of the quantitative estimate of impacts, for the following reasons. Flood control impacts of Reclamation structures are estimated, in the form of annual dollar value of flood losses averted, by the U.S. Army Corps of Engineers. Although the Corps of Engineers uses care and accepted methodology to estimate flood control losses averted, nevertheless this impact cannot be measured directly. Including an estimate of a potential negative impact, along with measures of actual positive impacts, presents two problems. First, there is less credibility to an estimate of an event which did not occur than to one which did. Second, the estimating method used, while conceptually sound, mixes "softer" data with the harder data of other economic impact measures, and risks adulteration of the total.

OVERVIEW OF THE METHODOLOGY

The methodology for estimating economic output of Reclamation projects focuses on all forms of business activity, employment, and tax revenue generation that can be clearly attributed to the Reclamation program. The seven types of economic output discussed above were combined into six categories—USBR activity, agricultural water, municipal water, industrial water, hydroelectric power, and recreation (combined with support of fish and wildlife). For convenience in calculation, a seventh category was added—capital investment. The estimated investment in depreciable assets was deleted from each of the other six categories and consolidated in a single estimate, as described below.

The main features of the estimating techniques used for each of these categories of Reclamation impact are summarized as follows:

For each category of output, the direct economic impacts (and the resulting first-round indirect impacts) are traced.

Tracing impacts involves developing expenditure profiles that show how the money received for each project output is spent.

Expenditures are traced through the economy, by type of industry (Standard Industrial Classifications are used) and by level of business activity (retail, wholesale, or manufacturer).

At each level, the expenditures are subdivided into major components (wages, profits, and purchases from other sectors) and a residual component.

Various taxes (personal income, corporate income, indirect business and excise) are calculated on the aggregated business activity generated by the project.

Employment (equivalent number of jobs supported by the project) is calculated from total wages, using average wages by job category.

The key feature of this methodology is the inclusion of all significant direct and first-round indirect impacts originating from Reclamation projects, for which there are reliable data. The major differences between this method and an all-inclusive approach are the exclusion of certain resulting spending impacts and all employment multiplier effects (both indirect). Also the method excludes measurement of impacts wherever the measurement problem poses serious difficulties or where the resulting figure may be questionable, as is consistent with the conservative approach chosen. The required spending essential for achieving direct project output is included in developing estimates of economic activity generated by the Reclamation program. Throughout, the methodology uses a national viewpoint of benefits.

Some of the basic output measures are available annually through regular USBR reporting procedures and are available on a project by project basis. The remaining basic output measures can be calculated or estimated from other available data.

THE NATIONAL RECLAMATION PROGRAM

Table 1 shows the estimate of economic impact of all Reclamation projects in the United States during 1979, the last year for which calculations have been made. The impacts are impressive: total output of $17.4 billion; corporate profits of $2.2 billion; wages and net farm income of $9.4 billion; and the economic support of 815,000 jobs (full-time equivalent).

This economic activity in 1979 generated an estimated $2.7 billion in federal taxes (both personal income tax and corporate income taxes). State and local income taxes are estimated at another $1.2 billion.

THE CENTRAL VALLEY PROJECT

Table 2 shows an estimate of the economic impact of the Central Valley Project during 1979. The project-irrigated lands produced $3.8 billion more in crop value, livestock, and food processor revenue than would have been produced on those lands without federal irrigation water. The 1979 Central Valley crop production was substantially above earlier years because of a large increase in "temporary service" water which permitted an increase in irrigated acreage. There were large production increases of almonds, walnuts, wine and raisin grapes, and rice. Net farm income was $368 million. Farm proprietor income and wages supported 193,000 full-time equivalent jobs.

The tax revenues stimulated by the nation's investment in the Central Valley Project, and directly attributable to the project, were $756 million in 1979.

TABLE 1.—NET INCREASE IN BUSINESS ACTIVITY, TOTAL WAGES, AND EMPLOYMENT ATTRIBUTABLE TO RECLAMATION PROJECTS BY TYPE OF ACTIVITY, 1979

[Dollars in millions]

Type of output	Net value of output	Total tax base		Nontax base items	Total wages and net farm income	Person-years of employment (thousands)
		Personal income	Corporate profits			
Agriculture	($8,627.3)	($5,702.8)	($893.0)	($2,031.5)	($4,841.6)	(436.8)

Recreation	42.4	27.8	4.5	4.2	1.9	.8	6.9
Capital investment	643.5	419.9	63.4	63.0	27.0	12.2	102.2
User activity	117.0	81.2	7.7	12.2	3.3	1.6	17.1
Total	4,784.3	3,114.8	506.5	467.4	215.8	73.0	756.2

Note.—Figures in parentheses are subtotals.

CONCLUSION

Nationally, the federal reclamation program activities brought about $2.75 billion in federal revenues during 1979, and another $1.24 billion in state and local revenues. Jobs were provided for 815,000 full-time equivalent workers. Valued agricultural crops, hydroelectric power, municipal water supplies, recreation and flood control were provided by project lands and structures. And, as usual, a substantial portion of the nation's investment in the Reclamation program was repaid to the Treasury by water and power users.

From an economic viewpoint, there is good evidence that water projects do pay their way. The nation is richer because of them.●

PERSONAL EXPLANATION

The SPEAKER. Under a previous order of the House, the gentleman from Kentucky (Mr. MAZZOLI) is recognized for 5 minutes.

● Mr. MAZZOLI. Mr. Speaker, due to responsibilities in my district, I was absent on Friday, July 17, 1981. Had I been present, I would have voted:

"Yea" on rollcall No. 142, passage of House Resolution 177, calling for the development and implementation of a U.S. nuclear nonproliferation policy which strengthens barriers to the further spread of nuclear weapons;

"Nay" on rollcall No. 143, an amendment to H.R. 4034, the Department of Housing and Urban Development appropriations bill for fiscal year 1982, that reduces by $10 million the appropriation for the HUD Office of Policy Development and Research; and

"Nay" on rollcall No. 144, two amendments en bloc to H.R. 4034, the Department of Housing and Urban Development appropriations bill, which would have prohibited the use of Environmental Protection Agency pollution abatement and compliance funds requiring States to adopt, implement or enforce an auto emission control inspection and maintenance program.●

LEAVE OF ABSENCE

By unanimous consent, leave of absence was granted to:

Mr. DYMALLY (at the request of Mr. WRIGHT), for this week, on account of necessary district business.

Mr. ROBERTS of South Dakota (at the request of Mr. MICHEL), for today and the balance of the week, on account of a death in the family.

Mr. JONES of North Carolina (at the request of Mr. WRIGHT), for this week, on account of official business.

SPECIAL ORDERS GRANTED

By unanimous consent, permission to address the House, following the legislative program and any special orders heretofore entered, was granted to:

(The following Member (at the request of Mr. DECKARD) to revise and extend his remarks and include extraneous material:)

Mr. PORTER for 5 minutes, today.

(The following Members (at the request of Mr. OBERSTAR) to revise and extend their remarks and include extraneous material:)

Mr. COELHO, for 15 minutes, today.

Mr. GONZALEZ, for 15 minutes, today.

Mr. ANNUNZIO, for 5 minutes, today.

Mr. MAZZOLI, for 5 minutes, today.

Mr. BROWN of California, for 5 minutes, today.

EXTENSION OF REMARKS

By unanimous consent, permission to revise and extend remarks was granted to:

(The following Members (at the request of Mr. DECKARD) and to include extraneous matter:)

Mr. WILLIAMS of Ohio.

Mrs. SCHNEIDER.

Mr. FINDLEY.

Mr. SOLOMON.

Mr. DERWINSKI in two instances.

(The following Members (at the request of Mr. OBERSTAR) and to include extraneous matter:)

Mr. SCHEUER.

Mr. MAZZOLI.

Mr. ANDERSON in 10 instances.

Mr. GONZALEZ in 10 instances.

Mr. BROWN of California in 10 instances.

Mr. ANNUNZIO in six instances.

Mr. JONES of Tennessee in 10 instances.

Mr. BONER of Tennessee in five instances.

Mr. EDWARDS of California.

Mr. OBERSTAR.

SENATE JOINT RESOLUTIONS REFERRED

Joint resolutions of the Senate of the following titles were taken from the Speaker's table and, under the rule, referred as follows:

S.J. Res. 42. Joint resolution to authorize and request the President to designate September 20, 1981, as "National Ministers Day"; to the Committee on Post Office and Civil Service.

S.J. Res. 78. Joint resolution to provide for the designation of October 2, 1981, as "American Enterprise Day"; to the Committee on Post Office and Civil Service.

S.J. Res. 92. Joint resolution to authorize and request the President to designate the week of September 6, 1981, through September 12, 1981, as "Older Americans Employment Opportunity Week"; to the Committee on Post Office and Civil Service.

ADJOURNMENT

Mr. OBERSTAR. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 12 o'clock and 11 minutes p.m.), under its previous order, the House adjourned until tomorrow, Tuesday, July 21, 1981, at 11 a.m.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

1839. A letter from the Director, Export-Import Bank of the United States, transmitting a report on loan, guarantee, and insurance transactions supported by Eximbank

during April and May 1981 to Communist countries; to the Committee on Banking, Finance and Urban Affairs.

1840. A letter from the Director, D.C. Pretrial Services Agency, transmitting the annual report of the agency for calendar year 1980, pursuant to 23 D.C. Code § 1307; to the Committee on the District of Columbia.

1841. A letter from the Acting Comptroller General of the United States, transmitting a report on the need for uniform and comprehensive consumer safeguards in new mortgages for financing homes (CED-81-53, July 2, 1981); jointly, to the Committees on Government Operations and Banking, Finance and Urban Affairs.

PUBLIC BILLS AND RESOLUTIONS

Under clause 5 of rule X and clause 4 of rule XXII, public bills and resolutions were introduced and severally referred as follows:

By Mr. BENNETT:

H.R. 4210. A bill to allow the continuation of the minimum social security benefit; to the Committee on Ways and Means.

By Mr. PRICE (by request):

H.R. 4211. A bill to amend title 10, United States Code, to increase the number of Assistant Secretaries in the Department of Defense, and for other purposes; to the Committee on Armed Services.

ADDITIONAL SPONSORS

Under clause 4 of rule XXII, sponsors were added to public bills and resolutions as follows:

H.R. 3953: Mr. MATTOX.

AMENDMENTS

Under clause 6 of rule XXIII, proposed amendments were submitted as follows:

H.R. 4035

By Mr. WEAVER:

—In title III, section 302, page 53, line 5, after "exported", strike "by the purchaser".

H.R. 4144

By Mr. EDGAR:

—Page 3, line 1, strike out "$1,509,941,000" and insert in lieu thereof "$1,420,941,000".

—Page 3, line 1, strike out "$1,509,941,000" and insert in lieu thereof "$1,409,941,000".

—Page 3, line 1, strike out "$1,509,941,000" and insert in lieu thereof "$1,459,941,000".

H.R. 4209

By Mr. WILSON:

—Page 39, line 3:

SEC. 323. No funds appropriated by this Act shall be used to pay any salary or other expense for the purposes of putting into effect or enforcing any rule (1) which requires any reduction in the total daily number of flights by air carriers except air taxis, or by air taxis, at Washington National Airport below the number operated on July 20, 1981, and (2) which was

(A) promulgated without issuance of (and public comment on) an initial regulatory flexibility analysis described in section 603 of title 5, United States Code, and a preliminary regulatory impact analysis described in section 3 of Executive Order 12291; or

(B) put into effect prior to 60 days after the issuance of a final regulatory flexibility analysis under section 604 of such title and a final regulatory impact analysis described in section 3 of such Executive Order.

SENATE—*Friday, July 20, 1981*

(Legislative day of Wednesday, July 8, 1981)

The Senate met at 12 noon, on the expiration of the recess, and was called to order by the President pro tempore (Mr. THURMOND).

PRAYER

The Chaplain, the Reverend Richard C. Halverson, LL.D., D.D., offered the following prayer:

Let us pray in the words of the 145th Psalm:

I will extol Thee, my God, O King; and I will bless Thy name for ever and ever. Everyday will I bless Thee; and I will praise Thy name for ever and ever.

Great is the Lord, and greatly to be praised; and His greatness is unsearchable. One generation shall praise Thy works to another, and shall speak of Thy mighty acts. I will speak of the glorious honour of Thy majesty, and of Thy wondrous works.

And men shall speak of the might of Thy terrible acts; and I will declare Thy greatness. They shall abundantly utter the memory of Thy great goodness, and shall sing of Thy righteousness.

The Lord is gracious, and full of compassion; slow to anger and of great mercy. The Lord is good to all; and His tender mercies are over all His works.— Psalm 145: 1–9.

Sovereign God of the nations, be with the President of the United States and the heads of state who meet in the economic summit in Canada. May they seek Thy will to do it, for the sake of all peoples.

In Jesus' name, Amen.

RECOGNITION OF THE MAJORITY LEADER

The PRESIDENT pro tempore. The distinguished majority leader is recognized.

THE JOURNAL

Mr. BAKER. Mr. President, I ask unanimous consent that the Journal of the proceedings of the Senate be approved to date.

The PRESIDENT pro tempore. Without objection, it is so ordered.

PRESIDENT REAGAN'S FIRST 6 MONTHS IN OFFICE

Mr. BAKER. Mr. President, 6 months ago today our Nation and the entire world witnessed a momentous transition, the inauguration of Ronald Reagan as the 40th President of the United States. That ceremony, filled with promise, coupled with the departure from Iran of 52 American hostages, made that day one of the most euphoric in our Nation's history.

Since that time, we in Congress have enjoyed a mutually supportive partnership with the White House, a cooperative effort, the likes of which are rarely seen between the executive and legislative branches. The President's numerous trips to Capitol Hill are indicative of his eagerness to keep this relationship harmonious and productive.

And, I might add, Pennsylvania Avenue has been anything but a one-way street during the administration. I, along with many of the colleagues on both sides of the aisle, have enjoyed frequent trips to the White House. They have enhanced our partnership and made the day-to-day business of Government more efficient and cohesive.

Mr. President, I would like also at this time to thank for his support and cooperation my distinguished colleague, the Senator from West Virginia and minority leader, Mr. ROBERT C. BYRD. Many of the challenges that we in the 97th Congress face are neither partisan nor divisive. By operating within an atmosphere of trust and determination we have placed ourselves in a better position to serve the American people. Together, we have undertaken a challenging legislative agenda in order to meet the great expectations of the American public and to heed the mandate of the election in November.

Today, our country finds itself in the throes of serious economic uncertainty and instability. I firmly believe that the ambitious program for economic recovery that we have embarked upon with the White House will be the cornerstone for a new economic strength and a proud revitalized America.

I am optimistic about both the tax bill and the budget reconciliation process which we will soon be preparing to send to the White House. We are as anxious to bring these bold measures to fruition as is the President himself.

Today, as the President meets in Ottawa with other world leaders to discuss global economic conditions, I wish to send to him my sincere appreciation for his resolve, his leadership, and his courage during his first 6 months in office. I look forward to continuing that relationship and I pledge my full support to President Reagan and the American people for responsible and deliberate congressional action on these goals.

Mr. President, let our goal be not to meet expectations, but to surpass them.

ORDER OF PROCEDURE

Mr. BAKER. Mr. President, I have a request I wish to make and then a statement in relation to the legislative program.

My reason for convening at the hour of noon today is the number of special orders and the requirement that the Senate go into executive session at 1:40 p.m. for the purpose of considering the tuna treaty. It will be well after 2 p.m. today before we can resume consideration of the tax bill. There are a number of amendments known to the leadership yet to be offered on the tax measure and, of course, at this moment, at least, we have no time agreements on amendments or on final passage of this measure.

It is absolutely essential, in my judgment, Mr. President, that we complete action on the tax bill as soon as possible.

I would like now to propose a unanimous-consent request, Mr. President, in order to set the agenda of the Senate and its schedule for the next several days. These requests will extend past this week into Monday of next week. But in doing so, I in no way suggest that we will require that amount of time to complete action on the tax bill.

DAILY TIME OF CONVENING THROUGH MONDAY, JULY 27, 1981

Mr. BAKER. Mr. President, I ask unanimous consent that when the Senate completes its business on each day this week, it stand in recess until the hour of 10 a.m. on the following morning, inclusive of Saturday, July 25, and that when the Senate complete its business on Saturday it stand in recess until the hour of 12 noon on Monday, July 27, 1981.

The PRESIDENT pro tempore. Without objection, it is so ordered.

LEGISLATIVE AGENDA

Mr. BAKER. Mr. President, as I pointed out a moment ago, under an order previously entered the Senate will proceed at 1:40 p.m. today to the consideration of the Canadian tuna treaty with the vote to occur thereon at 2 p.m. Thereafter, the Senate will return to legislative session and will resume action on House Joint Resolution 266, the tax bill.

Mr. President, this will mark the fifth day on which the bill has been pending before the Senate.

The leadership expects and hopes that the Senate will agree to remain in session until approximately 7 p.m. this evening for the consideration of this measure.

Mr. President, unanimous-consent orders have been obtained for the Senate to convene each morning this week inclusive of Saturday at the hour of 10 a.m., according to the agreement of the Senate just entered into.

Mr. President, I hope to proceed promptly on each day to the tax bill.

● This "bullet" symbol identifies statements or insertions which are not spoken by the Member on the floor.

May I say parenthetically that if it is necessary to advance the time of the convening of the Senate in order to accommodate requests for special orders, I am prepared to do that in order to reach the tax bill as soon as possible in order to consider all proposed amendments and to dispose of them as promptly as possible. I express the hope that we can dispose of those amendments and the tax bill itself by the middle part of this week.

If action can be completed on the tax bill by the middle part of this week, or at least in advance of the time scheduled for a meeting of the Senate on Saturday, it would be my hope that the Senate would agree to vitiate the order for the Saturday session.

Mr. President, in respect to time for recessing the Senate this week, I have already indicated that I would expect us to be in session until approximately 7 p.m. today. I wish to advise my colleagues that the Senate will be in session late on Thursday, as is our policy. I would fully expect that the Senate will be in late on Friday as well, particularly if that is necessary in order to avoid a Saturday session and to gain final passage of this bill.

Members should be on notice as well that it is very likely that the Senate will remain in session past the 6 or 7 o'clock recess time on Tuesday and Wednesday as well as today.

So, in summary, Mr. President, I expect that we shall be in until 7 today or thereabouts; I expect that there is a possibility at least that we shall be in session substantially beyond that time on Tuesday and Wednesday. On Thursday, I expect that the Senate will be in much later than that—perhaps 10 or 11 o'clock—and on Friday as late as necessary in order to complete action on this bill if it appears that we can complete action on Friday and avoid a Saturday session.

Mr. PROXMIRE. Will the majority leader yield, Mr. President?

Mr. BAKER. I shall in one moment, Mr. President.

If we cannot complete action on the bill on Friday night, Members should be firmly on notice that we shall be in session on Saturday; that there will be rollcall votes on Saturday; and that Saturday might even be a long day.

Now, I am happy to yield to my friend.

Mr. PROXMIRE. Mr. President, if we complete action on the tax bill before Thursday, would we still be in very late on Thursday night?

Mr. BAKER. No. Mr. President, I expect that if we complete action on the tax bill before Thursday, there will be no need to be in late on Thursday.

Mr. PROXMIRE. I thank the majority leader.

Mr. BAKER. Mr. President, following the disposition of the tax bill, it is expected that the Senate will return to consideration of S. 951, the Department of Justice authorization bill, unless other arrangements are made. The leadership also anticipates Senate action before the August recess on two or perhaps three appropriations bills, which I understand will be available on the calendar either late this week or the early part of next week. In addition to those measures, Mr. President, we will, of course, proceed to consideration of the conference report on reconciliation when it is available and to the conference report on the tax measure when it is available.

Mr. President, I feel that it is essential that the Senate act on both the reconciliation conference report and the tax measure conference report and the two appropriations bills, at least, that I have identified before we recess for the August recess. I continue to believe, Mr. President, than we can do that admittedly ambitious legislative schedule and complete our work in time to fulfill the adjournment date of July 31.

Mr. President, I am prepared now to yield the remainder of my time, if any time remains, to any Senator requesting time, or the minority leader if he wishes it.

Mr. ROBERT C. BYRD. Mr. President, I thank the distinguished majority leader. I do not think I shall need it. If he does not yield time to his side, I would appreciate it if he would yield it to me.

Mr. BAKER. Mr. President, any time I have remaining, I now yield to the control of the minority leader.

RECOGNITION OF THE MINORITY LEADER

Mr. ROBERT C. BYRD. Mr. President, I thank the distinguished majority leader.

May I ask the distinguished Senator from Wisconsin if he needs time?

Mr. PROXMIRE. I would appreciate it very much, Mr. President. I have a 5-minute statement I should like to use.

Mr. ROBERT C. BYRD. Mr. President, I shall yield 5 minutes to the distinguished Senator from Wisconsin.

Does the Senator from Vermont wish time over and above his special order?

Mr. LEAHY. Is my time 15 minutes, Mr. President?

The PRESIDING OFFICER (Mr. RUDMAN). It is.

Mr. LEAHY. Then I should like some additional time.

Mr. ROBERT C. BYRD. Mr. President, I yield the remainder of my time to Mr. LEAHY and if he does not need it, he may yield to some other Senator.

The PRESIDING OFFICER. The Senator from Wisconsin.

MAMMOTH RATE OF FEDERAL SPENDING INCREASE SINCE 1950

Mr. PROXMIRE. Mr. President, during the year 1950, this Federal Government paid social security to millions of retired workers; we funded unemployment compensation. All the New Deal reforms had come firmly into place, and in the middle of that year, we went to war in Korea, a war involving a huge military commitment, a rapid advance in military spending. Now, let us keep Federal spending in 1950 as compared to this year, 1981, in fair perspective. Since 1950, we have had a 250-percent rise in prices, so we could expect Federal spending to rise by 2½ times simply to keep pace with the cost of inflation. We also had a 50-percent increase in the population, roughly from 150 million to 225 million, so we could expect another 50-percent increase in Federal spending to accommodate that population increase. In addition to that, the Federal Government took on all kinds of other activities—space, food stamps, CETA, health programs—and we expanded our established New Deal programs.

If we allow fully for the inflation and for the increase in population so we measure Federal Government spending in constant dollars on a per capita basis, how much did the Federal Government expand its spending since 1950, as compared to today? The answer: Not double, not triple, but a massive fourfold. In real terms we, the Federal Government, spend not twice as much as we spent in 1950 for every man, woman, and child, not three times as much, but four times as much. And remember, once again, 1950 was a year in which the Federal Government had already absorbed all the reforms of the New Deal and in 1950, we went to war in Korea and spent billions to prosecute that war. In spite of that, we have increased Federal spending since 1950 on a per capita, constant dollar basis by a mammoth, rampaging, fourfold.

Now consider the performance of our economy in 1950 and today in 1981. In 1950, we had an average of 5.3 percent unemployment. This year, our unemployment has moved to a level almost 50 percent higher than in 1950. So the vast amount of spending that we have shoved into the economy has not given us a lower unemployment rate. Unemployment has moved sharply higher.

Mr. President, has the economy become more productive with this huge increase in Federal spending? For the last 2 years we suffered a stagnant productivity, virtually no increase whatsoever, one of the first times in all American history except for the most serious kinds of recessions or depressions when productivity did not advance; but in 1980, it did not. We may have a slight recovery in productivity this year, but it still stumbles along anemically.

Now consider 1950, when our Federal Government, in real per capita terms, was spending a quarter of what it spends now. Result: In 1950, our nonfarm production advanced a spectacular 6 percent. Farm production is volatile and less predictable, but if we throw that in, the overall increase in real production was a smashing 8.7 percent. So, in 1950, when we were spending a tiny one-fourth in real terms from the Federal Government what we spend today, our unemployment was sharply lower and our rate of increase in production and productivity spectacularly higher.

Now comes the real piece de resistance; consider inflation in both these circumstances. In 1981, with a sagging economy, high unemployment, slow growth, inflation hovers around 10 percent. And what was it in 1950? Well, in 1950 the Consumer Price Index rose by—hold on to your hat—a flat 1 percent. Can anyone honestly argue that that 1-percent rate did not reflect the fact that Federal spending was one-fourth its present level?

And interest rates in 1950; how did they compare with interest rates in 1981? Well, my colleagues, in 1950, when we were spending one-fourth of what we spend today, interest rates were—get ready for this one—the prime was not 20 percent—which it is today, not 10 percent, not 5 percent, but 2.07 percent. The Federal Government was borrowing with Treasury bills at 1.2 percent. And the home mortgage rate? Not the present 18 percent but a cozy 4½ percent.

Mr. President, you can say all you want for progress, but anyone with any sense at all must recognize how much better and sounder and happier our economy was in 1950, when the Federal Government, in constant dollars—that is, allowing fully for inflation—and on a per capita basis—that is, allowing fully for population growth—spent less than a quarter of what we spend today. Far fewer Americans were out of jobs. Our production soared.

Interest rates were a tiny fraction of what they are today. Inflation was literally one-tenth of what we suffer now. And we did all of this while we discharged our responsibilities for social security, unemployment compensation, and the other great reforms of the New Deal, and while we fought a savage and costly war in Korea.

All of this, Mr. President, is why this Senator does not fault the administration for calling for the sharp reduction in spending they have asked for this year. After all, the President's program still leaves us with another increase in 1982 and in every subsequent year in Federal spending in real per capita terms. I do fault the administration for not insisting on a cut in Federal spending that would balance the budget and balance it in the coming year—1982.

THE CONSTITUTION, THE GENOCIDE CONVENTION, AND INTERNATIONAL LAW

Mr. PROXMIRE. Mr. President, this body has recently been embroiled in a lengthy constitutional debate on the separation of powers. In light of this, I wish to call the Senate's attention to another issue before us which has been the subject of a constitutional debate—the Genocide Convention.

There are individuals and organizations who claim that the Genocide Convention would usurp our constitutional protections and undermine the sovereignty of the United States.

Mr. President, nothing could be farther from the truth. No citizen of this country could ever be denied due process because of the Genocide Convention. What these critics are really attacking is the notion of international law itself. They claim the the United States must stand alone in the world in its defense of democracy and human values.

When we stand alone, however, we are far less effective in propagating and defending what we view as the fundamental rights of man. This fact was recognized by those American statesmen who played such a huge role in establishing the United Nations. This fact was recognized by those American statesmen who drafted and signed the Genocide Convention. It is high time that this fact was recognized by the U.S. Senate.

Mr. President, the United States currently stands alone among major nations in its failure to ratify the Genocide Convention. This is a source of constant embarrassment to our diplomats and serves to seriously diminish our authority to speak out against gross violations of human rights. We must end this foolish inconsistency. We must ratify the Genocide Convention.

ORDER OF PROCEDURE

The PRESIDING OFFICER. The Senator from Vermont is recognized for a period of 3 minutes and 26 seconds, under the minority leader's time. The Senator from South Carolina has the next special order, for a period of 15 minutes.

Mr. LEAHY. Mr. President, I ask unanimous consent that I may reserve that time under the minority leader's time, and add it to my time, and that I follow the distinguished President pro tempore.

The PRESIDING OFFICER. Without objection, it is so ordered.

The Senator from South Carolina is recognized.

DAVIS-BACON ACT—PART III IMPACT ON FEDERAL CONSTRUCTION PROGRAMS

Mr. THURMOND. Mr. President, in my two previous Davis-Bacon presentations, I endeavored to provide background on the Davis-Bacon Act. Let me begin today to discuss the impact that Davis-Bacon has on Federal construction programs.

GENERAL

Assessing the impact of the Davis-Bacon Act on Federal construction programs is an elusive task. The act has been in effect for so long that to assess the impact of Federal programs under circumstances where prevailing wage requirements would not apply is highly theoretical. However, both proponents and opponents have endeavored to do just that with results that coincidentally support the position of the faction doing the study.

Management contends that Davis-Bacon is inflationary and that is increases costs on Federal construction programs unnecessarily. Labor does not deny that Davis-Bacon provisions increase costs; however, labor takes strong exception to the premise that Davis-Bacon is inflationary and contends that without Davis-Bacon, the Federal Government would be encouraging contractors to use cheap, itinerant labor, and the quality of the finished product would suffer.

COSTS

First, there are administrative costs to the Department of Labor to maintain the bureaucracy that administers the act. As mentioned previously, this staff is very austere for the magnitude of the job when one considers that 20,000 wage determinations are made annually by a staff of about 50 professionals—which means that each staffer must produce on the average nearly two wage determinations each day. In relation to the total annual Federal construction effort of some $40 billion, the approximately $8 million spent by the Department of Labor to administer Davis-Bacon is insignificant, and probably too low to do the job right.

Second, there are administrative costs incurred by contracting agencies and contractors alike just to keep records required to administer Davis-Bacon provisions. The costs to contracting agencies is extremely difficult to discern and some have estimated it at $1 million, which is probably conservative. The Associated General Contractors (AGC) conducted a survey of its membership to attempt to identify the administrative cost to contractors imposed by Davis-Bacon requirements.

As a result, the AGC estimated that, on the average, one-half of 1 percent of the contract amount was included in the contract bid just to cover the cost of paperwork associated with Davis-Bacon requirements. This estimate may contain some bias and must be considered in view of the fact that contractors have to keep payroll records for any number of reasons other than Davis-Bacon and, even if Davis-Bacon provisions did not apply, in all likelihood one of the State "little Davis-Bacon Acts" might apply.

On the other hand, contractor associations do incur some expense in assembling and providing wage information to the Department of Labor. In addition, appeals of Davis-Bacon wage determinations do occur and there are expenses associated with the appeal effort. It is estimated that contractors do spend approximately $100 million each year in administering Davis-Bacon requirements on Federal construction projects.

Estimates of the impact of Davis-Bacon provisions on contractors' bids have been formulated by several different agencies. The General Accounting Office studied in detail 29 Federal projects with a total contract value of $88 million. They concluded that $9.1 million represented costs incurred as a result of improper wage determinations or other administrative problems attributed to Davis-Bacon enforcement.

In this sampling, construction that should have cost $78.9 million was inflated by $9.1 million, or 11.5 percent, directly attributable to Davis-Bacon.

In another study, the author looked very closely at the contracts awarded during the 35-day suspension of the Davis-Bacon Act by President Nixon in 1971. A detailed analysis was made of

288 contracts on which bids had been received prior to the Nixon suspension of the act, but which had not been awarded and which were subsequently rebid during the suspension period disregarding Davis-Bacon provisions. Interestingly enough, 914 contractors who originally bid on these 288 contracts submitted rebids, of which 594 showed decreases, 218 showed increases, and 102 showed no change from their original bid.

In the aggregate, all bids showed a 3-percent decrease, which, when combined with inflation of 1 or 2 percent that was estimated to have occurred during the rebid period, implies that Davis-Bacon costs about 4 to 5 percent of the contract amount. This same study also analyzes the low bids and the low rebids which show a decrease of only 0.63 percent, which when combined with inflation that occurred during the rebid process would yield a range of 1.5 to 2.5 percent as the cost impact of Davis-Bacon.

Many of the Federal agencies that administer construction contracts have expressed the opinion that Davis-Bacon provisions increase costs significantly. The General Services Administration used 10 percent as the cost of Davis-Bacon in a recent study examining why the cost of Federal office building construction was 38 percent higher than comparable private construction. The Department of Transportation has not elected to put a specific cost on Davis-Bacon, but has stated:

> Although the effect of the Davis-Bacon Act on highway construction costs is estimated to be considerable, it is difficult to specifically isolate this one factor.

The Department of Defense, in testifying before the Senate Armed Services Subcommittee on Military Construction on the fiscal year 1982 military construction bill, stated:

> . . . We have estimated a range of 5 to 15 percent of our costs in given areas (are attributed to Davis-Bacon). . . .

There seems to be ample evidence that Davis-Bacon does cost the Federal Government something in its construction programs. Keeping in mind that Federal construction programs now involve some $40 billion annually, a 1-percent cost represents $400 million and warrants study to see if the benefits derived from such costs are adequate. Labor contends that these costs are justified in terms of improved quality of construction and stability of work force. Management contends that the costs are higher than necessary and the same benefits that labor attributes to Davis-Bacon would be realized without Davis-Bacon in a free market situation, given the power that the trade unions now have to regulate wages.

There are other than cost impacts of Davis-Bacon alleged by management to benefit labor interests. According to one study:

> They (the construction unions) obviously don't need it (Davis-Bacon) to keep wages up. They have a very potent reason to want to keep it on the books—the Davis-Bacon Act, in the hands of a helpful and understanding Labor Department, is a wonderful weapon for winning jurisdictional disputes.

In addition, the Associated General Contractors contends that the 1964 amendment adding fringe benefits to the definition of wages serves as a collection mechanism for the unions to insure the payment and collection of union negotiated fringe benefits. (On private, closed shop construction the contractor may or may not be required to pay all fringe benefits.) Finally, management contends that Davis-Bacon promotes union job classifications, often resulting in open shop classifications that are not prevailing being paid at a higher union prevailing classification.

For example, in some areas unions do not use helper rates and since the helper classification is not recognized as prevailing by the Department of Labor, helpers must then be reclassified and paid at some higher skill level.

At the outset of this discussion, the impact of Davis-Bacon was labeled elusive. It can be safely concluded that Davis-Bacon costs something—perhaps less than the 15 percent alleged by some management-sponsored studies—but more likely in the range of 8–12 percent which still represents several billion dollars annually.

Further, Davis-Bacon by virtue of the procedures used by the Department of Labor to administer the act, favors union wage rates. The 30-percent rule, which I described last Friday, gives preference to whatever union wage rates happen to exist in a locality. Although the majority of workers may be nonunion and receiving a lower wage than the union scale, if the union has a 30-percent minority membership of a particular craft, its wage rate is fixed as the prevailing wage.

In those cases where the wage determination is not based on the 30-percent rule, the Department of Labor uses the averaging method. These wage determinations, even though below the union rate, still favor the union sector. For instance, if union wages are $15 an hour and the nonunion wages are $10 an hour, the average wage will be around $12. The nonunion contractor has to inflate his wages in order to compete for a Federal contract, and as a result most elect simply not to compete for government work against union contractors. The union sector, however, will pay whatever the collective bargaining rate provides or the $15 an hour and this further inflates the contract cost.

Tomorrow I shall continue this discussion of the impact that Davis-Bacon has on Federal construction programs.

Mr. President, I yield the floor.

RECOGNITION OF SENATOR LEAHY

The PRESIDING OFFICER. The Senator from Vermont.

Mr. LEAHY. Thank you, Mr. President.

HARRY CHAPIN

Mr. LEAHY. Mr. President, much has been said in these Halls and in the House of Representatives about Harry Chapin who died tragically last week. Much more will and really should be said.

Giving a eulogy for a close friend is never easy and giving one for a friend like Harry Chapin is even more difficult because it expresses the deep sense of loss my family and I feel. But it is important to speak of Harry because more than my family and I have lost a good friend. The hungry of the world have lost their best and most constant friend.

Harry had unique talents and passionate concerns. A songwriter, a singer, a storyteller, Harry would weave our thoughts together in laughter and in wry humor. He could make us cry and perhaps even more importantly, he could make us remember. But Harry could also carry us along with his concern, his passionate caring for the hungry of this world. Not content with merely talking about victims of starvation and malnutrition, he set about to do something. He determined to change structures to get to the root causes of hunger, the real reasons for lack in a time of plenty.

Harry did not simply want to show sympathy, he wanted to demonstrate that hunger was not inevitable in this world. And in a remarkably brief time Harry Chapin worked to create the President's Commission on World Hunger, he founded the Food Policy Center, created World Hunger Year, and established the Food Monitor magazine.

How did he accomplish this? With incredible determination, with selfless dedication, and he also did it by giving away the bulk of his earnings as an entertainer. He knew that our brothers and sisters around the world would continue to be malnourished and would continue to starve unless hunger became a matter of conscience to the millions of us who are well fed. He knew the enormity of his job, but I am convinced that the enormity never detered him or even allowed his inexhaustible energy to falter.

Mr. President, I remember so well a few years ago when Harry Chapin came to me with an idea that came from his wonderful wife, Sandy, to put together a Presidential Commission on World Hunger. He prowled the Halls of the House of Representatives with his good friends Congressmen BEN GILMAN, Rick Nolan, TOM DOWNEY, and others. I would go with him on the Senate side of Capitol Hill and we would meet with distinguished colleagues Henry Bellmon, Hubert Humphrey, BOB DOLE, GARY HART, DON RIEGLE, ALAN CRANSTON, then Vice President Fritz Mondale, and so many others. Harry would bring his coworkers with him, Marty Rogol, and Bill Ayers, and so many others and we would set up times to go and talk to people about preparing a joint resolution requesting a Presidential commission.

We would call Harry and say that Wednesday midmorning might be a good day to meet with certain Senators, and Harry would say "I will be there." What he never told us was the night before he had a concert in California and maybe another concert that Wednesday night back in California. In between he would fly here, to spend time talking for an hour or so with other Senators and go back for the concert.

He would talk to them. He would grab them. He would corner them in the Halls I would introduce him to a chairman and he would get the Harry Chapin treatment until Harry had him agree to cosponsor the resolution.

We passed that resolution, with bipartisan support here and in the House of Representatives, and then we went down to the White House to talk to the President about it. I recall going down with another Senator and Harry Chapin, the three of us. We drove down in the other Senator's car which had a license plate which said U.S. Senate 1 on it, and we drove up to the White House gate and the gate opened just slightly. The Secret Service man and a couple uniformed guards came out and asked the Senator driving if he had any identification. He said he was Senator So and So. Did he have any identification? No, he did not. He turned to me, asked who I was. I said "I am Senator LEAHY." He said "Do you have identification?" And I did not have anything on me. At that point the guard noticed who was in the back seat. He said "Harry Chapin, how are you? Will you vouch for these two?" Harry said, "I will vouch for them." The gates of the White House opened up, and we were ushered in to see the President.

President Carter told us that we used somewhat unfair methods in trying to lobby him. He did not mind me, or Congressman Nolan or anybody else coming down and talking to him, but Harry would come down and talk to him and after we left he would go and sing to the President's daughter, Amy, and she would go and talk to her father about the need for the Hunger Commission."

So Harry started in, "Mr. President, these are the reasons for it," and he started giving the statistics and his feelings on hunger, and the President said, "You have convinced me. I will create the Commission."

Simply having won did not deter Harry. He kept on going and he started warming to it and the President said, "But I am going to do it," and finally about the third time we said, "Harry, you have to stop. You have convinced him. Don't change his mind."

But this is the way he was. His work was a commitment. It was a beginning. And it is one that cannot stop and it will not because it will continue in his name—as it should.

He was scheduled to testify this week in the House of Representatives and I only hope that those of us "second choices" who will testify in his place can begin to give his message at the hearings.

We should never forget how he could give that message. Harry was a singer and a poet. He loved his work and millions of Americans laughed and admired the simplicity of that work. Harry's songs were about ordinary people, with their attempts to get from one hard day to another and to love.

He wrote about a lot of the inner thoughts that are so hard for people to express for themselves. When he sang you could feel the warmth and recognition in his audience. Like great poets in our time Harry let people see themselves. But Harry Chapin's music was not set apart from his conscience. The two were of one piece. At least half of his concerts were benefits to raise money for people and causes that were important to him, principally the abolition of hunger and want. I think about the comforting words, the poignant notes, and the laughter from all of these thousands of concerts and I can only think how wonderful it was to have had Harry Chapin as a friend and a fellow human being for the years God granted him.

Now, Mr. President, I want the personal privilege about talking about the friendship between the Leahy family and the Chapin family, a friendship I cherish and would never give up.

Harry Chapin, his talented and wonderful wife Sandy, their children Jaimie, John, Jason, Jenny, Josh, his sister Dana, and his brothers Steve, Tom, and James. Why he could pack the House just with family.

They, too, should be noted here in the Senate today because while Harry gave so much of himself to all of us, they gave up so much of Harry to make it possible. But their love, and their own considerable talent, helped Harry make contributions to our society way beyond what should even be expected of a person so young.

Of all the times we were together from the first time I met him, as a new Member of this body to last night in Long Island at his wake to the concerts and the meetings and the work of all this. I remember best one summer evening when Harry came to our home in Vermont. We had walked up to one of the fields around our home and watched the sunset and came back on a pleasant summer evening. The windows were open, the lights were off, the candles lit. The breezes blew through the windows, blowing the curtains, and Harry sat there and sang a long time. He sang my favorite "A Better Place To Be," and his favorite, "My Corey's Coming."

At later times at our home he would sing "Tangled Up Puppet," the beautiful song he and Sandy wrote, and I think back to that time, and I think back to those songs. But what I think about today is the song he wrote and the lyrics of it in which he said:

All my life's a circle, sunrise and sundown;
The moon rolls through the nighttime till the daybreak comes around.
All my life's a circle but I can't tell you why,
The reasons spring round again, the years keep rolling by.
It seems like I've been here before, I can't remember when, but I got the funny feeling that I'll be back again.
There's no straight lines make up my life and all my roads have bends, there's no clear-cut beginning and so far no dead ends.

Harry Chapin started this circle with his amazing talent and his boundless energy, his unending compassion for the hungry of the world. We in this city can help complete that circle.

Mr. President, I reserve the remainder of my time.

Mr. METZENBAUM addressed the Chair.

The PRESIDING OFFICER. The Senator from Ohio.

TRIBUTE TO HARRY CHAPIN

Mr. METZENBAUM. Mr. President, I did not have the privilege of knowing Harry Chapin nearly as well as the distinguished Senator from Vermont, but I did have the privilege of knowing him somewhat. I think I have a kind of reserved jealousy that the Senator from Vermont had the privilege of knowing this man as well as he did, because I believe he was probably one of the most selfless people I have ever had the privilege of knowing.

I join the Senator from Vermont in expressing my deep personal grief at the early death of a man of the stature, the compassion, the kindness and, maybe more important of all, his concern, Harry Chapin. He was a very special person. He was an American original, a talented writer, composer, performer, whose work was deeply rooted in the lives and experiences of the working people of this country.

As I mentioned, I did not know him that well, but the little I did know him I came to respect him as being a thoroughly genuine human being whose love for his wife, his family, the kind of world in which we live spilled over into his music.

He was a man who cared about injustice and suffering in the world, and he was determined to do all that one man could do to make a difference.

There are few people who had the privilege that Harry Chapin had of making the choice of becoming a very wealthy person and becoming a person who probably was comfortable but never rich, but devoting so much of his time to the kind of world that all of us participate in making.

The fact that he devoted more than half of his time, half of his work, to benefit concerts for the causes in which he believed I think gives some indication of the stature and the dedication and the feeling of this man.

In 1980 alone he gave 130 benefit concerts. According to my mathematics that comes to one every 3 days. He cared very deeply about the fact that some could eat so well in this Nation and throughout the world and some could not eat at all. He was concerned about the poor and the ability to put food on their tables, whether they were in some far-removed corner of the world or whether they were his next door neighbors.

He was proud of the fact that he was the only member of the President's Commission on World Hunger to attend every single meeting, and the word "selfless" is synonymous with Harry Chapin.

He was that rare kind of individual who would give of himself, give of his own personal energy and talent, for the benefit of others.

There are many in the entertainment world who on occasion see fit to participate in what is happening in that world, one concert, one entertainment, one trip, two, three, four. But Harry Chapin did not know how to say "No" and when decent causes needed help Harry was always there.

In an article that appeared in the July 17 edition of the Washington Post, Tony Kornheiser recalled his last meeting with Harry Chapin.

Mr. Kornheiser wrote:

That night, a sleeting, crummy winter night, I remember him telling me that it was about time I stopped fooling around writing about celebrities and started writing about the people who really controlled the world.

I remember me telling him that it was about time he stopped trying to save the world and started selling out so he could become a rock star.

And I remember exactly what he said about that. He said, "being a rock star is pointless. It's garbage. It's the most self-indulgent thing I can think of. I've got nothing against selling out. But let me sell out for something that counts. Not so Harry Chapin can be No. 1 with a bullet, but so I can leave here thinking I mattered."

I ask unanimous consent that Mr. Kornheiser's article be printed in the RECORD at the conclusion of my remarks.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibit 1.)

Mr. METZENBAUM. Mr. President, Harry Chaplain's life was cut short at the age of only 38.

But he did matter. He mattered greatly. And he succeeded in showing thousands upon thousands of people that a good and determined person can confront a cynical world and make an impact.

I did not know Harry Chapin's family well. I had had the privilege of meeting them on occasion, but I say that in his loss they lost a parent, a father, a husband, a wonderful human being, and they should know that there are just so many others throughout this world who share their grief.

We will miss him, the Nation will miss him, and the hungry peoples of the world will miss him.

They join me in expressing our sympathy to his family.

I yield back the remainder of my time, Mr. President.

EXHIBIT 1

HARRY CHAPIN'S RICHES: THE TROUBADOUR WHO LAUGHED AT FAME AND GAVE AWAY HIS FORTUNE

(By Tony Kornheiser)

They called Harry Chapin a troubadour, but he was more of a novelist. He wrote short, poignant, biographical novels and set them to music. Novels about tax drivers who have chance encounters with their first loves and choose not to go home again. Novels about fathers and children who start out not getting close to each other and end up not even getting next to each other. Novels about lovers who get swept away in the heat of the moment. Novels about snipers and disc jockeys and heroic true believers who never lose touch with who they are.

And yesterday, when Harry Chapin died in a car wreck, he left behind the sort of novel that he wrote about so well. A man whose life ended abruptly in the middle. Between the search and the goal. Between the promise and the gift. Not yet there, but on the way.

He'd be giving a concert, and he'd sit on a stool, his guitar resting on his right knee, and he'd joke with the audience about the kind of songs he'd written. He knew that most of the critics thought he was a lightweight, and while that judgment offended him, it never discouraged him. He thought it hilarious that one rock performer was reviewed this way: "He was a rich man's Harry Chapin." Harry would laugh and say, "Look at where they've got me. They've got me as a standard for comparison. If anyone is lower than me, he has to be at the very bottom of the ocean." He'd even use his standing with the critics in his act. He'd blush and tell the audience that when he was younger he had the nickname "Gapin' Chapin." And he'd call himself "a third-rate rock star." And then he'd turn up his energy higher, much higher than his amps, and sing his songs. "Taxi." "Cat's in the Cradle." "I Wanna Sing You a Love Song." "Sniper." "W.O.L.D." And in his own way, for his special audience, he was every bit as popular and loved, and even worshiped like a Bruce Springsteen.

Harry Chapin could have been a millionaire.

Harry Chapin maybe should have been a millionaire.

But every year at least half of his concerts were free, either for charity or as a benefit.

He put his money where his mouth was.

I met Harry while doing a profile on him in 1976, a profile in which I accused him of not so much being a singer-songwriter as being a moralist. I believe the term was that he sang a course in Morality 101. He liked that. He laughed very loudly at that.

He had a great and rich and good laugh.

The last time I saw Harry, he gave a concert at Constitution Hall. It was a typical Chapin concert in that his energy was high, and the only reason he stopped singing was because he was told that if he stayed on stage even another minute they were going to have to put the help on overtime. Harry already had gone on for almost three hours and it was closing in on midnight.

And after it was over, Harry went out into the lobby for a typical Chapin post-concert session. And there he would sell Harry Chapin albums and Harry Chapin T-shirts and Harry Chapin song books. And on each one he would sign his typical Chapin message: "Keep The Change, Harry Chapin."

What was so impressive about what Chapin did wasn't so much that he signed every last thing that was thrust at him—even for people who hadn't bought a thing—but that every penny he took in from these sales didn't go into Harry Chapin's pocket, but toward charity, specifically toward ending world hunger.

Later that night Harry and I and another reporter took a taxi (what else?) over to the American Cafe on Capitol Hill and sat around for a few hours solving all the world's problems. I knew how hard he worked for the cause of preventing world hunger, so of course I razzed him about ordering a big thick sandwich. And he came back at me the way he always did, by saying, "Look, I'm not asking you to starve; I'm simply asking you to try and spread the word that we grow enough food each year to feed the world easily. You've got access to a great newspaper here. For God's sake use it."

And then we talked about the congressmen he'd seen recently, and how his lobbying effort was going, and how many charities and causes he was pushing. As ever, he was all high energy and optimistm. I thought then and I think now that Harry Chapin was a worthy man. That he was a liberal in the very best, philosophical sense of the word. It wasn't welfare he was talking about, it was decency. He used the phrase "enlightened self-interest." He said it made good sense to redistribute the food. Not because it was the noble thing to do, but because if you removed hunger and desperation you would remove a major cause of crime and violence. If there is such a thing as a practical liberal, Harry Chapin was that.

And when we were all talked out about saving the world, we drank a few more beers and talked about Long Island, where we both were from, and remembered the afternoon we played touch football on his lawn, right next door to Long Island Sound, and I insisted I was a better quarterback than him, and he insisted he was a better end than me. And laughed some more, his rich laugh filling the now empty restaurant, and just like on stage he was the last to leave, because if they didn't throw him out they'd have to pay the help overtime.

That night, a sleeting, crummy winter night, I remember him telling me that it was about time I stopped fooling around writing about celebrities and started writing about the people who really controlled the world.

I remember me telling him that it was about time he stopped trying to save the world and started selling out so he could become a rock star.

And I remember exactly what he said about that. He said, "Being a rock star is pointless. It's garbage. It's the most self-indulgent thing I can think of. I've got nothing against selling out. But let me sell out for something that counts. Not so Harry Chapin can be No. 1 with a bullet, but so I can leave here thinking I mattered."

Mr. DOLE addressed the Chair.

The PRESIDING OFFICER. The Senator from Kansas.

Mr. DOLE. Mr. President, a parliamentary inquiry. Does the Senator from Vermont have some time remaining?

The PRESIDING OFFICER. The Senator from Vermont has 7 minutes and 23 seconds remaining.

Mr. LEAHY. I yield whatever time the Senator from Kansas wishes.

Mr. DOLE. Three minutes.

The PRESIDING OFFICER. The Senator from Kansas is recognized.

HARRY CHAPIN

Mr. DOLE. Mr. President, first I wish to thank the distinguished Senator from Vermont for taking this time to recognize Harry Chapin's accomplishments.

It is somehow fitting that those of us in the Senate who knew Harry Chapin should pause here briefly today to discuss many of the things that he was associated with.

It just so happened that my last conversation with Mr. Chapin was by telephone. He was asking my assistance in acquiring the use of the grounds around the Statue of Liberty for July 4, 1982, at which time he had planned to have a large benefit to benefit world hunger.

I remember he also said at that time, although I was of a different party and maybe of a somewhat different philosophy, "Because of your interest in food programs, I want to do a concert for you." I guess he has done many of those for men and women in politics.

But, again, it demonstrates, just as we have heard from the distinguished Senator from Ohio, what Harry Chapin was all about—unselfish, committed, concerned—concerned not with piling up money, but with doing what he could on behalf of those in need in the world and in this country.

He could have been a multimillionaire, but he chose, instead, to make a lasting mark on the world by upholding his commitment to a higher moral order. He was, as others have indicated, intensely concerned about world hunger. He was, as was indicated, a member of the President's Commission on World Hunger. And, as a member of that Commission, not with the attendance record that he had, I did come to know Harry Chapin; in his work with the distinguished Senator from Vermont, Senator LEAHY and others, I also came to know Harry Chapin.

Despite the fact that he could have lived a life of wealth and leisure, sheltered from the harshness of the world's problems, he chose to become involved—to try in his own way to make the world a better place in which to live.

Harry Chapin was one of those few individuals who participated as a public figure in the depth of drama that is part of everyday reality—away from the glitter of stardom. Maybe he did not follow the path of fame as many know it—he certainly was not concerned with success if this meant making millions of dollars by merely selling records and giving concert tours. At least half of Harry's concerts were free—either for charity or as benefit concerts. Specifically, this man was so concerned about world hunger that he became one of the most active individuals to engage in a public awareness campaign and lead efforts to do something about this problem. That world hunger existed at all was a strange phenomenon to him, because there is enough food produced each year to easily feed the entire world population.

So it would seem to me that he has left his mark. He was a liberal, and a liberal in the best sense of the word. He possessed a spirit of generosity and optimism which carried him through his various commitments with a great sense of seriousness and purpose. He also possessed a high-energy level which he channeled toward all that interested him. He did not talk about welfare per se, although hungry people became a focused cause for him. What he was really committed to was decency and dignity for all human beings. While he was with us, he did what he could to make an impression on all of us—to let us know what was important to him and what was not. In the process of living up to what he believed in, he laughed at his own fame and gave away his fortune for causes he supported.

What mattered to him were people and family—he had his own wonderful family of five children, and it is for his wife and children that we should grieve today, for they are the ones left behind by the tragic events that deprived them of the man they knew as a husband and father. Still, what remains is the spirit of inspiration and bright memories of the times they shared together.

It just seems to me that he also had the family of hundreds and thousands and perhaps millions outside his immediate family of hundreds and thousands and him, those who benefited from his work, and those who will continue to benefit because of things he has done.

Mr. President, I wish to conclude my statement with some words from last Friday's article on Harry Chapin in the Washington Post, written by Tony Kornheiser, a good friend of his. I think this best expresses the sense of what has happened in recent days:

When Harry Chapin died in a car wreck, he left behind the sort of novel that he wrote about so well. A man whose life ended abruptly in the middle. Between the search and the goal. Between the promise and the gift. Not yet there, but on the way.

What remains with all of us today are the songs he wrote and sang, and the strength of his vision—for this we will always remember him.

So I would say that when I last spoke with him it was the same Harry Chapin I had spoken with off the Senate floor on a number of occasions, calling not about something for himlsef but about what he could do for someone else 12 months from the day—almost to the day—he called. That is the Harry Chapin that many in this Chamber, and many in this country, and many around the world, know better than I. Certainly he left us with a legacy to continue his commitment to the larger issues in life.

The PRESIDING OFFICER. The Senator from Vermont.

Mr. LEAHY. Mr. President, I thank the distinguished Senator from Kansas for his remarks. He was one of the original sponsors of the resolution that I referred to earlier in my remarks. I know how appreciative Harry Chapin was of that.

I thank the distinguished Senator from Ohio (Mr. METZENBAUM) for his statement. I know, again, how much Harry Chapin appreciated his support on these issues.

Mr. President, I am not sure what the order is for the remainder of my time. I do not need further time. I think there was time, however, reserved for the distinguished minority leader.

The PRESIDING OFFICER. The Senator is correct.

Mr. LEAHY. Mr. President, I suggest the absence of a quorum.

Mr. METZENBAUM. Will the Senator withhold that request?

Mr. LEAHY. Yes.

SPEECH BY PROFESSOR WILLARD MUELLER ON THE ANTITRUST MOVEMENT

Mr. METZENBAUM. Mr. President, it has become fashionable these days to depreciate the value of our antitrust laws. That fashion has spread even to those who should know better, like economist Lester Thurow. In both his book and in articles, Mr. Thurow has propounded a series of propositions about the uselessness of antitrust law that are full of fallacies, distortions, and naivetes. Nevertheless, many of these arguments are now national policy as Antitrust Chief William F. Baxter sets about the business of undoing 90 years of antitrust jurisprudence.

In a recent speech, Prof. Willard F. Mueller, William F. Vilas research professor at the University of Wisconsin in Madison, responded at length to Professor Thurow. In an address to the Conference on Industrial Organization and Public Policy at Middlebury College in April, Professor Mueller convincingly demonstrates the inadequacies and weaknesses in the Thurow thesis and reaffirms the importance of antitrust law.

I commend the Mueller speech to my colleagues and ask unanimous consent that it be printed in the RECORD.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

THE ANTI-ANTITRUST MOVEMENT

(By Willard F. Mueller)

We are in the midst of a new antitrust movement. But unlike those of earlier times, this one is an "anti" antitrust movement. Tonight I shall place the current attack on antitrust in a historical perspective, examine its origins, and comments on the arguments of the economist who has emerged as the most popular exponent of abolishing the antitrust laws.

The antitrust laws were this nation's response to the *laissez-faire* capitalism that came into full flower after the Civil War. The new economic order, epitomized in the great trusts, created a feeling of unease among the people. Writing in 1911, Supreme Court Justice John M. Harlan characterized the mood that gave birth to the Sherman Act of 1890. "There was everywhere," said Harlan, "a deep feeling of unrest . . . the conviction was universal that the country was in real danger [from] the aggregations of capital in the hands of a few individuals and corporations controlling, for their own profit and advantage exclusively, the entire business of the country . . ."[1]

These feelings and fears gave rise to the Sherman Act of 1890. This act and the Clayton Act of 1914 were rooted primarily in the belief that excess corporate power must be restrained to assure fair competition, prevent exploitation of the consumer, and protect democratic institutions by preventing excessive centralization of economic power.

Until World War I there was continuing agitation for more vigorous enforcement and strengthening of the Sherman Act of 1890. In the 1912 presidential campaign each candidate—Roosevelt, Taft and Wilson—spelled out an agenda for curbing excessive corporate economic power. The result was the enactment in 1914 of the Clayton Act and Federal Trade Commission Act. World War I changed abruptly the nation's agenda, and following that conflict concern with these matters was set aside as the nation was promised a return to normalcy.

During the 1920s there occurred the first concerted attack on the antitrust laws. Enforcement effort dwindled, many courts were openly hostile, and for a time the Federal Trade Commission came under siege and was charged with harboring persons hostile to American capitalism. To many, a return to "normalcy" meant a return to the *laissez-faire* capitalism of the 19th century.

The most progressive Senators such as LaFollette and Norris continued to support the FTC until the middle 1920s, when in 1925 President Coolidge appointed William E. Humphrey, his former campaign manager and a lobbyist for Western lumber interests, to the chairmanship of the FTC. The new Humphrey majority's anti-antitrust sentiments so alienated the progressives that some proposed abolishing the agency. Under Humphrey's aegis, the FTC was converted from an instrument for "the preservation of fair methods of competition—into a device for limiting price competition itself."[2]

By the late 1920s and early 1930s many special interest groups urged drastic changes, if not outright repeal, of the antitrust laws on grounds that these laws shackled business initiative and that their repeal was essential to economic recovery; many of the arguments were very similar to those used today.[3]

The most ambitious proposal for legitimizing a cartelized economy was the Swope Plan of 1931, formulated by General Electric president Gerald Swope. It called for coordinating production and consumption through legal-

---

Footnotes at end of article.

ized cooperation among corporations to stabilize "competitive methods and prices."[4] In 1932 both political parties were being urged to repeal or drastically weaken the antitrust laws. Leading members of the American Economic Association rallied to the defense of the antitrust laws. In a sharply worded "reaffirmation of the essential principle of fair competition," the economists urged both political parties to reject these attacks.[5]

The statement may have had some effect. The 1932 Republican platform was silent on the issue, though the chairman of the resolutions committee favored a plank attacking the Sherman Act. The Democratic party platform included a brief statement embodying the main features of the "Economists Statement."

Any satisfaction over this seeming victory was short-lived, however, since a centerpiece of one of the New Deal's first creations, the National Industrial Recovery Act (NRA), repudiated the antitrust laws, replacing them with the "codes of fair competition" that businessmen had sought and FTC Chairman Humphrey had tried to give. Then, quite unexpectedly, at what seemed antitrust's darkest hour, a new era of antitrust began. In 1935 the NRA, already economically ill, was given a death sentence by the Supreme Court. President Roosevelt, disturbed by the failures of his program to prevent a deepening of the depression in 1937–38, turned his back—at least partially—on centralized NRA-type planning in favor of making competitive capitalism work more effectively. To accomplish this he appointed Thurmond Arnold to head a substantially enlarged Antitrust Division and called for a full-scale investigation into the way twentieth-century capitalism worked and how it could be improved.

During 1937–1942, a period many recall as the golden age of antitrust, Thurmond Arnold pursued an aggressive policy. In a single year he filed more Sherman Act cases than had been brought during the first 20 years of the Act. Perhaps the main legacy of these years was the demonstration that antitrust still had a meaningful role a half century after the Sherman Act was enacted. Although Arnold's big cases generally were stalled during the war years, the antitrust agencies rebounded strongly at war's end, and the big cases went forward.

While antitrust as a "movement" was dormant in the post-war decades, the enforcement effort did not wither as it had after World War I. The reason for this difference, as historian Richard Hofstadter persuasively argues, was that Arnold's regime had resulted in the institutionalization of the antitrust process: "Despite the collapse of antitrust feeling both in the public at large and among intellectuals, antitrust as legal-administrative enterprise [was] solidly institutionalized."[6]

The most important area of activity involved merger enforcement, which was given new life by the Celler-Kefauver Act of 1950. The act amended and greatly strengthened Section 7 of the Clayton Act, which had been rendered totally ineffective by a series of Supreme Court decisions in the 1920s.

Following passage of the 1950 Act, the FTC and the Antitrust Division initiated an aggressive program of enforcement. Although it has been almost totally ineffective in dealing with conglomerate mergers, the Celler-Kefauver Act has been used effectively in challenging horizontal mergers, the type that most directly injure competition. A few statistics illustrate the immensity of the merger enforcement effort. During 1951–1980 the antitrust agencies issued 500 merger complaints challenging 1,477 mergers. Nor was this effort merely a "charade" involving small acquiring companies, as Galbraith has asserted. The bulk of these complaints challenged large acquiring companies: 83 percent of all acquired assets were by companies with assets exceeding $1 billion and 95 percent by companies with assets exceeding $250 million.[7]

From my studies, I conclude that many American industries would definitely be much more concentrated were it not for this enforcement effort. Many large corporations seem to have an insatiable appetite for growth by merger, even when it can be accomplished only by conglomerate acquisitions that make little or no economic sense. It takes little knowledge of business behavior to realize that without restraints on horizontal mergers, this merger appetite would be wholly unrestrained, leading to unacceptably high levels of concentration in many industries.

The Celler-Kefauver Act clearly has done very little about conglomerate mergers. But it might have been otherwise had the agencies followed through on the efforts begun in the late 1960s and early 1970s. The Supreme Court, under Chief Justice Earl Warren, had upheld the government in all of the conglomerate merger cases to reach the highest court. The agencies, especially the Antitrust Division under Donald Turner (1936–1938) hesitated in following up on these victories. Then, in 1969, President Nixon appointed Richard W. McLaren to head the Antitrust Division. As a condition of accepting the appointment, McLaren had received Attorney General Mitchell's approval to test whether the Celler-Kefauver Act could be used to challenge successfully large conglomerate mergers, especially those involving acquisitions of dominant firms and those creating the potential for reciprocity. McLaren first laid out his game plan, and then began carrying it out expeditiously.[8] Although few observers believed McLaren would actually carry out his plan to challenge conglomerate mergers, during 1969 he brought suit to block three large acquisitions by ITT (Hartford Fire Insurance, Canteen Corporation and the Grinnell Corporation), and two other large conglomerate mergers. This marked the zenith of the conglomerate merger enforcement effort.

The counterattack came swiftly. While most business leaders merely criticized McLaren, ITT officialdom, spearheaded by Board Chairman Harold Geneen, descended on Washington, perhaps encouraged by ITT's success in helping to topple the Allende government in Chile.[9] I have recounted the ensuing campaign at length elsewhere, though I did so without benefit of the subsequently released White House "Watergate" tapes.[10] These tapes demonstrate that Richard McLaren's policy was overruled by the President himself. A key day in these events was April 19, 1971. Several months earlier Richard McLaren had successfully petitioned the Supreme Court for permission to appeal the *ITT-Grinnell* case, and the Justice Department's appeal brief was ready by March 1971. Under White House pressure, McLaren asked the Court to postpone submission of the brief for one month, to April 20, 1971. On the afternoon of April 19, 1971, the President met with his chief aide, John Ehrlichman, and George Schultz, Director of the Office of Management and Budget. Their conversation was recorded by the President's secretly installed tape recorder.[11]

The conversation begins with Ehrlichman telling the President that the *ITT-Grinnell* appeal was being pursued despite his attempts to give the Justice Department "signals" to the contrary. The President expressed outrage, and decided to call Deputy Attorney General, Richard G. Kleindienst, to give McLaren his marching orders.

PRESIDENT. [picks up the telephone] yeah.

KLEINDIENST. Hi, Mr. President.

PRESIDENT. Hi, Dick, how are you?

KLEINDIENST. Good, how are you, sir?

PRESIDENT. Fine, fine. I'm going to talk to John [Attorney General Mitchell] tomorrow about my general attitude on antitrust.

KLEINDIENST. Yes sir.

PRESIDENT. And in the meantime, I know that he has left with you, uh, the IT & T thing because apparently he says he had something to do with them once.

KLEINDIENST. [laughs] Yeah. Yeah.

PRESIDENT. Well, I have, I have nothing to do with them, and I want something clearly understood, and, if it is not understood McLaren's ass is to be out within one hour. The IT & T thing—stay the hell out of it. Is that clear? That's an order.

KLEINDIENST. Well, you mean the order is to——

PRESIDENT. The order is to leave the God damned thing alone. Now, I've said this, Dick, a number of times, and you fellows apparently don't get the message over there. I do not want McLaren to run around prosecuting people, raising hell about conglomerates, stirring things up at this point. Now you keep him the hell out of that. Is that clear?

KLEINDIENST. Well, Mr. President——

PRESIDENT. Or either he resigns. I'd rather have him out anyway. I don't like the son-of-a-bitch.

KLEINDIENST. The, the question then is——

PRESIDENT. The question is, I know, that the jurisdiction—I know all the legal things, Dick, you don't have to spell out the legal——

KLEINDIENST. [Unintelligible] the appeal filed.

PRESIDENT. That's right.

KLEINDIENST. That brief has to be filed tomorrow.

PRESIDENT. That's right. Don't file the brief.

KLEINDIENST. Your order is not to file a brief?

PRESIDENT. Your—my order is to drop the God damn thing. Is that clear?

KLEINDIENST. [Laughs] Yeah, I understand that.

PRESIDENT. Okay.

KLEINDIENST. [unintelligible]

[President hangs up.]

After this conversation the President said to those gathered, "I hope he resigns. He may." Then follows an attempt by George Schultz to assure the President that he was following sound Chicago School economics in permitting conglomerate mergers. It must have comforted Nixon to learn that Schultz had "checked this over with my friend Stigler" who assured Schultz that mergers presented no problem.

But Nixon was too preoccupied with McLaren's independent behavior in the ITT case to sit silently and endure for long Schultz's lecture on "Chicago School" economics.

PRESIDENT. The problem is McLaren's a nice little fellow who's a good little antitrust lawyer out in Chicago. Now he comes in and all those bright little bastards that worked for the Antitrust Department for years and years and years and who hate business with a passion . . . have taken him over . . . That was all right fifty years ago. Fifty years ago maybe it was a good thing for this country. It's not a good thing for the country today. That's my views about it, and I am not—we've been through this crap. They've done several of them already about—they raised holy hell with the people that we, uh, un—well Geneen [Chairman of ITT], hell, he's no contributor. He's nothing to us. I don't care about him. So you can—I've only met him once, twice—we've, I'm just uh—I can't understand what the trouble is.[12]

Presidential counsel John Ehrlichman then made a feeble effort to come to McLaren's defense.

EHRLICHMAN. McLaren has a very strong sense of mission here.

PRESIDENT. Good—Jesus, he's—get him out In one hour.

Footnotes at end of article.

EHRLICHMAN. He's got a——

PRESIDENT. One hour.

EHRLICHMAN. Very strong——

PRESIDENT: And he's not going to be a judge either. He is out of the god damn government. You know, just like that regional office man in, in San Francisco. I put an order into Haldeman today that he be fired today.

EHRLICHMAN. Yeah.

Attorney General Mitchell subsequently discussed these matters with the President and advised him that it would be politically unwise to interfere with the ITT appeal. The President agreed to heed Mitchell's advice to permit the appeal to go forward after Mitchell assured him, "we can get rid of the ITT thing, I think".

Get rid of it they did. The Justice Department entered into a sham agreement with ITT settling all three ITT cases before the Supreme Court was given an opportunity to hear the *ITT-Grinnell* appeal.[13] Thus ended the assault on conglomerate mergers. Since 1971 no significant conglomerate mergers have been challenged.

THE NEW ATTACK ON ANTITRUST

It would be a mistake to single out the ITT affair as the origin of the current anti-antitrust movement. It was merely one scene in a hit play, "The Watergate Scandals," that ran well in Washington for two seasons. McLaren's assault on conglomerate mergers floundered, as Henry C. Simons might have said, on the orderly process of democratic corruption.

The new attack on antitrust began well before Watergate. The very success of antitrust and the consumer movement were partly responsible for galvanizing corporate America into action in the 1960s and 1970s.

From World War II until about 1973–1974, the enforcement effort was modestly aggressive, especially in the area of mergers, and the courts became increasingly sympathetic to strict interpretations of these laws. Private antitrust activity reached historic highs in the 1960s and 1970s. As historian Richard Hofstadter put it, whereas "once the United States had an antitrust movement without prosecution; in our time there have been antitrust prosecutions without a movement."[14]

The Warren Court played a central role in all this, as perhaps the only Supreme Court since 1890 that felt comfortable with vigorous enforcement of the antitrust laws. But the strong pro-antitrust era of the Warren Court ended in 1973–1974, when in the words of associate Justice White, a "new anti-trust majority" emerged. One legal authority asserts that the Burger Court has a deep-rooted "anti-antitrust" bias.[15]

The changed composition of the court reflected a broader conservative movement that had spread across the land, as special interests mobilized to change the antitrust laws as well as other aspects of our economic and political systems. It is a mistake to assume the new attack on antitrust flowered from seeds only recently planted. It germinated two decades ago and has been growing continuously ever since.

The "Chicago School" of economics has long provided the main intellectual resources for attacking the antitrust laws and their enforcement. But the views from Chicago did not have great influence on public policy until they became firmly implanted at a number of other universities (e.g., UCLA, Virginia, Rochester, and Texas A&M) and when they became generously endowed by industrial interests seeking intellectual legitimization of their objectives.

During the 1960s and 1970s business interests stepped up greatly their support of groups and individual holding views compatible with those of business. The most obvious manifestations of corporate efforts aimed at shaping views toward modern capitalism are the American Enterprise Institute, the Hoover Institution, the Heritage Foundation, and other centers of conservative economic thought. The National Chamber of Commerce has supported academic researchers critical of the regulatory agencies.[16] Corporate philanthropists of the New Right have increasingly contributed generously to "scholars".

The John M. Olin (of Olin Corporation) and Sarah Schaife Foundation (large holder of Gulf Oil securities), together reportedly have given $7.5 million to academics at places like the University of Chicago, UCLA, and the American Enterprise Institute.[17] The Heritage Foundation, launched just seven years ago with a $250,000 contribution by ultraconservative brewing tycoon Joseph Coors last year had a budget of $5.3 million.[18]

The world's largest corporation, AT&T, has assumed responsibility for publishing the major professional journal in regulatory economics, the *Bell Journal*.[19] If this is a harbinger of how our professional journals will be sponsored in the future, perhaps IBM or Exxon will take over the financially troubled *Industrial Organization Review*.

The University of Miami's Law and Economics Center provides special two-week, all expense paid, cram courses in *laissez-faire* economics for the federal judiciary. The Center is financed almost exclusively by large corporations, in some cases, corporations (ITT and IBM) that have cases before the very judges attending the Center.[20] To date nearly one-fifth of the Federal judiciary has attended at least one of the Center's institutes. Upon returning home to their chambers, the judges receive monthly mailings from the Center on crucial economic issues like advertising. The anti-antitrust bias of the Center's faculty was probably pretty well summed up by Chicago School economist, Harold Demsetz, when he told the assembled judges, "My own personal view is that the place of the antitrust laws comes with explicit price collusion—and probably nowhere else."[21]

These various forces are subtly, and often not so subtly, influencing many persons' views toward the antitrust laws. For example, OMB Director David Stockman, an historian by training, reportedly gained most of his knowledge of regulatory economics by reading publications of the American Enterprise Institute. (Not too surprisingly, Stockman named Institute scholar, James Miller, to head regulatory matters within OMB.) This also likely explains Stockman's views on antitrust, which he put succinctly: "I disagree with the whole antitrust tradition."[22] It is hardly surprising, therefore, that, "the decision to push for an end to funding the Federal Trade Commission's competition bureau was made on the basis of a two page memorandum after less than a minute's deliberation by OMB Director Stockman."[23]

Ironically, the current critics of antitrust rely on the ideology of free markets. They object not to competition, they assert, but rather to the allegedly anticompetitive effect of the antitrust laws. Competition in their view, already is very intense and would continue to be so in the absence of antitrust; and where competition is not working effectively, the problem more likely than not is to be found in some anticompetitive government-imposed policy. There is also much loose talk about the need for larger American corporations so that they can compete more effectively in foreign markets.

Rather than attempt to review all the critics, I shall this evening examine in some detail the criticisms raised by Lester C. Thurow, Professor of Economics and Management at the Massachusetts Institute of Technology. I do so not out of personal malice. Professor Thurow has excellent academic credentials in his field of specialization, and I understand he is a pleasant and engaging young man.

I have chosen to discuss Thurow's views solely because nearly every recent criticism of antitrust appearing in the popular press and business magazines give prominent play to his ideas.[24] Thurow has never been one to limit his views to the classroom or to the professional literature. Although he has been commenting on antitrust policy for some time, he first moved to center stage by writing a piece for the *New York Times*, entitled, "Let's Abolish the Anti-trust Laws."[25] Since then his voice or written words are everywhere. This past February he was interviewed at length by the Executive Editor of *Dun's Review*. Dun's titled the interview: "Abolish the Antitrust Laws", with the long subtitle, "That's the View of Top Economist Lester Thurow, A Liberal Democrat, Who was an Economic Advisor to George McGovern and Jimmy Carter."[26]

Methinks that much of Thurow's popularity with the business press is explained by the contents of the subtitle. Nothing so warms the heart of the conservative as criticisms of antitrust by "liberal democrats" that were former advisors to presidents or contenders for high office.

To avoid mistaken criticism, I shall comment only on statements made directly by Thurow, thus avoiding error that comes from misquotations or misinterpretations by the occasional unsophisticated or careless journalist.

I begin by examining his views as revealed in his latest book, *The Zero-Sum Society*.[27] In his review of *Zero-Sum*, my colleague, Professor Robert J. Lampman, predicts that the book "will interest undergraduate students in economics as well as the general reader."[28] Were it restricted to the narrower audience of professional economists, Thurow's errors would cause less mischief.

As with other matters, Thurow's views on antitrust are unequivocal: "The antitrust approach has been a failure", says Thurow. "The costs it imposes far exceeds any benefits it brings."[29] He gives five reasons for these conclusions.

FREE TRADE MAKES ANTITRUST UNNECESSARY

In markets where international trade exists or could exist, "If they [the antitrust laws] do anything, they only serve to hinder U.S. competitors who must live by a code that their foreign competitors can ignore."[30] The assertion that U.S. antitrust laws disadvantage American corporations in international competition is an old chestnut used to discredit the laws for decades. Yet there is no persuasive empirical evidence, nor does Thurow cite any, to support the claim.

First, U.S. corporations generally are considerably bigger than their foreign competitors. Second, the main restraints on U.S. behavior in foreign markets are those forbidding participation in cartels. There are few, if any, respectable economic arguments that show how the inability to participate in a cartel reduces a company's ability to compete. On the contrary, the accepted economic wisdom, supported by considerable historical experience, is that firms outside a cartel have greater sales and profits than the cartel.

Thurow's other argument regarding international trade is that, "If competitive markets are desired, the appropriate policy should be to reduce barriers to free trade."[31] He cites as examples the actual trade barriers in steel and the proposed barriers in automobiles. Thurow's problem here is that he lacks historical perspective. We did have free trade in steel until the late 1960s. But, because competition was ineffective among domestic steel companies, they responded to imports by yielding market share rather than by cutting price. As a result, by the late 1960s they had surrendered such a large part of the market to foreign competitors that they placed in jeopardy the jobs of hundreds of

Footnotes at end of article.

thousands of workers and the capital of numerous investors. At this point the Johnson administration was persuaded to negotiate the first of a series of restraints on steel imports. The point here is that ineffective competition was the underlying reason for abandoning free trade in the first place.

I readily acknowledge that the antitrust laws have failed to keep the steel industry competitive enough, though they have accomplished much even here. But this is clear. The problem with the steel industry would not be improved by repealing the antitrust laws and permitting greater concentration, and certainly not by permitting complete cartelization as Thurow would permit in industries involved in international trade. The available evidence indicates that the largest steel companies have not been the most innovative and that greater size is not needed to make the leaders more efficient. Moreover, with or without free trade, buyers in Mid-America are totally dependent on domestic steel companies when buying many products and are protected only by competition among domestic sellers. Thus, free trade often promises much more than it delivers, and clearly merely being in favor of it in principle is not reason enough to warrant abandoning concern with competition among domestic competitors. As Frank Knight said many years ago, the free traders win the debates but the protectionists win the elections.

MONOPOLY FOR BREAKFAST?

Thurow next comes to the defense of monopoly by arguing that the general rise in income tends to greatly increase the relevant market in which firms compete. Most goods people buy today are not "physiological necessities but luxuries that could be substituted by other goods . . ." [32] The person considering the purchase of a Rolls Royce may substitute for it "a swimming pool, a summer home, or a wide variety of products.' In Thurow's economic world all of these products are in the same market, so even if Rolls Royce has a monopoly it is not in a position to exploit it. Thurow then proceeds to use this economic argument to attack one of his favorite targets for ridicule, the FTC's case challenging the monopoly power of the leading makers of dry breakfast cereals. Thurow's defense of the industry exceeds in zeal—if not in economic rigor—that of the economists employed to defend the industry in court, e.g., J. Fred Weston, Harold Demsetz, Lester Telser, Jesse Markham and a gaggle of others.

Thurow concedes that a few sellers have power over the price of branded cereals. But this poses no problem in his view, "Since any individual consumer can, if he chooses, buy no-name brand corn flakes at a much lower price, the brand names must be yielding some psychic utility or brand-name corn flakes would not be sold." [33] Acknowledging that this "psychic utility" likely was created by advertising, Thurow asks, "so what?" After all, "most wants have been determined by some . . . form of advertising." And while this may lead some consumers to make "silly decisions," the government has no business stopping "people from making silly decisions that do not affect anyone but themselves." If one were to pursue similar logic on the subject of income distribution, an area in which Thurow professes expertise, one might reason that market failures that distorted income distribution were not the public's business so long as the resulting distortion created by say, advertising, affected only the individuals misled by it. It is generally acknowledged that the food purchase decisions of the poor are more often distorted by advertising than are the decisions of the economically more fortunate. But Thurow's compassion for the poor evidently does not extend to situations where advertising misleads them into paying enormous monopoly overcharges; they are being justly punished for making "silly" purchase decisions.

This naive defense of advertising-created monopoly power is almost enough to make a "Chicago School" economist blush. Indeed, Thurow himself evidently is not entirely satisfied, for he proceeds to build other defenses for the industry. But instead of setting things aright, he merely falls into new errors.

He considers the case where consumers do not have a lower price alternative to a powerful brand of corn flakes. Not to worry here either says Thurow: "if the brand premium gets too large, others can easily enter the no-name brand corn flakes market." After all, he sees no patent or other significant entry barriers. (He conveniently ignores the relevant entry barriers: trademarks of established brands, the huge promotion and advertising costs of launching new brands, and the difficulty of getting shelf space because of brand proliferation). Of course, the very fact that branded corn flakes typically command a 20 percent premium over no-name brands is compelling evidence to most industrial organization economists that there exists enormous barriers protecting the established brands. Thurow also is less than fair with his readers in selecting corn flakes as his example, since they, puffed wheat and puffed rice are about the only cereal brands available under private label. Indeed all private label brands of cereal make up less than 4 percent of total dry breakfast cereals. Markups on other dry cereals are considerably greater than on corn flakes. For example, Kellogg's Sugar Frosted Flakes are essentially corn flakes with sugar added. Scherer [34] reports that after adjusting for the added sugar costs, Sugar Frosted Flakes prices are 16 percent more than Kelloggs Corn Flakes, which in turn sell for 20 percent more than private label corn flakes.

Thurow defends these high premiums on the grounds that consumers are better off because their psychic utility has been enhanced by the amount of the premium. This is the kind of silly reasoning that gives economists a bad name among people of common sense. The prices consumers pay in these circumstances are determined by the market power of sellers rooted in oligopoly and product differentiation created largely by advertising. Merely because some consumers are willing to pay the price asked does not automatically justify that price. Many consumers prefer "2 percent" or "skim" milk to ordinary milk. And doubtless many would be willing to pay a premium for it although its costs are less than for milk with higher butter-fat content. The reason they pay less is that competition forces prices to reflect cost differences. This is the way prices behave in a market where competition is working. All this Thurow ignores.

Thurow closes his defense of breakfast cereal pricing by beseeching his readers to not fear even if cereal companies monopolize cereal sales. Even in this worst possible case the consumer is protected because "there are still a great deal of other breakfast alternatives (bacon and eggs, no breakfast). These other products make the market a competitive market even if there is no competition within the dry cereals business." [35]

Now, this is really too much. True, often substitute products place limits on the holders of market power. And one must be tolerant of laymen who conjure up all sorts of silly examples of substitutes that protect consumers against monopoly prices. But surely the American Economic Association should expect better of its members.

The computed cross elasticity of demand between breakfast cereals and eggs is .01.[36] As all of you bright undergraduates know, this means that a 100 percent increase in the price of breakfast cereals will result in a 1 percent increase in the consumption of eggs. I doubt if the cross elasticity of demand between cereals and bacon is any higher. Thurow's other alternative for curbing the power of a cereal monopolist, namely to not eat breakfast, sounds like Marie Antoinette's advice to the poor of France, "let them eat cake." Many Americans may go without breakfast, but their doing so has not curbed the power of the cereal companies. The simple fact is that 40 percent of consumers spend over 25 percent of their income on food and 20 percent of consumers spend over 33 percent. Despite the affluence Professor Thurow sees all about him, most Americans are not indifferent to the billions of dollars in monopoly overcharges incorporated in their food bills.[37]

CONGLOMERATES MAKE ANTITRUST LAWS UNNECESSARY

Another phenomenon of modern capitalism dear to Thurow's heart is the huge conglomerate enterprise. It is not to be condemned but embraced because it so enhances competition as to make the antitrust laws unnecessary because "monopoly rents are inherently limited in an economy full of large conglomerate firms." [38]

This is so, says Thurow, because conglomerates are ever ready to enter oligopolistic industries where firms earn high profits: "Excessive rates of return attract competitors, and potential competitors have the ability to enter *all* those markets that are not natural monopolies." [39] Surely no serious student of industrial structure, much less the man of industry, can take this assertion seriously. And Thurow offers not one shred of evidence to support his assertion. In fact, he contradicts the views he expressed in an earlier work, *Generating Inequality* (1975). In explaining why firms in low-profit industries do not invest in high-profit industries, Thurow said in 1975, "Barriers to entry are often high, and managers often do not have the specialized knowledge necessary to make profits in another industry. The existence of high profits in the cosmetics industry, for example, does not mean that iron and steel executives could earn profits there." [40]

Economists still differ over the competitive significance of growing industrial conglomeration. But none can ignore the growing evidence that continuing mergers among large firms are eliminating more and more potential competitors. Nor do conglomerates have a good track record of significant *de novo* entry in highly concentrated industries, e.g., cereals, soft drinks, etc.

Finally, growing industrial conglomeration tends to dull the incentive for large conglomerates to enter one another's domains, recognizing that to do so is to invite hostile retaliation elsewhere.[41] I realize mine is still a minority view on this aspect of conglomerates. Many economists are blind to the problem because they ignore the available evidence and do not seek out evidence of their own. For believers and unbelievers alike, I suggest reading the intriguing story of how AT&T and IBM have avoided direct competition for years because each believed it had more to gain from avoiding competition with the other than engaging in it.[42]

ANTITRUST COSTS EXCEED THEIR BENEFITS

Thurow next argues that "it is not obvious that anything of economic value is accomplished even if an antitrust case is won by the government." [43] As usual he chooses his own ground, in this instance, his argument rests almost exclusively on the IBM case—as he interprets it.

Thurow first supposes that if the government were to win the case, IBM might be broken into three or four firms. So what, he exclaims! "By now we should have enough experience to know that a three or four firm oligopoly does not act noticeably different

Footnotes at end of article.

from a one-firm monopoly faced with potential competition (the Japanese) . . ."

No so. Most industrial organization economists, even those of a Chicago view, believe there is a significant difference. Also, Thurow's arithmetic is faulty. If IBM were broken up, the total number of U.S. mainframe computer manufacturers would be ten or more. And equally important, were IBM to lose its dominant position, entry would be easier and existing firms could compete more effectively, especially since appropriate relief would also call for restraint on predatory conduct.

The truth, of course, is that neither Thurow, I, nor anyone else knows what relief will occur if the government wins. My candid opinion is that at best the new Assistant Attorney General for Antitrust, William Baxter, will end the case with an innocuous consent agreement, or worse still abandon the case. But should this come to pass, it will not demonstrate any inherent defect in antitrust but a manifestation of the anti-antitrust movement's success in placing in high office persons who do not believe in much current antitrust doctrine.

Thurow also glibly asserts that any tampering with IBM's dominant position will undermine its efficiency, thereby giving aid and comfort only to our enemies, the foreign computer makers. This is another unsupported assertion for which there is much contrary evidence.[44]

Although Thurow concedes IBM's "dominant position" permits it to earn handsome profits, not to worry, because "this is not to say that it has been able to extract *crippling* monopoly rents from computer customers." This comment sheds much light on Thurow's value judgments concerning what constitute excessive profits. He apparently would tolerate all but those that are so excessive as to "cripple" consumers. This is like telling the thief he may commit grand larceny so long as he does not maim his victim.

After his *tour de force* demonstrating that antitrust provides no benefits, Thurow condemns the laws enforcement "diverts scarce resources from the real problem, which is productivity." [45]

Thurow again turns to the IBM case as a "perfect" example of this waste of scarce resources. Economists in the IBM case, as Thurow understands it, wasted numerous resources debating over what constituted the relevant market in which to measure IBM's market power. He says that "if the market is large mainframe computers, then IBM's got 98% of it . . . On the other hand, if IBM is in the office equipment market, then the company has a small share of that market. So all of the testimony revolves around such issues as whether a typewriter is the same thing as a computer. Well, that's just a silly issue . . ." [46]

Silly indeed! So silly that I wonder where in the world Thurow got his unworldly impressions as to what the case is all about. True, relevant market is one important issue. But never did the government assert, nor did any economist testify, that IBM had 98 percent of *any* market. And even though some IBM economists engaged in flights of fancy in defining the breadth of the relevant market, none ever went so far as to include typewriters.

Thurow's unfamiliarity with actual cases has never prevented him from drawing important conclusions about antitrust matters. In response to the question of whether he could think of a single antitrust case that had been good for the economy he first replied, "I can't think of any off hand." But on reflection he cited the "Brown Shoe machinery case." He said the company involved "eventually fell on hard times and was merged out of existence. In a sense the government destroyed the company. But I don't think that's the purpose of the antitrust laws." [47]

Students of antitrust doubtless will be puzzled by this example, since there never was such a case. Apparently Thurow got the famous *Brown Shoe* case, involving Section 7 of the Clayton Act, confused with the famous *United Shoe Machinery* case, involving the Sherman Act. Both are precedent setting cases. But there is no basis for Thurow's statement that the government's action caused the demise of either Brown Shoe or United Shoe Machinery. Both were ordered to divest certain properties. But the divested properties are still alive and well. Admit it, Lester, you never seriously studied carefully a single antitrust case.

NONPRICE COMPETITION TO THE RESCUE

Thurow's final objection to the antitrust laws is their preoccupation with price competition. Reminiscent of the "new Competition" literature of the 1950s, Thurow argues that "price is clearly only one of the many competitive weapons (advertising, product quality, and so forth) and in many areas not the most useful or used weapon." [48] True enough. But Thurow ignores two key points. First, if a firm is shielded from price competition, often the same shields protect it from other forms of competition. Second, some other forms of competitive rivalry, especially advertising, may be destructive of competition because they erect entry barriers and inflate costs. But Thurow dismisses this possibility by appeal to the standard *laissez-faire* rationalization that however a corporation chooses to compete must be in the public interest because private decision-makers can be trusted to choose that which is best. As he sees it, "When industries do not engage in price competition they do so for the perfectly good reason [that] it simply isn't the most efficient way to compete." [49]

Now you have heard it all: Thurow's five reasons why we should abolish the antitrust laws. He asks his readers to accept his teaching on faith; he cites no authority for any of his assertions.

THE THUROW ANTITRUST ACT OF 1980

Do not misunderstand me. Antitrust does have a place in his Zero-Sum Society. His antitrust act would consist of two basic propositions:

The first would be a ban on predatory pricing . . . The second would be a ban on explicit cartels that share either markets or profits. Firms can grow by driving competitors out of business or by absorbing them, but they cannot agree not to compete with each other." [50]

There it is, "The Thurow Antitrust Act of 1980," clear, concise, and inconsistent. It would prohibit price fixing among all the firms in an industry, yet it would permit all firms in an industry to merge and form a monopoly. Apparently recognizing belatedly this inconsistency, Thurow is now willing to drop his rule against price fixing. When Dun's Review asked his views on price fixing, Thurow replied, "I don't think there's really very much of it going on." [51] When he then was asked whether he would "scrub the laws against price fixing too," he replied:

"That's right. But Congress would be standing by ready to write a new statute if a rash of price fixing took place. But my hunch is that it probably wouldn't be necessary." [52]

Evidently Thurow is unfamiliar with the literally hundreds of U.S. corporations that have been indicted for price fixing in recent years, or the rich historical literature documenting the propensity of businesses to engage in elaborate and pervasive price fixing schemes in nations without laws prohibiting such behavior. He even seems to have forgotten the words of his intellectual mentor, Adam Smith, who warned over 200 years ago that "people of the same trade seldom meet together, even for merriment and diversion, but the conversation ends in a conspiracy against the public in some contrivance to raise prices."

In sum, Thurow's case for repealing the antitrust laws rests on no more than his hunches, guesses, speculations, and erroneous interpretations of these laws.

After examining carefully Thurow's views, I think every fair minded person will agree that there really is much less to Thurow's ideas than first meets the eye. His are not the statements of a scholar or even a well informed layman. Most professors expect better of their studens in Economics 101.

THUROW'S EMPTY BOX

How to explain, then, the uncritical attention given Thurow's views? The answer is to be found in the anti-antitrust movement that is everywhere about us. All movements seek "respectable" spokesmen. When the movement has a conservative base, none is in greater demand than the liberal intellectual who embraces, in part at least, the conservative's creed. In this setting a man willing to lend his intellectual prestige to a movement and be embraced by it in return, need not necessarily know whereof he speaks. And he may gain the limelight and popular applause for a time by wrapping his ideas in an attractive package. All this it seems Lester Thurow has done. But, alas, after we remove the wrappings on Thurow's package, nothing remains but an empty box.

Thus ends my epistle on Lester C. Thurow. Some of you may legitimately ask, but is there anything in the antitrust box? If your patience permitted, I would gladly stay to answer at length, even at this late hour. I would begin with the confession that I have not been an uncritical champion of these laws or of the adequacy of their enforcement. These laws are imperfect instruments of social control. We must therefore continually appraise with open minds alternative means of ensuring that the enormous powers of the large modern corporation are used to serve the public good. But it is inconceivable to me that America would abandon the antitrust laws without putting in their place something far more substantial than the empty promise that their repeal will result in the rebirth of the world of Adam Smith.

These laws contain our only legal rules for bridling the modern corporation's enormous economic power in the marketplace. These laws' main purpose has always been to maintain, so far as possible, a decentralized economic system and to place some restraint on the use of economic power. Justice William O. Douglas put it well:

"Industrial power should be decentralized so that the fortunes of the people will not be dependent on the whim or caprice, the political prejudices, the emotional stability of a few self-appointed men. The fact that they are not vicious men but respectable men is irrelevant." [53]

Nor have the people given those in the vanguard of the anti-antitrust movement a mandate to return to a system of 19th century *laissez-faire* capitalism. Nor will the people tolerate such action, once the motives of the anti-antitrusters are more widely understood. There is today, much as in 1980, a feeling of unease and impotence in dealing with powerful corporations that, in the words of former ITT Chairman Harold Geneen, "have become the primary custodians of making our entire system work." This quite naturally raises questions about the legitimacy of their custodianship. A recent *Fortune* article reported that many Americans are questioning the legitimacy of the large corporation. *Fortune* found that 51 percent of Americans with incomes of $25,000 or more believed that "big business is becoming a threat to the American way of life." [54] The fact that a majority of the most

Footnotes at end of article.

fortunate beneficiaries of American capitalism hold this view should give pause to those who believe there exists no real concern among the people on these matters. Many businessmen, too, fear that unrestrained capitalism may destroy itself. A longtime student of our system, A. C. Hoffman, retired vice president of Kraft, Inc., observed: "At the present rate at which American industry is being merged and consolidated, we will indeed reach that ultimate stage of monopoly *capitalism* which many predicted." [55]

I have expressed these concerns this evening not to attack our system but to urge repudiation of false prophets who would destroy it in the name of saving it. My mentor, the late George W. Stocking, urged in a presidential address that "capitalism must be saved from its friends".[56] Never has that advice been more sound than today.

[15] H. R. Lurie, "Mergers Under the Burger Court: An Anti-antitrust Bias and Its Implications," *Villanova Law Rev.*, January, 1978.

[16] For example, The National Chamber financed a study of conglomerate mergers by Jesse M. Markham that was published as J. W. Markham, *Conglomerate Enterprise and Public Policy*, Boston, Harvard University, 1973.

A fascinating confidential memorandum was written for the Chamber by Supreme Court Justice Lewis F. Powell, Jr., "Attack on American Free Enterprise," August 23, 1971, shortly before his appointment to the Supreme Court. The memorandum was addressed to Eugene B. Syndor, Jr., Chairman, Education Committee, U.S. Chamber of Commerce. The memorandum is a blueprint for attacking, and perhaps silencing, those critical of any aspect of capitalism. It goes so far as to recommend that the Chamber establish a body of scholars who would review all textbooks in economics, sociology and political science so as to encourage authors, publishers, and users to "return to a more rational balance." He likewise perceived as the most "fundamental problem" the ideological imbalance of many faculties. "Correcting this is indeed a long-range and difficult project . . . This is a long road and not one for the faint hearted." *Ibid*, pp. 16, 17 and 19.

[19] This is not to imply that scholars publishing in the *Bell Journal* have compromised their intellectual principles by doing so. To me this is not a question of whether or not the *Journal* is tendentious. As a basic principle, scientific journals should not be sponsored by the very interests that are the subjects of inquiry. To me this seems self-evident, although many economists evidently feel otherwise. And not too surprisingly, a previous editor of the *Journal* has, publicly, taken exception to my views.

ARCHBISHOP JAMES HICKEY

Mr. METZENBAUM. Mr. President, I ask all to join me today in recognizing a truly inspirational leader in our society, Archbishop James Hickey.

Mr. President, Archbishop Hickey was named bishop of my hometown of Cleveland in 1974, so I was fortunate to have had a chance to get acquainted with him at that time. In Cleveland, Archbishop Hickley was an inspiration to the entire community with his intelligence, his compassion, and his understanding of the needs of his people and of the problems confronting our society.

Archbishop Hickey is quoted as saying that—

I tend to think of myself in terms of fulfilling a gift God gave me.

Indeed, Mr. President, he does that, everyday of his life, and regardless of our individual religion, we are all the better for it.

Mr. President, I ask unanimous consent to have printed in the RECORD the full text of the July 19 Washington Post Sunday magazine article regarding Archbishop Hickey.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

POWER IN THE KINGDOM

(By John M. Barry)

When James Hickey was 13 years old, he left his family. He left to become a priest. "I loved my mother," he says, "but I didn't miss her. She never understood that."

If leaving to become a priest at 13 was not

as unusual in the 1930s as it would be today. Hickey's comment marks an emotional detachment that seems odd. It also marks an absolute joining of the man to the Roman Catholic Church.

"Very rarely did I have doubts about becoming a priest," he says. "I have never had a crisis of faith." Even for an archbishop—last August he was named archbishop of Washington—that is unusual.

He is properly addressed as "Your Excellency," and some still bow to him, to kiss his ring. He is master of hundreds of millions of dollars worth of property, master of a complete school system, master of Catholic University, of priests, of nuns, of parishes, of buildings, of football teams.

But his demesne extends further. In the church sense of time, Hickey has just arrived in Washington, yet he has . . . influence. That influence has been felt—whether they know it or not, and whether they are among the archdiocese's 400,000 Catholics or not—by blacks in Anacostia and whites in Chevy Chase. They will feel it more in the future.

Hickey's influence extended into the last presidential administration—he met with Carter, with Secretary of State Edmund Muskie, with others, and named as one of his two special assistants Msgr. Geno Baroni, a Carter assistant secretary of housing and urban development. He has testified on Capitol Hill and met with congressional leaders.

Now his influence extends to the Reagan administration. Undersecretary of State James Buckley has had "several conversations" with him. Buckley says, "We try to keep him informed. He's met with [Deputy Secretary] Bill Clark a number of times."

All the meetings, with Carter, with congressmen, with Reagan officials, dealt with El Salvador. They were not ceremonial. Hickey's voice is listened to in the American church and in Rome, and the stance of the Catholic Church is critical to stability in Latin America. The State Department knows it.

"Hickey," says the Rev. Robert Drinan, the former congressman, "was effective, very, very effective on the Hill on El Salvador . . . He has aroused the American Catholic Church on this issue. A man, a non-Catholic who is very sophisticated politically, said to me that he feels certain that but for the Catholic Church we'd have Marines in El Salvador right now."

Before the Reagan administration went public with its Salvador policy, Buckley and Secretary of State Alexander Haig, both Catholics, and United Nations Ambassador Jeane Kirkpatrick and their staffs briefed Hickey and other church leaders.

Baron says, "They invited us. We didn't ask them . . . You could tell they were very interested in making some impression on him."

James Hickey is a player on the highest level.

"The spirit of evil is a reality in the world," Hickey says. "'The Devil' is by no means a rhetorical expression. He is a fallen angel with all the power and force of an angel. I think people who allow the force to work through them become evil." And they, and Satan, must be struggled against.

Hickey's struggle is personal but his aroma is institutional. There is a legal concept called "corporation sole." It means the archbishop has absolute control over the assets of his diocese, and point out a dialectic all bishops face—a justaxposition of the corporation and the individual, intellect and emotion, freedom and submission.

Reminding a group of nuns celebrating the 25th and 50th anniversaries of their vows, Hickey says, "You did not choose God. God chose you."

His faith that he has been chosen makes him certain and strong. But it also brings up the question of free will, of surrendering the self. He says surrender is "an apt and often-used concept, but I never thought of it that way. To me, I hate to use the word 'fulfilled,' but that's what I feel. I tend to think of myself in terms of fulfilling a gift God gave me, not as surrendering."

The church is feudal. In creating order out of chaos, feudalism, and the church, made obedience a great good; the church is hierarchic, not bureaucratic. It is organic: the arm is connected to the shoulder, the shoulder to the neck, the neck to the head. Here, it is Hickey who is the head. It is Hickey who is obeyed. He is the church and the church is he. And he can operate where he is not the head.

"He's a very sophisticated man with a lot of experience in Rome," Msgr. George Higgins points out, comparing him to a Washington insider. "It's one thing to read in the paper a cabinet secretary said so and so. It's another for Clark Clifford to go in and see him."

When Archbishop Oscar Arnulfo Romero was murdered, the Vatican responded less than vigorously, reflecting the fact that several Salvadoran bishops had opposed Romero outright and only one attended his funeral. But after a lengthy visit by Hickey, the Vatican reversed itself this March and strongly endorsed Romero's actions. Mario Paredas, director of the Northeast Catholic Hispanic Center in New York, says, "If there is no connection, indeed there is a tremendous coincidence."

Hickey is the archetypal powerful bishop. Spellman of New York, Cushing of Boston and a few others have had a major presence regionally and in some cases nationally. But they represented the old church, protector of the status quo. Hickey is the first of this ilk—a powerful bishop—in Washington and he represents the church of change.

That change came out of the Second Vatican Council in the early 1960s. Hickey attended as a peritus (expert), and as his bishop's proxy. Vatican II focused concerns on human dignity, on the poor, on this world. That focus has led the church to challenge the status quo more than it has in centuries.

Vatican II did not change everything. Thinking of concerns such as priestly celibacy and birth control, the Rev. Francis X. Murphy, a Washington priest who's a longtime observer of the international church, can still say of Hickey, "Make no mistake, he's a conservative." But it changed much.

Sixty years old, white-haired, a hint of fleshiness softening his strong jaw, Hickey is not a man who radiates force and will. A patrician, a gourmet cook, a man who delights in art and classical music—it's easy to understand the assistant who describes him as "very Roman."

He laughs gently and seems at first even passive. But his eyes, from behind glasses, are alert, and one realizes that what seems passivity is instead absorption. It is as though what he absorbs, he understands, and cannot despise.

Throughout his home on Rockwood Parkway are remembrances. His mother's old cookie jar—he jokes about its survival—sits in an étagère. He handles his bishop's ring fondly. Hickey says, "This was Bishop Woznicki's"—Stephen Woznicki, former bishop of Saginaw, Mich., and Hickey's mentor—"I was his secretary, lived with him for nine years. He gave me his ring."

The only time of the day Hickey is alone is during his combination walk-jog at 6:30 each morning. Much of the rest of the time he listens and absorbs. His style is that of the lamb.

That is not weakness. He soaks up attacks. Kind of like Muhammad Ali lying on the ropes while his enemy pounds away at him, Ali enduring while the enemy grows exhausted. Of course this is an oversimplification. Hickey's style resembles Ali's in another way—he knows when to strike.

To Hickey abortion is evil, but so can be economics, so is racism and so is American military involvement in El Salavador. So he fights.

He fights in small ways, attending to detail, such as laying plans to consolidate all diocesan offices outside downtown and lease out the current offices in the high-rent Connecticut Avenue area. He plans to sell his house, a plush establishment bought by the previous archbishop that boasts a maid and a handyman, and provides space for frequent guests and two priests who live with him. He will live behind the new offices.

The Rev. Ed Braxton, Hickey's theological adviser, says, "Not that it's a palace, and no criticism of Cardinal Baum—" Hickey's predecessor—"but in light of the poverty here, why should he live in such a house?"

Hickey fights in larger ways too. He has had real power. In Cleveland, a city of a million Catholics, an observer says, "The Catholic bishop here, and the archbishop in Boston and in a few other places, is one of the four or five most significant people in the city in influencing how people act, even though they may hate his guts."

Court-ordered busing ignited the city. The mayor said nothing. In Congress, Cleveland Democrats Ron Mottl and Mary Rose Oakar backed an anti-busing bill, and Oakar called the diocesan position supporting the busing "hypocritical." As Boston had before, Cleveland seethed and violence threatened.

Hickey fought to stay on top of events. He went into parish after parish and condemned racism, he arranged the appointment of a black auxiliary bishop, he refused to allow white transfers into parochial schools to avoid the court order, he led marches.

Harry Fagan, the diocesan community affairs director, says, "I want to describe him as being very savvy without being a wheeler-dealer. In busing he cut the issue in a way you couldn't really oppose, a way you could back to the wall—that no kid should get hurt."

The explosion never came. No kid got hurt.

"Baum," says a priest who knows both well, "lived in a different kind of world. Whereas Hickey wanted to [be active]. He relished it. With a controversial issue he'll fight, while Baum would hope it wouldn't come up . . . The city will be aware he's here and aware he's more interested in poor people than wealthy people."

In Cleveland Hickey inherited missions that the diocese ran in El Salvador. Often he visited there himself. One visit has burned itself into his mind.

It is March 30, 1980, the funeral of Hickey's friend, Archbishop Romero, victim of a modern murder in a cathedral. Hickey is one of three men formally representing the American church in attendance. The cathedral sits at the head of a huge square.

The Rev. Al Winters, who accompanied Hickey, recalls: "The square was absolutely jammed. I heard figures from 30,000 to 100,000. I saw a tree actually pulled over by the weight of people sitting in it. . . . At the foot of the cathedral was an iron gate that was closed.

"The sun was terribly hot. When the homily started the archbishop moved into the cathedral. . . . Then this explosion! Instant panic! The Salvadoran people were screaming and yelling! I heard gunshots. There was another explosion . . . .

"Thousands rushed the cathedral. There were so, so many people. Many of the deaths were of asphyxiation. A young girl 16 or 17 threw herself across me. I couldn't see the archbishop . . . Then I did. He had been pushed up against the wall. There were more gunshots. They told us to get down. People

were dying around him. He was trying to minister to them as best he could."

Forty people died at the funeral.

"There is such a doctrinaire obsession and distance from reality in that violence," Hickey says. There is sadness in his voice, and anger.

Two of the four American missionaries murdered last December had been under Hickey's jurisdiction; one had extended her time there because he specifically asked her to stay. Hickey had ridden with them in their van, the van in which the four were killed.

Administration statements about them—particularly Kirkpatrick's claim that they were involved in politics—anger him.

"That's simply not true," he says wearily. "I don't think it's useful or helps anyone, our government or anyone else, to say they were political activists when they were not."

Hickey needs no State Department sources on El Salvador.

But all he does about El Salvador is personal. Though the weight of the institution behind him gives him weight, still it is he acting. More complex is what he does within the corporal institution of the church, an institution that he is remaking in his image. Some believe that Hickey has become a corporation in fact as well as in name. It saddens them. Others say that perception is wrong.

But one thing is clear. Always he knew what he wanted: to love God and oppose Satan.

The son of a dentist in Midland, Mich., Hickey grew up comfortably. He was always studious and has always been a leader. When 24-year-old Olin Murdick was considering the priesthood, he went to Hickey, then 17, for guidance.

Even then Hickey was a doer, on a fast track, and an intellectual. Murdick recalls, "He was a book-lover, very much a student, with a great deal of zeal, religious zeal . . . He made me realize that proclaiming the gospel was still an exciting thing to do."

Hickey's first job as a priest grew out not of passion, but intellect. While in the seminary he had written an article, "The Modern Proletariat," in which he talked of migrant Mexican farm workers in Michigan. His bishop read it and told him to set up a ministry to them.

That program went well. The bishop sent the obviously bright and committed Hickey to Rome, where he earned doctorates in theology and canon law. On his return a new bishop made him his secretary and assistant chancellor of the Diocese of Saginaw. Hickey was right on track, and among the fairest of the fair-haired boys.

In 1967, he became auxiliary bishop. Two years later he returned to Rome as rector of the North American College, a seminary for U.S. priests. Soon he became president of an association of Roman seminaries. Then, in 1974, he was named bishop of Cleveland.

Hickey knew what he wanted to do in Cleveland: make his diocese reflect Vatican II, to stand for human dignity, to be a force in the city. But he had never been a parish priest. His experience was as a thinker, an administrator. So his effort to be pastoral was systematic. He is organized: the diocese would be organized. He acts: the diocese would act. The diocese would be his reflection.

He set up secretariats for special concerns, named vicars for geographic areas, laid out flow charts. No autocrat, he made sure information flowed up as well as decisions down, delegated authority and supported people in showdowns against outsiders, including the mayor—but kept all answerable to him. He became the master bureaucrat, the ultimate administrator, and more than that, the feudal liege lord. That was most evident in the busing crisis.

"He had something to say even when nobody called him," snorts anti-busing activist Norbert Denneri.

The Rev. Donald Jacobs, a black minister who heads the Inter-Faith Council of Cleveland, says of the busing crisis, "The archbishop played the major role."

As leadership has moved Hickey away from close pastoral ties, he has tried to listen more attentively. In Washington, every priest will have or has had a lengthy private meeting in which Hickey seeks to learn, to know both the priest and the parish and to evaluate them. One priest commented, "He's very friendly, and when you're with him it's like you're the only person in the world. But when he's through, you're out of the office before you know what's happening."

Harry Fagan worked closely with him for years but says he does not really know him: "When you talk with him you're not dealing with small talk. You're talking about the issue . . . He knows what he's talking about and if you don't, you're crazy to be there."

"He likes to be in situations where he can control what happens," says a man who had regular contact with Hickey in Cleveland. "He appears to be more open than he is. He made statements [that] he was open but when you tried to get to him he wasn't available. The secretariats kind of kept you away from him. He kept himself fairly protected."

And Jacobs, who warmly supports him, says, "He's a formal type of guy, never one to let down too much in public. I think that's helpful. There are people who take advantage of those who relax."

But Hickey doesn't relax. Nothing happens by mistake. His sister Marie declined an interview, saying, "Jim doesn't like me to talk to reporters . . . Once before I said something out of turn in Cleveland and I don't want to again."

The day the pope was shot Hickey gave a press conference. Braxton sat just behind the press, listening carefully.

"That's part of my job," he explained, "to monitor, to make sure he's saying what he wants to say."

When the press asked harmless questions—Was the shooting a conspiracy? Where was he when he heard?—Braxton said, "I thought they would ask about El Salvador, terrorism, the church and politics."

So Braxton quickly relaxed, deciding that, "He's not going to volunteer anything for them."

Here Hickey is just beginning. He works hard, 14- and 16-hour days, for his purpose. Yet work does not drain him. It gives him strength. Rest weakens him; rest keeps him from fulfilling his vision of God's will.

First, he set up his command structure, assembling a top staff, almost a spectacular one. Hickey has two special assistants. Braxton is his theologian; Hickey may be the only bishop in the country with a full-time personal theological adviser.

When in Cleveland Hickey plucked Braxton from the faculty of the Harvard Divinity School. He uses him to stretch his mind, not only with theology. When Hickey came to Washington, he named Baroni, the former HUD assistant secretary, his other special assistant. Beyond Baroni's personal abilities, his uses in this city are obvious.

A month ago Hickey named more staff. The Rev. Raymond Kemp, a '60s activist and former District school board member, will leave his Washington parish to head the parish life and ministry office. John Carr, the executive director of Carter's White House Family Conference and a one-time top Hill aide, will head social concerns. Katherine Cole, a black college professor, will run all diocesan educational programs—a layperson in that job is unusual; she replaces a monsignor.

"He's opening the windows and letting in fresh air," says one priest.

This diocese will soon reflect Hickey totally. If that creates tensions with traditionalists who think the church should tend to Heaven and less to this world, or with progressives who want teachings on birth control or homosexuals changed, so be it. Hickey will not confront, but he will have his way.

Hickey is at the studios of WRC-TV to broadcast a charity appeal. He arrives 15 minutes before the show and jokingly introduces an assistant as "my animated alarm clock." The assistant winces. Even as a joke, to be seen as a thing, a function, is not pleasant.

Hickey's staff has handled all details. They inundate him with papers and tell him about children who will be on the program with him. Quickly he pins down a few details, makes notes, then asks: "If I ask them [the children] questions, are they prepared to answer?"

But things are not smooth and he is not happy. He looks at a script he is supposed to read live, with small children nearby, and says, "This is not the way to do it."

Never does he raise his voice, but a few moments later he is closeted with a technician and a microphone in a soundproof booth.

This is not the way to do it. That is the strongest statement he makes to his staff ever, about anything. But they get the point. He does not show anger. His reactions are professional—asking how does this affect the situation?—not personal. Sometimes he seems a machine.

To know this man, know his work. He is organized, softspoken, but everything—everything—is directed.

On Thursdays staff meetings are held. Sister M. Gerald Hartney, possessor of an M.B.A., comptroller of the archdiocese, says, "We submit our agenda on Monday with the length of time we want to talk. He puts himself last. If the time runs out on the meeting, it runs out on him. I've never seen him stop anyone, but you know very well if you're getting long-winded you're taking time from him."

Things move. For years there had been talk about opening a place for homeless women. Hickey liked the idea and wanted it opened within three months. No site had been picked, no plans made for plumbing, for electricity. In every staff meeting Hickey asked, "What have you done about the home?" Mount Carmel House opened ahead of schedule at 471 G Place NW.

There have been other changes as well, from planning a comprehensive drug program to bringing Nobel Peace laureate Mother Teresa Bojaxhiu to Anacostia. Things move all right.

But there is a price. Father Winters says of Hickey: "You're dealing with a bishop. Like an executive. He's there and you're here. He gives you a job and you do it."

To get jobs done in Washington, Hickey has found a guide—Baroni.

From a steel town in Pennsylvania, Baroni is an earthy man, gravelly of voice and craggy of face, wide-shouldered and heavy. Seated at his desk, behind an award given him by HUD Secretary Moon Landrieu, Baroni relaxes, yet seems to be sizing up his listener. He jokes of having had his own bureaucracy at HUD, with eight deputies and three special assistants. Now he shares a secretary with Braxton.

His office, like all the others in the archdiocesan headquarters on Rhode Island Avenue NW, is spare. The wall is bare except for one crucifix. The desk is cluttered. There is a sense of the Washington hardball-player about him, and a sense of the priest too—of that part of the church that does not always move in a straight line. Like Hickey, he does things.

"Geno," says a former government colleague and fellow-activist. "has learned to play the Washington game and learned it quite well. Though I think he gets the repu-

tation for being more Machiavellian than he is."

Before his appointment Baroni was already well known in the archdiocese. He has been an activist since the early 1960s, and worked with young Stokely Carmichael, among others. His appointment sent a clear message to every priest here.

The phone rings. It is someone asking how to get money out of a rich donor for a community project. Baroni laughs and says, "Just go there with a priest and a picture of the Sacred Heart and you'll get it." The caller is a member of Congress.

Auxiliary Bishop Thomas Gumbleton of Detroit says of Baroni's appointment, "That's very typical of Hickey. He would recognize the need to have someone like that close to him."

Baroni arranged the meeting of Carter, Hickey and Bishop Thomas Kelley, the secretary of the U.S. Catholic Conference, "to establish a precedent," Baroni says, of access to the president. He coordinated Hickey's congressional testimony, and makes the kind of connections here that Hickey makes for himself in Rome.

Not that Hickey needs Baroni or anyone else to get things done. If Baroni were not available, Hickey would find a way.

Yet, all that—the institution, the maneuvering—is dross. Hickey says, "You can have all the great diocesan programs you want but without the parishes you have nothing."

There are two reasons for that. The parishes make up most of the body of the church, and more elemental than that, the message of the church is spread through the parishes. He says, "The most important thing to say is that God loves you. He loves you, individually, as a person. He loves you concretely, through the sacraments, not just through an emotional moment."

God loves you, Hickey says. *Not just emotionally but concretely through the sacraments.* It is not just love but the firmness of ritual. Hickey represents both.

An illustration: Sunday mass. The stained-glass sparkles in the sun. A priest looks out from his pulpit on a sea of faces that look up at him, wait for him, seek guidance from him. What does the priest feel then? Is it responsibility? Ego? Power? The Rev. Joaquin Bazan, the pastor of the Shrine of the Sacred Heart Church in Mount Pleasant, laughs at the suggestion, then says, "I feel love. Not power, love."

Hickey says, "I see people who have come to hear the Lord's word. I see people there to share ideas. It's an important moment of communication, a grace-filled moment important for them and for me."

It is a statement by a man trying to fit the whole church into a sentence, an impossible feat. Hickey wants to be pastoral but he is no simple pastor.

Hickey cannot easily be defined. Views of him differ. Only one thing is beyond disagreement: his faith is everything. He does not doubt.

From the time he left his family at 13, and didn't miss them, he has fulfilled himself in the church. He has no memories of high school cheerleaders and football games, of dating. Since he was 13, everything he has touched has been associated with the church. His isolation is more complete by far than that of the parish priest. Everything Hickey thinks or does is subsumed by his vision of the church and of God.

But God is more than enough for a man; He is too much. What about man?

Hickey is often seen as distant—friendly, yes, but protected by layers of administration and a cool intellect.

Gumbleton says, "Hickey would reason that something was the right thing to do and therefore let's do it, but he wouldn't get personally involved in an emotional sense."

"He is more a thinker—not a scholar but a thinker—than most American bishops," a priest close to him observes. And to think is to be alone. A certain isolation is required, a distance.

"Perhaps it's one of his faults, that he does come across as distant," says Winters, who has traveled often with Hickey.

Hickey was not always that way. The Rev. Paul Baca, an Arizona priest, remembers that first project for migrant workers. As a seminary student he came from Denver to help Hickey, who spoke little Spanish then.

Baca says, "There was a lot of hostility then, to us and to the workers. This was 1946, '47. I was one place and the parish priest barely tolerated me. He (Hickey) just smoothed that over like you wouldn't believe. He made the priest feel that he was doing his part for working with us a week. Then he apologized to me and got me out, to a place where I could actually do something."

That sounds typical of the "savvy" Hickey. But Baca also remembers, "He lent us his car when our jalopy went bust and he went afoot himself looking for rides. He was a bridge too, to us and everyone. It was like a family."

That does not sound like a man who calls an assistant an "animated alarm clock." The years have pulled Hickey away from that family.

It is ironic therefore that his connection with the poor, a connection which began as an intellectual exercise—the article he wrote as a seminarian—pulls him back, grounds him to the earth. As Hickey has risen, it has been his anchor.

Winters goes on to say, "I don't find him [distant]. With the Cleveland priests and nuns in Salvador he would relax. After we traveled I got to know him, I hate to use the phrase 'as a human being,' but I guess that's it."

"The tragedy of El Salvador," says Gumbleton, "brought out in Hickey a depth of feeling that maybe he didn't know he had."

In Hickey's home the walls of his private chapel are bare except for a crucifix, two tapestries and five newspaper clippings. All are from El Salvador. The clippings are in Spanish and include photos of an archbishop, two American missionaries and two altar boys. All five were murdered, Romero and the missionaries by rightists, the altar boys by leftists. Hickey is a man who has been close to violent death.

"It moved him," says Winters. "He sensed everything, he sensed all the more the pain, the poverty. . . . It moved him. Other things move him too. I know."

In Hickey's heart there is an ache. It is painful, but it is an ache he needs.

It is Wednesday, May 13. The pope has just been shot. The archbishop is sitting in the bishop's chair in St. Matthew's Cathedral as a special mass is celebrated. His head is down, he looks severe and worn and his body seems to sag. All that is unlike him. Then his body and face stiffen and he is firm, if grim. Is he thinking about the pope, whom he knows and who he says would prefer death to hiding behind a security wall? his good friend, Archbishop Romero, assassinated in his cathedral? The missionaries murdered in El Salvador?

And what do the others at this mass think, those who kneel below the pulpit? Others who include Haig, Speaker of the House Tip O'Neill, Labor Secretary Ray Donovan, National Security Council director Richard Allen. What is in all their hearts?

Earlier Hickey had been talking about Romero. "We were walking in the funeral procession," Hickey recalls. "I don't know where the music was coming from, but someone was playing the 'Unfinished Symphony.' I remember thinking how everything was unfinished. The unfinished symphony. He was shot before the mass finished. The funeral was unfinished. And of course his work was unfinished."

Earlier too he had talked of the shootings of Reagan and the pope as "just two examples of violence that bedevil our work."

He was angry when he said that. Angry. At the devil. At evil. At the lack of peace. And he was firm.

Mr. LEAHY. Mr. President, do I have any time remaining?

The PRESIDING OFFICER (Mr. HUMPHREY). Time for the Senator from Vermont has expired.

Mr. LEAHY. I yield to the Senator from West Virginia.

Mr. ROBERT C. BYRD. Mr. President, do I have an order?

The PRESIDING OFFICER. Under the previous order, the Senator from West Virginia has 15 minutes.

Mr. ROBERT C. BYRD. I thank the Chair.

May I ask the distinguished Senator from Vermont if he wishes to have some time?

Mr. LEAHY. I appreciate the offer of the distinguished Senator from West Virginia, but I have already made my statement .

Mr. ROBERT C. BYRD. Mr. President, I suggest the absence of a quorum on my time.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. BAKER. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER OF PROCEDURE

Mr. BAKER. Mr. President, May I inquire, are there special orders yet to be executed?

The PRESIDING OFFICER. There remains 10 minutes allocated to the Senator from West Virginia.

Mr. BAKER. Mr. President, may I inquire of the minority leader if he has need for his time under the special order?

Mr. ROBERT C. BYRD. Mr. President, I thank the majority leader. I do not.

Mr. BAKER. I thank the Senator.

ROUTINE MORNING BUSINESS

Mr. BAKER. Mr. President, I ask unanimous consent that there now be a period for the transaction of routine morning business, not to extend beyond the hour of 1:40 p.m., during which Senators may speak for not more than 10 minutes each.

The PRESIDING OFFICER. Without objection, it is so ordered.

ANNIVERSARY OF FIRST MOON LANDING

Mr. SCHMITT. Mr. President, another anniversary of the momentous events in the Nation's space program is upon us today, July 20. A dozen years ago, Neal Armstrong, Buzz Aldrin, and Michael Collins accomplished what history will record as one of the most momentous feats in the long history of mankind. With Neal, Buzz, and Mike as their agents, the men and women of Apollo

and the men and women of the United States put men on the Moon, and a few days later returned them safely to Earth, and accomplished therein the purpose set by President John Kennedy and the American people of doing so before the end of the decade of the sixties.

Mr. President, I think it is safe to say that history will record the occassion of the first landing on the Moon, the landing of Apollo 11 and the spaceship Eagle, as not only an accomplishment for the free men and women of the world, and for the United States in particular, but something that truly was done for the benefit of all mankind, something that not only offered but has delivered great benefits up until now.

However, I think also, Mr. President, it is safe to say that history will record that with that landing the momentum went out of the U.S. space program and we began to decelerate. Even in the process of deceleration we landed five more missions on the Moon and continued to gain a great deal of knowledge about that planet as well as about ourselves.

It is this Senator's belief that had we proceeded with a much steadier course, we could be 10 years advanced beyond where we are today in our conquest of space and the utilization of its vast resources for the betterment of free peoples throughout the world.

What might have happened in that 10 years? Well, we certainly could be in a position to better defend ourselves and peace and freedom, utilizing the perspective of space satellites and other capabilities that it provides. We could be exploiting the potential of a permanent base on the moon comparable to that of Little America in Antarctica. We could be in the process of designing that mission about which many young people think so much, the mission to Mars, the one that will lay the basis, I believe, for the transfer of the civilization of free men and women to another planet.

We could have a permanent space station in orbit around the Earth that would be utilizing the resources of weightlessness, of high vacuum, the unique perspective of the Earth, Sun, and stars. Clearly, 10 years in this day and age is a long time. That is the unfortunate legacy of the loss of national perspective that came with the first landing on the Moon. Now, Mr. President, we have a new technology in the process of being proved, the technology of the Space Shuttle, the Columbia. A technology is not a substitute for purpose, although it does give us the basis to accomplish purpose once we decide what it is.

This morning, in his confirmation hearings, the President's science adviser, Dr. George Keyworth, indicated that one of his first priorities as science adviser has already become the examination of the Nation's space program and its directions. It is my belief that in the not-too-distant future, we shall see a new statement of purpose by the Reagan administration for the utilization of our vast capabilities in the new ocean of space.

Mr. President, I hope it does not take another international crisis to spawn that statement of purpose. I hope that we can realize that it is something not only that is appropriate to do, but is something that we cannot avoid doing; that is, perpetuating the movement of our civilization and its facilities and its principles away from the Planet Earth into space and onto the surfaces of other planets.

WHAT DID WE LEARN ABOUT THE MOON?

Mr. President, often we are asked what did we accomplish, what did we learn from the efforts of the men and women of Apollo, in particular, from those efforts initiated 12 years ago this day by Armstrong, Aldrin, and Collins? It is rare that men of one time can anticipate what will be written of them and their deeds in another, future time.

With the exploration of the Moon, however, I believe that we can predict in outlines what the historians of 100, 500, or 1,000 years from now will say. They will say that in the history of technology, man, for the first time, made a major and practical increase in his ability to do things. More importantly, that increase in the ability to do those things came without war and without the threat of war; competition, yes, but not war.

They will say that in the history of civilizations, the first truly space-faring nation was the United States. They will note that that space-faring nation was the only nation of its times with both the power and idealism to protect the seed of human freedom, a seed carried to its shores by many peoples and now being carried by their progeny to the planets and the stars.

They will say that in the history of mankind, Apollo marked the first steps in our evolution into the universe, an evolution no longer limited by the infinitely slow rates of biological change, but now determined largely by the collective use of our technology and our desire.

Finally, the historians of the future will say that in the history of science, there was obtained for the first time, a first-order understanding of a second planet, a place in the solar system called the Moon.

Mr. President, what are the broad outlines of this understanding? How does it relate to our understanding of the Earth and our future on the Earth? In short, what did we learn from the Moon flights?

Mysterious events were taking place around our youthful Sun about 4.6 billion years ago. The debris left over from the birth of that Sun were combining in orderly ways, but by largely unknown processes, to form the planets and their moons.

The specific beginning of our Moon remains unclear, as is the case for all the bodies in the solar system; however, there now appears to be no reason to doubt that the beginning occurred about 4.6 billion years ago. In addition to the ages of rocks from the Moon, radioisotopic ages of many meteorites confirm this conclusion.

The rate at which new planets and information about the solar system is being provided by space investigations is astounding. It is almost certain that an internally consistent and probably correct theory for the origin of the solar system will appear in the not-too-distant future. However, it is the very rate at which we are learning new things and the vast detail available to us which now limit the possible theories, also presently has saturated the ability of scientists to come to agreements on these fundamental questions about the origin of the Sun and planets. A return to fundamental principles has begun, analyzed under the limits new data impose. Unfortunately, the first new, generally accepted theory for the origin and evolution of the solar system has not appeared, but the excitement that we soon will have such a theory is high.

With respect specifically to the Moon, we are reasonably confident from the concentration of elements and ratios of elements that the Moon and Earth formed at the same time in about the same part of the youthful solar system; however, the two planets evolved separately as planetlike bodies rotating around each other beginning as far back as we can study; that is, beginning about the time they formed 4.6 billion years ago.

The great difference in mass between the Moon and the Earth, and therefore much less gravity on the Moon—one-sixth that of Earth—resulted in the Moon starting out with less of the light and gaseous elements—hydrogen, carbon, nitrogen, sodium, and so forth—relative to the heavy elements. However, the ratios between the heavy elements—uranium, thorium, and so on—are the same in the Moon and the Earth, thus supporting the close family relationship between these two neighbors.

The great difference in the surface area of the Moon relative to its volume as compared to the Earth resulted in the young Moon cooling more rapidly and in its later rejection of internally generated radioisotopic heat by conduction rather than by convection as on Earth. Thus, although they are silicate bodies with similar chemical compositions, these marked differences in gravity and cooling rate guaranteed different trends in the evolution of the Earth and the Moon as planets.

As many lunar scientists view the total scientific results of our Apollo explorations and studies, the Moon evolved through six major periods once it was a coherent body in space.

First, there was the time from about 4.6 to 4.4 billion years ago when at least an outer shell of the Moon was melted or partially melted. This melting occurred as energy was released as heat during the last violent throes of the Moon's accumulation of the debris left over after the creation of Sun and Earth. As silicate crystals—minerals composed largely of silicon and oxygen—formed in this melted shell, those crystals rich in calcium and aluminum floated while heavier crystals rich in magnesium and iron sank. Dense iron-sulfur liquid, which will not mix with molten silicate, also sank and later moved to the center of the Moon to form a core. For at least 1.5 billion years, circulation in this iron-sulfur core generated a global lunar magnetic field similar to, but less intense than, that of the Earth. There is no such

global lunar magnetic field today, although remnant magnetism due to the earlier field is common in many lunar rocks.

Second, there was an incredibly violent period from about 4.4 to 4.1 billion years ago when the crust of the Moon was saturated by impacts of large meteors. Every point on the Moon had a crater at least 50 miles in diameter formed on it. The light-colored cratered highlands we see today on the near side of the Moon and which dominate the stark landscape of the far side are the result of this bombardment. In addition, the crust of the Moon was intensely fractured to a depth of about 25 kilometers.

Third, a period about 4.1 to 3.9 billion years ago was the time when the large, circular basins, the facial bone structure of the "Man in the Moon," were formed by a few unbelievably energetic impacts of very large meteors, small planets, or comets.

A short fourth period appears to have occurred at about 3.9 billion years ago, when extensive plains of ash and pulverized rock formed at the beginning of the volcanic fifth period.

Fifth, the dark blue-gray and brown-gray maria or "seas" formed from about 3.8 to about 3 billion years ago, when lava flows of basalt and other volcanic debris erupted in the basins, valleys, and other low areas on the Moon's surface. The dark eyes, nose, and mouth of the "Man in the Moon" are the visible result.

The sixth and final period is that from about 3 billion years ago to the present when little has happened to greatly affect the appearance of the Moon's crust. The Moon's surface has been pulverized by continuous small impacts of meteors and there has been rare volcanic activity and a few rare large impacts of meteors to form the beautiful rayed craters; however, ancient life on Earth saw essentially the same Moon as we see today.

The significance of this last number of 3 billion years cannot be overemphasized. The fact that major changes ceased on the Moon about 3 billion years ago means that most of what we have learned from the Moon flights is about the first 1½ billion years of the early history of a planet similar in major ways to our own. That 1.5 billion years of early history has been largely obscured on Earth by 3 billion years of vulcanism, water and wind erosion and mountain building. Thus, the Moon gives a view into our own past. We could have hardly asked for more.

The study of the Moon shows us what was happening on Earth before and during the separation of the oceans, the atmosphere and the continents. The first five of the six periods of lunar history must have been mirrored on Earth with their effects modified by the presence of the Earth's greater gravitational forces, an early hot atmosphere and the disruption of the Earth's crust due to sustained internal convection.

With this new insight from the Moon, we now have reasonable explanations for many of the puzzling features geologists have long observed in the oldest rocks on Earth. For example, very large, titanium-bearing bodies of calcium and aluminum-rich silicate rock are probably the relics of the Earth's first ancient crust. Very large masses of layered basaltic rock, rich in platinum, chromium and other important metals, are probably the massive relics of the Earth's "maria."

Possibly most important of all insights are our new ideas for explaining the development of life on Earth. The continuous supply of energy and complex hydrocarbon chemical compounds added as debris fell into the Earth's hot atmosphere during its first one-half billion years may have been the basis for the creation of the first very complex chemicals, such as viruses, which could reproduce and later evolve into living organisms themselves. From that point, the evolution of life as we now know it was only a matter of time.

Likewise, it is only a matter of time before that life, through mankind as its agent, extends itself to other places and other stars. No more exciting time could be ordered.

Mr. President, I yield the floor.

IMPACT OF UNCONTROLLED IMMIGRATION ON THE U.S. ECONOMY

Mr. HUDDLESTON. Mr. President, for a long time, I have been making statements about the depressive effect uncontrolled and unlimited immigration has on our economy.

It is indeed encouraging to read that one of the Nation's leading economists and the president of the University of Colorado, Arnold R. Weber, agrees with my assertions. In a recent article in Dun's Review entitled "With U.S. Immigration Policy in Crisis, Businessmen Must Speak Out," he correctly points out that immigration is in many ways an economic phenomenon. President Weber states:

Immigration flows will also have a highly significant—albeit indirect—impact on macroeconomic development and policy . . . if the labor market continues to be supersaturated with immigants, both legal and illegal, unemployment will persist at high levels. . . . The pressure of unemployment will engender political demands for economic stimulation that even the most dedicated conservative will find difficult to resist. At the same time, the highly elastic labor supply created by unregulated immigration flows will impose a natural brake on capital-for-labor substitution, with depressing effects on investment and productivity.

I ask unanimous consent that President Weber's article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WITH U.S. IMMIGRATION POLICY IN CRISIS, BUSINESSMEN MUST SPEAK OUT

(Arnold R. Weber)

For most of us, attitude towards immigration have been conditioned by Emma Lazarus' words on the Statue of Liberty:

"Give me your tired, your poor, your huddled masses yearning to breathe free."

Recent events, however, have severely strained this evocation of past innocence and immobolized our policy mechanisms. The immigration issue, in fact, is approaching crisis proportions.

A few broad trends suggest the magnitude of the problem. During the Fifties, legal immigration into the United States averaged about 300,000 people each year. That rate rose to 375,000 in the Sixties, and in 1976–80 jumped to 540,000 per year. The number of legal immigrants swelled to 808,000 in 1980, comparable to the level experienced during 1901–1910.

Because the rising tide of immigration coincided with declining fertility rates, 20 percent of the annual population growth in the U.S. in the last decade occurred at ports of entry rather than maternity wards. In absolute terms, the U.S. accepted more legal immigrants than all the other nations in the world.

The inflow was supplemented by illegal or "undocumented" aliens. The Census Bureau reports that there now are between 3.5 and 6 million illegal aliens in the U.S. In contrast to the legal immigrants who come here for a combination of political and economic reasons, the illegals are attracted largely by the employment opportunities.

Several reasons help to explain these dramatic changes in immigration patterns. International political developments have caused immigrants to flee to the U.S. and have made this country willing to accept them. Thus, many immigrants have arrived from Cuba and Haiti, and there has been an increase in inflow of Salvadoreans because of the strife in that nation. Earlier, legal immigration was sharply increased by the acceptance of large numbers of Vietnamese refugees. U.S. immigration laws also are especially permissive in letting immigrants in for compassionate reasons, such as reuniting members of a family.

Changing technology, also, has played a role. Immigrants at the turn of the century usually arrived in this country after a long trek on foot or by railroad and then ship from Europe. Contemporary immigrants are likely to be carried by jet planes to Los Angeles, Miami or New York in no more than fourteen hours from the furthest corner of the world. In this context, deficiencies in enforcement programs have seriously undermined the integrity of our immigration laws.

PERSISTING PRESSURES

The ultimate resolution of the immigration issue will be strongly influenced by political and social considerations. Ethnic pressure groups will continue to press for a permissive immigrant policy, including legalizing the status of "undocumented" aliens. Foreign policy considerations and historical traditions will dictate that the U.S. remain a favored political asylum for refugees from totalitarian nations—or our vanquished allies.

Nonetheless, it is important that we understand that immigration in a very real sense is an economic phenomenon. Historically, immigration has always been an instrument of our national economic policy. We used immigration to fill an empty continent and to provide a growing labor force to exploit our bountiful natural resources. We did not impose systematic limits on immigration until after World War I. Since that time, we have used immigration as a device to smooth fluctuations in the labor supply and demand for particular industries and for the economy as a whole. This was the philosophy underlying the bracero program, which provided seasonal workers for American agriculture for many years. And it was an important part of the "preference system" established by the Immigration Act amendments of 1965, which facilitated the entry of immigrants with skills that are in short supply here. Immigration will continue to be used as a fine tuning device in the labor market and will have a salutory effect on economic growth.

Immigration flows will also have a highly significant—albeit indirect—impact on macroeconomic developments and policy. A

complex array of factors has contributed to our virulent inflation in the last ten years. But certainly the desire to maintain high levels of economic growth in order to absorb the record number of new job seekers has been an important consideration. In the Eighties, the demographic pressure on the labor market will subside. However, if the labor market continues to be supersaturated with immigrants, both legal and illegal, unemployment will persist at high levels. The situation in Florida following the influx of Cuban refugees provides a microcosm of this series of events. The pressure of unemployment will engender political demands for economic stimulation that even the most dedicated conservative will find difficult to resist. At the same time, the highly elastic labor supply created by unregulated immigration flows will impose a natural brake on capital-for-labor substitution, with depressing effects on investment and productivity.

At this time, there has been a partial breakdown of both immigration policy and enforcement. The debate is growing in intensity, and unless the issue is resolved soon it will inflame the 1984 election. In this highly sensitive and controversial area, economic considerations must be part of the discourse. Businessmen cannot abdicate the forum to the unions, politicians and ethnic spokesmen as if the stake in the debate is the high school civics prize.

Mr. HUDDLESTON. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. BAKER. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

CONCLUSION OF MORNING BUSINESS

The PRESIDING OFFICER. Morning business is closed.

EXECUTIVE SESSION

TREATY WITH CANADA ON PACIFIC COAST ALBACORE TUNA VESSELS AND PORT PRIVILEGES

The PRESIDING OFFICER. Under the previous order, the hour of 1:40 p.m. having arrived, the Senate will now go into executive session for the purpose of considering Executive Calendar 4, which the clerk will state by title.

The legislative clerk read as follows:

Treaty with Canada on Pacific Coast Albacore Tuna Vessels and Port Privileges, Treaty Document No. 97-13, reported favorably without amendment.

The Senate proceeded to consider the treaty.

The PRESIDING OFFICER. Time for debate on this treaty is limited to 20 minutes to be equally divided and controlled by the majority and minority leaders or their designees, with a vote to occur on the resolution of ratification of the treaty at 2 p.m.

Mr. BAKER. Mr. President, I designate the distinguished chairman of the Committee on Foreign Relations (Mr. PERCY) as being in charge of the time at this time.

The PRESIDING OFFICER. The Senator from Illinois.

Mr. PERCY. Mr. President, in 1979, Canada seized 19 U.S.-flag vessels fishing for albacore off its coast. Canada claims 200-mile fisheries jurisdiction over all fish, including highly migratory species such as albacore tuna, while the United States neither claims for itself nor recognizes other nations' claims of 200-mile jurisdiction over highly migratory species of tuna. The United States holds that highly migratory tuna must be managed by an international regime rather than by each coastal state. Under U.S. law, Canadian fishermen are free to fish for albacore in the U.S. fishery conservation zone beyond 3 miles.

As a consequence of the Canadian seizures of U.S. flag vessels, the United States imposed an embargo on imports of tuna and tuna products from Canada as required by the Fishery Conservation and Management Act. Canada has challenged this embargo as a violation of our international obligations under the General Agreement on Tariffs and Trade (GATT) and the issue is currently under consideration by a GATT panel in Geneva. Last year, the United States and Canada reached an interim agreement which gave U.S. fishermen temporary access to Canadian waters and thus enabled us to lift the embargo.

The proposed treaty provides U.S. albacore fishermen with unfettered access to the Canadian fishery zone and allows them to purchase fuel on the same basis as Canadian albacore tuna fishermen, which could result in a substantial savings. In return, Canadian albacore fishermen will be allowed to offload and sell their tuna catch in four selected U.S. ports. Those ports are: Astoria, Oreg.; Bellingham, Wash.; Coos Bay, Oreg.; and Crescent City, Calif. Any such landings are currently prohibited by U.S. law.

I appreciate my colleagues consent to an expedited consideration of this treaty. Under normal conditions, albacore tuna begin to run off the coast of Canada mid to late July. The American tuna fleet has expressed its intention to follow the fish north at that time. Therefore, it is important that this treaty be in place by that time. Failure to adopt this treaty would result in provincial seizures of U.S. ships and an automatic embargo on Canadian tuna products during a period coinciding with the Ottawa economic summit. In order to avoid this embarrassing situation, I urge my colleagues to vote in favor of granting advice and consent to the ratification of the treaty.

Mr. President, I am happy to yield such time as he may desire to my distinguished colleague from Washington, but before I do so, I ask for the yeas and nays.

The PRESIDING OFFICER. Is there a sufficient second? There is a sufficient second.

The yeas and nays were ordered.

The PRESIDING OFFICER. The Senator from Washington.

Mr. GORTON. Mr. President, the United States-Canadian Albacore Treaty is an important reciprocal effort to resolve one of the outstanding fisheries problems with our Canadian neighbors. This treaty deals specifically with problems which have arisen on the Pacific coast in the migratory albacore fishery.

During the late summer warm water currents move northward along the Pacific coast, and albacore follow these currents. Frequently the albacore will go north of Washington State and the end U.S. jurisdiction into Canadian waters. The United States neither claims for itself nor recognizes other nations' claims of fisheries jurisdiction over highly migratory species of tuna—such as albacore—further than 12 miles from the coast. The U.S. position is based on the determination that national jurisdiction over such highly migratory fisheries is not consistent with effective management and conservation of the resource.

The administration's letter of submittal outlines some of the problems which have occurred in this fishery when U.S. fishermen have engaged in the albacore fishery within Canada's extended jurisdictional boundaries—including Canadian seizures of U.S. vessels, U.S. embargo against Canadian tuna, and U.S. compensation of U.S. fishermen. I will not detail that record here. The treaty before us today puts these problems to rest. It provides for reciprocal access to each others' fishery zones and it provides for reciprocal port access. This treaty is a constructive and important first step toward resolving our differences with Canada over fishery questions. It is also noteworthy, as the Pacific Fishery Management Council points out, that our two nations were able to arrive at a satisfactory agreement despite their original differences over the management of this species.

This treaty has the support of the entire U.S. fishing industry, and I ask unanimous consent that letters of support from the Fishing Vessel Owners Association, the U.S. Tuna Foundation, and the Pacific Fishery Management Council appear in the RECORD at the conclusion of my statement.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibit 1.)

Mr. GORTON. Mr. President, I would like to add another brief comment about fishery relations with Canada. I hope that our ability and willingness to resolve the albacore problem will set the stage for a permanent and similarly acceptable resolution to our complicated and difficult salmon interception negotiations. Both nations' ability to manage our salmon resources and to plan for, and to benefit from, enhancement programs depends on such a resolution. We have made commendable progress in these negotiations—and have arrived at agreed interim management measures to help pave the way toward a final resolution of this problem. Because fishery issues are among the most controversial between our two nations, it is important that the administration make the successful and prompt conclusion of the Pacific salmon interception negotiations a very high priority.

EXHIBIT 1

FISHING VESSEL OWNERS' ASSOCIATION, INCORPORATED

SEATTLE, WASH., *April 3, 1981.*

Mr. BRIAN S. HALLMAN,
Department of State, Bureau of Oceans and Scientific Affairs, Washington, D.C.

DEAR MR. HALLMAN: I am in receipt of your letter and the copy of the final version of the U.S./Canada Albacore agreement.

We would like to express our thanks to your office for working on the interim arrangement last August and also this agreement well before the next season starts. The Fishing Vessel Owners Association supports the agreement you have sent to us and would hope for an early ratification in the Senate.

Very Truly Yours,

ROBERT D. ALVERSON,
Manager.

WESTERN FISHBOAT OWNERS, ASSOCIATION,
San Diego, Calif., February 24, 1981.

Hon. SLADE GORTON,
U.S. Senate,
Washington, D.C.

DEAR SENATOR GORTON: In August and September of 1979, nineteen U.S. vessels were seized for fishing albacore tuna off the coast of Canada. Since that time I have been seeking for an agreement which would allow U.S. vessels fishing for albacore to have access into Canada's 200 mile zone.

There have been many meetings with many segments of the U.S. West Coast fishing industry to present a united effort to achieve such an agreement.

With able help and consultation from Mr. Morris Busby, U.S. State Department, an agreement has been reached with the Canadians. However, before this agreement can become effective it must be ratified by the U.S. Senate.

I sincerely request your support in having this agreement ratified.

It is not only a good agreement for the U.S. albacore fishermen, but instills confidence that the U.S. can have compatible fishing agreements with our neighbors.

Thank you for your support.

Sincerely,

LEWIS WRIGHT,
General Manager.

UNITED STATES TUNA FOUNDATION,
Washington, D.C., February 24, 1981.

Hon. SLADE GORTON,
U.S. Senate,
Washington, D.C.

DEAR SENATOR GORTON: On February 17, 1981, the United States and Canada concluded negotiations on a treaty concerning the albacore tuna fishery off the Pacific Coast of Canada and the United States. The treaty is the culmination of many months of negotiation and, in the opinion of the U.S. tuna industry, reflects favorably on both countries.

The U.S. tuna industry supports the treaty language and encourages early ratification by the U.S. Senate. The treaty will hopefully set an example for future international fishery negotiations.

Sincerely,

DAVID G. BURNEY.

PACIFIC FISHERY MANAGEMENT COUNCIL,
Portland, Oreg., March 3, 1981.

Hon. SLADE GORTON,
U.S. Senate,
Washington, D.C.

DEAR SENATOR GORTON: The United States recently concluded a treaty with Canada regarding reciprocal fishing privileges on albacore. This agreement will permit U.S. fishermen access to Canadian waters to fish for albacore and to land their catches in certain Canadian ports. In return, Canadian fishermen are granted similar privileges with respect to fishing in U.S. waters for albacore and landing their catches in U.S. ports.

The treaty is especially noteworthy in that the delegations from the United States and Canada were able to arrive at a satisfactory arrangement despite the juridical differences concerning the management of this species. The Department of State should be commended for its efforts.

The Pacific Fishery Management Council has been actively involved in the negotiations and fully support the treaty. We respectfully request your support in seeking its ratification.

Sincerely,

E. CHARLES FULLERTON,
Chairman.

Mr. HAYAKAWA. Mr. President, the treaty before us reflects the traditional spirit of friendship and cooperation that has long characterized our relations with Canada. It is an agreement based on mutual self-interest. It is designed to benefit the fishing industries of both countries through a series of basic and reciprocal provisions.

A few principal provisions of the treaty will serve to illustrate its practicality and reciprocity:

First, fishing vessels of both countries would be allowed to fish for albacore tuna in waters under the jurisdiction of the other;

Second, vessels of both countries would be allowed to use each other's ports and facilities;

Third, both parties would be allowed to land catches without payment of duties;

Fourth, vessels of both countries are to collect statistics and scientific information on operations in the fishing zone of the other party; this information is to be exchanged twice yearly; and

Fifth, violation of the treaty is to be handled in an equitable and uniform manner.

Finally, this treaty takes into account the deliberations of the Third United Nations Conference on the Law of the Sea in the field of fisheries. I urge my colleagues to adopt this far-sighted treaty enhancing the economic potential of the fishery industry off the Pacific coast of Canada and the United States.

Mr. PELL. Mr. President, today the Senate gives consideration to the Treaty With Canada on Pacific Coast Albacore Tuna Vessels and Port Privileges. The primary purpose of this treaty is to provide reciprocal port access and loading privileges for albacore tuna to United States and Canadian fishermen in specified ports of British Columbia, Oregon, Washington, and California. The treaty also reconciles differences between United States and Canadian laws with respect to management by coastal States of highly migrating species such as tuna, and permits U.S. tuna fishermen to follow, unimpeded, the albacore tuna as they migrate north.

By ratifying this treaty, the United States will avoid the seizure of any American fishing vessels which attempt to catch albacore tuna within 200 miles of Canadian shores. Such an event occurred in 1979 when 19 U.S. ships fishing for albacore were seized by Canadian officials. In response to the seizure, U.S. authorities imposed an embargo on tuna imports from Canada, as mandated by the Fishery Conservation and Management Act. Such events are not in the interest of either party, place unnecessary strains on United States-Canadian relations, and must be avoided if at all possible.

More important than the specifics of the treaty is the fact that through this treaty, the United States and Canada were able to resolve their differences and reach an accord which is mutually beneficial to both sides.

Mr. President, this is a highly beneficial treaty—serving U.S. economic interests as well as U.S. foreign policy interests. I urge my colleagues to give their advice and consent to ratification.

Mr. PERCY. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The bill clerk proceeded to call the roll.

Mr. BAKER. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER (Mr. GRASSLEY). Without objection, it is so ordered.

VOTE

The PRESIDING OFFICER. The question is on agreeing to the resolution of ratification on Treaty Document No. 97–13, Treaty With Canada on Pacific Coast Albacore Tuna Vessels and Port Privileges. The yeas and nays have been ordered and the clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. STEVENS. I announce that the Senator from Oregon (Mr. HATFIELD) is necessarily absent.

I further announce that, if present and voting, the Senator from Oregon (Mr. HATFIELD) would vote "yea."

Mr. CRANSTON. I announce that the Senator from Arizona (Mr. DECONCINI) and the Senator from Massachusetts (Mr. TSONGAS) are necessarily absent.

The PRESIDING OFFICER. Are there any other Senators in the Chamber wishing to vote?

The yeas and nays resulted—yeas 97, nays 0, as follows:

[Rollcall Vote No. 202 Ex.]

YEAS—97

Abdnor	Garn	Mitchell
Andrews	Glenn	Moynihan
Armstrong	Goldwater	Murkowski
Baker	Gorton	Nickles
Baucus	Grassley	Nunn

NOT VOTING—3

DeConcini Hatfield Tsongas

The PRESIDING OFFICER. Two-thirds of the Senators present and voting having voted in the affirmative, the resolution of ratification is agreed to.

(The following occurred later in the day:)

Mr. BAKER. Mr. President, after the vote on the treaty, there was not a motion to reconsider. I ask unanimous consent, as in executive session, that a motion to reconsider the vote on the resolution of ratification be considered as laid on the table.

The PRESIDING OFFICER. Without objection, it is so ordered.

LEGISLATIVE SESSION

Mr. BAKER. Mr. President, at this point, the Senate will return to the consideration of the tax measure. Is that correct?

The PRESIDING OFFICER. The Senate will resume the consideration of legislative business.

ECONOMIC RECOVERY TAX ACT OF 1981

The PRESIDING OFFICER. The clerk will state the pending business.

The assistant legislative clerk read as follows:

A joint resolution (H.J. Res. 266) to provide for a temporary increase in the public debt limit.

Mr. MOYNIHAN. Mr. President, may we have order?

The PRESIDING OFFICER. The Senate will be in order. Senators will return to their seats. Senators wishing to converse will please retire to the cloakrooms.

Mr. BAKER. Mr. President, I inquire of the distinguished chairman of the Finance Committee what amendments we are likely to deal with this afternoon and in what order.

Mr. DOLE. First, the Packwood-Moynihan amendment, followed by the amendment by the Senator from Alaska (Mr. STEVENS).

We are negotiating with two or three other Senators who have minor amendments. Then the Senator from Kansas may have an amendment of his own.

Mr. BAKER. I thank the Senator.

Mr. President, I reiterate what I said this morning. It is my expectation that the Senate will be in session—and I trust will be busily engaged in the consideration of amendments—until about 7 p.m. tonight.

The PRESIDING OFFICER. The Chair recognizes the Senator from Kansas.

Mr. DOLE. Mr. President, the distinguished Senator from Texas has an amendment, and we are trying to accommodate him this afternoon. It is with reference to the thousand-barrel exemption.

I promised Senator PACKWOOD and Senator MOYNIHAN that their amendment could be brought up at this time.

The PRESIDING OFFICER. The Senator from Oregon is recognized.

UP AMENDMENT NO. 246

(Purpose: To allow the deduction for charitable contributions to be allowed for individuals who do not itemize deductions)

Mr. PACKWOOD. Mr. President, I send to the desk an amendment and ask for its immediate consideration.

The PRESIDING OFFICER. The amendment will be stated.

The assistant legislative clerk read as follows:

The Senator from Oregon (Mr. PACKWOOD) proposes an unprinted amendment numbered 246, for himself and Senators MOYNIHAN, DOLE, ROTH, HEINZ, DURENBERGER, LONG, BENTSEN, MATSUNAGA, BAUCUS, BRADLEY, MITCHELL, ANDREWS, BOSCHWITZ, BURDICK, CANNON, CHILES, COCHRAN, CRANSTON, D'AMATO, DECONCINI, DIXON, DODD, FORD, GLENN, HAWKINS, HEFLIN, HELMS, HOLLINGS, HUDDLESTON, JACKSON, KASTEN, KENNEDY, LEAHY, LEVIN, LUGAR, MATHIAS, MELCHER, METZENBAUM, MURKOWSKI, NUNN, PRESSLER, PRYOR, QUAYLE, RANDOLPH, RIEGLE, SCHMITT, SIMPSON, SPECTER, TSONGAS, WEICKER, WILLIAMS, ZORINSKY, BOREN, GRASSLEY, BAKER, DENTON, JEPSEN, and NICKLES.

Mr. PACKWOOD. Mr. President, I ask unanimous consent that reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment is as follows:

On page 44 after line 5:

At the end of title I, insert the following new subtitle:

Subtitle C—Charitable Contribution Deductions

SEC. 121. DEDUCTION FOR CHARITABLE CONTRIBUTIONS TO BE ALLOWED FOR INDIVIDUALS WHO DO NOT ITEMIZE DEDUCTIONS

(a) IN GENERAL.—Section 170 (relating to charitable, etc., contributions and gifts) is amended by redesignating subsections (i) and (j) as subsections (j) and (k), respectively, and by inserting after subsection (h) the following new subsection:

"(i) TRANSITIONAL RULE FOR NONITEMIZATION OF DEDUCTION.—

"(1) IN GENERAL.—In the case of an individual, the applicable percentage of the deduction allowed by subsection (a) for the taxable year shall not be treated as an itemized deduction.

"(2) APPLICABLE PERCENTAGE.—For purposes of paragraph (1), the applicable percentage shall be determined under the following table:

For taxable years beginning in—	The applicable percentage is—
1982 or 1983	25 percent.
1984	25 percent.
1985	50 percent.
1986 or thereafter	100 percent.

"(3) SPECIAL RULE FOR 1982 AND 1983.—In the case of taxable years beginning in 1982 and 1983, that portion of the deduction allowed by subsection (a) to which the applicable percentage shall be applied under paragraph (1) shall not exceed $100.".

(b) CONFORMING AMENDMENTS.—

(1) Paragraph (1) of section 57(b) (relating to adjusted itemized deductions) is amended by inserting "without regard to paragraph (3) thereof" after "section 63(f)".

(2) Paragraph (1) of section 63(b) (relating to individuals) is amended—

(A) by striking out "and" at the end of subparagraph (A), and

(B) by inserting after subparagraph (B) the following new subparagraph:

"(C) the deduction for charitable, etc., contributions and gifts provided by section 170, to the extent that such deduction is not treated as an itemized deduction under section 170(i), and".

(3) Subsection (f) of section 63 (relating to itemized deductions) is amended—

(A) by striking out "and" at the end of paragraph (1),

(B) by striking out the period at the end of paragraph (2) and inserting in lieu thereof a comma and the word "and", and

(C) by adding at the end thereof the following new paragraph:

"(3) the deduction for charitable, etc., contributions and gifts provided by section 170, to the extent that such deduction is not treated as an itemized deduction under section 170(i).".

(c) WITHHOLDING.—

(1) Paragraph (1) of section 3402(m) (relating to withholding allowances based on itemized deductions), as amended by section 101(e)(5), is amended—

(A) by striking out "and" at the end of subparagraph (B),

(B) by adding after subparagraph (B) the following new subparagraph:

"(C) that portion of the deduction allowable by section 170 for the taxable year which is not treated as an itemized deduction under section 170(i), and", and

(C) by redesignating subparagraph (C) as subparagraph (D).

(2) Paragraph (2) of section 3402(m) is amended by inserting ", the deduction referred to in paragraph (1)(C)," after "section 151".

(3) The caption for section 3402(m) is amended by inserting "or charitable" before "deductions".

(d) EFFECTIVE DATES.—

(1) The amendments made by subsections (a) and (b) shall apply with respect to taxable years beginning after December 31, 1981, and with respect to contributions payment of which is made after such date.

(2) The amendment made by subsection (c) shall apply with respect to remuneration paid after December 31, 1981.

(e) TERMINATION DATE.—The amendment made by this section shall not apply to contributions made after December 31, 1986.

Mr. PACKWOOD. Mr. President, this is a very simple and—for those of us who are cosponsors—meritorious amendment.

Over the years, we have heard about getting a bang for the buck. We heard it during the years of President Eisenhower's administration, in the defense budget, and we have heard it in a variety of social and military programs over the years. However, I believe there are few amendments that provide more bang for the buck than this amendment.

In a nutshell, what it allows people of this country to do is to deduct contributions to charities even though they may take what used to be called the standard deduction, what we now call the zero bracket. This is especially important to all charities but doubly so to those charities that depend upon hundreds or thousands of donors who give $5 a week, $10 a week, $25 a week, to those small contributors who tithe to whatever their particular charity is week after week. Many of those take what used to be called the standard deduction and in the past if they took the standard deduction they were not allowed to deduct their contributions to charity, although interestingly, we do allow a number of other so-called above-the-line deductions for those who take the standard deduction.

In the President's budget, and I have supported his budget, according to the Urban Institute there is a cut of about $27.3 billion—reemphasize, that is billion dollars—to private charities, $27.3 billion that they would otherwise get but for the budget cuts. I am convinced that those charities given adequate tax incentives will be able to raise a fair portion of that money by private contributions. It is unfair, however, that we allow those who itemize—quite frankly those are usually people in upper-income brackets—those who itemize their deductions to take a deduction for contributions to charity but those who do not itemize to be prohibited from deducting a contribution to charities.

There may have been a time in the day of Andrew Carnegie or the early days of the Mellons where charities in this country could depend upon the very generous and munificent giving of relatively few people. Those days are gone. I am not sure if it ever was those days but indeed if it was those days are gone.

Today the YMCA's, the B'nai B'rith's, the Catholic youth organizations, and the Presbyterian Church depend upon literally scores of thousands, millions of people, contributing small amounts in order to sustain themselves.

This amendment would operate as follows: In 1982 you could take a 25-percent deduction of a contribution to charity to a maximum of $100, $100 contribution to $25 deduction. The same would be true in 1983. In 1984 it would be 25 percent but no cap, no limit, on the size of the deduction. In 1985, 50 percent, with no limit on the deduction, and in 1986, 100 percent of your deduction.

Then in order to insure that this amendment is working fairly we have agreed with the administration, and great credit belongs to Senator DOLE for helping Senator MOYNIHAN and me reach an accommodation with the Treasury Department and the administration, we have put a sunset provision in the law. I support sunset provisions. Sunset provision merely says that this law will terminate on a certain date unless it is extended by Congress, and that forces Congress to review the provision, forces us to decide whether or not it is meritorious. So on December 31, 1986, this particular law will expire, unless it has worked as Senator MOYNIHAN and I, the other sponsors hope it will work. If it does work as we hope it will work, I think it will be extended without significant debate.

So on behalf of Senator MOYNIHAN, myself, and the 51 or 52 or so other cosponsors, I encourage the Members of this Senate to adopt this amendment. If we want to indeed give the private sector a chance in business and the private sector a chance in charity, this amendment is a step in that direction.

Mr. MOYNIHAN. Mr. President, I rise to join my friend from Oregon in this matter and first ask unanimous consent that the Senator from Tennessee (Mr. SASSER), be listed as a cosponsor.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. MOYNIHAN. Mr. President, this is the third consecutive Congress in which my distinguished colleague from Oregon and I have offered our proposal to permit all taxpayers to deduct their gifts to charities whether or not they itemize their other deductions.

I think it speaks to the merits of the issue that with each successive Congress we have had more cosponsors for our proposal. This measure passed the Finance Committee in the last Congress as part of the omnibus tax cut bill. It would have passed this body had we taken up that legislation.

This is a measure to allow the two-thirds of American households that do not itemize deductions to take a deduction for their charitable contributions.

Mr. President, this tax bill we are passing is not notable for its attention to those persons at the lower end of the income scale in our country, and it is, I think, more than appropriate that we call attention to the fact 80 percent of the direct benefit from this measure will accrue to taxpayers with incomes below $30,000 and 60 percent to families with incomes below $20,000.

And this comes at a time, as my distinguished colleague has said, when the independent sector is going to have to assume a very great many of the provisions which had been thought to be securely in the public sector and which the budget we are adopting now would abolish.

I wish to make the point, Mr. President, because it cannot be too strongly emphasized, that the imbalance that we are correcting here today is an imbalance brought about by the Federal tax system. The President will recall, of course, that we have not changed our tax rates in the United States since 1964 with President Kennedy's tax bill.

There have been very large price changes over that time that seem to have accelerated in recent years. Yet until this present bill came to the floor we had no change in actual tax rates. It therefore, became the biennial practice of Congress to give a small tax cut by increasing what used to be known as the standard deduction but which is now termed—because it is more difficult to understand—the zero bracket amount. As that bracket rose, it went well beyond the point where the average household was able to find that there were still charitable contributions to be deducted.

The original standard deduction was meant to reflect the actual cost in medical care, charity, and such things that could be deducted and, therefore, to save time it was made an option for any taxpayer. It did not, in fact, give an advantage to the taxpayer. He could get the same deductions by itemizing, but it saved him the trouble of doing so.

As the level of the standard deduction went up it no longer became the fact that the taxpayer could reach the same amount of deductions by itemizing, and the amount of charitable giving began to fall behind. I do not want to say that it declined in absolute terms, but as a percentage of personal income it did.

In 1970, Mr. President, Americans gave 1.99 percent of their personal incomes to charity. By 1980, this had dropped to 1.84 percent. That may not seem large in percentile terms, but each one-hundredth of 1 percent of personal income is equal to approximately $200 million in contributions. Such that were charitable contributions today to be given at the same rate as 10 years ago they would be $3 billion higher.

A large generalization is perhaps not in order, but we do know that private organizations, private charities—the Salvation Army, and some of the nongovernmental schools come quickly to mind—do things at a much more cost-effective level than does the public sector. It is done as well or better at much less cost. Other activities come to mind. The Audubon Society does things no one else can do or will. The churches of America, the synagogues, and the temples are singular today in the degree to which they live wholly from the gifts of their congregations and grow and prosper.

But if our Tax Code begins to turn against that independent sector, that sector will shrivel. The Senator from Oregon and I have continually had presented to us in hearings the point that in Europe—and not least perhaps of interest in Britain where charitable contributions created itself as a distinctive institution, in the course of the 19th century—the voluntary sector has all but disappeared. The names of the earlier private ventures and private activities are there, but they are supported by government and they are run by government. If we believe in mediating institutions, if we think there should be something between the individual and the State, then we believe in this legislation.

We have spoken of its merits through so many Congresses that it scarcely seems necessary to continue now.

Mr. President, adoption of this amendment by the Senate will mark a historic moment, and one that brings me particular pride and satisfaction. This is the third consecutive Congress in which my distinguished colleague from Oregon and I have offered our proposal to permit all taxpayers to deduct their gifts to charities—whether or not they itemize their other deductions. We have labored hard to bring this legislation to a point where all of our Senate colleagues know of its significance, to a point where all can vote knowledgeably on it.

If this legislation is enacted, we will have accomplished a great deal.

First, taxes will be reduced significantly for millions of low- and middle-income families. Indeed, 80 percent of the direct benefit of our legislation will accrue to taxpayers with incomes below $30,000 and 60 percent to families with incomes under $20,000.

Second, contributions to charities will increase greatly, more than the attendant loss to the Federal Treasury. Charitable gifts enhance the abilities of religious charities, of the ASPCA, of the Audubon Society, of universities, museums, and thousands of other private nonprofit organizations to enhance the lives of millions of individuals.

Prof. Martin Feldstein, one of this Nation's most distinguished economists, estimates that if this deduction had been available in 1975 charitable contribu-

tions would have been $3.8 billion greater than they in fact were, at a cost to the Treasury of about $3.2 billion. In other words, the deduction has a multiplier effect, increasing philanthropy by more than it decreases tax revenues.

A study published in May by the Urban Institute estimates that the administration's proposed budget cuts in areas affecting the activities of nonprofit organization will be $110.4 billion—in constant dollars—over the next 4 years. By far the most important accomplishment of our legislation will be to provide resources to private charities that they must have if they are reasonably to be expected to pick up the slack that will result as direct Government efforts in such important areas as health, education, arts and humanities, welfare, and social services are scaled back. Scaled back more, I would add, and faster than many of us believe desirable. Some of these vanishing resources can be replaced by individual donors, but only if our public policies foster and stimulate such philanthropy. This legislation is a chance for Government consciously to reduce its share of the gross national product and to cut taxes while encouraging individuals to support the voluntary, nonprofit sector of the economy.

Mr. President, this amendment does not represent a new or revolutionary idea. In fact, it will do no more than reestablish the fundamental principle that underlay the charitable deduction when it was written into the Internal Revenue Code in 1917. This is the principle that the portion of an individual's income that is given to charity ought not be taxed.

The principle is clear enough. What has been less well understood is its gradual erosion as the standard deduction has been increased. The standard deduction, now properly termed the "zero bracket amount," is an alternative to itemized deductions and is an alternative now chosen by more than three taxpayers in five. There is nothing at all wrong with the standard deduction; in fact, increasing it, as Congress has been wont to do in recent years, is a straightforward way of lightening individual tax burdens. But the increasing appeal and widening use of the standard deduction have the unintended consequence of reducing the incentive to make charitable gifts. A 1979 Gallup survey found that at every income level, itemizers gave more than nonitemizers. The effects also have been felt by charitable organizations whose donated income has been declining.

Charitable giving, as a percentage of personal income, declined from 1.99 percent in 1970 to 1.84 percent in 1980. As each one-hundredth of 1 percent of personal income is equal to approximately $200 million, this decline means that annual giving is now almost $3 billion a year less than it would be if the level of giving of just a decade ago had been maintained.

Our legislation would restore the charitable deduction's original character, and again make that deduction available to all taxpayers.

It would also restore a bit more independence and vitality to the voluntary sector. It will add a bit to the ability of the ordinary working men and women to determine how, and on what, some of his or her money is spent. It will in some small measure retard the process that has been described as the slow but steady conquest of the private sector by the public.

Accompanying a mounting wariness toward Government monopoly, there is a widening appreciation by the American people of the unique and vital role played by private, nonprofit organizations in our Nation's economy.

This appreciation predates the present administration. It constitutes the fundamental rationale for this legislation, which we first introduced in the 95th Congress. Moreover, it is familiar to every American as the basic principle of federalism: that the National Government should assume only those responsibilities that cannot satisfactorily be carried out by the States, by the localities, and by the myriad private structures and organizations, both formal and informal, that comprise the American society; structures that include the family itself, the neighborhood, the church, and the many private nonprofit agencies found in every community in this land.

My distinguished colleague from Oregon and I have sought to reestablish this principle in some small way through our charitable contributions legislation. With this amendment we will succeed—in part. I say in part because, for budget reasons, we must phase in the "above-the-line" deduction over 5 years and after 1986 the provision will expire. By 1986, however, we will know whether this action has contributed to the revitalization of the voluntary sector. How will we know? By continuing to watch the trend in charitable giving as a percentage of personal income. I have every expectation that the recent decline will slow and soon be reversed.

While I am in the Senate, this legislation will not be undone. For it will be shown to be among the most significant social policy advances of recent years. It will reinforce the fiscal underpinnings of the tens of thousands of voluntary organizations that embody this society's devotion to community its dedication to common provision, and its predilection for what Tocqueville called association. It will enhance one of mankind's noblest impulses: to give voluntarily of one's own earnings so that the lives of others will be better. It will retard the tendency to rely solely on Government to meet the needs of individuals and communities.

It is the regrettable fact that even with additional voluntary contributions, our eleemosynary organizations will not be able to fill in all the gaps created by the abrupt and in many cases unwarranted cuts in direct Federal expenditures on social welfare programs. There is much that only Government can do as effectively, as efficiently, or as sensitively as private organizations. When I first introduced this legislation, Government was growing, and my thought was to buttress the private sector. Now, as Government shrinks, the need for a vibrant voluntary sector is even greater. This amendment will help, and it is in that spirit that I move its adoption.

It would not do to let this moment pass without acknowledging the extraordinary efforts of the Nation's voluntary organizations themselves to explain the need for this legislation. I would particularly wish to note the tireless, selfless, and invariably gracious work of a remarkable new entity called Independent Sector. Seldom does a Senator have occasion to welcome the appearance of a new Washington organization. The significance of Independent Sector is that this new organization does not represent a new interest group; rather, it has organized and mobilized and used all the informational resources that have long been available to the largest and most important interest group of all: the American people, working through the tens of thousands of voluntary organizations that exist only because of the American people's concern for one another.

Before I step down, I would like to join my colleague from Oregon in expressing our gratitude to the Senator from Kansas, the chairman of the Committee on Finance. This is not an easy thing for him to accept in a measure where he must, of necessity, in his role as chairman of the Committee on Finance, resist most amendments. Such is his adeptness in these matters that he is defeating most amendments, deserving amendments, some of which I had the honor—the dubious pleasure—of offering. But he agreed to this because he shares our view and our object.

This is a large exception for which we are personally grateful and which, I think, a great many people in this Nation, a great many institutions, a great many people who care for those institutions and who are cared for by them, will be grateful as well.

I hope they will have this statement by the Senator from Oregon and me attest to our personal sense of the degree to which the Nation is indebted to him for what he is doing today. I would like to thank him as a colleague, an admiring friend, as well as a fellow member of the Finance Committee.

Mr. DURENBERGER. Mr. President, I urge my colleagues to join me in supporting the charitable contribution amendment offered by my friends from Oregon and New York. It was my great privilege to cosponsor a similar measure last year, a measure designed to preserve the vitality of our Nation's charitable and volunteer community, and to insure that the millions of Americans who receive their services continue to have innovative and sensitive options to a Government-dictated program.

We are finally coming to realize that Government cannot address every social need, and indeed, should not be asked to do so. We are finally facing some self-evident facts: When Government tries

to monopolize the social service field, however good the intentions, the programs fail to achieve their goals. Why? In large measure because national programs, implemented through Federal regulations under the direction of bureaucrats in Washington, do not reflect the diverse needs of individuals.

National programs with uniform requirements cannot be bent and shaped enough to fit the needy of Minneapolis, New York, Portland, or any other place in this country. If we are truly concerned about feeding the poor, caring for the children of working parents, finding jobs for the unemployed, tending to the ill and the elderly—as individuals and not as statistics—we must provide an environment where those in need can select the services they need and want, not only from Government but from charities and volunteer organizations as well. We must allow for diversity and sensitivity when we provide social services, and we must allow for consumer choice.

We need to deinstitutionalize many of our social programs, and in the process, we will transform those who are on the receiving end from "clients" to individuals in need of assistance. We need to change our system from one which treats recipients of social services as objects to be cared for, to individuals who need a little boost on the road to self-sufficiency. We need to help these individuals learn how to rely on themselves to a greater extent. Finally, we need to deinstitutionalize many of our social programs to allow foundations, charities and volunteer organizations the freedom to experiment and innovate—without the threat of a cut-off of Federal funds.

The amendment we are considering today is an essential first step toward diversity, consumer choice, and deinstitutionalization. The charitable contribution amendment will give foundations, nonprofit charities, and a wide variety of volunteer organizations access to the financial resources they need to continue their work.

During the past decade, volunteer and charitable organizations, like many other sectors of our society and many individuals, have become financially embarrassed. The financial strains have resulted from several factors, some related to Government policy and some not. Inflation has been a major contributor to the problem. Many people who would like to contribute to the arts, to their church or favorite charity can no longer justify their contributions—not when the price of essentials for daily living has steadily and rapidly risen. After paying for food, clothing, and shelter, there is little left for charities. And, I might add, no tax incentives for the 68 million taxpayers who do not itemize. Inflation has also eroded the purchasing power of the contributions which foundations and charities receive. Their dollar buys less, just as yours and mine buy less.

At the same time that inflation dampens giving and undermines purchasing power, it increases the numbers and the needs of the poor, the unemployed, the elderly, and others whom foundations and volunteer organizations set out to help. These organizations are asked to do more and more with less and less.

The national economy affects volunteer and charitable organizations in other ways: Inflation has required that more people enter the work force who might otherwise have been available to volunteer. Two-career families and two-working-parent families have little time or energy to devote to volunteering.

And if they have the time, they are less willing to give it, as the cost of transportation and other out-of-pocket expenses of volunteering go up. The adverse effects of inflation on the nonprofit and voluntary sector were a major concern to foundation and volunteer executives who came together last year to discuss the future of volunteerism. I was privileged to be one of the 10 national leaders who took part in the National Forum on Volunteerism sponsored by the Aid Association of Lutherans and Volunteer: The National Center for Citizen Involvement.

In our process of reshaping the role of the Federal Government, of relearning the essential value of nonprofit and volunteer organizations, of reorienting our attitudes to those who need social services from Government "client" to person in need of individual assistance, we must also reshape our thoughts about encouraging charitable giving. If we want diversity, we must give opportunities for the charitable and volunteer sector to obtain necessary resources.

One step is to pass the amendment now before us. It is my strong belief that the charitable contribution amendment will help reverse the dramatic decline in private giving we have experienced over the past few years.

By allowing taxpayers a deduction on charitable contributions, whether or not they itemize, this legislation will correct an inequity in the tax code. It will help insure that the voluntary sector, which lost an estimated $5 billion between 1972 and 1978 because of the change in the standard deduction, will not be a victim of Federal tax practices.

More important is the current discussion against the poor and middle-income taxpayer who struggles to meet the family needs for food, shelter, and clothing. The standard deduction hardly covers the costs they incur for borrowing, medical expenses, taxes, and casualty losses.

Under existing law, individuals who take a standard deduction can be taxed on private dollars contributed to nonprofit organizations. This form of taxation certainly poses a philosophical challenge to the rationale that income which goes to charitable activities should not be taxed because it does not enrich the giver.

Mr. President, I look forward to the day when charitable and volunteer organizations have the freedom to provide social services, when their consumers can shop around for what they need—from private nonprofit vendors as well as from Government agencies. But if that day is to come, we must give nonprofit groups access to financial resources. And we must give individuals incentives to support the work of charities. Let us move ahead in that direction.

I will conclude with one important comment which, I think, fortifies the arguments made by the Senator from Oregon and the Senator from New York.

Whether we look at the issue they have been championing in terms of people whom we all know, and nonprofit institutions we have all participated in, or whether we look at it in terms of the statistics that have been brought forward in many hearings, chaired by the Senator from New York when he was in the majority and chaired by the Senator from Oregon now that he is in the majority, the important point is that the standard deduction once upon a time was designed to cover living costs, borrowing costs, medical costs, casualty costs, and so forth, for those in the middle-income brackets. It no longer accomplishes that function.

The standard deduction today, together with personal exemptions, does not go halfway toward meeting the basic costs of living for poor and middle-income Americans. But there are literally millions, 68 million Americans, today who are forced to use the standard deduction, and a vast majority of those people—and this is where the statistics come into play—a vast majority of those people are taking the time, making the effort and providing charitable contributions to religious activities, to the social work of religious organizations, to nonprofit organizations of the United Way—usually at great personal sacrifice.

The reason they are doing it, Mr. President, is very simply because they live next door to these problems. They participate in these organizations. They are involved in this church-related social service work, and they know the problems, and yet this Government is saying to them, "You get no more benefit out of this tax system of ours than those who choose not to get involved, not to give of themselves, not to contribute their hard-pressed earnings for those really in need."

This is a long-time need, and I am sorry we have to phase it in. But that is one of the realities of life.

I, too, compliment the chairman of the Committee on Finance for his effort and his cooperation in making it possible for the Senator from Oregon and the Senator from New York to finally bring into American tax policy something that makes sense to the American people.

I thank the Chair.

Mr. MATSUNAGA. Mr. President, will the Senator from New York yield?

Mr. MOYNIHAN. Before I yield, Mr. President, I ask for the yeas and nays.

The PRESIDING OFFICER. Is there a sufficient second? There is a sufficient second.

The yeas and nays were ordered.

Mr. MATSUNAGA. Mr. President, as a cosponsor of the amendment I rise in strong support of the Moynihan-Packwood amendment. It is truly shocking to learn that voluntary contributions for charitable work constitute less than 2 percent of the national income.

Representatives of charitable institutions who testified before the Committee on Finance, stated that the previous reduction of the individual income tax rate from a maximum of 90 percent to 70 percent, resulted in a one-third reduction, 33⅓-percent reduction, in voluntary contributions to the institutions.

With the further reduction of the maximum individual tax rate from 70 percent to 50 percent, these representatives of the charitable institutions expressed the grave fear that contributions would once more drop perhaps even by as much as two-thirds.

Donors in the top tax bracket are now encouraged to give with the knowledge that each dollar contributed meant a 70 cents tax savings; in other words the Federal Government paid 70 cents for each dollar contributed in foregone taxes. But that tax savings for individual donors will now be reduced to 50 cents on every dollar contributed and there will be less incentive to contribute. The attitude of potential donors will change as a result of reduced individual tax rates.

So we need to do something now in this tax reduction measure to see that charitable organizations are not too severely harmed. For that reason I rise in strong support of this measure. We have more than 50 cosponsors to this amendment, and I do not need to urge the Members to vote favorably on this amendment. Nevertheless, I say let us give this an expeditious passage.

Mr. BOREN addressed the Chair.

The PRESIDING OFFICER. The Chair recognizes the Senator from Oklahoma.

Mr. BOREN. Mr. President, I also want to congratulate those who have worked hard to make the passage of this amendment possible, especially the Senator from Oregon and the Senator from New York, who have worked on this particular piece of legislation for a long, long time, in fact for a number of years.

I think all of us recognize that, as we have to live within our means as a government, it becomes more and more important that we encourage individuals and private responsibility in the area of taking care of the vital needs of citizens who cannot help themselves.

We also recognize that the private sector can be more effective, as the Senator from Minnesota has pointed out, in tailoring programs that meet special local needs.

Just this past week I had the opportunity in my home State to attend the dedication, for example, of a park for the handicapped. Already 400 citizens of ages 3 to 90 are utilizing this particular facility. Several hundred thousand dollars a year are budgeted for the program from a local foundation which not only made this park possible but also finances the activities of a center for the handicapped where skills are learned and various other activities are carried out, all totally through the private sector with private contributions and private donations.

Again, the community itself has risen to the responsibility. And, through the tax code, I think it is imperative that we do all that we can to encourage that sense of private responsibility and that rebuilding of community spirit, which is all important in our country.

During the committee consideration of the tax bill, there were those who were, of course, concerned about the total size of the tax cut. The administration, I know, felt that they had to keep the total dollar figure within certain limits during the period of committee consideration. But at that time, Chairman DOLE spoke to several members of the committee, assuring us that later on full consideration would be given to this amendment.

I want to commend him for his leadership in working with the authors of this proposition and making it possible for this proposal to be considered at this time and for indicating his support for it. I appreciate the fact that he has joined with the authors of this piece of legislation in making the case to the administration and to the others for its inclusion in the tax cut package.

As one who has endorsed the total package being proposed by the President in a bipartisan spirit, I can only say that I think inclusion of this amendment in that package makes it an even stronger one and one which comes even closer to meeting the total needs of the American economy and also making sure that our tax policy reflects sound social policy as well as sound economic policy.

So I want to congratulate again all of those who have played a part in making the presentation of this amendment possible. I am very proud to join with the others who have cosponsored the proposal and urge its adoption.

Mr. PACKWOOD addressed the Chair.

The PRESIDING OFFICER. The Senator from Oregon.

Mr. PACKWOOD. Mr. President, I ask unanimous consent to have printed in the RECORD an article entitled "The Federal Government and the Nonprofit Sector" published by the Urban Institute, together with miscellaneous editorials and articles supporting this amendment.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

THE FEDERAL GOVERNMENT AND THE NONPROFIT SECTOR: IMPLICATIONS OF THE REAGAN BUDGET PROPOSALS

(By Lester M. Salamon with Alan J. Abramson, the Urban Institute, May 1981)

SUMMARY OF PRINCIPAL FINDINGS

1. The proposed Reagan budget cuts, if enacted, would significantly reduce the revenues available to a wide assortment of private, nonprofit organizations, ranging from symphony societies to social welfare agencies, from private colleges to local community organizations. These impacts result from the fact that nonprofit organizations have become active partners with the federal government in a broad range of public purposes. Because adequate data on the extent of this involvement are virtually nonexistent, however, the true impact of the proposed cuts on the nonprofit sector has been difficult to ascertain.

2. To correct this, the present study developed a basis for calculating the likely effects of the current round of proposed budget cuts on nonprofit organizations. What it found, in the first instance, was that nonprofit organizations stand to lose $4.8 billion in revenues in FY 1982 alone, and $27.3 billion during 1981–84, as a consequence of the reductions proposed in the Reagan budget package. This represents a reduction of 9.7 percent in FY 1982, and 13.1 percent in fiscal years 1981–84, below the outlay levels projected in the official budget submitted in January 1981 by the previous Administration. Expressed in constant dollar terms, these cuts reduce federal assistance to nonprofit organizations 12.2 percent *below* 1980 actual outlays in FY 1982, 22.7 percent in FY 1983, and 26.3 percent in 1984.

3. Nonprofit organizations involved in *social welfare* and *education* activities will be most heavily affected by these cutbacks, with revenue losses during 1981–84 or $18 billion and $5 billion, or 50.3 percent and 18.4 percent, respectively, compared to January estimates. Expressed in constant dollar terms, federal support of nonprofit organizations in the fields of *social welfare, health services,* the *arts,* and *conservation* will decline by at least one-third below actual 1980 levels during the 1981–84 period if these proposals are enacted.

4. For private philantrophy to keep pace with inflation and also offset the loss of revenue to nonprofit organizations resulting from these budget reductions, private giving in 1982 would have to increase by 26 percent over its 1981 level, or about three times faster than its rate of increase over the recent past. In 1983 and 1984, the comparable rate of increase needed in private giving would be 39 percent and 44 percent, respectively.

5. In addition to its direct impacts on the resources of nonprofit organizations, the Reagan budget proposals will also have more general impacts on program areas of interest to nonprofit organizations, impacts that could increase demands for nonprofit services at the same time that the resources available to nonprofit organizations to provide these services are being cut back. In fiscal year 1982, outlay reductions in program areas of interest to nonprofit organizations will total $20.4 billion, a cut of 11.1 percent below the comparable January budget levels.

In FY 1983 and 1984, these reductions will increase to $44.7 billion and $61.4 billion, respectively. For the four years of the budget program, 1981–84, outlays for programs in service areas of interest to nonprofit organizations will be cut a total of $128.2 billion. As a result, these program areas, which accounted for 26 percent of all outlays in 1980, will absorb 50 percent of the projected cuts.

6. Expressed in constant dollar terms, these cuts involve total reductions over the next four years of $110.4 billion below actual 1980 outlays in program areas of interest to nonprofit organizations, a decline of close to 20 percent in real dollar terms.

7. These reductions are especially sizable in the areas of *social welfare* and *education,* which are slated in the Reagan budget proposal for cuts over the next four years of 44 percent and 30 percent, respectively, below actual 1980 outlays in constant dollar terms. While the overall reductions in outlays for the *arts and environment* are smaller in absolute terms, they are much deeper relative to existing funding. Funding for arts programs over the next four years is projected to decline, for example, by 37 percent below actual FY 1980 outlays in real dollar terms, while funding for relevant conservation programs is slated for a 62 percent decline.

8. The data reported here are based on unpublished budget tables available from the Office of Management and Budget, and estimates of nonprofit involvement in federal programs developed from literature reviews, program data, and extensive interviews with program managers and researchers. Throughout, efforts were made to use essentially conservative estimates to avoid overstating the

results. In addition, the results are somewhat incomplete because of data unavailability on the extent of nonprofit involvement in some programs. Finally, no effort is made here to gauge the consequences for nonprofit organizations of potential additional reductions in state and local spending that may result from federal cutbacks.

9. This report makes no effort to assess the merits of the budget proposals advanced by the current Administration, either with respect to particular proposals or with respect to the package as a whole. The focus of attention is on what the proposals are and what they will mean for nonprofit organizations, not on whether they are desirable or undesirable. Nor does this report assess the potential impacts on nonprofit organizations of the other two elements of the President's "economic recovery program"—tax and regulatory changes—which may or may not modify the impacts resulting from the budget reductions.

10. Copies of this report may be obtained from the author in care of The Urban Institute, 2100 M Street, N.W., Washington, D.C. 20037; or from the sponsoring organizations. The cost of the report is $10.00 for single copies, and $7.00 per copy for orders of five or more.

[From the Boston Globe, July 18, 1981]

CHARITABLE GIVING

A proposal extending tax breaks for charitable contributions to American taxpayers who use the short form could get lost in the current House-Senate tax cut shuffle. Earlier this week the House Ways and Means Committee rejected a measure that would allow tax deductions for contributions to nonprofit organizations and institutions for those who don't itemize deductions. Sens. Robert Packwood and Patrick Moynihan hope to resuscitate the proposal as an amendment to the Senate Finance Committee's version of the tax cut package within the next few days. The Charitable Contributions Act should be included in the final version of any tax cut package.

The rich now receive tax benefits for their contributions; it pays those in higher tax brackets to make substantial contributions to their favorite charities. Two-thirds of all Americans, mostly those with low and middle incomes, who take the standard deduction don't get anything more than satisfaction for what they give. This hurts these taxpayers as well as the universities, hospitals, churches, nonprofit arts and cultural institutions and community service organizations that depend on the largesse of individual givers.

During the past eight years, there have been six increases in the standard deduction resulting in a decline in the number of taxpayers who itemize deductions and a corresponding drop in contributions received by nonprofit groups. In fact, a recent Gallup poll showed that taxpayers who itemize give at least twice the amount of those who don't itemize: in the $15,000 to $20,000 income bracket, those who itemize give three times as much as those who take the standard deduction.

It is estimated that the Charitable Contributions Act would boost contributions to nonprofit organizations and institutions by at least $5.8 billion a year. Right now those organizations stand to lose about $27 billion in government funds because of cuts in areas of health, education, environment and the arts.

The Charitable Contributions Act would cost the Treasury Department from $2 to $4 billion annually. The Joint Committee on Taxation has determined that 83 percent of this lost revenue would go to taxpayers with incomes under $30,000; 60 percent of it would go to taxpayers with incomes under $20,000.

It is ironic that the Administration, which believes the private sector should pick up the slack in the wake of the budget cutting process, isn't supporting this legislation wholeheartedly in the Congress. It is also ironic that House Democrats, including previous supporters, have turned against the legislation, since they are anxious to cut taxes to help low- and middle-income Americans and to cut them even more dramatically than the Administration.

The Charitable Contributions Act would make it easier for taxpayers in lower brackets to support nonprofit groups. The legislation would spread the wealth to those organizations and individuals who need it most, who will have an even harder time making ends meet in the future. It should be passed.

[From the Washington Star, July 17, 1981]

CHARITABLE CONTRIBUTIONS

There was a tense little drama in the Senate Finance Committee the other day, which did not have a happy denouement.

An amendment to the tax-cut bill, to permit deductions for charitable contributions on non-itemized tax returns, was down 9 to 8, with three members not on the scorecard as the committee was winding up work. Within a few hours, however, supporters of the legislation brought round Sen. Spark Matsunaga, D-Hawaii, making the count 9–9 Later that day, Pennsylvania Republican John Heinz plighted his troth to the proposal and, next morning just before committee voting deadline, Sen. David Durenberger, R-Minn., signed on. It appeared the amendment would be approved, 11 to 9. But before the barn door could be closed, Oklahoma Republican David Boren changed his aye vote to a nay. The final count was 10–10 and, under Senate rules, a tie is a loss.

The defeat, we hope, will not tbe final. The Senate sponsors, New York Democrat Daniel Patrick Moynihan and Republican Robert Packwood, of Oregon, intend to bring the proposal up on the floor.

President Reagan has called the idea a "noble" one, but his folks are edgy about endorsing a measure that would decrease federal revenue at this point. It would be better, they say, not to include the idea in the tax-cut bill pending in the Senate. However, supporters feel that that bill may be the only tax-cut bill this year, and indeed for several years to come.

Is the charitable contributions proposal worth all this fuss? We think so. With the administration drastically and necessarily paring federal spending, private contribution to a range of voluntary programs will be logical pluggers of a good many funding gaps. But efforts over the past dozen years to simplify income-tax filing have discouraged contributions by individuals, who traditionally account for 90 per cent of charitable giving in this country.

Since 1969, the standard income-tax deduction has been raised five times. In 1969, 53 per cent of those filing income tax returns itemized their deductions, for example; by 1978 only 29 per cent were itemizing. This has significantly reduced the incentive to make charitable contributions. The loss to voluntary organizations, which often do a better job than government in social-welfare and cultural matters, has been in the billions of dollars.

The Moynihan-Packwood legislation—and a companion measure in the House, sponsored by Rep. Barber Conable, R-N.Y., and Richard Gephardt, D-Mo.—would permit those taking the standard deduction also to deduct charitable contributions. This could increase private giving by nearly $6 billion a year, according to Independent Sector, an organization representing voluntary organizations.

The shrinkage in federal revenue, perhaps $2.2 billion a year, should not be a dominating consideration in light of the predictably wider need for the services of private organizations, such as United Way. Indeed, the charitable contributions legislation seems tailored to the Reagan philosophy. Failure of the charitable contributions proposal would continue the unfortunate trend that, as we said earlier this year, is "transforming charity into an activity of the rich."

[From the New York Times, July 8, 1981]

CITIZENS' "SAFETY NET"

(By Waldemar A. Nielsen)

The general size and shape of the Administration's cuts in social programs can now be discerned. Congress will still make some modifications and adjustments, but in the end, the reductions surely will add significantly to the strains and distress of many groups and regions of the country.

To protect those who might otherwise be most severely affected, President Reagan and other Administration officials have repeatedly emphasized the importance of the "safety net" of Government programs that will be spared.

But the most important "safety net" of all is never mentioned—namely, the hundreds of thousands of private nonprofit agencies—educational, charitable, cultural, and religious—that exist in every community and that some 60 million Americans support every year with both money and their services as volunteers. This "safety net" will be called upon to play a crucial role in the austerity period that is in the offing but it will have to do so at a time when it is in fragile and frayed financial condition.

For more than a decade, the costs of nonprofit institutions have been driven up by inflation, their endowments have been eroded by the slump in the securities markets, and their income from individual gifts has fallen off as many Americans have been discouraged from giving to charity by rising taxes and their own rising costs of living.

Moreover, many nonprofit agencies will themselves now be hit by the force of Federal program cuts. In recent years, they have become increasingly dependent on Government funding to sustain their activities. At present, about one-third of their total income derives from Federal grants, contracts, and reimbursements. A significant part of this, perhaps $5 billion or $6 billion, is now jeopardized.

In the interest of national stability, it would be an act of wisdom for the Reagan Administration to take steps at this time to strengthen the national apparatus of private nonprofit organizations. The approach would be consistent with the Administration's philosophy of strengthening the capacity of the private sector to provide more of the human services that the Government has taken responsibility for in recent years.

President Reagan should announce his full and strong support for the proposals now under consideration by the Congress to restore tax deductibility for charitable gifts for the two-thirds of all taxpayers from whom such incentive has been eliminated by the spreading use of the standard deduction. At a cost of a relatively modest reduction in Government revenue, charitable giving would thereby increase by more than $5 billion a year.

The upward trend of corporate philanthropy in recent years has been quite remarkable. Still, only a minority of companies have yet begun significant giving programs. Those corporations that have taken leadership in this development deserve commendation and greater public recognition, and those that have not yet responded deserve some Presidential prodding.

The President should order forthwith a re-examination of the regulations and policies of all Government agencies that impinge

on private nonprofit institutions, as a basis for changing those that are damaging or unjustifiably costly.

Mr. Reagan should put his active support behind the lagging effort of the Office of Budget and Management to find ways to increase cooperation and consultation between Government and private nonprofit organizations in the critical period ahead. Wherever feasible, the Government should use and fund existing nonprofit organizations to carry out its human-service programs rather than give preference to its own bureaucracy and facilities.

The President should lend his active support to the national task of encouraging and volunteering. One of the measures by which this could be done would be to establish a form of national recognition for outstanding service to communities and to the Nation by volunteer leaders. A society is what it honors, and the United States has done very little to recognize and applaud the selfless service of its millions of dedicated citizen volunteers.

The tradition of private action for the public good is one of our Nation's most admirable qualities. But for most of our history it has simply been taken for granted, and more recently this situation has become worse.

Government, both deliberately and inadvertently, has become an oppressive, competitive, and in some respects destructive force. If the Administration is to reverse this trend, a program of affirmative action, not merely a few kind words in Mr. Reagan's Inaugural Address, is called for.

[From the New York Times, July 6, 1981]

NONPROFIT GROUPS CALL ON INDUSTRY TO REPLACE U.S. AID

(By Kathleen Teltsch)

Large companies from coast to coast report a surge in appeals for grants from antipoverty groups, universities, cultural agencies and other nonprofit organizations scrambling to replace money they fear they will lose as a result of Reagan Administration budget cuts.

The companies say there is no way they can come anywhere near offsetting the Federal grant money that is to be eliminated.

"We've been deluged with thousands of requests, a 100 percent increase in the first quarter of this year," said Mary Hall, vice president of corporate contributions at the Weyerhaeuser Company headquarters in Tacoma, Wash., which twice a day receives mail sacks crammed with appeals. Most corporate givers reported an increase of 25 to 35 percent in requests from the nation's 300,000 nonprofit organizations, which range from opera companies and private universities to groups that feed the poor.

"There's a certain element of panic about anticipated losses," Richard F. Neblett, contributions coordinator for Exxon, said at its Manhattan headquarters, where the increase in appeals is less dramatic than that at Weyerhaeuser.

VOLUNTEER AID ENCOURAGED

Throughout the budget-cutting process, senior White House officials have said that they expected private volunteer efforts to replace many curtailed Government programs. For example, a Task Force on the Arts and Humanities that President Reagan named in May is to report by the end of the summer on what Mr. Reagan called a plan "to make better use of existing Federal resources and to increase support for the arts and humanities by the private sector."

However, despite efforts in Congress and elsewhere to encourage private giving, corporate officers and other experts on charity say that business, foundations and individual givers combined will be unable to offset the Federal grant money being cut.

While final details of the budget cuts are not yet known, a study by the Urban Institute in Washington recently estimated that there would be reductions of $128.2 billion from 1981 to 1984 for social welfare, health, environment, the arts and Government-financed housing and food programs.

$27 BILLION LOSS IN 5 YEARS

Lester M. Salamon, the political economist who directed the institute's study, said that the anticipated cuts would mean a loss of $27 billion over the next five years for the nonprofit organizations working in these fields, the groups now flooding corporations with their appeals for money.

Contributions to nonprofit groups by companies and some 600 company-operated foundations last year totaled only $2.55 billion, according to the American Association of Fund-Raising Counsel Inc.

The difference between the amount of funds to be lost and the total corporate contribution is of such dimensions that companies cannot possibly pick up the whole tab, said Anne Klepper, a senior research associate for the Conference Board, whose 4,000 members include the country's leading foundations, government agencies and educational institutions.

"There have been unrealistic expectations about who will do what for a long time," she said. "Now the situation is getting crunchier. Inevitably there will be a struggle to survive among the nonprofits. It could be a Darwinian scene."

Private giving from all private sources for nonreligious purposes would have to increase by 144 percent over the next five years to make up for reductions in Government assistance and keep up with inflation, Mr. Salamon estimated, growth four times faster than the average over the last five years.

TOO MUCH, TOO SOON

Corporate officials say the Administration's assumption that the private sector and especially business can fill the void is expecting too much, too soon.

"You cannot send a Mailgram from Washington to all corporations and say a funny thing happened, and expect they will be ready immediately to make up the shortfall—life is not like that," Edward M. Block, a vice president of the American Telephone and Telegraph Company, remarked in objecting to the proposed cutback in financing for the National Endowment for the Arts. Mr. Block is also president of the American Council for the Arts.

Even if business took the lead in support of the arts, a vast fund-raising campaign could not be started in time to avoid serious damage, Mr. Block contended. Business will also be under heavy pressure to help pay for a variety of human services, he observed, suggesting that these might be assisted at the expense of the arts.

A.T. & T. is the leading partner of the Bell System, whose $38.2 million budget for philanthropy made it the largest single donor in the business community in 1980. Exxon ranked second, with contributions of $38.1 million. Only six private foundations in the United States give away more money annually.

Many companies plan to increase giving, among them, Exxon, International Business Machines, Levi Strauss and General Electric, but the widespread opinion is that the total for all would not offset the Government reductions.

"A DROP IN THE BUCKET"

Contributions from corporations increased 15 percent in 1978 and 1979, dropping to 4 percent because of low profits last year, but even if the former high level was reached, it would amount to only $380 million more a year, "a drop in the bucket," in the words of John I. Schwartz, president of the American Association of Fund-Raising Counsel.

"Dollar for dollar, there is no way for the private sector to make up for the cuts," agreed John H. Filer, chairman of the Aetna Life and Casualty Company, although he maintained that companies and nonprofit groups could have significant impact in critical areas, including training the hard to employ.

Less than 30 percent of the country's two million companies report to the Internal Revenue Service that they make philanthropic donations, the Conference Board said. Under Federal law, companies are permitted to deduct for charitable giving up to 5 percent of their taxable income. Only a few, mainly companies in the Minneapolis area that have joined a 5 Percent Club, reach the maximum; the average hovers around 1 percent.

Even before the Reagan Administration, there were efforts by organizations and individuals to persuade companies to step up giving and to reach the thousands that do not make any contributions.

The National Business Roundtable issued a policy statement in March endorsed by the Chamber of Commerce and the National Association of Manufacturers calling on the business community to increase giving. And Laurence A. Wien, a New York lawyer and real estate investor, is credited with having "shamed" dozens of prospering companies into increasing their contributions by presenting or threatening to push stockholder resolutions.

Raising the present level of company giving to 5 percent would increase corporate contributions to $10 billion to $12 billion, according to philanthropic experts. However, even doubling the present level to 2 percent is expected to take several years, these analysts said.

BUSINESS FACES IMPLICATIONS

The Administration and public expectations that business can be "the thousand-fingered Dutch boy plugging the dikes" poses risks for business, which "will have to perform as never before," according to Donald H. Haider, professor of public management at Northwestern University.

Speaking at a Public Affairs Council meeting of corporate leaders in Chicago in March, Mr. Haider produced a stunned silence with his warning that a failure by industry to increase business activity, create jobs and also act as the "great gap-filler" could result in a backlash in which business could lose the freedom from regulations and other benefits it expects from the Reagan Administration.

Brian O'Connell, president of the Independent Sector, said it would be a mistake for the Administration to single out business and give the impression that the burden now rests with it to pick up the slack. The group, set up two years ago to stimulate private charitable giving, has been lobbying for new tax laws to encourage giving by individuals. Its 310 members include leading companies, foundations and nonprofit organizations.

"I believe business will do more and can do more, but it has to be done in a spirit of encouragement and cooperation and not by giving the impression that business must fulfill an obligation," Mr. O'Connell said.

HELPING CHARITY—AND THE TAXPAYER

(By Jeffrey L. Lant)

America's more than 500,000 nonprofit organizations, particularly those in the human services where Reagan Administration budget cuts will be severely felt, have a fine opportunity to help themselves. But they'll have to act by the first week of June, when the House Ways and Means Committee finishes its tax work for the session.

Ways and Means is considering legislation allowing taxpayers to deduct charitable contributions regardless of whether they take

the standard deduction. At present, taxpayers who use the short form or do not itemize deductions are not credited for their charitable contributions. Thus a gift of $100 to a nonprofit day-care center costs the full $100. The same gift by a taxpayer in the 40 percent tax bracket who itemizes his deductions costs $60.

There has, of course, always been this discrepancy, but the impact was less significant when fewer people used the short form. Since 1969 the Treasury has raised the standard deduction five times to simplify the tax system. As a result, less than 25 percent of all taxpayers itemize deductions.

The effect on charitable giving is hardly surprising. The more people using the short form, the fewer making charitable contributions and the smaller the contributions. A recent Gallup Poll shows that itemizers in the $10,000-$15,000 income bracket in 1978 contributed an average of $324 to charity, compared with only $249 for non-itemizers. When all income brackets are considered, the mean average contribution of itemizers was $652 compared to only $210 for non-itemizers.

In 1978 a movement arose in Congress to reverse that trend. The movement is currently spearheaded by Reps. Richard A. Gephardt (D-Mo.) and Barber Conable (R-N.Y.) and Sens. Robert Packwood (R-Ore.) and Daniel P. Moynihan (D-N.Y.). Each year their bill (HR-501 and S-170) creeps a little closer to passage as the leading arguments against it have been dealt with.

The chief of those arguments has been its potential cost in lost federal revenue. Supporters of the legislation, using figures provided by Harvard economist Martin Feldstein, admit that it will cost the Treasury about $4.8 billion a year. However, they say that the benefit to public charities will be about $5.7 billion yearly, a figure that goes some of the way toward making up the $20 billion in Reagan-promoted federal budget cuts.

Increasing citizen support of civic organizations and broadening public participation is, of course, a hallmark of the Reagan philosophy. Thus it is no surprise to learn that both the President and the Republican platform endorse this legislation. Moreover, in the House and Senate the legislation has attracted broad bipartisan support: 108 House Democrats and 112 House Republicans are sponsors; 12 Senate Democrats and 12 Senate Republicans, too.

There seems to be two obstacles:

(1) Liberal Democrats fear that the anticipated loss in federal revenue under this legislation might imperil favored social programs which the President's measures have already adversely affected. They have thus withheld their support. The Massachusetts congressional delegation, for instance, despite the wealth of nonprofit organizations in this state, has hung back.

Proponents counter the objections of the liberals by citing the incalculable advantages to be gained in encouraging more people to support public charities and nonprofit organizations, a benefit only a bill of this kind can provide.

(2) Despite the high-blown Republican rhetoric in favor of this bill, there has not been a notable push from the White House for its passage.

At this juncture, nonprofit organizations can help themselves first by urging the recalcitrant members of the Massachusetts congressional delegation to support this legislation and, second, by urging House Speaker Thomas P. O'Neill and Rep. Daniel Rostenkowski (D-Ill.), chairman of Ways and Means, to do so. Unless they act, an important measure capable of mitigating the sting of the budget cuts on nonprofit organizations will be shelved until another Congress assembles.

AN EXCELLENT WAY TO HELP CHARITIES

Times could be better for America's charities. Not only has inflation discouraged many people from making donations, but the Reagan's administration's budget cuts threaten to have a devastating effect on federal funding for nonprofit organizations. Charities expect to lose $27.3 billion in revenue from Washington over the next three years. All of this means that fewer services will be available at a time when the need for assistance is especially strong.

Fortunately, Congress has an excellent opportunity to help charities help themselves. Pending in the House Ways and Means Committee and in the Senate Finance Committee is legislation that would allow taxpayers claiming the standard deduction to take a special deduction for contributions to charities.

At present, taxpayers who use the short form or do not itemize deductions are not credited for their donations to non-profit organizations. Thus, a gift of $100 costs the full $100. The same gift by a taxpayer in the 40 percent tax bracket who itemizes his deductions costs $60.

Thought there has always been this discrepancy, its impact has become more significant now that more people use the short form. In an effort to simplify the tax system, the Treasury has raised the standard deduction about a half-dozen times over the past 10 years. As a result, about two-thirds of all taxpayers do not itemize deductions.

The effect on charitable giving is hardly surprising. A recent Gallup Poll shows that itemizers donate two or three times more to non-profit organizations than do non-itemizers. In the $2,000-to-$50,000 income bracket, for example, itemizers gave an average of $658 to charity in 1978, compared with only $281 for non-itemizers. The same discrepancy was found in all other income brackets.

It stands to reason, then, that giving non-itemizers a special deduction would be a good way to stimulate donations and to help the nation's non-profit organizations. True, the legislation would result in lost federal revenue. Harvard economist Martin Feldstein, a proponent of the tax idea, estimates it would cost the Treasury about $4.8 billion annually. But that loss is expected to be more than offset by an additional $5.7 billion in contributions.

The legislation has gained broad, bipartisan support in both houses of Congress. In the House, HR 501 has 232 co-sponsors, including all four of the Northwest suburbs representatives: John E. Porter, 10th District; Philip M. Crane, 12th; Robert McClory, 13th, and John N. Erlenborn, 14th. In the Senate, a companion bill, S. 170, has 30 co-sponsors. (Neither Alan J. Dixon nor Charles H. Percy is on that list.) It is still unclear whether this proposal will be included in the tax cut package now being hammered out between the Reagan administration and Congress. As matters now stand, it is not. And, despite the high-blown Republican rhetoric in favor of this legislation, there has not been a notable push from the White House for its passage.

The special deduction for charitable contributions deserves approval—if not now, then later this year, when other tax bills are likely to come up. Unless Congress acts, an important measure capable of relieving some of the pain from the Reagan budget cuts will be shelved.

CONGRESS NEEDS A PUSH ON CHARITABLE GIVING POLICY

One of the painful aspects of making out a personal income tax return is the knowledge that many others are paying less because they are more skilled in the art of dodging.

Tax policy is like the law that forbids sleeping under bridges. It applies equally to millionaries and vagrants. In spite of the seeming evenhandedness, this law doesn't restrict the activities of millionaires perceptibly but it plays havoc with the lifestyle of vagrants.

Or perhaps taxes are more aptly compared to the rain in the poem which says it falls upon "the just and unjust fella, but more upon the just because the unjust hath the just's umbrella."

Congress now has before it a straightforward tax amendment that would benefit the good causes in American life. It would be equal not only in name but in reality.

The 96th Congress, to its shame, let this amendment die. The 97th can, and should, review it.

The amendment would have allowed taxpayers to deduct the charitable contributions they made during the year whether or not they take the standard deduction.

As things now stand, taxpayers must make a choice between itemizing or taking the standard deduction. They can't do both.

Taking the standard deduction greatly simplifies tax preparation but it also reduces the motivation for charitable giving.

Charitable giving in the United States has suffered from the greatly increased usage of the standard deduction, which has risen sharply over the past nine years.

There are estimates that this increased usage of the standard deduction has resulted in a decrease in charitable giving over this nine-year period by about $5 billion.

Yet, U.S. tax policy should be encouraging the charitible giving that supports thousands of nonprofit organizations whose work relieves government—and thus the taxpayer—of a great burden.

They support youth work, hospitals, schools, work with the handicapped, the fight against disease, day care and help for the elderly. They are the nuclei around which gather millions of volunteers.

The dollars thus spent offer the greatest possible return in the form of actual good works.

The estimated annual cost to the treasury of this measure would be about $2.2 billion, a fraction of the proposed tax cut but a natural part of that tax cut.

The estimated annual return to the organizations of the nature of those that belong to Jacksonville's United Way would be a yearly $5.7 billion.

States and communities across the nation are seeking ways to help compensate for the loss to good causes that will be sustained as a result of the budget cuts in the offing. This is an obvious and productive move along that line.

Two proposals that would effect this change are now in Congress.

One is H.R. 501 sponsored by Rep. Richard Gephardt, D-Mo., and Rep. Barber B. Conable Jr., R-N.Y. The other is S. 170 with Sen. Daniel P. Moynihan, D-N.Y., and Bob Packwood, R-Ore., as sponsors.

The proposal died last year and it may well die this year, despite its obvious merit, unless a showing of public support is made.

It is time the American people involved themselves in tax policy and demanded changes that will help create a more humane America instead of letting it be dictated by a narrow range of informed, but often selfish, interests.

[From the Washington Star, July 19, 1981]

ENLARGING DEDUCTIONS FOR CHARITY

Last June 25, by a vote of 19–1, the Senate Finance Committee reported an omnibus tax reduction bill to the Senate floor. I laud their their efforts and achievement. This is an excellent bill which will provide needed tax

relief to both individual taxpayers and to businesses.

I was disappointed, however, to see that an amendment allowing above-the-line deductions for charitable contributions failed to be included on a 10-10 tie vote. This would leave in place the current inequity in the tax code whereby only the 29 percent of American families who itemize their deductions are allowed to deduct charitable contributions from their taxable income. This effectively discourages the vast majority of taxpayers from making such contributions.

I have long believed that this inequity should be eliminated. Historically, one of the greatest strengths of this nation is the deep responsibility we feel to our community and to those less fortunate than ourselves. Thus I have been proud to cosponsor S. 170, a bill which would allow *all* taxpayers, not just those who itemize, to deduct charitable contributions from their income when paying their federal taxes.

A move will be made on the Senate floor during the consideration of the omnibus tax bill to attach this incentive for charitable contributions as an amendment. I fully support this effort. This legislation is needed now more than ever. Under projected budget cuts, volunteer organizations will lose $27.3 billion in direct government aid by 1984. However, America's volunteer organizations can, and should, assume an expanded role in providing services to our nation's needy.

Adoption of the charitable contributions amendment is vital to this effort.

ALFONSE D'AMATO,
U.S. Senator.

WASHINGTON, D.C.

[From the New York Times, Jan. 23, 1981]

HURTING VOLUNTARY AGENCIES

(By Brian O'Connell)

WASHINGTON.—Ronald Reagan and many of the people here with him and with the new Congress believe that more public services should be delivered by voluntary organizations. Even without this conviction, it is likely that we are headed for a period of large Federal budget cutbacks, when Government will look to voluntary organizations to pick up the slack.

This heightened interest in voluntary initiative is welcome. But it is important not to give a false impression that voluntary organizations can substitute for the necessary role of the Government in a vast array of public services, such as public welfare and the enforcement of civil rights. It would be a disservice to President Reagan and the public to exaggerate what voluntary organizations can do, or what Government should not do.

Still, it is possible to open significantly the serving roles of individual citizens and their nonprofit organizations. The first step is to stop the Treasury Department from using its tax authority to capture money that should go to these voluntary groups. Treasury officials say that the drain from voluntary organizations was never intended but, in the face of tight Federal budgets, it is not the right time to correct the error.

This position absolutely contradicted a principle of the Carter Administration, which advocated citizen involvement and service. It would be utterly untenable in a Reagan Administration. If any President wants to stimulate greater private-sector activity, his Treasury cannot be allowed to engage in unfair competition with voluntary organizations—with, for example, church-related day-care centers, Jewish homes for the aged, or Salvation Army service centers.

Historically, tax policy has encouraged the deduction of contributions. This has provided a significant incentive for giving, but, even more importantly, has served to remind all of us that it is the philosophy and policy of the people and our Government that giving is an act for the public good that is to be fostered. In the last 10 years, however, this principle has been seriously undermined.

To simplify the income-tax system the Government has increased the level of the standard deduction five times since 1969. In 1979, about 75 percent of all taxpayers used the standard deduction. This reduced incentives for giving among enough taxpayers to represent a loss of more than $1.5 billion to voluntary organizations in 1979. That may not seem like much to a Government with a budget of $600 billion, but it still goes a long way in the independent sector—that's all the money raised in 1979 by all United Way campaigns.

A recent Gallup survey revealed that in every tax bracket, taxpayers who itemized gave at least twice the amount of non-itemizers. The ratio is 3 to 1 in the $15,000-to-$20,000 income category.

Charitable-contributions legislation (supported by 44 Senators and 255 Representatives in the last Congress) is designed to offset both the inadvertent change of tax policy and the loss of dollars. The bills would, in essence, remove charitable contributions from the standard deduction and again allow all Americans to deduct their gifts. Contributions are not like other deductions. The others all represent expenditures that serve the taxpayers—interest payments, for example. The charitable contribution serves society.

Even the term and concept of standard deduction are no longer relevant. It is now called the "zero bracket amount" and is largely a vehicle for tax reductions. The Treasury acknowledges that the "zero bracket amount" no longer contains fixed dollars or percentages for the separate deductions.

The charitable-contributions bills are designed only to redress the Government's significant undercutting of contributed income. It is hardly sensible or fair for the Government to capture money that should flow to voluntary groups or for Treasury to espouse big government at the expenses of pluralism when the Government is trying to transfer responsibility back to private agencies. They cannot have it both ways, and neither can the country.

Americans of all philosophical and political persuasions are intellectually committed to our country's unique degree of voluntary action, but we assume this pluralism will continue without planning to ensure that it will.

The charitable contributions legislation would increase contributions by an estimated $4 billion a year. That would expand personal giving by 12 percent. Even if the Government were to lose a like amount—estimates are that the loss would be far less—the total would represent only a fraction of 1 percent of Federal expenditures.

For a society rapidly learning the practical limitations of big government and turning to voluntary organizations for help, a 12 percent expansion of funds voluntarily contributed is a sensible first step in the right direction.

ECONOMIC RECOVERY TAX ACT OF 1981

(Report of the Committee on Finance, U.S. Senate on House Joint Resolution 266; together with additional and minority views)

A. ADDITIONAL VIEWS OF SENATORS PACKWOOD, HEINZ, DURENBERGER, BENTSEN, MOYNIHAN, AND BAUCUS

We voted to report the tax cut bill, H.J. Res. 266. The bill, of course, raises many issues. These views relate to only one—the future for a vigorous, broad based voluntary sector in the United States.

In Finance Committee mark-up of H.J. Res. 266, we proposed to allow all taxpayers to deduct contributions to charitable organizations whether or not they itemize their deductions. Our amendment was structured to meet budget restrictions endorsed by the Finance Committee.

This proposal would help preserve the vitality of our nation's charitable and volunteer community. We are confident that volunteer groups, dollar for dollar, can equal or exceed the job done by government in delivering services. We believe that his proposal can help achieve this. Unfortunately, the proposal was defeated by a 10–10 tie vote.

We believe that the President and a majority in Congress favor extending the deduction for charitable contributions to non-itemizers. However, some believe that the budget cannot accommodate it, and that there is no particular need to approve it now. We respectfully disagree with these objections.

Description of proposal

In Committee, we proposed to allow people who do not itemize their deductions to deduct contributions to charitable, religious, scientific, cultural and educational organizations.

One purpose of proposal is to help reverse the decline in support for charitable groups. In 1970, we gave 1.99% of our personal income to charity. By 1980, this fell to 1.84%—a loss in contribution of more than $3 billion per year by 1980.

One important explanation for the loss of giving is that fewer people itemized deductions. This means fewer people have a tax incentive to give.

In 1970, 57.4% of taxpayers itemized deductions. By 1981, due to successive increases in the zero bracket amount (formerly called the standard deduction), the percent of taxpayers itemizing deductions is estimated to be 38.3%. Thus 61.7% of taxpayers, 43,000,000 households, no longer have a tax incentive to contribute.

There is growing evidence that the tax incentive for charitable contributions works. Survey research contained in a Gallup opinion poll in 1979 shows that itemizers contribute between two and three times as much to charity as non-itemizers.

The distinguished economist Martin Feldstein of Harvard University has also confirmed this conclusion. He testified before the Finance Committee's Subcommittee on Taxation that the revenue loss from this bill would be exceeded by new contributions to charitable groups. He said each $1 of revenue loss from this bill could produce from $1.30 to $2.00 in contributions.

We believe the incentive works. We also believe that this provision would be one of the most cost effective federal initiatives we could undertake. We can think of no way to get more money to solve human needs at less cost of the federal government.

Studies showing the effect of tax incentives on giving do not even attempt to measure the enormous importance of volunteer help. For example, the American Red Cross, in testimony before the Taxation Subcommittee of the Senate Finance Committee in January, 1980, indicated that it has 77 volunteers for each of its paid workers. Charitable organizers have often found that if a person gives financial support to an organization, soon after he or she often wishes to be personally involved by volunteering time. Reduced contributions can weaken this important volunteer resource.

As the incentive to give applies to fewer and fewer people, community organizations also lose their democratic base. They become more dependent on corporations and wealthy contributors.

The average income in 1981 for itemizers is estimated to be $31,533. In contrast, the aver-

age income for persons taking the standard deduction is estimated to be only $12,600. This legislation will encourage these 43,000,000 households to participate in giving.

Vast support for S. 170

Support for S. 170 among policy makers is overwhelming. Thirty-five Senators of both parties have cosponsored S. 170 in the first six months of this new Congress, and 43 did in the last Congress. Two hundred and ninety-one members of the House of Representatives—a clear majority—have cosponsored the current companion bill sponsored by Representatives Gephardt and Conable, H.R. 501.

Last September, the Senate Finance Committee approved a form of this bill as a Committee amendment to its tax cut bill. The vote was 16–4.

The 1980 National Republican Platform endorses this proposal:

"The American ethic of neighbor helping neighbor has been an essential factor in the building of our nation. Republicans are committed to the preservation of this great tradition."

"To help non-government community programs aid in serving the needs of poor, disabled, or other disadvantaged, we support permitting taxpayers to deduct charitable contributions from their federal income tax whether they itemize or not.

* * * * *

"Government must never elbow aside private institutions—schools, churches, volunteer groups, labor and professional associations—in meeting the social needs in neighborhoods and communities.

* * * * *

"Most important, to ensure the continued primacy of private support for the arts, we reiterate our support of broader tax incentives for contributions to charitable and cultural organizations."

On September 18, 1980, then-candidate Reagan sent a telegram to the National Conference of Catholic Charities citing the above language, and stating that he was strongly committed to it. Support for this proposal has been bipartisan from its inception.

Need for approval now

A study prepared by the Urban Institute and released in May, 1981, finds that nonprofit organizations will lose $27.3 billion in direct funding in fiscal years 1981–1984 under the Administration's reductions. Direct funding lost to non-profit organizations in each of these years in $100 million in fiscal year 1981; $4.8 billion in fiscal year 1982; $9.8 billion in fiscal year 1983; and $12.7 billion in fiscal year 1984.

In addition, the tax reductions in the Senate Finance Committee version of H.J. Res. 266 will further hamper our citizen's voluntary effort to meet community needs. The reduction in marginal rates will decrease tax incentives at each income level to contribute to charity. For example, the reduction in maximum rate from 70 percent to 50 percent, although fully meritorious to stimulate investment, will lead to less giving by persons in those higher brackets. Also, the reductions in estate and gift taxes will decrease the role of charitable giving in estate planning.

If the independent sector is to become more active in areas affected by budget cuts, we must give it the tools its needs to assume the broader responsibilities which is can handle so capably.

Accommodating budget limits

This proposal can be enacted now.

In September, 1980, the Senate Finance Committee approved a four year phase-in for this legislation. In the first year, non-itemizers would be permitted to deduct ¼ of their contributions. In the second year they would be permitted to deduct ½; in the third, ¾; and in the fourth year and thereafter, all contributions would be deductible. In light of budget restrictions, we think this concept is acceptable.

Delay in approving the bill will hamper non-profit volunteer efforts. But action now will send the word that America's tradition of reliance on volunteer organizations for alternative delivery systems will continue.

Our goal is to strengthen people's ability to solve problems for themselves in their own communities. Unintentionally, budget and tax cuts present a twin threat to this effort. We think it's vitally important that we signal to our fellow Americans that we wish their efforts to continue and we intend for them to succeed. Approval of this legislation now will send this message.

BOB PACKWOOD.
DAVE DURENBERGER.
JOHN HEINZ.
DANIEL MOYNIHAN.
LLOYD BENTSEN.
MAX BAUCUS.

The PRESIDING OFFICER. The Senator from Kansas.

Mr. DOLE. Mr. President, I thank both Senator PACKWOOD and Senator MOYNIHAN. I appreciate their patience. I apologize if, the other day, we were less than totally in support of this amendment. I have counted noses since then and I think they have in excess of 50 cosponsors, so it seems to me the better part of valor is to embrace them, rather than to concern myself any more about what the cost might be.

In fairness to both Senators, however, they were willing, in working with the Treasury, to, in the early years, put a cap on their provision and then, as the distinguished Senator from Oregon, Senator PACKWOOD, indicated, the Sun will set on this provision. I am not certain of that, but at least that is what it says in the script.

There is no doubt that charitable giving has declined, and that this amendment will help reverse this trend.

Under the Packwood-Moynihan amendment, in 1982 and 1983, a taxpayer who does not itemize would be permitted to deduct 25 percent of charitable contributions, but only up to $100. In 1984, such a taxpayer can deduct 25 percent of charitable contributions without any $100 limitation. In 1985 that percent will rise to 50 percent and in 1986 it will rise to 100 percent. The amendment will "sunset" in 1986.

If, in fact, it is effective—as I think it will be—in increasing the charitable contributions, perhaps it should be extended.

It seems to me that this provision has broad support. It had broad support a year ago in the deliberations in the Senate Finance Committee. I know of few who oppose the concept advanced by both Senators.

I would say, as has been said before, our problem is one of trying to work the proposal into this tax proposal with the fiscal constraints we had.

So I compliment both the Senator from Oregon and the Senator from New York for their willingness to scale down the amendment to some degree and also for their initiative in making certain that it would become part of this bill.

I might add that, as I view this amendment, it is consistent with the Reagan administration's philosophy that the private sector should assume a greater role in providing human services. The Federal Government cannot do the whole job. I hope this amendment will be helpful in providing the charitable agencies the resources needed to fill the void.

Mr. President, I think the cost of this amendment has been included in the RECORD. But just for those who want to know, in fiscal year 1982, the cost is $38 million; in fiscal year 1983, $280 million; in fiscal year 1984, $390 million; in fiscal year 1985, $1.291 billion; and, in fiscal year 1986, $2.827 billion.

It is a substantial amount. But, again, it should increase the charitable giving. That is the purpose of it.

I am certain that we will have further discussions of this, maybe not here today but in the conference. The House did not add this provision to their bill. I think they might have, except they were trying to substitute this provision for another very popular provision in that bill.

Senator PACKWOOD and, perhaps, Senator MOYNIHAN will be conferees. So their voices will be heard in the conference.

● Mr. CHILES. Mr. President, I support the amendment offered by the Senator from Oregon (Mr. PACKWOOD), and the Senator from New York (Mr. MOYNIHAN). This amendment would allow the millions of Americans who do not itemize on their tax return to deduct their charitable contributions. As a cosponsor of S. 170, on which this amendment is based, it is my hope that the Senate will act quickly and affirmatively.

In this day and age of restrained Federal spending and budget cuts, I think now more than ever we need to provide some stimulus for contributions to charitable organizations and institutions. Without providing lower- and middle-income families and individuals some incentive for giving, many charitable groups may well experience difficulty attracting funds to continue their activities. It is estimated that proposed budget cuts will cost nonprofit organizations some $27 billion in Federal support over the next 4 years. If we expect the charitable sector to respond to increased social needs during this period, then it is obvious we need to do something to assure these groups that adequate funds will be available.

In my review, the incentives provided by this amendment will do just that. By permitting those who take the standard deduction to also deduct their charitable contributions, it is estimated that private giving will increase some $6 billion a year. Over the past few years, legislation of this nature has received strong bipartisan support and 35 Senators have already cosponsored S. 170 this year. I hope many more of my colleagues will join in this effort and will help assure charitable organizations that the funds they will need to carry on their work will be available in the coming years.●

HUMPHREY SUPPORTS CHARITABLE DEDUCTIONS FOR ALL AMERICANS

● Mr. HUMPHREY. Mr. President, I am pleased today to support the amendment which will allow all taxpayers to deduct their charitable contributions whether

they itemize their deductions or not. For 2 years, I have advocated this concept, having been added earlier this year as a cosponsor of S. 170.

I commend both Senators BOB PACKWOOD and PATRICK MOYNIHAN for their excellent work in preparing this much needed revision of the Tax Code.

I fully support President Reagan's commitment to permit taxpayers to deduct charitable contributions from their Federal income tax itemizing.

The fundamental principle that money given to charity should not be subject to taxation was recognized in 1917 when the charitable deduction was written into the Internal Revenue Code. Since that time, because of the rise in the standard deduction or the zero bracket amount, more and more taxpayers are finding it advantageous not to itemize, thus losing the opportunity to deduct for their voluntary contributions to nonprofit organizations. Last year alone, over 300,000 individuals and families in New Hampshire were denied the opportunity to deduct their charitable contributions because they did not itemize. While New Hampshire individuals give as much as $65 million annually, nondeductible contributions have been estimated between $12 and $25 million.

This legislation will restore the charitable deduction's original character, and again make that deduction available to all taxpayers. This measure will simply move the charitable deduction above the line on tax forms, permitting deduction even for those who do not itemize.

Not only will this bill reduce the tax burden on thousands of New Hampshire families and millions of Americans, it will also increase the funds available to private institutions. This bill attempts to redress the imbalance between the eroding voluntary sector and the growing Government sector. Private foundations and charitable institutions provide an important alternative to the Government as a source of human services.

The Government's role in providing many services has increasingly been called into question. Current economic and political conditions necessitate a scaling back of expectations concerning Government. By strengthening the voluntary sector, this bill will help to fill the gap created by the decreased intervention of the public sector.

This legislation will increase the abilities of colleges and universities, or religious charities and historic preservation societies, of the Society for the Protection of New Hampshire Forests and hundreds of other local nonprofit organizations to enrich the lives of the people of New Hampshire and all Americans. The American Red Cross, the Audubon Society, and the American Society for the Prevention of Cruelty to Animals will be enhanced by this action.

Further, the legislation will help New Hampshire's over 1,200 educational and charitable organizations to diversify their financial foundations by strengthening their base of small contributors.

Let me conclude, Mr. President, by urging my colleagues to support this straight-forward, but significant, revision of the Internal Revenue Code, so that all Americans can benefit from the charitable deduction.●

● Mr. D'AMATO. Mr. President, as a longtime supporter and cosponsor of S. 170, the bill to allow the above-the-line deductions for charitable contributions, I am pleased to cosponsor this amendment and to add my urgings to those of my distinguished colleagues that this Chamber adopt this most worthwhile of amendments. This amendment is vitally important if we are to preserve America's volunteer community. It belongs as part of this tax reduction package.

This amendment will extend to every American taxpayer the privilege that is currently afforded to only the 29 percent who itemize their deductions, that is, it would allow all taxpayers, regardless of their income class, to deduct their charitable contributions from their taxable income. This amendment will be phased in slowly in order not to disrupt the President's budget objectives.

For private philanthropy to keep pace with inflation plus make up for the loss in Federal financing resulting from budget cuts already approved by Congress, 1982 private giving to nonprofit organizations would have to be 26 percent greater than it was in 1981. This is about three times the annual rate of growth recorded in the recent past. In 1983 the rate of increase in private giving to volunteer organizations over 1982 would have to be 39 percent just to maintain present services. In 1984 a 44-percent increase would be necessary.

We have historically been a Nation of givers, rather than takers. I have every confidence that private philanthropy will meet this challenge and keep our volunteer community alive and active. Our commitment to the Nation's needy and deserving can, and will, be met.

It is perfectly appropriate, however, for the Government to encourage these activities through the tax system. Deductions for charitable contributions have long been a part of the law. Over time, however, fewer and fewer taxpayers have elected to itemize their deductions. Now only 29 percent do so and these individuals are primarily in the upper income brackets. This amendment will extend this deduction to the rest of America's taxpayers. It is consistent with the President's policy of across-the-board tax relief. It is consistent with my policy of protecting the average American taxpayer. It is consistent with the policy of this Chamber to encourage the private sector to step in and provide those services which the Government can no longer afford to offer.

Volunteer organizations involved in social welfare, education, health services, conservation, and the arts will all benefit through this legislation. With this legislation nonprofit community organizations will be able to make up the $27.3 billion shortfall they would otherwise suffer during the next 3 years.

Mr. President, I urge adoption of this amendment.●

● Mr. NICKLES. Mr. President, the charitable contributions amendment offered by my colleague (Mr. PACKWOOD) incorporates a sound approach that will allow charitable organizations to continue as a vital part of our American society.

Congress has increased the standard deduction five times over the last decade. During this same period, the number of individuals itemizing their deductions has decreased by approximately 45 percent. This decline has had a very serious impact on the percentage of personal income that individuals donate to charities and similar organizations. The increased deduction has in fact discouraged contributions by individuals, who traditionally account for nearly 90 percent of charitable giving in this country.

The average contribution to many organizations is often under $50. However, these small yet numerous contributions are vital to sustaining charitable organizations throughout America. This legislation would encourage the small contributor by permitting him the same tax exclusion afforded those who are able to itemize all of their deductions, charitable or otherwise.

Mr. President, the amendment that I am supporting today would permit those taking the standard deduction to also deduct charitable contributions from their gross income to calculate their adjusted gross income.

At a time when we will rely more heavily on private organizations to again take a stronger, leading role in local, State, and nationwide service efforts, this legislation remains a key to their fundraising activities and thus to their survival. The burden on private organizations will continue to grow, and rightly so, as our Government lightens the load currently borne by taxpayers.

Mr. President, passage of this amendment would certainly give Americans an "extra" incentive to make donations to the wide variety of charitable, volunteer, and nonprofit organizations that make such a valuable contribution to our Nation. I therefore am pleased to join in support of this legislation.●

● Mr. BRADLEY. Mr. President, for decades nonprofit organizations have been providing assistance and enrichment to our communities. In the past, these groups have been supported by the Federal Government and by private donations. Individual contributions comprise 90 percent of the private support.

However, the administration's policies have potentially jeopardized the survival of many of the worthy programs of these organizations. The cuts in Federal spending have reduced direct support to charitable organizations that are expected to amount to as much as $27.3 billion over the next few years. The cutbacks in Federal funds and private donations could be catastrophic for the programs run by the nonprofit community.

I feel that the Moynihan-Packwood charitable deductions amendment, of which I am a cosponsor, provides a much needed remedy for this problem. It is also consistent with the administration's policy of giving greater responsibility to the private sector for assisting communities. Most important, this amendment will open up a major new source of fiscal support to nonprofit organizations by

providing a deduction to the great majority of American taxpayers who do not itemize and whose only incentive to contribute to charitable organizations has been sheer altruism.

Finally, it is my belief that the Moynihan-Packwood amendment addresses a longstanding inequity. Donations to organizations that represent an individual's beliefs have traditionally been one means by which that individual can give effective expression to his views. In the past, the individual who itemizes has been able to be partially compensated for his donation, while the person who does not itemize—usually one in the middle- or lower-income bracket—has obtained no tax benefit from his charitable contribution. This amendment is a timely step toward recognizing the worth of all contributions regardless of the income bracket of the donor.●

● Mr. LEVIN. Mr. President, I rise in support of the charitable contributions amendment. This amendment would allow individuals whether or not they itemize to deduct contributions to charitable organizations.

The impact of Federal budget cuts on the work of voluntary organizations concerned with education, health, social welfare, arts, environment, and other activities will be substantial. The cuts in these programs will total more than $128 billion from 1981 to 1984. Private philanthropy and volunteer organizations cannot be expected to cover a significant portion of the cuts. And volunteer organizations will lose approximately $27.3 billion in direct Government aid in the next 4 years under projected budget cuts.

The increased need for more services from independent sector groups, resulting from budget cuts, comes when there has been a substantial decline in charitable contributions. In 1980, contributions to charity dropped by more than $1 billion from the year before. Th's downward trend, evident since 1970, is due to a number of factors. Among them is the growing percentage of taxpayers who do not itemize. With six increases in the standard deduction in the past 9 years, the percentage of taxpayers who do not itemize has increased from 53 to 72 percent. In addition, contributors have cut back their gifts as a means of dealing with inflation.

This amendment will stimulated an estimated $5.7 billion in increased giving to voluntary organizations. In so doing, it will help private philanthropy and charitable organizations meet their unprecedented challenges in the years ahead. It is both needed and long overdue.●

Mr. CHAFEE. Mr. President, the charitable contribution amendment to the Internal Revenue Code is one that is long overdue. Having been a cosponsor of this legislation for more than 2 years, I know how strong the commitment of Senators PACKWOOD and MOYNIHAN has been to our private sector charities, and I share that commitment.

Unfortunately, at a time when private sector agencies are being asked to pick up the slack left by Government budget cuts in many social welfare, education, and arts programs, private giving has been declining in relation to overall economic growth. Part of the reason for this lies with Federal tax policy. A side effect of the move toward tax simplification during the last decade has been that fewer people are itemizing their returns and, therefore, fewer people are entitled to deduct their charitable contributions. In 1970, 48 percent of taxpayers itemized. Today only about 25 percent do.

The biggest decline in giving has been among middle-income groups. In Rhode Island, these are the people that form the bedrock support for such organizations as the United Way, the Red Cross, the Catholic charities, and many others. In our State of less than a million people, the United Way alone funds over 300 separate programs through nearly 150 nonprofit agencies. If we are interfering with the strength and vitality of this private sector effort because of the shape of our tax code then, Mr. President, we should change the code.

That is why I will vote this afternoon for the Packwood-Moynihan charitable deduction amendment. The fact that the Senate Finance Committee last month voted not to include this provision on the President's tax package should not be taken as a rejection of the charitable deduction concept. I was one of 10 members of the committee who voted against it at that time. The reason was simply this: I, and many of my colleagues, had personally promised the President that we would work to report his economic recovery tax package from committee free of unrelated amendments. We fulfilled this obligation. An equally important reason that this amendment should be supported today is that the sponsors have now revised it to fit within the President's budget constraints.

I ask that I be added as a cosponsor of the Packwood-Moynihan amendment to the Economic Recovery Tax Act.

Mr. DOLE. I am prepared to vote. As I understand it, there will be a recorded vote.

Mr. MOYNIHAN. I yield back all time on our side.

The PRESIDING OFFICER. There has been no time limitation.

The question is on agreeing to the amendment of the Senator from Oregon (Mr. PACKWOOD). The yeas and nays have been ordered and the clerk will call the roll.

The assistant legislative clerk called the roll.

Mr. STEVENS. I announce that the Senator from Oregon (Mr. HATFIELD) is necessarily absent.

Mr. CRANSTON. I announce that the Senator from Massachusetts (Mr. TSONGAS) is necessarily absent.

The PRESIDING OFFICER (Mr. MATTINGLY). Are there any other Senators in the Chamber wishing to vote?

The result was announced—yeas 97, nays 1, as follows:

[Rollcall Vote No. 203 Leg.]

NAYS—1

Hayakawa

NOT VOTING—2

Hatfield Tsongas

So Mr. PACKWOOD's amendment (UP No. 246) was agreed to.

Mr. MOYNIHAN. Mr. President, I move to reconsider the vote by which the amendment was agreed to.

Mr. LONG. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. HAYAKAWA. I find to my dismay that mine was the only vote against the amendment introduced by my colleagues Senator PACKWOOD and Senator MOYNIHAN, gentlemen whom I hold in highest esteem. The vote was 97–1.

The standard deduction was a small but important step in simplifying our income tax returns. No doubt many hundreds of thousands, if not millions, take the standard deduction whether they make charitable contributions or not. Despite such abuse of this provision, I believe that the standard deduction was worth introducing, since it does simplify tax returns, the complexity of which has driven all of us to despair, and most of us to professional assistance in preparing our returns.

The present amendment restores a complexity in our returns which a previous Congress wisely got rid of. I am sorry that a majority of my colleagues have undone a wise action which to a small degree contributed to the simplification of our tax returns—no doubt at considerable cost in tax revenues.

Mr. BAKER. Mr. President, I would like to take this opportunity to thank the distinguished Senators from Oregon (Mr. PACKWOOD) and New York (Mr. MOYNIHAN), for their efforts in procuring an amendment which will enhance and facilitate charitable disbursing in America.

Charitable contributions have been

steadily declining, largely due to existing tax laws. These laws provide favorable tax treatment to only those taxpayers who itemize their deductions; they fail to reward contributions by those who elect the standard deduction, thereby providing no incentives for further donations.

Private and voluntary contributions are essential to the countless organizations and activities that rely on private sector support. I believe that this change in the Tax Code will induce increased support for charitable institutions and personal donations.

Specifically, this amendment provides for the abatement of 25 percent of all deductions in the first 3 years with a $100 limitation for the first 2 years, and increases up to a 100-percent deduction in 1986. At that time, the provision is scheduled to expire.

I am not alone in my praise of this amendment, Mr. President. This body's near unanimous vote today is indicative of the broad support that exists for charitable contributions in America.

Several Senators addressed the Chair.

The PRESIDING OFFICER. The majority leader is recognized.

Mr. BAKER. Mr. President, may we have order?

The PRESIDING OFFICER. The Senate will be in order.

Mr. BAKER. Mr. President, I inquire of the distinguished manager of the bill what amendment will be offered next.

Mr. DOLE. The Senator from Alaska (Mr. STEVENS) has an amendment. I am not sure how long it may take. The Senator from Ohio has indicated that it may take some time.

Mr. BAKER. I thank the Senator.

Mr. President, I inquire of the distinguished assistant Republican leader if he has some inclination to accept a time limitation or whether he has an estimate of how long his amendment will take.

Mr. STEVENS. Twenty or thirty minutes to a side will be plenty, so far as I am concerned.

Mr. BAKER. Do I understand correctly that the Senator from Ohio is also interested in this amendment?

Mr. METZENBAUM. I am indeed interested in this amendment, but I am certain that it could not be concluded in any limited amount of time. I would not be agreeable to a time limitation.

I have indicated to the distinguished Senator from Alaska that I am interested in trying to work out some accommodation with him in connection with this matter. I believe it is a very substantive amendment. It has to do with changing the law, not really having to do with the Finance Committee tax bill measure. If we are going to get into it, I believe there will be some extended debate.

Mr. BAKER. I thank the distinguished Senator from Ohio.

Mr. President, it appears that we cannot get a time agreement at this time.

I hope Senators will explore further the possibility of a time limitation or an accommodation.

I yield now, so that the Senator from Alaska may call up his amendment.

UP AMENDMENT NO. 247

(Purpose: To amend the Internal Revenue Code of 1954 by Eliminating The Voting Rights Pass Through Requirement for Closely Held Corporations Participating in Employee Stock Ownership Plans (ESOPs))

Mr. STEVENS. Mr. President, I call up my amendment which is at the desk.

Mr. METZENBAUM. Mr. President, will the Senator from Alaska yield?

Mr. STEVENS. I should like to have the amendment called up, and then I will yield.

The PRESIDING OFFICER. The amendment will be stated.

The legislative clerk read as follows:

The Senator from Alaska, for himself, Senator DANFORTH, and Senator MURKOWSKI, proposes an unprinted amendment numbered 247.

Mr. STEVENS. Mr. President, I ask unanimous consent that reading of the amendment be dispensed with.

Mr. METZENBAUM. I object.

The PRESIDING OFFICER. Objection is heard.

The legislative clerk read as follows:

On page 225, strike out line 15 and insert in lieu thereof the following:

SEC. 328. PASS THROUGH OF VOTING RIGHTS ON EMPLOYER SECURITIES.

(a) IN GENERAL.—Subsection (a) of section 401 (relating to qualified pension, profit sharing, and stock bonus plans) is amended by striking out paragraph (22) and redesignating paragraph (23) as paragraph (22).

(b) EFFECTIVE DATE.—The amendment made by this section shall apply to acquisitions of securities after December 31, 1979.

SEC. 329. EFFECTIVE DATE.

The PRESIDING OFFICER. The Senator from Alaska.

Mr. METZENBAUM. Mr. President, will the Senator yield for a question?

Mr. STEVENS. I yield.

Mr. METZENBAUM. Mr. President, the Senator from Ohio inquires of the Senator from Alaska whether or not he would be disposed to lay aside the amendment until such time that there might be adequate discussion to see whether or not the matter could be worked out.

The Senator from Ohio has strong concerns about the fact that the amendment would take away voting rights of people who already have those voting rights, in connection with the ESOP plans. I would be very happy to try to work out some modified manner in which this problem could be handled to accommodate the Senator from Alaska, rather than take up the time of this body in debating the issue.

Mr. STEVENS. Mr. President, the Senator from Ohio suggested that a private bill might be used instead of an amendment to the tax measure. This is a tax issue. It involves an amendment that was put in the 1978 act which, in the opinion of this Senator, has had a depressive effect upon the use of ESOP's in closely held corporations. I do not seek a private relief bill.

This is not just one corporation. Nor do I have the ability, as the Senator from Ohio is discussing, to define limits on assets or net worth of closely held corporations which might benefit, and I have no way to determine the size of the corporations that are affected or their net worth. I am dealing with a matter of principle. He has a matter of principle, also, and he opposes the amendment.

Mr. President, it is my opinion, as I will explain later, that the impact of the 1978 amendment has been to stifle if not to kill the use of ESOP's. It is killing them in my State. My State has used a great many ESOP's, as the junior Senator from Alaska will explain. In his private capacity, he was involved in ESOP's and knows some of the problems that have occurred.

Our State needs ESOP's and needs this kind of closely held corporate plan in order to prevent our small corporations from literally being swallowed up by the larged corporations that are coming into our State solely because of the estate tax problem on these closely held corporations. I know of at least two that are going to terminate if something is not done to remove this provision from the law.

I believe it is harsh to deny employees the rights they have. The Senator says they are not going to get their vote. There will not even be plans. The plans will be canceled by those who find that although they agreed to the concept of an employee stock ownership plan, they never intended to transfer the control of their closely held corporations during their lifetime or until they retired.

In effect, we have a situation now in which those plans are being canceled. I do not believe that is right. They are a good mechanism in a State such as ours and any place else where there are closely held small corporations that have grown primarily through the work of a key person in the corporation. Those are the people who are objecting to this passthrough provision.

I say to the Senator from Ohio that if he opposes this amendment, he should explain why. If he has a substitute, if he has something he can bring before the Senate for its consideration, I will be happy to see it considered.

I say to the Senator from Ohio that when I asked to schedule this amendment for this measure, I cleared it with him and with his staff, and we received word from him that he had no objection. Then he withdrew that and said he wanted to talk. I have tried to talk, and am perfectly willing to talk with the Senator from Ohio to work out his problem with my amendment. He wants me to work out my amendment with his problem, rather than his problem with my amendment. This is the place to work it out. I will be happy to be reasonable and listen to the Senator from Ohio, and I hope he can explain to the Senate his objections.

If this amendment is not agreed to, I know of at least two groups of employees who will be denied the benefits of their ESOP's. The plans are going to be canceled, and there is no reason for that. It is because of this provision that that was in the act.

Mr. President, this is an amendment to the Internal Revenue Code of 1954 to remedy a problem created by the 1978

revisions. What I propose is to eliminate for closely held corporations only the voting rights passthrough requirement as applied to employee stock ownership plans (ESOP's).

Since passage of the 1978 amendment, which added section 401(a)22 to the code, there has been a precipitous decline in the formation of new ESOP's, for closely held corporations. The massive expansion of ESOP's in the late 1970's has slowed to a small trickle since passage of the 1978 language.

Many employers formed ESOP's prior to the introduction to the voting rights requirement, and they are now considering abandonment of the ESOP's programs. As I said, I know of two in my State in particular. The voting rights requirement creates an enormous administrative burden. Solicitation of employee proxies for ESOP's is an especially onerous paper burden for the small, closely held corporation.

Additional ambiguities have been created by the passage of the 1978 revisions, including possible SEC regulation of ESOP's.

The most onerous effect of the 1978 revision was that it takes away from the small family-owned business the right to control its own enterprise when there is an intent to transfer ownership of that business to the employees. I think this is most unfortunate, because to me there are great virtues in allowing transfer of ownership by small enterprises to the employees who have put their life's work into the enterprise.

Following passage of the Revenue Act of 1978, there was a tremendous outcry by the then-existing ESOP providing corporations. I quote my distinguished colleague, Senator RUSSELL LONG, in his remarks following passage of the 1978 amendment:

> Last year as part of the Revenue Act of 1978 Congress provided for the pass through to plan participants the voting rights in certain situations, closely-held employer's stock held in profit-sharing plans, stock bonus plans, money purchase plans, and employee stock ownership plans (ESOPS).
>
> This is a very ill advised decision. We held no hearings on this question and did not give the business community any opportunity to advise Congress on how they perceived the issue. In fact, only the Treasury Department actually demanded the pass through of these voting rights. This winter I and most other Members of Congress received letters from constituents that all oppose this position to the Revenue Act of 1978. I would estimate that perhaps as many as 300 letters and telegrams have reached me personally.

We have to recognize that however laudable some might feel these requirements to be, they will be meaningless if they cause employers not to adopt, or to terminate, these plans and thereby deprive their employees of the benefits of stock ownership.

Mr. President, the fears that we all felt with the passage of the Revenue Act of 1978 have come to pass. ESOP's for closely held corporations have become a very small part of employee benefit packages. A number of closely held corporations have either stopped or eliminated their ESOP plans, and I feel that this is a great detriment not only to the employees and organizations but also to the public itself. However one may feel about allowing such pass through, the facts must still be recognized: First, that is if the choice is no ESOP or ESOP without voter right pass through—we must elect the latter. It is in that spirit that I offer an amendment today.

And I would be happy to answer any questions any Senator might have concerning the amendment that is offered on behalf of myself, Senator DANFORTH, and Senator MURKOWSKI.

Mr. METZENBAUM. Mr. President, let me first clarify the situation for my friend from Alaska.

I do not know that I ever indicated I had no objection to this amendment. In fact, quite the opposite. I indicated that I do have an objection to the amendment but that I was receptive to attempting to work out a special problem about which the Senator from Alaska spoke to me, and that concerned one particular company in Alaska. Indeed, I still am receptive to attempting to work out that problem.

It is also a fact that I have not suggested, although possibly someone on my staff talked about some special bill, private bill, and I do not intend to suggest that there be a private bill in connection with the subject but that, rather, anything that we might work out would become a part of the tax measure before us today.

The fact is that what we are talking about is an ESOP created by privately held corporations, otherwise known as closely held corporations. What we are talking about has to do with the advantages that the ESOP's have for those who own them, those who create them, and there are, indeed, very substantial tax advantages. In connection with those tax advantages that are being created, this is one of these great big Christmas trees that makes it such a wonderful thing that the employees are getting everything and the employers getting nothing. The fact is it is well thought out, cleverly designed, and I am not challenging the concept, but it is a procedure to enable the corporations to take a very substantial tax deduction and in the process to create an employee stock-ownership plan.

What happened was in 1978 in these closely held corporations a provision was made that the employees would have voting rights.

To oppose an amendment which repeals the so-called voting rights pass-through guarantee that applies to many defined contribution employee benefit plan is to me to do nothing less than what all of us in the Senate should be doing at this moment.

The argument is made that someone might not be willing to go along with creating an ESOP if the employees have some voting rights. The very fact is that when the GAO made a report, a report that had been requested by the distinguished Senator from Louisiana, the former chairman of the Finance Committee, the GAO specifically said in its recommendations to Congress and I believe as a matter of fact it is the first recommendation:

> In line with the recent policy of protecting employees interests and to facilitate the passing of full capital ownership to workers participating in ESOP's, we recommend that the Congress enact legislation to provide that full and unrestricted voting rights be passed to ESOP participants for all employers' stock allocated to their accounts which is not publicly traded.

What we are doing now is doing exactly the opposite. The GAO does a report for the chairman of the Committee on Finance and what we have before us is a proposal to do exactly the opposite of that which the GAO proposed.

Mr. President, in this case what we are talking about is an ESOP plan that was created under an arrangement by which the employer puts aside a predetermined level of benefits into an employee's account. In the case of that benefit being in the form of stock, voting rights pass-through signifies that the employee is able to vote his or her stock on corporate issues on which stock is voted.

What kind of reason can there possibly be for denying the employee who is supposed to be getting that stock or the group of employees, the right to vote the stock?

If the employer does not want to create the ESOP so be it. But the employer cannot have his cake and eat it too.

The legislation that is before us today represents a giant step backward in the areas of employee participation in stockownership programs, shareholder rights, and corporate democracy. The amendment turns back the clock. It erases a progressive, meaningful, and successful feature of ESOP-employee stockownership plans. It would deprive many ESOP's of one of their most attractive characteristics, that the employees would have a right to vote. It would disenfranchise hundreds of thousands of employee stockholders, who would be left holding stock over which they would no longer be able to exercise voting rights.

They have that right now. This amendment would deprive them of that right. Why? Because the Senator from Alaska says that there is a specific problem in connection with one corporation in Alaska, and the Senator from Ohio has responded and said if that be the case that is not a major challenge facing Congress, and I am not prepared to debate this issue at length on that particular detail.

Therefore, I am willing to figure out some legislative language that would attend to that one situation in Alaska, but that is not what this amendment would do.

This amendment would totally undo the voting rights provisions that were given to the employees 3 years ago.

This provision would very likely decrease the value of the employees ESOP shares and would dilute the effectiveness of the entire ESOP program.

Under current law, a tax qualified defined contribution plan is, under certain conditions, required to pass through voting rights on employer securities to plan participants when major corporate decisions are being voted upon.

The vote pass-through requirement is triggered if, first, the employer who established the plan does not have a class of publicly traded stock, second, if the plan acquires employer securities after December 31, 1979, and third, if more than 10 percent of the plans total assets are invested in employer securities.

In other words, under current law, if you are an employee who is a participant in a defined contribution plan, and your plan has more than 10 percent of its assets invested in your companies closely-held nonpublicly traded stock, then the law of the land says you are entitled to a share of the decisionmaking authority when your shares are voted on a major corporate decision, a decision which of course, affects the value of your stock.

The present statute is a valuable and progressive piece of law. It encourages participation in ESOP's, and promotes employee stock ownership as a means of capital formation and improving corporate performance.

But the amendment before us today cuts from the law one of its central and most vital components: voting rights for employees who own the stock. The amendment deprives hundreds of thousand of employee-stockowners of any direct voice whatsoever in the management of their own stock.

If the amendment were to suggest that we remove the voting rights of all stockholders in America, there would undoubtedly be a hue and cry from coast to coast, and the Senate would never seriously consider such a proposal.

I hope that the Senate, today, uses the same good judgment with respect to this proposal to wipe out voting rights for hundreds of thousands of workers who own stock in their company.

I am happy to see that the distinguished former chairman of the Finance Committee is in the Chamber. I just pointed out that in response to his inquiry of the GAO, that the GAO had said in unequivocally clear language in their first recommendation that Congress enact legislation to provide full and unrestricted voting rights be passed to ESOP participants for all employer stock allocated to their account which is not publicly traded.

Although I recognize that the former chairman of the Finance Committee is not actively engaged in the debate in connection with this matter, I wonder, since he has been the leader in connection with the development of ESOP's, since he has been the father of the concept, since it is he who has indeed caused that program to become a reality, and since it is he without whom there would not have been a 1978 law, I wonder whether or not the distinguished former chairman of the Finance Committee and now the ranking minority member of the Finance Committee has a position with respect to the pending amendment which would wipe out the voting rights of all of those employees who are involved in ESOP's of closely-held corporations?

Mr. LONG. Did the Senator ask me a question?

Mr. METZENBAUM. Yes.

Mr. LONG. Let me say that I just came into the Chamber. The Democratic Caucus was discussing another matter, and I would like to consider the Senator's position as well as the amendment before I respond to the question. I am studying a memorandum at the moment.

Mr. METZENBAUM. I thank the Senator from Louisiana.

Mr. STEVENS. Mr. President, let me point out that 81 percent of the ESOP plans that have responded to an inquiry concerning this provision oppose the passthrough requirements. One of the main reasons is that the vote that is required to be passed through may be cast by employees who are no longer even members of the enterprise involved, the closely held corporation, because some employees obviously do not stay long enough for their rights in the plan to mature.

But this amendment requires the voting rights go through to the employees who are involved in the purchase. That places an onerous burden on small corporations. These are closely held corporations. We are talking about family, basically small family, corporations in the small towns of America.

If a corporation is publicly held the law and regulations applicable to those publicly held corporations already require a passthrough because of the different circumstances involved in publicly held stock. But this is closely held stock, and they are designed basically for the situation where, as I remarked, there is a small but very enterprising corporation formed by a family that expands and expands and expands, and they have a massive estate problem coming.

Rather than face a merger with national organizations they have devised an employee stockownership plan. I devised some of them as a practicing attorney some years ago before there was such a thing as ESOP's. We arranged for the employees to purchase the shares of stock and put them in a trust, and the trust provided that upon the death of the principal the employees took over the operation of the closely held corporation or a substantial portion of it, depending upon the amount of stock they purchased.

The opposition of the Senator from Ohio, in my opinion, is based upon the assumption that somehow or other there are hundreds of thousands of employees involved. That is not the case as far as the type of corporation I know of. They may add up all over the country to 100,000 or more, I do not know, but the employees of the small corporations that we deal with are up to 100, maybe 150, 200, at the most. I do not think there could be that many in most of the Alaska operations.

But the gentleman, Mr. Kelso, who devised the whole approach to the employee stock ownership plan, spent a lot of time in Alaska. He consulted with a lot of small businesses there, and they, believing this was a good way to arrange their affairs so that the corporation could survive their death or their retirement, put together these plans. Then after that was done, all those plans were in effect, Congress came along and passed a 1978 amendment which said, "Oh, by the way, the employees must have a pass-through of voting rights."

As a matter of fact, in most instances the vote probably is not by the employees anyway under those plans. The vote is by the trustee until the transfer takes place of control, which is triggered by the retirement or the death of the principal.

I think there is no reason for Congress to inject itself into this type of management. The plans were working, ESOP's were expanding in number all over the country, employees were gaining benefits they never dreamed they would have, and it was all set up as a way to assure local control of local businesses.

Then along came this 1978 amendment and, as I say, the number of new ESOP's has dwindled to a trickle, and I am informed by those operating in my State that they just will not transfer the control of their corporations during their lifetime or during their period of service in the corporation. That is the principle of this.

The question is if you really want to benefit the employees, then take away this provision, which is of detriment to their formation, and will lead to their termination if it is not taken away.

Mr. LONG. Mr. President, will the Senator yield?

Mr. STEVENS. I am happy to yield to my good friend.

Mr. LONG. Mr. President, we are not talking here about the publicly traded corporations. We are not talking about the corporations listed on the New York Stock Exchange. We are talking about closely held corporations. We are talking about situations where an employer, the people who own the stock in a closely held corporation, would like to make their employees stockholders in the corporation. They would like to give a substantial portion of their stock to the employees, and they would like to do it by way of setting up a trust so that by setting up the trust and making the donation for the benefit of all the employees, the employees get the benefit of the earnings and appreciation on that stock.

This Senator did not want to put in the law that that stock would be voted by the employees because to do so would scare a great number, in fact, it may very well scare the overwhelming majority of those who own closely held corporations out of setting up the employee stock ownership trust, and putting the stock in trust for the employees.

I do not know where this particular individual who has been discussed on one occasion came from, but to take an extreme example, take Hallmark Cards. The gentleman who started that corporation came to me and told me he would like to leave all—not 10 percent but all—of his stock to the employees. He said if he could leave it to the employees in a tax-free trust or in an ESOP trust, he would be delighted to do so, and that is what he was going to do if we did not insist that those employees should vote the stock.

That particular man, who had his employees' interest at heart, said he did

not think those people had the business experience to keep that company out in front and bring it the success it ought to have—to provide the management, if you will, that that corporation ought to have to be preeminent in its field the way it is today and, therefore, he was not going to give the stock to his employees if he was required to pass-through voting rights. If he could give it to them so they get all the benefits, so that all the stock goes to the employees, but not the voting rights, he would be glad to give it to them.

Now I happen to believe that over a period of time where employers and employees work together and the employer sets up something for the benefit of his employees it helps them to learn the responsibilities of shareholders and that over a period of time the employees can become some of the best informed stockholders in this country. But most employers are not going to set up employee stockownership plans if that is going to risk the voting control of their company. They are not going to have themselves voted out of control of their own company by setting up an employee stock ownership plan. Nothing has set back the employee stockownership plan movement as much as this requirement that they pass through the voting rights.

Mr. Mondale suggested we have that with regard to the tax-credit-type ESOP, which I fought for, for all companies that set up an employee stock-ownership plan and claim an extra 1-percent tax credit for the benefit of their employees. That had something of a chilling effect. But we are not arguing about that. This amendment does not address that situation.

Mr. President, I have had people come to me time and again saying "If we are going to risk losing control of our company by setting up this employee stock ownership plan, as much as we would like to do it for many other reasons, we are not going to do it for that purpose."

Furthermore, Mr. President, I have had people, even including a Member of the U.S. Senate, say, "I would like to set up an employee stock ownership plan, but I dare not do it because among people in a closely held corporation where the voting stock is fairly well divided, that would set the stage for someone to come in here and organize the employees, vote the stock, decide with one family member against another family member and, in doing so, it could lead to a big knockdown, drag-out fight among the people who are part of a closely held corporation which might not otherwise have occurred."

Rather than have the employee bring about a quarrel between the family members of a corporation, we would just as soon not have any employee stock ownership plan.

So the fact is that, in closely held corporations. the requirement of passing through the voting rights from the trustee to the employee has kept people from setting up the plan.

Therefore, Mr. President, I would submit that the Senator is right in saying that for closely held corporations, if they want to set up employee stock ownership plans for the benefit of employees, they should not be required to pass through voting rights.

Mr. President, I hope the amendment will be agreed to. I think it is a meritorious amendment. I believe that it would move forward the employee stock ownership movement if we did not have the requirement.

There is nothing to prevent employees from negotiating or agreeing or reaching a conclusion, but to require that the voting rights pass through with the stock means that, in most instances, in closely held corporations, they just will not set the plan up.

Mr. METZENBAUM addressed the Chair.

The PRESIDING OFFICER. The Senator from Ohio.

Mr. METZENBAUM. Mr. President, it has been suggested that these closely held corporations are just mom and pop corporations and that they do not have that many employees involved. The fact is they have a tremendous number of employees involved.

In 1978, the Federal Government authorized tax qualification status for 850 stock bonus plans covering 1.2 million employees. And that is after the legislation was enacted giving the employees voting rights. In 1979, the Government authorized 574 stock bonus plans, covering an additional 362,200 employees, or a million and a half employees.

Mr. STEVENS. Will the Senator yield?

Mr. METZENBAUM. Not at this point. I would like to finish my thought.

Let us be realistic, Mr. President. We are not talking about mom and pop corporations, nor are we talking about the great generosity of the major corporations that are privately held. What we are talking about are tax exemptions, tax deductions that you cannot get any other way.

If you create an ESOP, you can get a tax deduction by giving up a percentage of your ownership. As a matter of fact, that cost in the year 1979 was somewhere between $1.5 billion and $2.3 billion, according to the GAO report.

The ESOP's are being portrayed as if those who create them do it because they sit around someday and they say: "Wouldn't it be wonderful if our employees could have a little bit of the ownership of our company?" No; they come in because the accountants and lawyers come in and say: "Wouldn't it be wonderful if I showed you a way that you could get a tax deduction on your own personal taxes for hundreds of thousands and maybe millions of dollars by giving up a piece of the ownership."

Let me say, Mr. President, that there is a gimmick that they use a little bit also, because it relates directly to how you value that particular amount of stock.

The stock is valued on the basis of an appraisal. But the GAO report that was done for the Senator from Louisiana talks about the very method of appraisal. The GAO comes out with a very critical assessment. They do not say that this is done on the basis of actual value. Oh, no. What the GAO report says is the following when they are talking about problems identified in closely held companies:

> The company sold or contributed company stock to its plan at questionable prices. These were based on appraisal valuations which lacked independence or did not properly consider relevant factors, such as earnings capacity, book value, comparability with similar companies, and marketability. If the transactions in company stock were for more than fair market value—

Mr. President, may I have order in the Senate?

The PRESIDING OFFICER. May we please have order?

Mr. METZENBAUM. To continue.

> If the transactions in the company stock were for more than fair market value they, one, were prohibited transactions under the Act of 1974 and subject to an excise tax; two, could mislead participants about the value of the plan account; and, three, could increase the amount in which participants would ultimately pay income tax.

Mr. President, what we are really talking about is a special arrangement brilliantly concocted in the mind of the former chairman of the Finance Committee to provide a method by which employers and closely held and publicly held corporations could get tax deductions and, at the same time, make it possible for employees to have a share of the company. I have no quarrel with that. I am not challenging the concept of ESOP.

What I am saying is that with ownership also goes the right to vote. Now, there are some other companies in this country that do not think the people who own the company have a right to vote. They call those mutual insurance companies. Some of them do permit voting, some of them encourage voting, and some of them make it well nigh impossible for the policyholders, who are actually the owners of the company, to have any say in the way the company is operated.

What earthly reason can there be for making it impossible for employees to have a share of an ESOP of a closely held corporation not to have the same voting rights that the employees in a publicly held corporation have?

Sometimes, in publicly held corporations, you have real battles as to who is going to provide the real leadership in the company. Sometimes you have an issue as to whether or not you vote yes or no with respect to a particular offer. You have lots of challenging questions and we give those employees voting rights.

What we are trying to say here this afternoon is that we are not going to give those rights to the people who have stock in a closely held corporation. That is just not right. It is just not logical. It is just not reasonable and it should not be the way that this Senate resolves to act in this matter.

Now, having said that, Mr. President, let me point out one other matter. This amendment, in my opinion, does not belong on this bill. It is true it deals with issues within the purview of the Finance Committee, but this is a substantive question having to do with whether you do or do not have voting rights in an

ESOP of a closely held corporation. That is a matter that ought to come before the Senate in a separate bill.

The Senator from Alaska has said to me, "I have a special problem in Alaska." I have said, "Fine, let us draft an amendment to take care of your special problem in Alaska. Let's see to it that we provide a limit as to what the value may be of those closely held corporations and let's place a limit upon the time when the denial of voting rights would continue to exist."

If there is an aged person who is 75 or 80—or 65 or 50, whatever the age may be—and he wants to protect his leadership rights in this closely held corporation and it is, indeed, a small corporation, I am perfectly willing to look at an amendment that might provide some protection or at least some tranquility for that individual. But that is not what we are talking about.

We are talking about all of these corporations, a million-and-a-half employees, and we are talking about denying those employees the rights which they presently have.

Mr. President, my feeling is that this tax bill does enough to the workers of this country, is inequitable enough to them without adding another feature to it to deny them the right to vote in the ESOP in which they already have voting rights.

I would say to my friend from Alaska, as I understand it, the ESOP about which he is speaking is not as yet formed and, as I understand it, his amendment would be retroactive and take away the voting rights of those who already have them. That, in and of itself, in my opinion, is entirely questionable. But my feeling is the entire thrust is wrong and should not become the law.

As a matter of fact, today's New York Times has an article about this matter, not this amendment but this matter. The article says, in part:

> The Reagan Administration, in general, backs the idea. "Voting rights are a predictable and salutary trend that is likely to accelerate" where new ESOP's are installed, said John McClaughry, a White House tax and labor adviser. He termed greater employee involvement in company management "an exciting new vista for American industry."

Now, the assistant majority leader is in the Chamber, one of the most able spokespersons for the Reagan administration. As I see it, the position that he has taken with respect to this amendment is entirely contrary to the approach of the Reagan administration itself.

Mr. STEVENS addressed the Chair.

The PRESIDING OFFICER. The Senator from Alaska.

Mr. STEVENS. Mr. President, I wish the Senator from Ohio would look at the facts. The facts are that he has quoted some statistics dealing with all employee stock ownership plans and their employees. We are dealing with closely held corporations only.

Now, the loss from closely held corporations, the tax cost is not what he outlined, nor is the problem what he outlined.

The problem is this: If there is a passthrough provision and the corporation is closely held, the time is going to come when, because of passing through those voting rights, it will no longer be closely held.

Once you get—I forget what the minimum is; in Alaska, in terms of an Alaska corporation itself, it is very small. I do not know how he understands the law in his State, but I know the law in my State. I do not know what the total impact of this is in terms of the Federal law on what is closely held, but in Alaska, it is not many people.

This is a problem in terms of closely held corporations, Mr. President. That is why they are closely held. They are family enterprises. The people who organize these employee stock ownership plans view their employees as part of the family. Their rights are protected by the trustee under the plan. There is not a pass-through to individuals.

As I have said, every time you have a corporate meeting in my State, you have to have a sign-off from the stockholders having voting rights. Yet many of them, these transient employees who might have pass-through rights under this amendment, are gone.

Mr. President, this is the kind of burden that is not just voting once a year, it is the whole administration of a small corporation. Anyone here who has had anything to do with small corporations knows you have to have meetings, you have to sign waivers of the meetings, those people who have voting rights have to execute those, you have to approve the minutes—there are all sorts of ministerial details to keeping a small corporation going. The problem in this is the minutia of the paperwork burden that are added to these small corporations in addition to the primary thing, which is losing control over the corporation of the key person running it.

I wish the Senator from Ohio would concentrate on the problem—that is, closely-held small corporations and their plans. We are not dealing with the details that he read from the front of the Comptroller General's statistics dealing with all of the tax impact on all the plans associated with employee stock ownership plans. We are just dealing with the closely-held corporations.

Mr. METZENBAUM. Will the Senator yield for a question?

Mr. STEVENS. In just a minute. I shall treat the Senator the same way he treated me: When I finish, I shall yield.

Mr. President, we have to deal with the problem on the basis of what we know in our areas. Senator DANFORTH is prepared to talk about it in his area, Senator MURKOWSKI and I on our area. I know employee stock ownership plans have been beneficial to the State of Alaska in terms of preserving local ownership of growing enterprises as the primary motivator of that corporation was either ready to retire or thinking about preparing for the contingency of his own passing away.

This, to me, Mr. President, is a vital thing to us in trying to preserve local ownership of these dynamic, growing, small entities. The Senator from Ohio is thinking about the people who did it for the purpose of tax benefit. I do not quarrel with a tax benefit, but I know of no one I have talked to in Alaska who formed an employee stock ownership plan because of the tax benefit. They did it because of the management problems and the estate problems associated with the operation of the company.

Mr. President, I hope we can talk only about closely held small corporations and their ESOP's, because that is all this is. It is nowhere like the tax impact that was mentioned by the Senator from Ohio.

I yield to the Senator from Missouri.

Mr. DANFORTH. Mr. President, I commend the Senator from Alaska. As a matter of fact, this amendment is something that we have been trying to get done since 1979, since the Revenue Act of 1978, when we—I think mistakenly and without any hearings—put this passthrough requirement in the law. It almost immediately turned out to be a matter that backfired.

It seems to me that it is especially appropriate in connection with this particular tax bill to take the matter up, because the point of this tax bill is to try to increase the productive capacity of this country. If there is anything that is related to increasing our productivity, Mr. President, it is the effort to make it possible for people who work for corporations to have a stake in the profitability of those corporations, to view themselves as something more than just employees, but owners as well. That is the theory that Senator LONG has been following in his championing of ESOP's: Let us give the employees a piece of the action.

Now, Mr. President, it does happen, and I think that it is beyond refutation, that the pass-through requirement has been a deterrent to the creation and the maintenance of ESOP's. I should like to read some excerpts from a couple of letters, Mr. President. The first is a letter that I received in November of 1979 from Sheldon I. London, legislative counsel of the ESOP Association of America. Mr. London says, in part:

> This letter is written on behalf of the ESOP Association of America, a nonprofit trade association comprised of 350 ESOP companies employing 230,000. Our Association is committed to the promotion and expansion of employee stock ownership, and it is because of these objectives that we are keenly interested in your Amendment which would delete Section 401(a)(22) of the Internal Revenue Code. That provision established voting rights pass-through on major corporate issues (e.g., mergers, acquisitions, consolidations) for shareholders in ESOP's operated by closely-held companies after 1979.
>
> Section 401(a)(22) is considered by our membership as the single greatest threat to the continued viability and growth of the employee stock ownership concept.
>
> To illustrate, one of our ESOP members who lives in a rural area of the United States is threatened by a merger of his small, privately-owned newspaper with a large newspaper chain. The owner is an independent businessman who enjoys his editorial freedom. Should the question of selling the newspaper to a giant corporate chain be in

the hands of his reporters and pressmen? He insists, furthermore, that if the pass-through provision had been required when his ESOP was created, there would not have been an ESOP. That is precisely the point we are trying to make: By requiring the pass-through in closely-held companies, the Congress will be inhibiting the creation of more ESOPs and some of those now in effect might be terminated.

Then, Mr. President, a letter that I received, again in 1979, from Joseph A. Dee, the chairman of the board and president of Brooks Cameras, Inc., San Francisco, Calif. Mr. Dee writes:

As Chairman of the Board and President of Brooks Cameras, Inc., a closely-held ESOP company, I am deeply concerned about pass-through of voting rights, which was a provision of the Revenue Act of 1978. If the law is not changed we must reconsider our company's plans for continued operation of the ESOP. If the voting requirement had been in the law when we established our ESOP we very well may have decided against ESOP as an employee benefit program.

Mr. President, I do not see anything to be gained by placing into the law and keeping in the law something which is a deterrent to employees having a piece of the action in closely held corporations. As a matter of fact, I think that giving employees a piece of the action is very worthwhile to increasing our productivity as a country and increasing the sense of participation of the people in their work. That seems to me to be the American dream. So often, we get away from it, these days. But to give people a sense that they have a stake in their employment, a stake beyond just picking up a paycheck, is a matter of recognizing the dignity of the individuals involved.

Mr. President, what is to be obtained by the passthrough? Well, under the situation without a passthrough, the provisions of ERISA would govern and the trustee of the profit-sharing plan would be obligated, and I quote from the law, "to discharge his duties with respect to a plan solely in the interest of the participants and beneficiaries for the exclusive purpose of providing benefits to participants."

That is the legal responsibility of the trustee, Mr. President. The legal responsibility of the trustee of the plan is so to vote the stock of whatever stock he holds as to serve the exclusive benefit of the participants of the plan.

The reason that the employers of the closely held corporations do not want the passthrough requirement has nothing to do with any nefarious scheme on their part. They are closely held corporations and they simply do not want to be troubled with the extensive amount of paperwork, accountants' fees, lawyer fees, and so on necessary to comply with the conditions of the Securities and Exchange Commission. It seems to me, Mr. President, that in a closely held corporation, where the employer is considering a profit-sharing plan or an ESOP plan, the last thing we want to do to him is say, "And, by the way, if you decide to set up such a plan, let me tell you of the number of forms you have to fill out and the amount of paper you have to fill out and the number of accountants you have to hire and the number of lawyers you have to hire. And, by the way, if you do not comply with the technicalities of the law in every respect, then the penalties of the law will be imposed upon you. Then you can expect the lawyers of the Federal Government to come after you for sure."

Mr. President, I do not believe that the interests of the employees of America or the small businesses of America, the closely held businesses of America, are served by delivering unto them large quantities of paper. I do not believe that the cause of productivity in a growing economy is served by placing into the law disincentives to profit-sharing plans and to ESOP plans.

For that reason, I believe that the Senator from Alaska has provided a real service by offering this amendment, and I am pleased to be a cosponsor of it.

(Mrs. HAWKINS assumed the chair.)

Mr. METZENBAUM. Madam President, will the Senator from Missouri yield for a question?

Mr. DANFORTH. I yield the floor.

Mr. METZENBAUM. Will the Senator yield for a question?

Mr. DANFORTH. Of course.

Mr. METZENBAUM. Is the Senator on the Finance Committee?

Mr. DANFORTH. Yes, I am.

Mr. METZENBAUM. Was this matter heard before the Finance Committee?

Mr. DANFORTH. It has been, yes. This went through the Finance Committee in 1979, by a unanimous vote.

Mr. METZENBAUM. Why is it not in this tax measure now, and why did it have to come up to the floor as a floor amendment?

Mr. DANFORTH. Frankly, I wish I had thought of it. I think that is a fair question to the Senator from Alaska. It was simply inadvertence on my part for not thinking of it.

Senator LONG and I have been working on this matter virtually since it was first put into the law. As I recall, it was agreed to. It was dealt with by the Finance Committee in 1979 and, as I recall, this provision was agreed to unanimously by the members of the Finance Committee.

So it is a matter that has been considered by us and has been a matter of some discussion in the Finance Committee.

Mr. METZENBAUM. Is it a fact that it was opposed during the Carter administration, by the Carter administration?

Mr. DANFORTH. I do not know that.

Mr. METZENBAUM. Is it a fact that the Reagan administration, according to the New York Times today, would also be opposed to it, apparently, since they indicate that they believe in more voting rights, not less?

Mr. DANFORTH. I do not know. I have never talked to anybody from the Treasury Department in this administration on the question of passthrough or profit-sharing plans.

However, I find it inconceivable that the position of the administration would be in favor of a continuation of section 401(a)22. It may be that for strategic reasons or otherwise—and I do not know this for a fact—it may be that the administration, for reasons of strategy in this measure, wants things kept off it. It is common knowledge that the administration does.

However, on the merits of section 401(a)22, it seems to me that it would be totally contrary to the thought of this administration that they would want something such as this in the law.

Mr. METZENBAUM. Does the Senator from Missouri think that the quotation of Mr. John McClaughry, a White House tax and labor adviser, as set forth——

Mr. DANFORTH. I have never heard of this man.

Mr. METZENBAUM. May I finish?

Mr. DANFORTH. I say to the Senator from Ohio that in every markup in the Finance Committee measure and in all the meetings we have had on tax legislation, the Treasury Department has been represented, and we know very well the cast of characters from the administration. They are always there.

Mr. Chapoton, the Assistant Secretary of the Treasury, and his associates have been there. I have never heard of this gentleman. What is his name?

Mr. METZENBAUM. Is it not a fact that if it were not in the joint resolution, there would be nothing for the administration to address itself to? The quotation in the New York Times is as follows:

The Reagan administration, in general, likes the idea. "Voting rights are a predictable and salutary trend that is likely to accelerate" where new ESOP's are installed, said John McClaughry, a White House tax and labor adviser.

I say to the Senator from Missouri that he asked me who the man is. I am not an intimate at the White House. I leave that for the Senator from Missouri to find out.

Mr. DANFORTH. I do not know who Mr. McClaughry is. There are five members of the Finance Committee in the Chamber. We deal with tax matters all the time. Perhaps somebody else can enlighten me as to who this administration spokesman is. I find it impossible to believe that the administration supports this paperwork burden on small business.

Mr. DOLE. I have heard the name. I have never met him. I guess he is down there someplace.

Mr. METZENBAUM. I did not hear the Senator.

Mr. DOLE. I have heard the name, but I have never met him. He is quoted occasionally, so I suppose he is down there.

Mr. LONG. Madam President——

Mr. METZENBAUM. Madam President, I thought I had the floor. I yield to the Senator from Louisiana.

Mr. LONG. Madam President, I know the gentleman about whom the Senator is talking. I have met him, and I believe he is a very fine fellow. I have never discussed this matter with him, but I know that he is in favor of employee stock ownership, and that gives us something in common. Because I am very much in favor of employee stock ownership, I am for the amendment.

I know there are some people in the White House who are in favor of employee stock ownership, and that is why they are said to be in favor of the amendment.

As to the Treasury opposition, the last I heard from the previous administration came from Mr. Donald Lubick, Assistant Secretary for Tax Policy, whom I liked very much. On that particular point, I think he is in error.

Madam President, if I have a small business corporation and I am thinking about setting up a plan for my employees and I look at all the complexities and all the troubles that may be involved in it, it may be that the straw that breaks the camel's back in making me decide not to have an employee stock ownership plan would be that I would have to pass through the voting rights from the trustee to the employees and become involved in a great deal of complexity and controversy which otherwise would be none of my problem.

Sitting beside me is Mr. Jeff Gates, a member of our minority staff, who has worked as a lawyer before he came here and did a great deal of work on employee stock ownership plans. It was his experience that people would come to him as a lawyer, because of his experience in this area, and consider setting up an employee stock ownership plan for the benefit of their employees, either in their wills or by donation while they are living.

In discussing it, his impression was that whenever the question came up, the question was asked: "Do we have to pass through the voting rights if we put in this stock for the employees?" If the answer was, "Yes, you do," the result in about 80 percent of the cases was that they were no longer interested in setting up an employee stock ownership plan.

The Senator mentioned in his speech that since this provision became law—requiring this passthrough of voting rights of the trustee to the employees—about a million employees had benefited by employee stock ownership. That should have been 5 million. Five times more should have benefited by that.

I say more praise to those highly motivated people who want their employees to own stock and are willing to take a chance. But of those who are highly motivated with respect to employee participation, there are some—I assume about 20 percent—who will set up the plan despite the fact that they would be required to passthrough the vote. Look at what this means in some respects.

Here is a letter from Mr. Richard E. Swan of Oklahoma. He says:

> The voting pass-through requirement of this Act will assure that the ESOP will never get over 49% of the stock in similar closely-held corporations. Before this Act, we set out on a program which would allow our employees to own up to 80% of the stock in the corporation.

Here is an employer who would have been happy to have his employees own 80 percent of it, but he is not going to do it because he fears that by losing voting control of his corporation, the corporation might fail.

Here is a letter from Mr. Joseph A. Dee, president of the ESOP Association of America. Here is a man interested in organizing employee stock ownership plans. He is all for it, heart and soul, and is dedicated to it. He also makes it his life work. He says:

> It is the position of The ESOP Association of America that voting pass-through in closely-held ESOP companies be optional on the part of the principal owners rather than mandated by Government.

Let us understand: We do not seek to say that the employers cannot provide voting rights in the employee stock ownership plan if they wish to. We do not seek to say that they should not negotiate about it with labor. We say only that it should be optional. That is a position taken by those involved in this business, seeking to organize employee stock ownership plans for employees.

I hope the Senator from Ohio is for employee stock ownership plans. I assume he is, and I hope he is.

The Senator from Ohio quoted a GAO study which he said had some serious criticism of employee stock ownership plans. In the IRS and in the Department of Labor, in my judgment, the people handling the employee stock ownership plans are unfair and unduly critical of this program. They seem to think for some reason that if they can keep employees from owning stock in the company, they have somehow served their purpose.

In other words, if a person makes a donation for the benefit of employees, that company is more likely to be audited by the IRS than if it makes a donation to charity, and that is not right.

The problem the Senator from Ohio has raised about a challenge to the value of the donation is exactly the same problem that exists when one makes a donation to charity. If he is making a valuation too high, then he is claiming too much as a donation, and the same problem exists when he makes contributions of nonpublicly valued stock for the benefit of employees.

My information is that in the Department of Labor and in the IRS, special scrutiny is given to any donation for the benefit of those employees.

Mr. METZENBAUM. If the Senator will yield, without losing his right to the floor, I did not question the matter of appraisal. The Senator from Louisiana requested, on August 16, 1978, and on July 3, 1979, the GAO to make a study. All I did was quote from the study that was made for the Senator from Louisiana by the GAO, and it was dated June 20, 1980. It was not I who questioned it. It was a study made at the instance of the Senator from Louisiana.

Mr. LONG. There are many things in that study that were favorable to employee stock ownership plans. What the Senator from Ohio picked out was what they said was the most critical problem involved in employee stock ownership plans.

All I am saying is that there is a well-known problem about the valuation of gifts which are deductible. The same problem exists with regard to charitable donations; it also exists with regard to any gift made for the benefit of the Government, or made for the benefit of the arts, or made for the benefit of charity, or made for the benefit of employees, or made for the benefit of anybody—if it is deductible, the same problem exists on anything.

To single out a gift made for the benefits of the employees for special scrutiny in my judgment is unfair. If the valuation is excessive it should be challenged in any case, but it should not be held out to special scrutiny just because it happened to be held for the benefit of employees.

As I say, Madam President, I wish to see employee stock ownership spread as widely as it can be spread. I wish to see every company include the employees among their shareholders. I wish to see every employee a capitalist. I wish to see him own something.

This is one of the first impediments of him owning something. I did not raise it in the committee, but I have raised it on other occasions.

Madam President, I am convinced the amendment is a meritorious one and I wish the opportunity to vote for it. I would appreciate it very much if the Senator will permit us to have a vote on this amendment because I think it is right and I think it is in the public interest.

Mr. MURKOWSKI. Madam President, will the Senator yield?

Mr. LONG. I yield.

Mr. METZENBAUM. Madam President, I do not object to the Senator from Alaska being recognized, but I do wish to point out that the Senator from Ohio was on the floor and that the Senator from Louisiana is in no position to yield the floor to another Member. I do not object to the Senator from Alaska being recognized.

Mr. MURKOWSKI. Madam President, the Senator from Alaska thanks the Senator from Ohio.

I wish to point out that, in my opinion, certainly there is nothing more difficult in the United States today than managing a small business. I think the failures in small business point that out.

The employee stock ownership plan, or ESOP, was specifically designed to aid and assist small businesses in this country, but when the law was changed to provide the pass through of voting rights the lifestyle, so to speak, of the ESOP was dramatically changed. The change meant that the control of the closely-held corporation was placed in jeopardy, making it difficult to obtain financing. Those financing small business look to the continuity of management and ownership of the small business as a criterion for financing. This continuity has been placed in jeopardy as a consequence of the transfer of the voting rights.

We are looking at a current situation where the ESOP, because of the change in the law, has become ineffective as a tool to assist and aid small business.

I personally had the privilege of working with ESOP's in my State, and the principal objection of the ESOP has been to keep and maintain key personnel and reward them with an equity interest in the business. In many cases, these key personnel would probably leave for higher paying jobs in other areas, or for other reasons were it not for the incentive provided by the ESOP.

I should also wish to point out that an ESOP is not a tax dodge. It is a meth-

od by which to take advantage of a law of Congress for the benefit of the employees who wish to take an equity interest in the business.

I think if we reflect for a moment on how the Internal Revenue Service occasionally establishes value for small businesses, we would find that it is anything but fair. In many cases, value is based on one single offer or on what one share might bring in the market. But the value of a small business as determined by the IRS does not necessarily reflect what a large segment of shares would sell for at any one time.

I think, also, we must consider the significant difference between the passthrough concept in a major corporation and that of a small business depending on the ESOP for its very future. This future is placed in jeopardy as a consequence of the passthrough privilege.

I can assure the Senator having had considerable experience in the financial community, that when control of a small corporation is in jeopardy, its ability to raise capital is impaired.

So in conclusion, Madam President, I urge adoption of the amendment on behalf, if you will, of the small business men and women of our country.

Mr. METZENBAUM. Madam President, I have heard a lot of arguments made. I guess the best ones I have heard today are those that somehow this is going to increase productivity. Reduce taxes, balance the budget, cut the budget, take food out of kids' mouths. Everything increases productivity around the Senate these days.

There is not anything in the amendment that increases productivity. If we want to increase productivity, let the employees know what they are voting on, let them know what they own in the company, do not hide the fact from them.

What we are really saying is we are afraid the employee might want to look at the books. Is that a terrible thing, when the employee takes a look at the books?

Then I heard the other new argument. The other thing that we use around here these days is called the paperwork smear—too much paperwork. What kind of paperwork is there to let some employees have voting rights? What kind of paperwork is that? I do not find any paperwork involved in the employees having the right to vote and letting them know what the facts are so that they may actually vote.

But, no, we are told there is too much Government regulation, too much paperwork, and too many forms. That is just a figment of the imagination. That is just a kind of a concept that we use around here these days because no one likes paperwork, no one likes Government regulation, and no one likes filling out forms.

But this whole idea that if we somehow deny the workers the right to vote, we are going to be doing something great for the country is beyond my comprehension.

If that is the case, why do we not deny them the right to vote in connection with the publicly held corporations? But no one is proposing that.

And then the argument is being made that these closely held corporations are like neighborhood grocery stores or neighborhood gasoline stations or they are just little mom and pop operations. But the fact is what we are talking about, as I understand the definition, are not the 25 people that the Senator from Alaska talks about, but it is a question of not being a publicly held corporation and, according to the way I am informed, under those circumstances, it becomes a closely-held corporation.

The Senator from Missouri says it is time that we give the employees an opportunity to have a piece of the action, that they should have a stake in the company. The Senator from Ohio is not opposed to that. That is what this debate is all about, that I think they should have a piece of the action and it should be a full-fledged piece. It should not be a half of a piece. If they have 5 percent of the company they should have 5 percent of the voting rights, and if they have 2 percent, so be it.

Then a new argument is made, "Oh, Senator, you are doing something to keep the employees from having a right to own the company." Why am I doing that? Because certain employers wrote certain other Senators a letter, said they do not want employees to have any voting rights.

But again I refer to the GAO report, which was requested by the Senator who conceived this entire program, and what does that report say? It says there should be more voting rights, not less voting rights.

Instead of that we are trying to go backward and we are trying to say no voting rights, no voting rights, take them away from those who have the voting rights.

Did they do some harm by exercising those voting rights? Is there a scintilla of evidence that any harm was done by employees having voting rights? No. But some special employers are saying, "If you do that I am not going to let my employees have an ESOP."

We are not going to let them have a tax deduction if they do not let their employees have an ESOP, although by the time we get done with the tax bill the ESOP issue may be behind us because it may no longer be important to have a tax deduction since there will not be too many people left required to pay taxes if they are in high enough brackets under this administration's program.

Madam President, there have been no hearings on this bill. The hearings that were held were held back in the previous administration. It is a different committee now. It is a far more enlightened committee. It is a committee far more concerned about employees. They might very well have come up with a totally different concept.

I look over the members of the Finance Committee and they might have come up with a totally different result.

But there have been no meetings. There have been no hearings.

How many companies would be affected by this amendment? There is some one company that says they are concerned about it in Alaska, some one company in Missouri, and a couple of companies that have written in letters.

What about all the employees? Who asked them? Should they not have had an opportunity to come before the committee and say, "We are opposed to this. You gave us voting rights. Now you are taking away from us those voting rights"? Why do we need this amendment on this floor at this time?

The majority party has control of the Finance Committee. They have control of the agenda of the Senate and they have the right to bring a bill to the floor after persons have had an opportunity to be heard both pro and con.

The last time there were hearings held this is what the administration said:

> We oppose the proposal in H.R. 2492 to repeal section 401(a)(22). We believe the disclosure of relevant financial information, together with the pass-through of voting rights in the limited situations described, is an essential element in making the plan's investment in closely-held employer securities meaningful.

As I already have pointed out, the administration has been quoted to the same effect in the New York Times today.

Will this provision affect all closely-held corporations regardless of their size, if they are multibillion dollar companies? Of course, it will.

I believe if we are going to be fair, if we are going to be reasonable, if we are going to be objective on this subject, then we ought not to accept the Stevens amendment.

Madam President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. STEVENS. Madam President, I ask unanimous consent that the order for the quorum call be rescinded.

Mr. METZENBAUM. I object.

The PRESIDING OFFICER. Objection is heard. The clerk will continue with the call of the roll.

The assistant legislative clerk continued with the call of the roll.

Mr. BAKER. Madam President, I ask unanimous consent that the order for the quorum call be rescinded.

Mr. METZENBAUM. I object.

The PRESIDING OFFICER. The objection is heard.

The legislative clerk continued the calling of the roll, and the following Senators entered the Chamber and answered to their names.

[Quorum Call No. 9 Leg.]

Baker	Dole	Murkowski
Boren	Hawkins	Pell
Byrd, Harry F., Jr.	Levin	Stennis
	Long	Stevens
Byrd, Robert C.	Matsunaga	Warner
Danforth	Metzenbaum	

The PRESIDING OFFICER. A quorum is not present.

Mr. BAKER. Madam President, I move that the Sergeant at Arms be instructed to request the attendance of the absent Senators and I ask for the yeas and nays.

The PRESIDING OFFICER. Is there a sufficient second? There is a sufficient second.

The yeas and nays were ordered.

The PRESIDING OFFICER. The question is on agreeing to the motion of the Senator from Tennessee. The yeas and nays have been ordered, and the clerk will call the roll.

Mr. STEVENS. I announce that the Senator from Oregon (Mr. HATFIELD) and the Senator from Pennsylvania (Mr. SPECTER) are necessarily absent.

Mr. CRANSTON. I announce that the Senator from Massachusetts (Mr. TSONGAS) is necessarily absent.

The PRESIDING OFFICER (Mr. MURKOWSKI). Are there any other Senators in the Chamber who wish to vote?

The result was announced—yeas 92, nays 5, as follows:

[Rollcall Vote No. 204 Leg.]

YEAS—92

Abdnor	East	McClure
Andrews	Evon	Melcher
Armstrong	Ford	Metzenbaum
Baker	Glenn	Mitchell
Baucus	Gorton	Moynihan
Bentsen	Grassley	Murkowski
Biden	Hart	Nickles
Boren	Hatch	Nunn
Boschwitz	Hawkins	Packwood
Bradley	Hayakawa	Pell
Bumpers	Heflin	Percy
Burdick	Heinz	Pressler
Byrd, Harry F., Jr.	Helms	Pryor
	Hollings	Randolph
Byrd, Robert C.	Huddleston	Riegle
Cannon	Humphrey	Roth
Chafee	Inouye	Rudman
Chiles	Jackson	Sarbanes
Cochran	Jepsen	Sasser
Cohen	Johnston	Schmitt
Cranston	Kassebaum	Simpson
D'Amato	Kasten	Stafford
Danforth	Kennedy	Stennis
DeConcini	Laxalt	Stevens
Denton	Leahy	Symms
Dixon	Levin	Thurmond
Dodd	Long	Tower
Dole	Lugar	Wallop
Domenici	Mathias	Warner
Durenberger	Matsunaga	Williams
Eagleton	Mattingly	Zorinsky

NAYS—5

Garn	Proxmire	Weicker
Goldwater	Quayle	

NOT VOTING—3

Hatfield	Specter	Tsongas

So the motion was agreed to.

The PRESIDING OFFICER. With the addition of Senators voting who did not answer the quorum call, a quorum is now present.

ORDER OF PROCEDURE

Mr. BAKER. Mr. President, if I may have the attention of the Senate for a moment——

The PRESIDING OFFICER. The Senate will come to order. Senators will please leave the well and return to their seats.

The majority leader is recognized.

Mr. BAKER. Mr. President, earlier today, I announced that the Senate would be in session until about 7 o'clock this evening. It appears that there is some possibility, at least, that I shall have to change my mind and ask the Senate to agree to stay later.

There is an amendment pending now by the Senator from Alaska on which apparently there is considerable controversy and on which there already has been a great deal of debate.

Mr. President, at this point, it is absolutely essential that we move these amendments on this measure on a reasonable and prompt basis.

I do not intend to ask the Senate to lay aside this amendment in order to proceed to another but, rather, to continue with it as long as it is necessary to resolve this issue.

I have not spoken for or against the amendment, and I will not do so now. But I do urge that if we have any expectation of finishing this measure, we simply cannot get bogged down on amendments such as this.

So I inquire now of the author of the amendment and the principal opponent of the amendment whether or not it is possible to dispose of this amendment in a reasonably short time. Otherwise, it will be necessary for me to change my prediction as to the time the Senate will conclude its business this evening.

Mr. METZENBAUM. Mr. President, I have just advised the majority leader that I am prepared to let this matter go to a vote very shortly, because I just want the Members of the Senate to know what is involved, and then go ahead and vote on it.

If the majority leader has no objection to my doing so, I should like to proceed at this moment to discuss this amendment, and at the conclusion of my remarks, if the Senator from Alaska wishes to refute or rebut my arguments, assuming that I have no counter rebuttal to him—although I might have, and it would not be at length—I would be willing to let the matter go to a vote.

Mr. BAKER. I thank the Senator from Ohio. I believe that would improve our chances of going out of session at a reasonable time.

I inquire of the Senator from Ohio and the Senator from Alaska if they are willing at this point to agree to a 30-minute time limitation, equally divided.

Mr. METZENBAUM. I have no objection.

Mr. BAKER. I make that request, Mr. President, and that the control of the time be in the usual form, which would mean that the author of the amendment has control of half of it and the Senator from Ohio would have control of the other half, under the circumstances.

Mr. METZENBAUM. That is agreeable, if it is agreeable to the minority leader.

The PRESIDING OFFICER. Is there objection? The Chair hears none, and it is so ordered.

Mr. BAKER. Mr. President, I thank all Senators, and I especially thank the Senator from Ohio.

Having reached this agreement, I believe it is likely, barring other unforeseen complications, that we will still be able to attain our recess time of approximately 7 p.m.

Mr. ROBERT C. BYRD. Mr. President, will the Senator yield?

Mr. BAKER. I yield.

Mr. ROBERT C. BYRD. I also express my appreciation to the distinguished Senator from Ohio (Mr. METZENBAUM), for the reasonableness with which he has agreed to this request.

Mr. METZENBAUM. I thank the Senator.

The PRESIDING OFFICER. Who yields time?

Mr. METZENBAUM. Mr. President, I yield myself such time as is necessary.

Mr. BOSCHWITZ. Mr. President, I ask the Senator from Ohio how long he intends to speak. If it will be a half hour——

Mr. METZENBAUM. I have only 15 minutes under my control, and I do not intend to speak for more than 5 or 6 minutes.

Mr. BOSCHWITZ. Then, I will wait. [Laughter.]

Mr. METZENBAUM. Mr. President, if I may have the attention of the Senate, I tell Senators that this is a very elementary amendment.

This amendment has to do with ESOP's, employee stock ownership plans. It has to do only with a limited number of ESOP's, those which are in closely held corporations; and, for all practical purposes, that can be defined as those that are not publicly held companies.

This amendment provides that those employees who participate in ESOP's at the present time will be denied any voting rights. They have those voting rights now, and this amendment would reverse the clock and take away from them the voting rights they presently have.

The argument is made that if you do not do that, employers will not want to go into the plans.

It should be pointed out that the position of the Senator from Ohio is in accord with the position of the administration, according to the New York Times story of today, which indicated:

> The Reagan Administration, in general, backs the idea. "Voting rights are a predictable and salutary trend that is likely to accelerate" where new ESOPs are installed, said John McClaughry, a White House tax and labor adviser. He termed greater employee involvement in company management "an exciting new vista for American industry."

This would do violence to that very concept. This would also violate the very concept, the very construction, the very suggestion, the very direction that the GAO has given.

Mr. President, may we have order in the Senate?

The PRESIDING OFFICER. The Senator from Ohio is correct. The Senate is not in order. The Senate will please be in order.

Mr. METZENBAUM. The very concept of ESOP's came about by reason of the direction of the distinguished ranking minority member of the Senate Finance Committee, RUSSELL LONG. Back on August 16, 1978, and again on July 3, 1979, he requested the GAO to discuss certain aspects of ESOP's, and the first recommendation the GAO made was to this very point. They said:

> In line with ERISA policy of protecting employees' interests and to facilitate the passing of full capital ownership to workers participating in ESOPs, we recommend that the Congress enact legislation to provide that full and unrestricted voting rights be passed to ESOP participants for all employee stock allocated to their accounts which is not publicly traded.

What we are doing is exactly turning around. We are doing it upside down. Instead of doing that which the GAO recommended to the ranking minority member of the Finance Committee and to the entire Finance Committee, we are denying the employees the right to vote. There is no logic to it. There is no reason to it. It is unfair. It is unreasonable. It is a denial of rights employees presently have. Therefore, I believe this amendment does not make good sense.

Mr. President, I reserve the remainder of my time, and at this time I ask for the yeas and nays.

The PRESIDING OFFICER. Is there a sufficient second? There is a sufficient second.

The yeas and nays were ordered.

Mr. STEVENS. Mr. President, if anyone else wishes to comment on this matter, I will yield.

Let me state, as succinctly as I can, that I have offered this amendment to remedy a problem created by the 1978 revisions of the Internal Revenue Code. The amendment eliminates for closely-held corporations only the voting rights passthrough requirement as applied to employee stock ownership plans.

In our State, there are several such plans—many of them. The problem with the passthrough is that it requires the key person of a closely held family corporation to transfer control to an employee stock ownership plan prematurely. This came about as a result of the 1978 act. The plans were agreed to by the employees and the employer. They were set up by them, and they have a vital function. But the amendment of 1978 required the passthrough of the stock rights prematurely, contrary to many of the plans.

We seek to eliminate the amendment that required that passthrough prematurely, in order to preserve the plans, because the employers have indicated that they will cancel the plans if that requirement remains in the law.

Most of these plans are formed by the employees and the employer. The employees pay into a trust fund. The trust fund acquires the stock, or you can have a situation where the employees enter into an agreement with the employer to buy the stock, and the agreement is taken to a bank, and the plan is financed, and the stock is transferred to the employee as the employer pays off the loan over a period of time.

Under the agreement, the time for the transfer is normally the retirement of the key person or his death. But these people who have formed these small corporations want to assist their employees to take the corporations over when the key person is no longer part of the business. They have found that the Government has required them to transfer the voting rights prior to their leaving the corporation, and they have refused to operate under those circumstances.

By eliminating this provision we will restore the viability to the ESOP for closely held corporations. The record shows that since the 1978 amendment they have gone downhill. There are fewer and fewer of them. They are not viable, and the only way to make them viable is to let them operate in accordance with the agreement that was entered into in each instance and not mandate a passthrough requirement by the corporation.

I yield to the Senator from Louisiana whatever time he wishes.

Mr. LONG. Mr. President, I appreciate the sincerity of the Senator from Ohio in this matter, but I hope he equally appreciates ours.

Mr. President, here is a letter from an employer in Oklahoma, Swan Air Conditioning Co. This is typical of the problem. This man states that if this passthrough requirement must be forced upon him his employees would never have more than 49 percent of the stock in his company. The significant thing is that this employer was planning to put 80 percent of his stock in the hands of his employees by way of that ESOP trust, but he simply does not feel that those employees have better managerial judgment than he has. So he says he is unwilling for them to have 80 percent of the stock, and that is rather typical of the problem.

Sitting beside me here is Mr. Jeff Gates, who advised many people on setting up employee stock ownership plans and encouraged them to do it as a private lawyer. In many cases, he tells me, whenever they ask the question, "Do we have to pass through voting rights to the employees if we set up the plan either as part of our estate planning or as a gift when we are alive?"—when he has to tell them that the voting rights must be vested in those employees, at that point, for fear that the employees might not know how to manage the corporation, 80 percent of them will say, "No, if that is how it is, forget about it, we are not going to set up the employee stock ownership plan."

Here is the letter from Joseph A. Dee, the president of the Employee Stock Ownership Association of America, advocating that we not require this passthrough of voting rights. He says in their newsletter that they have taken a survey of their members and of their member companies that have employee stock ownership plans, 83 percent of them object to passing through the voting rights, only 16 percent favor it.

Up to 18 months ago this problem did not exist, so the problem has only existed for 18 months, and it is the biggest single impediment to getting the employer to set up these employee stock ownership plans.

This man Hall who owns the Hallmark cards came and advised me, and he said he wants to leave all of his stock to his employees in his will and he will do it. One condition is if we are going to require the voting rights passthrough, he is not going to do it because he does not think they have the management skill to keep that company out front and competitive, and his son indicates a similar intention to do the same thing for the employees in his turn.

Until such time as employers feel that they can confidently rely upon employees to have as much business and managerial judgment as the employer, all we are doing when we require the pass through of voting rights is just to give employers a strong incentive not to set up employee stock ownership plans.

I am for employee stock ownership plans. I wish to persuade every employer that he need not worry about it. But, Mr. President, that is not how they feel about it.

I think that we should keep in mind that it is important that the employees own stock, it is important that they own a piece of the action and they are going to own five times as much of it if we do not require the passthrough of voting rights.

I hope that the Senate will realize if they want the employees to own stock in these companies we should make it easy for the employers to set up employee stock ownership plans, not difficult. We should go along with them and rely upon their judgment.

Keep in mind that with this amendment passthrough voting is entirely discretionary. Employers may put the voting rights either with the employees or with the plan trustees, depending upon the best judgment of the employer. I am satisfied that the Stevens amendment means a vast expansion of employee stock ownership, and I hope it will be agreed to.

Mr. DANFORTH. Mr. President, will the Senator yield a minute?

Mr. STEVENS. I yield a minute to the Senator from Missouri.

Mr. DANFORTH. Mr. President, first of all, if the passthrough is not in effect the stock would be voted by the trustee of the profit-sharing plan and that trustee would be subject to the rules of ERISA; he would have a fiduciary duty to vote the best interests of the employees.

Second, this provision with the passthrough provision was mistakenly put in the Revenue Act of 1978. The following year, 1979, the Finance Committee unanimously voted to take out the passthrough provision.

So this amendment would have the strong support on both sides of the membership of the Finance Committee, all but four members of which today were on the Finance Committee back in 1979.

There is no doubt at all that this provision has been a disincentive to the creation of profit-sharing plans and employee stock ownership plans.

So I hope the amendment is agreed to.

Mr. METZENBAUM. Mr. President, how much time remains on this side?

The PRESIDING OFFICER. Ten minutes and fifty-six seconds.

Mr. METZENBAUM. And on the other side?

The PRESIDING OFFICER. Six minutes and fifty seconds.

Mr. METZENBAUM. Mr. President, it has been suggested that because the employees have voting rights somehow or other there has been a diminution of those companies that have developed ESOP's.

The fact is the year that this was put into effect, during that year, the Federal Government authorized 850 stock bonus plans covering 1.2 million employees and in 1979 the Government authorized 574 stock bonus plans covering an additional

362,000 employees. I do not have the figures for 1980.

I should point out that not all of those employees work in closed corporations, but the fact is as to the publicly held corporations in every single one of them those ESOP's must have voting rights.

So all the Senator is trying to do is to carve out a group and say they will not have voting rights.

Tell me this: What makes it better to permit the employees and assume they use better judgment when they have voting rights in a publicly held corporation where their vote may be determinative as to who is in a takeover position or who takes over the company, or what makes them better able to vote in connection with a battle for the board of directors, a slate on one side or the other, or what makes them better able in a publicly held corporation to be able to see the figures and to have the responsibility than it does with respect to a privately held corporation?

I heard the distinguished Senator from Louisiana read the letter that one man would not go into it. We do not make laws around here for one man or one company or two companies. It is interesting that every time we have some issue of this kind there is always one person who has a little mom and pop operation and we have to legislate for them.

In this instance, let us legislate for those employees who presently have votin rights. They presently have voting rights and if we adopt the Stevens amendment we will be taking those voting rights away from them, and that is what the issue is all about.

The PRESIDING OFFICER. Who yields time?

Mr. LEVIN. Mr. President. I wonder if the Senator from Alaska will yield me 1 minute to ask a question?

Mr. STEVENS. I yield.

Mr. LEVIN. Mr. President, as I understand the position of the Senator from Alaska it is that this amendment will allow existing agreements which do not provide for passthrough to take effect.

The Senator from Ohio informed us that this will remove existing voting rights that employees have.

Is it the intention of the amendment of the Senator from Alaska to take away voting rights which exist under agreements which are now in force? Will this be retroactive to agreements now in force and purport to remove from employees voting rights which they now have under existing agreements?

Mr. STEVENS. The answer is that the voting rights will be determined by the agreement that the stock was acquired under and not by the 1978 law at all. I cannot answer specifically the Senator from Michigan because it depends on each agreement. I can tell him this: In connection with the one I talked with the employer in my State just stopped participating in the plan in 1978. He has not transferred any stock since that time because he would not consent to the passthrough provision.

I am informed that the ESOP Association advised him to await the outcome. This was for the tax law in 1979. It was dropped out somewhere. It was naturally voted out by the Finance Committee. They thought it was going to come through in 1979. It did not.

This is the next time we address the tax law and have an opportunity to deal with it.

Mr. LEVIN. If the Senator will yield for 1 additional minute for a question, I am one sympathetic to his position. I think it is a mistake to require passthrough in the closely-held corporations. I am troubled by the possible implication that existing agreements which do provide for the passthrough as a result of that law or otherwise would now be vitiated by the act of this Senate. I do not think we could remove existing voting rights, but I wish to know whether or not it is the intention of this amendment to eliminate existing rights in existing agreements?

Mr. STEVENS. It is the intention of this amendment to have voting rights be determined by the individual agreements, and I agree I do not think we can legislate away their voting rights.

I say this: The ones I am familiar with would have had to modify their agreements to meet the requirements in the 1978 law. They have not done so. I do not think there have been stock transfers. Maybe the Senator from Louisiana knows a better answer to this than I, but the stock has not been transferred by these ESOP's awaiting some action to eliminate this requirement.

I might point out to my friend from Michigan, he is familiar with SEC provisions dealing with proxies, for instance. You have to register those proxies. They do not have to register them for a small corporation, but they would with this passthrough provision.

The paperwork is such on small corporations that they just have not complied with it and the record shows ESOP's have dropped all over the country. They are going downhill. The employees are being denied the benefits of ESOP because of this provision.

You have to notify those having rights to vote of a meeting; you have to give them proxy opportunities, you have to register the proxy opportunity. You have to comply with so many things that they just said, "We won't do it."

The primary reason they will not do it is because they felt during their lifetime they had set up an agreement whereby they had maintained control. If they transferred that stock in most instances they would have lost control, and they will not do that. So I do not think the ones that—maybe my distinguished colleague who is in the Chair—he cannot respond—but the ones I am familiar with have not transferred the stock.

I do not think we can legislate away voting rights that have been transferred pursuant to the 1978 law. This just goes back and says that those that have been acquired since that 1978 law are not required to have those voting rights any more.

Mr. LEVIN. I thank the Senator.

Mr. METZENBAUM. Mr. President, I would like to respond further to the Senator from Michigan, if I may have the attention of the Senator from Michigan, because I want you to understand that indeed it will occur just as I said it would. It will deny the rights to employees who presently have the rights, and that comes about by reason of the fact that the language of the amendment is that the amendment made by this section shall apply to acquisitions of securities after December 31, 1979.

So it does have a retroactive effect, and what we are talking about is an amendment in 1978 that specifically provided that the employees had the rights. What this does is to now reverse the trend and say they will not have the rights, retroactively.

Mr. LEVIN. Mr. President, will my friend from Ohio yield for a question? If there were no retroactivity implied in this amendment, would the Senator still be opposed to this amendment?

Mr. METZENBAUM. I would be opposed to the amendment prospectively but not nearly as strongly as I am at the moment.

The PRESIDING OFFICER (Mr. MURKOWSKI). Who yields time?

Mr. STEVENS. I yield to the Senator from Louisiana.

Mr. LONG. Mr. President, there is no intention to upset any vested rights, and so far as I am concerned, if that is a problem, in conference I would be happy to see to it that any agreements made because of existing law would remain in effect. I think the sponsor of the amendment would intend for it to be that way. So that is no problem.

Mr. DOLE. May I also say that is the understanding of the Senator from Kansas which he has as a conferee.

Mr. LONG. I thank the Senator.

Let me say further, as far as these large companies are concerned, it may have prevented some of them from setting up plans because their employees, under the employee stock ownership tax credit, would have voting rights, but that is a small percentage of the stock.

In many instances what we are talking about in these closely-held corporations involves situations where the employer would put in 20 percent, 40 percent, maybe even 50 percent of the stock for the employees into the trust fund. Those are the kinds of situations where the employer simply is not going to do it if he is afraid that he is going to prevent the company from having wise management decisions.

If we do not respect the views of the employers in that respect, we are simply denying employees all across the Nation stock and the opportunity to participate in all the profits which otherwise the employers would be happy to provide them with.

Mr. STEVENS. Mr. President, do I have any time remaining?

The PRESIDING OFFICER. One minute and four seconds.

SEVERAL SENATORS. Vote. Vote.

Mr. METZENBAUM. Mr. President, I found rather interesting the colloquy which just occurred between the Senator from Kansas and the Senator from Louisiana and the Senator from Alaska

about being certain that this amendment would not be retroactive in its impact.

I am wondering, if that is the case, whether or not the proponents of the amendment would be prepared to accept by unanimous consent an amendment that would specifically spell that out rather than worry about taking it to the conference committee? Does the Senator——

Mr. STEVENS. Mr. President, I will use my time when the Senator has finished.

Mr. METZENBAUM. I beg pardon?

Mr. STEVENS. I will use my time when the Senator has finished.

Mr. METZENBAUM. I am asking the question on my time.

Mr. STEVENS. On the Senator's time, it is this Senator's intention that the voting rights would be determined by the agreement. But if there are voting rights that are vested because of the 1978 amendments that have been transferred and vested, then it was my understanding that the Senator from Kansas and the Senator from Louisiana would work that out in conference to see that that is protected.

I know of no such stock which has been so transferred, so I would prefer not to put it at this time in this amendment.

Mr. METZENBAUM. I did not think so. I thank the Senator from Alaska.

Mr. STEVENS. Mr. President, the way to protect the employee stock rights, the voting rights, is to assure that they will get that stock. Without this amendment these plans will be canceled. With this amendment the plans will continue. They were a growing, viable way to increase employee stock ownership in the enterprises in which they had been working.

I yield back the remainder of my time.

Mr. METZENBAUM. Mr. President, let us not kid ourselves about these plans being canceled so capriciously because when they cancel the plans, as I understand it, they have already taken a very substantial tax deduction.

I would guess under the law they would then have to pay a new tax for canceling the plan because I cannot believe you can take a tax deduction and create a plan and then in the same way go forward and cancel the plan. That is just illogical. Although I have not checked the specifics of the law, I have no doubt I am right in my representation to the Senate.

Mr. President, I yield back the remainder of my time, and I am prepared to vote.

The PRESIDING OFFICER. All time having been yielded back, the question is on agreeing to the amendment of the Senator from Alaska. The yeas and nays have been ordered, and the clerk will please call the roll.

The assistant legislative clerk called the roll.

Mr. STEVENS. I announced that the Senator from Oregon (Mr. HATFIELD), and the Senator from Pennsylvania (Mr. SPECTER), are necessarily absent.

I further announced that, if present and voting, the Senator from Oregon (Mr. HATFIELD), would vote "aye."

Mr. CRANSTON. I announce that the Senator from Massachusetts (Mr. TSONGAS), is necessarily absent.

The PRESIDING OFFICER (Mr. PACKWOOD). Are there other Senators in the Chamber wishing to vote?

The result was announced—yeas 94, nays 3, as follows:

[Rollcall Vote No. 205 Leg.]

NOT VOTING—3

Hatfield	Specter	Tsongas

So Mr. STEVENS' amendment (UP No. 247) was agreed to.

Mr. STEVENS. Mr. President, I move to reconsider the vote by which the amendment was agreed to.

Mr. DOLE. Mr. President, I move to lay that motion on the table.

The motion to lay on the table was agreed to.

The PRESIDING OFFICER. The Senator from New Jersey.

Mr. DOLE. Mr. President, may we have order in the Chamber?

The PRESIDING OFFICER. Will the Senator withhold until we have order in the Chamber? May we have the well cleared?

The Senator from New Jersey.

SECTION 221—RESEARCH AND DEVELOPMENT

Mr. BRADLEY. Mr. President, I would like to engage in a colloquy with the chairman of the Finance Committee concerning the interpretation of section 221 of the bill, which deals with research and development.

The chairman is no doubt aware that New Jersey is proud to count among its businesses many pharmaceutical and chemical companies. To obtain the best and safest products for U.S. markets, these companies undertake many activities ranging from clinical studies for pharmaceutical companies to largescale field studies for agricultural companies. The costs of these studies are deductible under section 174 of the Internal Revenue Code.

May we all assume that these expenditures for these activities would constitute research and experimentation costs within the meaning of section 221 of the bill as well?

Mr. DOLE. The Senator from New Jersey is correct. It is the intent of the committee to include within the provision of section 221 research and experimental expenditures incurred in clinical testing and studies of pharmaceuticals and experimental field studies for agricultural chemicals that are currently deductible under section 174 of the Internal Revenue Code subject, of course, to the specific exclusions in the bill, such as research conducted outside the United States, and additional requirements of the bill, such as the stricter trade or business requirement.

I might add that the provision is set forth on page 127 of the bill.

Mr. BRADLEY. Mr. President, I thank the chairman very much for his explanation.

The PRESIDING OFFICER. The Senator from Kansas.

UP AMENDMENT NO. 248

(Purpose: Reducing the rate of cost recovery on 15-year real property other than low-income rental housing)

Mr. DOLE. Mr. President, I send an amendment to the desk and ask for its immediate consideration.

The PRESIDING OFFICER. The amendment will be stated.

The assistant legislative clerk read as follows:

The Senator from Kansas (Mr. DOLE) proposes an unprinted amendment numbered 248.

Mr. DOLE. Mr. President, I ask unanimous consent that further reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment is as follows:

On page 47, line 9, strike out "167(b)(2)" and insert in lieu thereof "167(j)(1)(A)".

On page 47, between lines 22 and 23, insert the following:

"(C) SPECIAL RULE FOR LOW-INCOME HOUSING.—In the case of 16-year real property which is low-income rental housing (within the meaning of section 167(k)(3)(B)), subparagraph (A)(ii) shall be applied by substituting 'section 167(b)(2)' for 'section 167(j)(1)(B)'."

On page 113, line 25, strike out the end quotation marks and the end period.

On page 113, after line 25, insert the following:

"(5) ADJUSTMENT TO BASIS.—For purposes of this subtitle, if a credit is allowed under this section for any qualified rehabilitation expenditure in connection with a qualified rehabilitated building other than a certified historic structure, the increase in basis of such property which would (but for this paragraph) result from such expenditure shall be reduced by twice the amount of the credit so allowed.".

On page 116, between lines 2 and 3, insert the following:

"(e) CONFORMING AMENDMENT.—Subsection (a) of section 1016 (relating to adjustments to basis) is amended—

(1) by striking out "and" at the end of paragraph (22),

(2) by striking out the period at the end of paragraph (23) and inserting in lieu thereof ", and", and

(3) by adding at the end thereof the following new paragraph:

"(24) to the extent provided in section 48 (g) (5), in the case of expenditures with respect to which a 15 per centum tax credit has been allowed under section 38.".

Mr. DOLE. Mr. President, after adopting the Packwood-Moynihan amendment on charitable deductions the Weicker-Durenberger-Nunn amendment on small business, as well as several other amendments, which all but one in this body we are now over the administration's revenue loss estimates for the tax cut by about $1.6 billion in fiscal 1983 and by about $1.1 billion in fiscal 1984.

In order to bring the bill somewhat back to balance, I am offering at this time an amendment which will reduce the revenue loss already included in the Finance Committee bill.

Under present law, Mr. President, new commercial real estate may be depreciated at declining balance rates up to 150 percent of straight line. New residential real property may be depreciated at rates up to 200 percent. Used commercial real estate may be depreciated at straight line rates and used residential real estate may be depreciated at rates up to 125 percent of straightline. Under the committee's bill, all real property except theme parks may be written off over a 15-year period at rates based on a 200-percent declining balance method with a switch to the sum-of-the-year's digits method. The only difference between commercial and residential real property is in the recapture rates. Generally, residential real property will face less recaptured gain as ordinary income on disposition. The only special benefit for low-income housing is the phaseout of recapture of gain after 100 months.

This amendment would base the real property recovery rate on a 150-percent declining balance method over a 15-year period except for low-income housing which will retain a 200-percent rate.

The revenue pickup of my amendment, including allowing only a 150-percent declining balance for all real property other than low-income housing, which would remain at 200 percent, would be in fiscal year 1981, about $100 million; fiscal year 1982 about $800 million; in 1983, $1.2 billion; fiscal year 1984; $1.7 billion; 1985, $2 billion; and in 1986, $2.4 billion.

In support of this first portion of the amendment, Mr. President, I think there is a need to restrict the rate of real property cost recovery. The bill's real estate capital recovery provisions are very rich and I think that is a view shared by many Members of both the Senate and the House. In fact, this same action was taken by the House Ways and Means Committee last week. As it stands, the bill's real estate provisions would encourage the real estate tax shelter industry. Because of the combination of rapid writeoffs and the limited recapture for residential real estate, there will be much churning of real estate and little long-term ownership—with corresponding adverse effects on the quality of our housing stock.

Reducing real property depreciation rates to approximate a 150-percent declining balance rate will bring the reduction in depreciation rates for real property more in line with that for personal property.

The amendment will restore the special treatment of low-income housing and restore the incentive for its construction.

Mr. President, I ask for the yeas and nays on my amendment.

The PRESIDING OFFICER. Is there a sufficient second? There is a sufficient second.

The yeas and nays were ordered.

UP AMENDMENT NO. 249

(Purpose: To reduce the rate of cost recovery on 15-year real property other than low-income rental housing and to require a reduction in basis for certain property eligible for the rehabilitation investment credit)

Mr. DOLE. Mr. President, I now offer an amendment which I ask to have immediately considered as a substitute.

The PRESIDING OFFICER. The amendment will be stated.

The assistant legislative clerk read as follows:

The Senator from Kansas (Mr. DOLE) proposes an unprinted amendment numbered 249.

Mr. DOLE. I ask unanimous consent that further reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment is as follows:

On page 47, line 9, strike out "167(b) (2)" and insert in lieu thereof "167(j) (1) (B)".

On page 47, between lines 22 and 23, insert the following:

"(C) SPECIAL RULE FOR LOW-INCOME HOUSING.—In the case of 15-year real property which is low-income rental housing (within the meaning of section 167(k) (3) (B)), subparagraph (A) (ii) shall be applied by substituting 'section 167(b) (2)' for 'section 167 (j) (1) (B)'.

On page 113, line 25, strike out the end quotation marks and the end period.

On page 113, after line 25, insert the following:

"(5) ADJUSTMENT TO BASIS.—For purposes of this subtitle, if a credit is allowed under this section for any qualified rehabilitation expenditure in connection with a qualified rehabilitated building other than a certified historic structure, the increase in basis of such property which would (but for this paragraph) result from such expenditure shall be reduced by the amount of the credit so allowed.".

On page 116, between lines 2 and 3, insert the following:

(e) CONFORMING AMENDMENT.—Subsection (a) of section 1016 (relating to adjustments to basis) is amended—

(1) by striking out "and" at the end of paragraph (22),

(2) by striking out the period at the end of paragraph (23) and inserting in lieu thereof ", and ", and

(3) by adding at the end thereof the following new paragraph:

"(24) to the extent provided in section 48 (g) (5), in the case of expenditures with respect to which a credit has been allowed under section 38.".

Mr. DOLE. Mr. President, in addition to the change in the recovery rate for structures, we provide in the Finance Committee bill a substantial new tax incentive for the rehabilitation of older buildings.

Under the bill, a 15-percent investment credit is provided for the rehabilitation of buildings which are at least 30 years old. A 20-percent credit is allowed for a building at least 40 years old and a 25-percent credit is allowed for the rehabilitation of a certified historic structure.

These incentives are undoubtedly justified in today's economy, although there was some dispute above that in the committee deliberations. It is not good policy to provide tax incentives which may encourage businesses to abandon older buildings and relocate to different parts of the country. There must be a balancing incentive to rehabilitate existing, older structures.

Similarly, we must protect our architectural heritage. Too many cities and towns have witnessed the demolition of significant buildings because it was cheaper, after tax, to build a new structure on the same spot.

PROBLEM WITH COMMITTEE PROVISION

However, it troubles this Senator that the three-tier system provided in the bill does not provide a sufficient distinction between historical structures and other older buildings. We must recognize the simple fact that it costs more to renovate a historical structure than to renovate other buildings. First, there is the cost of certification itself and, second, there are the often very large additional expenses connected with a quality rehabilitation. We must provide a mechanism to recognize these simple realities.

In addition, this incentive may very well be more than what is necessary for rehabilitation of older buildings. We must not overlook the fact that the ACRS provisions in the bill provide a major tax incentive for rehabilitation of structures. All structures will be written off over 15 years. This is less than half the period applicable in many cases under present law. Combined with accelerated methods of cost recovery over this shortened period, we have a large incentive indeed.

Mr. President, put simply this amendment will reduce the cost eligible for recovery deductions under ACRS by the amount allowed as a credit for rehabilitation expenditures other than those relating to rehabilitation of a certified historic structure.

Let me give an example why I think this should be done. It is not a big saving item, but it is something that I think should be done.

Let us assume, for example, that rehabilitation expenditures amounted to $10,000 and the credit allowed was $2,000, that is, 20 percent of $10,000. Recovery deductions would be allowed only with respect to $8,000 of rehabilitation costs.

EFFECT OF AMENDMENT

The effect of this amendment is to deny recovery deductions to the extent the taxpayer is reimbursed for his cost

in the form of a tax credit. I believe this provision makes sense, Mr. President. It was recommended by the Finance Committee staff, the staff of the Joint Tax Committee, and by others who are trying to find some way to make certain that what we do is not bad tax policy.

Mr. President, I suggest that this amendment would deny a taxpayer's deducting an amount that is not in fact a cost to him.

This amendment will make sure that rehabilitation of buildings will take place where it is truly economically justified. But renovation will not take place solely to obtain tax benefits.

Even more importantly, this amendment will provide sufficient distinction between historic structures and other older buildings to encourage people to preserve historically significant structures without adding to the revenue loss of this bill.

Mr. President, the revenue pickup of requiring a basis adjustment on the last amendment I just offered for properties other than historic structures that receive the rehabilitation credit would be, in fiscal year 1982, $34 million; fiscal year 1983, $80 million; fiscal year 1984, $86 million; fiscal year 1985, $87 million; fiscal year 1986, $90 million. Therefore, the total revenue pickup of the combined amendments is about $100 million in fiscal year 1981; $800 million in fiscal year 1982; $1.3 billion in fiscal year 1984; $1.8 billion in fiscal year 1984; $2.1 billion in fiscal year 1985.

Mr. President, I think that will help offset some of the revenue loss from other amendments we have adopted. I say for the record that with these provisions cutting back on all but low-income housing to 150 percent, plus the basis adjustment on the rehabilitation credit, we are under in 1981 by $100 million; in 1982, about $1.7 billion; in 1983, still over by about $0.3 billion; and in 1984, under by $0.7 billion. We are still a little short in 1983.

Mr. MATSUNAGA. Will the distinguished chairman of the committee yield?

Mr. DOLE. I yield to the Senator from Hawaii.

Mr. MATSUNAGA. It is my understanding that what the chairman is proposing is already included as a provision in the Ways and Means Committee bill. Am I correct in my assumption?

Mr. DOLE. That is correct. Mr. President, the committee took that action, I think, sometime last week. They have not yet made the basis adjustment, but on the most significant proposal of my amendment, cutting back on all but low income to 150 percent, that has been done by the Ways and Means Committee.

Mr. MATSUNAGA. I thank the Chair.

The PRESIDING OFFICER. The Senator from Connecticut.

Mr. DODD. Mr. President, I suggest the absence of a quorum.

Mr. DOMENICI. Mr. President, I should like to ask a question of the distinguished Senator from Kansas.

Do I correctly understand that if his amendment is agreed to, he will have picked up sufficient revenues for 1981 and 1982 to come in under the estimated cost of the original Finance Committee measure?

Mr. DOLE. That is correct. We will have the figures in just a second on 1983 and 1984. We may have to find a couple of other areas.

There are a number of outstanding amendments floating around the Chamber. We would like to accommodate some of those. If all the Senators who voted for the charitable deduction will now vote to get us back in the black, we will be in business again.

This is a responsible way to proceed. I say to the distinguished chairman of the Budget Committee that before we finish work on this measure, we will have what we call a fiscal responsibility amendment which will indicate to the Senate, whether we do it on the floor or in conference, that we will come back within the administration's number before we finish.

Mr. DOMENICI. I thank the Senator.

The PRESIDING OFFICER. The Senator from Kansas still has the floor.

Mr. DOLE. I yield to the Senator from Connecticut.

Mr. DODD. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. DOLE. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. DOLE. The yeas and nays have not been ordered on the pending amendment.

The PRESIDING OFFICER. Not on the second amendment.

Mr. DOLE. I ask for the yeas and nays.

The PRESIDING OFFICER. Is there a sufficient second? There is a sufficient second.

The yeas and nays were ordered.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from Kansas (Mr. DOLE), UP No. 249. On this question the yeas and nays have been ordered, and the clerk will call the roll.

The assistant legislative clerk called the roll.

Mr. STEVENS. I announce that the Senator from Oregon (Mr. HATFIELD) and the Senator from Pennsylvania (Mr. SPECTER) are necessarily absent.

I further announce that, if present and voting, the Senator from Oregon (Mr. HATFIELD) would vote "yea."

Mr. CRANSTON. I announce that the Senator from Massachusetts (Mr. TSONGAS) and the Senator from New Jersey (Mr. WILLIAMS) are necessarily absent.

The PRESIDING OFFICER. Are there any other Senators in the Chamber who desire to vote?

The result was announced—yeas 56, nays 40, as follows:

[Rollcall Vote No. 206 Leg.]

YEAS—56

NOT VOTING—4

Hatfield	Tsongas	Williams
Specter		

So Mr. DOLE's amendment (UP No. 249) was agreed to.

Mr. DOLE. I move to reconsider the vote by which the amendment was agreed to.

Mr. STEVENS. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. STEVENS. Mr. President, I ask unanimous consent that the yeas and nays on the pending amendment be vitiated.

The PRESIDING OFFICER. Is there objection? The Chair hears none, and it is so ordered.

The question is on agreeing to the amendment, as amended. (Putting the question.)

The amendment (UP No. 248), as amended, was agreed to.

Mr. DOLE. Mr. President, I move to reconsider the vote by which the amendment, as amended, was agreed to.

Mr. STEVENS. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. STEVENS. Mr. President, there will be no further votes tonight.

UP AMENDMENT NO. 250

(Subsequently numbered amendment No. 503.)

(Purpose: To restore the minimum benefit for persons already on the benefit rolls prior to December 1981)

Mr. RIEGLE. Mr. President, I have an amendment that I send to the desk. I want to say this will be an amendment to reestablish the minimum benefit on social security. I would like to ask for the yeas and nays on this amendment.

The PRESIDING OFFICER. Has the Senator sent his amendment to the desk?

Mr. RIEGLE. It is on its way.

The PRESIDING OFFICER. The clerk will report.

The legislative clerk read as follows:

The Senator from Michigan (Mr. RIEGLE) proposes an unprinted amendment numbered 250.

Mr. RIEGLE. Mr. President, I ask unanimous consent that further reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment is as follows:

At the appropriate place, add the following new section:

SEC. —. (a) Title II of the Social Security Act is amended by adding at the end thereof the following new section:

"SEC. 234. (a) Subsection (b) shall apply to any individual who was entitled to benefits under this title for any month after December 1930 and prior to December 1981 and whose benefits under this title are reduced by reason of amendments made by a public law enacted at any time in 1981 to section 215(a)(1)(C) and to other sections of this Act related to the minimum social security benefit.

"(b) In any month in which an individual receives a reduced benefit as described in subsection (a), such individual shall be entitled to receive an additional payment under this section equal in amount to the difference between the benefit to which he would have been entitled under this title if the amendments described in such subsection had not been enacted and the benefit to which he is entitled without regard to this subsection.

"(c) The benefits payable to any individual under the preceding subsection shall be payable from the same trust fund from which his reduced benefit described in subsection (a) is payable."

Mr. RIEGLE. This is an amendment that would restore the minimum benefit on social security for those people who are entitled to receive it through the end of this year, and I ask for the yeas and nays on the amendment.

The PRESIDING OFFICER. Is there a sufficient second? There is a sufficient second.

The yeas and nays were ordered.

Mr. DOLE addressed the Chair.

The PRESIDING OFFICER. The Senator from Michigan has the floor.

Mr. STEVENS. Mr. President, will the Senator yield?

Mr. RIEGLE. Not at this point. I will in just a minute.

UP AMENDMENT NO. 251

Mr. RIEGLE. Mr. President, I send a perfecting amendment to the desk and ask that it be reported.

The PRESIDING OFFICER. The clerk will report the amendment.

The legislative clerk read as follows:

The Senator from Michigan (Mr. RIEGLE) proposes an unprinted amendment numbered 251.

Mr. RIEGLE. Mr. President, I ask unanimous consent that further reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment is as follows:

In lieu of the language proposed to be inserted insert the following:

SEC. —. (a) Title II of the Social Security Act is amended by adding at the end thereof the following new section:

"SEC. 234. (a) Subsection (b) shall apply to any individual who was entitled to benefits under this title for any month after December 1980 and prior to January 1982 and whose benefits under this title are reduced by reason of amendments made by a public law enacted at any time in 1981 to section 215(a)(1)(C) and to other sections of this Act related to the minimum social security benefit.

"(b) In any month in which an individual receives a reduced benefit as described in subsection (a), such individual shall be entitled to receive an additional payment under this section equal in amount to the difference between the benefit to which he would have been entitled under this title if the amendments described in such subsection had not been enacted and the benefit to which he is entitled without regard to this subsection.

"(c) The benefits payable to any individual under the preceding subsection shall be payable from the same trust fund from which his reduced benefit described in subsection (a) is payable."

Mr. RIEGLE. Mr. President, in light of the comments earlier of the distinguished majority whip, I will just speak very briefly about the amendment that I have offered tonight.

It concerns the issue of restoring and maintaining the minimum benefit on social security for those persons who currently receive it under the law, and who would continue to receive it or would be entitled to receive it through the end of this calendar year. It would not provide the minimum benefit in the future to new persons who otherwise, under existing law, would be entitled to receive it.

So, in effect, it would maintain the minimum benefits for those persons who now receive it and those persons who become entitled to receive it between now and the end of the year. It would not extend that benefit to new persons becoming entitled after the first of the year.

I hope that tomorrow we could have a discussion on this. We have previously discussed this issue on the floor. I know there is a lot of sentiment to maintain the minimum benefit on social security because, as the story has gotten out and we have seen who is to be damaged—3 million elderly persons across the country, half of them below the poverty line, 75 percent of those, elderly women, and a number of them in their late eighties and nineties. In fact, over 80,000 of them are above the age of 90—many of them will have to be forced onto welfare unless an effort is made to maintain the minimum benefit.

I know there has been a concern mounting on both sides of the aisle. Most of the Members on this side have previously voted on other occasions to maintain the minimum benefits. I think this is a good time and a good opportunity, on a tax bill of this sort, for Members of both sides to have an opportunity to consider supporting this and maintaining it, so that we can deal with the tremendous degree of apprehension, fear, and pending hardship that faces the millions of elderly people across the country who are presently eligible for the minimum benefit.

I might say that this is the minimum benefit on social security. This is the lowest rung on the social security ladder. It is the person who, in a sense, is most vulnerable in most instances to economic circumstances that they face in their own lives.

I would hope that when we vote on this that a majority in the Senate would decide that the time has come to put the Senate on record as maintaining this particular minimum benefit.

As I say, I would probably not be inclined to say more tonight, but hope that tomorrow morning we can take up the issue.

Mr. KENNEDY. Mr. President, I strongly support the Riegle amendment because we ought to reverse the decision made in the reconciliation bill to eliminate the minimum benefit.

Ever since debate began on this issue, OMB and the Senate majority have argued that the elimination of the minimum benefit for 3 million people really is not going to hurt anybody.

First, we were told over a million people would really receive more because of their spouses earning record. Then we were told that most of the remaining 2 million would be eligible for SSI. Then the Finance Committee added a provision to allow those between ages 60 to 64 to qualify for SSI.

But every day we learn that these assurances are not worth the paper they are written on.

We already know from recent news articles that 15,000 elderly nuns and other members of religious orders will be thrown off the rolls.

Nobody knows how many will have their checks delayed or lost after their benefits are recalculated. No one knows how many others will apply for SSI. No one knows how many between ages 60–64 will even qualify for SSI.

In short, what this body is doing is playing Russian roulette with millions of very aged Americans, many of them in the eighties and nineties who are among the weakest, most defenseless people in our society.

All this can do is further undermine confidence in the social security system—confidence that has already been shattered by the administration's proposal to reduce benefits.

We have said from the beginning that eliminating the minimum benefit for present recipients makes absolutely no sense in terms of equity and social justice. It is now clear that we were right. And now is the time to correct the mistake we made in the budget reconciliation bill.

Mr. President, I ask unanimous consent that the article to which I referred may be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Post]

NUNS FELL PREY TO SOCIAL SECURITY CUTBACK

(By Spencer Rich)

The dedicated budget-cutters at the White House and in Congress are having second thoughts about one of their good works. It seems that as they sliced their way through the budget they acted to reduce the already small Social Security benefits of several thousand elderly nuns and other members of religious orders.

The affected orders have complained, and repentance is nigh.

The offending vote was to eliminate the $122-a-month minimum benefit under Social Security. This now serves to sweeten the monthly checks of some 3 million beneficiaries, whose low earnings records are such that they would otherwise be entitled to less. President Reagan said when he recommended wiping out the minimum—which both houses of Congress have agreed to do—that those whose incomes fell too far could turn to welfare.

But for various reasons that apparently wouldn't do for the nuns and others involved, and now a group representing Roman Catholic nuns is asking Congress for an exemption from the proposed new rule.

The nuns' proposal was outlined last week to the Senate Finance Committee by Sister Frances Mlocek of the Leadership Conference of Women Religious of the U.S.A.

It would allow thousands of nuns and male members of religious orders who have taken the vow of poverty to remain eligible for the minimum benefit for at least 10 years; they would be differently treated from the others now on the minimum, even though many of them are also poor and elderly.

Mlocek said the nuns or male clerics benefiting from the existing minimum benefit provision constitute a special case. Until 1972, persons in religious orders who had taken vows of poverty were not eligible for Social Security. Only in 1972 did Congress permit them to enter.

The sister said 240 religious orders of men or women, with about seventy-five thousand members in all, had enrolled. About fourteen thousand five hundred of the members are now on the rolls, and many more will eventually become eligible as they reach retirement age.

Since they do not receive any cash pay, for tax and benefit purposes these individuals are deemed to have an income equal to the value of food, clothing and shelter given them by their orders. This is usually calculated at $100 a month or a bit more, meaning that the tax is very low and so the benefit would be too except for the minimum.

Mlocek said that since they were only made eligible for Social Security in 1972, the nuns and others involved have not had time to build up any earnings record sufficient to obtain a reasonable benefit. This argues for a special exemption, she said in an interview.

Rep. Bill Archer (Tex.), senior Republican on the House Ways and Means Social Security subcommittee, said he thinks the nuns have a "justifiable cause." He said that it is his understanding that because of their vows of poverty, they can't apply for welfare.

An effort to grant an exemption possibly in conference on the budget bill, but more likely in separate legislation, is picking up steam. Ways and Means Committee member James Shannon (D-Mass.) has drafted a bill.

Senate Finance Committee Chairman Robert J. Dole (R-Kan.) and Senate Social Security subcommittee Chairman William Armstrong (R-Colo.) have also expressed concern, and Sen. Daniel Patrick Moynihan (D-N.Y.) is expected to take up the cause.

"It's for the nuns? I'm for it," said Ways and Means member Thomas J. Downey (D-N.Y.). And in the administration there is reportedly similar sentiment.

UP AMENDMENT NO. 251, AS MODIFIED

(Subsequently numbered amendment No. 504.)

Mr. RIEGLE. Mr. President, I believe I still have the right to modify my perfecting amendment. I send a modification to the desk.

The PRESIDING OFFICER. The amendment is so modified.

Mr. DOLE. Mr. President, parliamentary inquiry. Does the Senator have a right to further modify the amendment?

The PRESIDING OFFICER. A second-degree amendment, yes.

The clerk will report the modification.

The legislative clerk read as follows:

The Senator from Michigan (Mr. RIEGLE) proposes an unprinted amendment No. 251 to modify his unprinted amendment numbered 250.

Mr. RIEGLE. Mr. President, I ask unanimous consent that further reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment is as follows:

In lieu of the language proposed to be inserted, insert the following:

Sec. . (a) Title II of the Social Security Act is amended by adding at the end thereof the following new section:

"Sec. 234. (a) Subsection (b) shall apply to any individual who was entitled to benefits under this title for any month after December 1980 and prior to January 1982, and whose benefits under this title are reduced by reason of amendments made by a public law enacted at any time in 1981 to section 215(a)(1)(C) and to other sections of this Act related to the minimum social security benefit.

"(b) In any month in which an individual receives a reduced benefit as described in subsection (a), such individual shall be entitled to receive an additional payment under this section equal in amount to the difference between the benefit to which he would have been entitled under this title if the amendments described in such subsection had not been enacted and the benefit to which he is entitled without regard to this subsection.

"(c) The benefits payable to any individual under the preceding subsection shall be payable from the same trust fund from which his reduced benefit described in subsection (a) is payable."

Mr. RIEGLE. Mr. President, will the Chair advise me how many Members I would need to have for a second for the yeas and nays?

The PRESIDING OFFICER. One-fifth of those present.

Mr. RIEGLE. Mr. President, I ask for the yeas and nays.

The PRESIDING OFFICER. Is there a sufficient second?

Mr. RIEGLE. Mr. President, could I inquire of the Senator from West Virginia if he might support my request for the yeas and nays.

The PRESIDING OFFICER. There is not a sufficient second.

Mr. RIEGLE. Mr. President, I see four of seven Members on the floor with their hands raised.

The PRESIDING OFFICER. There is now a sufficient second.

The yeas and nays were ordered.

The PRESIDING OFFICER. The Senator from Kansas.

Mr. DOLE. Mr. President, I move to lay on the table the underlying amendment and I ask for the yeas and nays.

The PRESIDING OFFICER. Is there a sufficient second? There is a sufficient second.

The yeas and nays were ordered.

Mr. STEVENS. Mr. President, may I ask our friend from Michigan how much time he would like to debate the amendment in the morning?

Mr. RIEGLE. Mr. President, I would think that probably an hour, evenly divided, would be sufficient. Then, if there is not a need to use that much time, we can yield the remainder back. I know there are some colleagues on this side that would like to speak on this matter.

Mr. ROBERT C. BYRD. How about 40 minutes equally divided?

Mr. RIEGLE. That would be sufficient.

Mr. DOLE. On the basis of what I understand to be an agreement, I ask unanimous consent to withdraw my motion to table.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. STEVENS. Mr. President, I ask unanimous consent that there be a 40-minute time limit on the amendment of the Senator from Michigan, and that following that time the Senator from Kansas be recognized to renew his motion to table.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. RIEGLE. I thank the Senator.

The PRESIDING OFFICER. The Senator from Kansas.

Mr. DOLE. Mr. President, I think we have worked out a pretty good arrangement. We have debated and voted on this I do not know how many times this year. It would seem to me, as far as this Senator knows, there has been no change in positions. We can dispose of this after 20 minutes by the Senator from Michigan and whatever time we may use on this side.

I would hope that we are looking at passing this bill sometime this week. There are a number of us who also have conference duties on the reconciliation. The Finance Committee's responsibility is somewhere in the neighborhood of $11 billion to $12 billion. I would hope tomorrow after we dispose of this amendment on social security we can get back to the tax reduction bill.

Mr. President, I would announce to those listening in their offices that there are really not that many amendments remaining that we will need much debate upon. Some require studies; some are technical in nature. Others I think probably will require some debate.

Hopefully we are looking toward completion of this bill by midweek or shortly thereafter.

Mr. STEVENS. Mr. President, I thank the Senator from Kansas.

BIRTHDAY GREETINGS TO SENATOR HAYAKAWA

(The following proceedings occurred earlier.)

Mr. STEVENS. I see our good friend from California (Mr. HAYAKAWA) is in the Chamber. His birthday was yesterday. He has a birthday celebration to go to. Would the Senator mind yielding to our friend from California so he might make his statement?

Mr. RIEGLE. This Senator would be quite willing to do that. He would extend a birthday greeting to his friend from California in addition.

Mr. HAYAKAWA. I thank the distinguished Senator from Michigan and I am grateful to him for his good wishes.

(The remarks of Mr. HAYAKAWA in connection with the introduction of

legislation are printed under Routine Morning Business.)

ROUTINE MORNING BUSINESS

Mr. STEVENS. Mr. President, I ask unanimous consent that there now be a period for the transaction of routine morning business, with Senators being permitted to speak therein for not to exceed 2 minutes each.

The PRESIDING OFFICER. Without objection, it is so ordered.

DEATH OF HARRY CHAPIN

Mr. KENNEDY. Mr. President, I join my colleagues today in expressing my deep sense of loss over the death of Harry Chapin—a young folk singer who gave his voice not only to grace the words of song, but to express a deep feeling for the hungry millions of men, women, and children around the world.

Harry Chapin was a citizen of the world. His voice reached out to millions of young people. His labors were for others.

At least half of his public concerts were free, either for charity or as benefits. He was particularly active in the cause of world hunger. His songs and his concern were an important catalyst for the Presidential Commission on World Hunger—where he himself served with great commitment and distinction.

As Tony Kornheiser wrote in the Washington Post last Friday, Harry Chapin was "a liberal in the very best philosophical sense of the word. It wasn't welfare he was talking about, it was decency. He used the phrase 'enlightened self-interest.' He said it made good sense to redistribute the food, not because it was the noble thing to do, but because if you removed hunger and desperation you would remove a major cause of crime and violence."

Mr. President, all those who knew Harry Chapin and his work will mourn not only the loss of his singing but of his urgent concern for those hungry millions who struggle at the edges of life in the poorest lands on Earth.

Harry Chapin once said of his life that he hoped to "leave here thinking I mattered." He has left us. And he did matter—to his friends and to people in the Third World who will be fed because he cared, who are alive today because he saw hunger and tried to end it.

I ask unanimous consent that Mr. Kornheiser's article on Harry Chapin be printed at this point in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HARRY CHAPIN'S RICHES

THE TROUBADOUR WHO LAUGHED AT FAME AND GAVE AWAY HIS FORTUNE

(By Tony Kornheiser)

They called Harry Chapin a troubadour, but he was more of a novelist. He wrote short, poignant, biographical novels and set them to music. Novels about tax divers who have chance encounters with their first loves and choose not to go home again. Novels about fathers and children who start out not getting close to each other and end up not even getting next to each other. Novels about lovers who get swept away in the heat of the moment. Novels about snipers and disc jockeys and heroic true believers who never lose touch with who they are.

And yesterday, when Harry Chapin died in a car wreck, he left behind the sort of novel that he wrote about so well. A man whose life ended abruptly in the middle. Between the search and the goal. Between the promise and the gift. Not yet there, but on the way.

He'd be giving a concert, and he'd sit on a stool, his guitar resting on his right knee, and he'd joke with the audience about the kind of songs he'd written. He knew that most of the critics thought he was a lightweight, and while that judgment offended him, it never discouraged him. He thought it hilarious that one rock performer was reviewed this way: "He was a rich man's Harry Chapin." Harry would laugh and say, "Look at where they've got me. They've got me as a standard for comparison. If anyone is lower than me, he has to be at the very bottom of the ocean." He'd even use his standing with the critics in his act. He'd blush and tell the audience that when he was younger he had the nickname "Gapin' Chapin." And he'd call himself "a third-rate rock star." And then he'd turn up his energy higher, much higher than his amps, and sing his songs. "Taxi," "Cat's in the Cradle." "I Wanna Sing You a Love Song." "Sniper." "W.O.L.D." And in his own way, for his special audience, he was every bit as popular and loved, and even worshipped like a Bruce Springsteen.

Harry Chapin could have been a millionaire.

Harry Chapin maybe should have been a millionaire.

But every year at least half of his concerts were free, either for charity or as a benefit—

He put his money where his mouth was.

I met Harry while doing a profile on him in 1976, a profile in which I accused him of not so much being a singer-songwriter as being a moralist. I believe the term I used was that he sang a course in Morality 101. He liked that. He laughed very loudly at that.

He had a great and rich and good laugh.

The last time I saw Harry, he gave a concert at Constitution Hall. It was a typical Chapin concert in that his energy was high, and the only reason he stopped singing was because he was told that if he stayed on stage even another minute they were going to have to put the help on overtime. Harry already had gone on for almost three hours and it was closing in on midnight.

And after it was over, Harry went out into the lobby for a typical Chapin post-concert session. And there he would sell Harry Chapin albums and Harry Chapin T-shirts and Harry Chapin song books. And on each one he would sign his typical Chapin message: "Keep The Change, Harry Chapin."

What was so impressive about what Chapin did wasn't so much that he signed every last thing that was thrust at him—even for people who hadn't bought a thing—but that every penny he took in from these sales didn't go into Harry Chapin's pocket, but toward charity, specifically toward ending world hunger.

Later that night Harry and I and another reporter took a taxi (what else?) over to the American Cafe on Capitol Hill and sat around for a few hours solving all the world's problems. I knew how hard he worked for the cause of preventing world hunger, so of course I razzed him about ordering a big, thick sandwich. And he came back at me the way he always did, by saying, "Look, I'm not asking you to starve; I'm simply asking you to try and spread the word that we grow enough food each year to feed the world easily. You've got access to a great newspaper here. For God's sake, use it."

And then we talked about the congressmen he'd seen recently, and how his lobbying effort was going, and how many charities and causes he was pushing. As ever, he was all high energy and optimism. I thought then and I think now that Harry Chapin was a worthy man. That he was a liberal in the very best, philosophical sense of the word. It wasn't welfare he was talking about, it was decency. He used the phrase "enlightened self-interest." He said it made good sense to redistribute the food. Not because it was the noble thing to do, but because if you removed hunger and desperation you would remove a major cause of crime and violence. If there is such a thing as a practical liberal, Harry Chapin was that.

And when we were all talked out about saving the world, we drank a few more beers and talked about Long Island, where we both were from, and remembered the afternoon we played touch football on his lawn, right next to Long Island Sound, and I insisted I was a better quarterback than him, and he insisted he was a better end than me. And laughed some more, his rich laugh filling the now empty restaurant, and just like on stage he was the last to leave, because if they didn't throw him out they'd have to pay the help overtime.

That night, a sleeting, crummy winter night, I remember him telling me that it was about time I stopped fooling around writing about celebrities and started writing about the people who really controlled the world.

I remember me telling him that it was about time he stopped trying to save the world and started selling out so he could become a rock star.

And I remember exactly what he said about that. He said, "Being a rock star is pointless. It's garbage. It's the most self-indulgent thing I can think of. I've got nothing against selling out. But let me sell out for something that counts. Not so Harry Chapin can be No. 1 with a bullet, but so I can leave here thinking I mattered."

FOR DEMOCRACY IN THE PHILIPPINES

Mr. KENNEDY. Mr. President, earlier this month Vice President BUSH declared in Malacanang Palace before President Ferdinand Marcos of the Philippines that "We love your adherence to democratic principle—and to the democratic processes."

Even for an administration which favors a diplomacy of silence toward violators of human rights and freedoms in pro-American dictatorships, this statement represents a new record in callousness and disregard for repression.

Even President Marcos must have been surprised by such hypocrisy from a representative of the United States—after imposing over 8 years of martial law in the Philippines, replacing it with a dictatorial national security code, and then conducting Presidential elections so controlled that no serious political leader agreed to run against the incumbent.

Mr. President, two Filipino leaders now in exile in this country, Senator Benigno Aquino and Senator Raul S. Manglapus, leader of the Philippine Christian Democrats, sent this cabled message to Vice President BUSH upon his arrival in Manila:

Kindly keep in mind that your every word of praise for the Marcos dictatorship and your every appearance and published picture with the dictator will deepen the cynicism of the Filipino people and drive

more of their countrymen to the arms of the radical left.

The Filipino people should know that the American people stand where they have always stood: for the respect of human rights, for the defense of democracy, and for the furtherance of liberty and freedom not only in America but throughout the world. President Kennedy once said:

Our historic task in this embattled age is not merely to defend freedom. It is to extend its writ and strengthen its covenant.

Mr. President, I urge my colleagues to study the thoughtful and telling commentaries, by Senator Manglapus on Vice President BUSH's recent visit to the Philippines and by Senator Aquino on the end of martial rule in that country. I ask unanimous consent that these commentaries, appearing on July 10 in the New York Times and on January 29 in the Wall Street Journal respectively, be printed at this point in the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the New York Times, July 10, 1981]

BUTTERY TOAST IN MANILA

(By Raúl S. Manglapus)

MCLEAN, VA.—Before Vice President Bush's celebrated Presidential-inauguration toast to Ferdinand E. Marcos—"We love your adherence to democratic principle and to the democratic processes"—passes forever into the satirists' domain, let us not forget that this starting obeisance is a natural expression of President Reagan's foreign policy.

The United States, in supporting any dictator who proclaims himself anti-Communist, apparently has forgotten an important lesson: Right-wing dictatorships, by driving the moderate opposition underground, are the fastest breeders of radical movements.

Before Mr. Marcos seized power in a coup in 1972—three years after he was elected for a second, and constitutionally last, four-year term—there were 1,000 to 2,000 Communist guerrillas in the New People's Army; before the coup, the Rand Corporation says, the guerrillas were not a threat to the Government. By last October, the insurgents' army numbered 5,500, according to Mr. Marcos' Defense Minister, Juan Ponce Enrile. Further, it is supported by a mass base—tens of thousands of people who, led by priests, nuns, and ministers, have been gone into the ranks of the Communist Party or its National Democratic Front.

Mr. Bush, by his presence and by adding his benediction to Mr. Marcos' mockery of the democratic electoral process—a process long and passionately, albeit imperfectly, practiced by the Filipinos—may have considerably accelerated the final exhaustion of popular patience and pushed the population closer to the brink of violence.

Mr. Marcos' mockery of democracy has been so extensively reported in the news media that Mr. Bush's toast and his presence cannot be excused on the grounds of ignorance. Pope John Paul II had seen through Mr. Marcos' so-called lifting of martial law last January and announcement of a Presidential election when, speaking directly to Mr. Marcos in February during his visit to Manila, he said that "even in exceptional circumstances, one can never justify any violation of the fundamental dignity of the human person and of the basic rights that safeguard this dignity."

The Pope knew, as Mr. Bush should have, that in "lifting" martial law after eight years, Mr. Marcos also kept in force all the decrees that he had promulgated and that are assembled in the National Security Code, with patchwork provisions that include six months' imprisonment for "rumor-mongering," summary dismissal of judges, and immunity for all public officers, civil and military, in carrying out the code. The code also outlines a national-security network capable of reaching down to household and classroom.

All this meant that the repression was to continue unabated. Thus, it was not surprising that the opposition boycotted the election June 16 and that Mr. Marcos, faced with two handpicked straw-man candidates, could claim an overwhelming victory, which America was all too eager to accept.

Mr. Marcos, wielding the Subic Naval Base and Clark Air Base for extortion, had gotten President Carter to promise him half a billion dollars in military aid over a five-year period. Yet Mr. Carter managed to keep him at arm's length, refused to invite him on a state visit, and thus consoled the Philippine democratic movement that, in giving Mr. Marcos more money, Washington was acting only out of fear of losing its bases rather than out of conviction.

But Mr. Bush's visit and his words bear the stamp of conviction, not fear. Now a rapidly radicalizing population, despairing over American support for Mr. Marcos—70 percent of the Filipinos are malnourished while Mr. Marcos's family and cronies amass obscene wealth—will become a more serious threat to the bases than the anti-American street demonstrations before the coup.

Filipinos are entitled to wonder why they must be forced to swap democracy for bases—which are not even vital for Philippine defense—especially after their country was the most devastated in Asia during World War II because of their stubborn allegiance to democracy and to America, and after they allowed the bases on their soil, thereby disqualifying themselves from membership in the non-aligned movement.

It appears that the quickest way for an Asian country to lose its democracy is to be the friend of America. More Filipinos are beginning to perceive that the most durable postwar democracies in developing Asia are neutralist India and Sri Lanka, and that India is closer economically and militarily to the Soviet Union than to the United States. In the coming decade, will a democratic Philippines rely on the Soviet Union to protect its independence?

Democracy has launched a formidable counterattack in Western Europe and in important parts of Latin America and Africa. The United States should recognize that its real friends are peoples with democratic aspirations and not the flamboyant dictators who will bring American interests crashing down with them when their violent hour comes.

[From the Wall Street Journal, January 29, 1981]

MR. MARCOS AND THE FUTURE OF THE PHILIPPINES

(By Benigno Aquino)

On Jan. 17 Philippine President Marcos ended the eight-year martial rule. But what should have been a day for national rejoicing passed barely noticed in spite of broad play in the Marcos-controlled media.

To the average Filipino, this latest Marcos maneuver means very little. President Marcos remains ensconced in his palace with all his authoritarian powers intact and even strengthened by "safeguards" decreed a few days before the lifting. Life in the country continues to be a drudgery to a few and a struggle to many. Tweedledum has been replaced by Tweedledee.

Hailed by his controlled press as "the first man in history to deliberately and voluntarily lift martial law," Mr. Marcos fooled no one because he moved more with caution than with conviction. For example, a few days before the lifting, Mr. Marcos decreed a new security code and a public order code. These laws permit the police to make preventive arrests, meaning that a citizen may be arrested for crimes which the state believes he might commit in the future. These decrees are even worse than the martial law orders that sanctioned mass detentions.

The infamous Amendment 6 to the Marcos-dictated constitution remains undisturbed. This amendment, "approved" by the people in a mock referendum in 1976, institutionalized Marcos's one-man rule for life; it permits him to legislate even after a regular national assembly is constituted in 1984.

To add to all these powers, Mr. Marcos decreed that the print media council, the instrument for suppressing press freedom, be retained. And the ban on the right to strike in vital industries remains.

To a man, the united opposition in the Philippines denounced the lifting as "mere paper lifting" because only two visible symbols of martial rule were phased out: the military tribunals and the army detention centers. Everything else remains: no free press, no free speech, no peaceful assembly, no strike for labor, no independent legislative body.

The Filipino opposition groups in the United States said that the mere lifting of martial rule without dismantling the institution of dictatorship is a "cruel deception."

Since Jan. 17 many Filipinos have been trying to divine the motives behind Mr. Marcos's maneuver. Some believe he is out to impress the Reagan administration, to mollify American opinion and pave the way for the smoother flow of U.S. economic and military aid. Others say he wanted to remove possible irritants in the face of a forthcoming visit of Pope John Paul II. More cynical observers say he was forced to buy time to ride out the present economic crisis.

By this maneuver, Mr. Marcos hopes to mollify the urban guerrillas who have been threatening to bring his government to its knees by discouraging foreign tourists and investors with a well-planned destabilization program.

The World Bank has just released a 392-page report raising serious questions as to whether its funds are "making a dent on poverty in the Philippines." The report documents a sharp decline in real Filipino wages since the 1960s. Purchasing power, the report says, has dropped in both urban and rural areas, in all regions and in practically all occupations. Thus, the World Bank acknowledges that, after eight years of martial rule, the Philippines is a great "political risk" to potential international creditors and investors.

With external debt passing $12 billion and projected to hit $20 billion by the end of 1983, Mr. Marcos faces an imminent economic collapse which calls for either a political accommodation with his opposition to harness the national potential or for more repressive measures to contain growing unrest.

Faced by a grim economic reality, the opposition has two options: to accelerate the downfall of the Marcos regime by violent guerrilla action, or to negotiate for the dismantling of the martial law regime now that Mr. Marcos has signaled willingness to take the first short steps on the long road back to freedom and political normality.

Violent confrontation carries with it the seeds of a national catastrophe such as recently witnessed in Nicaragua and El Salvador. Mr. Marcos has full control of all forces of repression and should he decide to dig, he could condemn the Philippines to a similar catastrophe. No sane Filipino favors this option; it could only represent a final act of desperation.

The second option calls for a negotiated gradual reduction of Mr. Marcos's absolute powers and a programmed return to democracy. This requires an understanding and an acceptance by opposing camps that the

consequences of violent confrontation could only condemn both the victors and the vanquished to defeat.

Mr. Marcos must believe that there are now Filipinos who are ready and willing to lay down their lives in the struggle for freedom. The urban guerrilla actions in Manila late last year are just samples of worse things to come. With an unabated and worsening economic crisis, stepped up rural and urban insurgencies would insure an early collapse of the repressive regime.

President Kennedy once advised that "we should never negotiate out of fear." On the contrary, the Filipinos, both the pro- and anti-Marcos elements should negotiate out of fear—fear of each other's potential, and fear of a violent and a bloody upheaval that threatens to engulf the entire nation if sanity and good will do not prevail.

The choices are: freedom for the Filipino or a protracted bloody struggle; national survival in the face of a rapidly escalating economic crisis or national disaster.

HUMAN RIGHTS IN GUATEMALA

Mr. KENNEDY. Mr. President, in May of this year, the Reagan administration sent an envoy, retired Gen. Vernon D. Walters, to Guatemala to discuss U.S. conditions for the restoration of military aid to that country. Since 1977, Guatemala has received no U.S. military aid because it has refused to accede to U.S. law by stopping its gross and consistent violations of the human rights of its people.

One result of that discussion appeared when the administration recently secretly approved $3.2 million in sales of military trucks and jeeps to Guatemala. The administration side-stepped the ban on these sales by removing the vehicles from restricted lists and placing them on unrestricted ones. Sales from the unrestricted lists, which also include spare parts for Huey helicopters, do not require the recipient country's human rights record to be taken into account.

But this sleight of hand by the administration does not change the fact that the United States has again begun to bolster the military regime in Guatemala, despite the appalling human rights record there. Since the suspension of military aid to Guatemala in 1977, the human rights situation has in fact worsened. A campaign of terror and violence has taken the lives of thousands of innocent people there.

In light of this situation, a number of questions need to be answered before relations with Guatemala are altered, and in particular before military aid could be provided. Can the administration now certify that the pattern of violence has changed, especially in light of recent, well documented reports by Amnesty International that point to the responsibility for abuses of military and security forces under the direction of high Guatemalan officials in the National Palace? Is there any evidence that the resumption of military aid and the bolstering of the Guatemalan armed forces would convince the government to adopt a more humanitarian course toward its population?

In fact, the government of Gen. Lucas Garcia has demonstrated time and again that it is unable—or unwilling—to reduce the daily toll of death and violence in its country. For the United States to supply military aid to this regime would be wrong for the human rights of the people of Guatemala, and a mistaken precedent with regard to the whole of Latin America.

Moreover, our experience in Guatemala prior to 1977, when U.S. military aid was supplied, provides no basis for expecting that such assistance now would lead to better access or greater influence, or, most importantly, to an improvement in human rights there.

In El Salvador, we have seen violence flare from both the right and the left. In Guatemala, there is a systematic campaign of kidnapings, torture, and murder whose aim, it appears, is the complete elimination of anyone opposed to, or imagined to be opposed to, the military government—especially centrist leaders. The February 17, 1981 Amnesty International report on Guatemala states:

> By far the majority of the victims were chosen after they had become associated—or were thought to be associated—with social, religious, community or labor organizations, or after they had been in contact with organizers of national political parties.

The targets for the extreme government violence, Amnesty continues:

> . . . tend to be selected from grassroots organizations outside official control.

The church in Guatemala has been a particular target for repression. The Catholic Church, including foreign missionaries, has come increasingly and literally under fire for its public stands against government violence and against government policies which maintain enormous economic inequality.

The province of El Quiche is a cruel example of this campaign against the church. After the murder of Father Jose Maria Gran on May 31, 1980—one of three Guatemalan priests killed that month—repeated bombings, and an attempt on the life of the Bishop of El Quiche on July 19, the entire diocese of El Quiche was closed in self-defense and in protest over the violence.

Two additional examples are the June 10, 1981, kidnaping of Father Luis Pellecer of the Society of Jesus, seized in plain view from an automobile by six armed men, beaten around the head and spirited away; and the murder last week of Father Marco Tulio Maruffo near Quirigua. Thus far in 1981 nine Catholic clergyman have been killed.

The tragic conditions in Guatemala have not gone unnoticed. In a letter to the bishops of Guatemala last November, his holiness John Paul II expressed his utmost concern over conditions in Guatemala, which the bishops there have called a "road to self-destruction." His holiness referred to Guatemala as experiencing a "profound crisis of humanism," and wrote to his bishops:

> Together with you and through you I wish to exhort and entreat those who have the authority in the country not to omit any effort to remedy this surge of discord and hate; to do everything possible to ensure peace and security for the citizens.

In addition, our former congressional colleague and now president of Americans for Democratic Action, Father Robert Drinan, has published a perceptive and penetrating critique of the situation in Guatemala in the June 13, 1981 issue of the respected Jesuit weekly, America. Father Drinan has been in the vanguard of the fight for human rights, both inside and outside the Congress. In his article, "American Guns, Guatemalan Justice," Father Drinan records the persecution of the Guatemalan church and the Guatemala people and explains cogently why resumption of American military aid would be politically and morally wrong.

I hope that my colleagues will heed the compelling words of the holy father for peace, not military escalation, in Guatemala, and will study carefully Father Drinan's analysis. I ask unanimous consent that the letter from Pope John Paul II to the bishops of Guatemala, Father Drinan's article, and a news release on Guatemala by Amnesty International be inserted at this point in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

LETTER OF POPE JOHN PAUL II TO THE BISHOPS OF GUATEMALA

The news about conditions in your country and, in particular, in your church communities, finds in me a profound echo, that prays and wishes to be close to you, especially in your pastoral mission, expressing comfort and inspiration.

I well know the anxieties you have communicated to me on more than one occasion, even publicly, in the last few months, for the many, for too many acts of violence that have wracked your country, and your repeated calls for an end to what you have rightly called "the road to self-destruction" that violates all human rights—first among them the sacred right to life—and that does not help to solve the social problems of the nation.

I share your grief for the tragic burden of suffering and death that weighs, with no signs of diminishing, on so many families and on your church communities deprived not only of not a few catequists, but also of priests, killed in suspicious circumstances, at times vilely and treacherously.

I am particularly saddened by the grave situation that has been produced in the diocese of El Quiche, where, because of the multiplying criminal actions and death threats against Church people, religious service to the Church communities continues to be completely lacking.

You have seen the root of the sickness that disturbs Guatemalan society, Venerable Brothers, in a "profound crisis of humanism," which has gone to the point where the values of the spirit were displaced, leaving the way open to egoism, violence and terrorism.

Together with you and through you I wish to exhort and entreat those who have authority in the country not to omit any effort to remedy this surge of discord and hate; to do everything possible to ensure peace and security for the citizens; to guarantee to the Church the possibility of developing its evangelizing mission, which has as its purpose to educate everyone for a profound interior conversion and for the reconciliation of souls.

There has been a general wish, for some time now, that the social reforms necessary for a more just and dignified life for everyone be realized in Guatemala. In harmony with these aspirations I reconfirm that which I have repeated several times, in my apostolic travels: that the Church must stimulate those responsible for the common good

to opportunely undertake such reforms, with decisiveness and valour, with clearsightedness and effectiveness, attending to criteria of justice and principles of an authentic social ethic. Once again it must be remembered that the Church wishes to offer its specific collaboration, in view of social progress which respects in man spiritual as well as material needs. The road we indicate to achieve said objectives is that of solid commitment of all, to substitute the ideologies of egoism, preponderance, and the interest of groups or parts, with the genuine values of fraternity, justice and love.

To the priests, to the men and women religious, to the lay people committed in the different sectors of the apostolate, I send my words of encouragement to act in close union with you, Venerable Brothers, to offer the profession of faith and unity, of valour and self-denial, which must characterize any disciple of Christ.

To the dear children of the Church in Guatemala, I make a call to hope, that it sustain you in the current difficult circumstances and help you to remain loyal to your own Christian vocation.

I invoke for all of you the assistance and help of God, by the intercession of Mary, Mother of Christ and of the Church. To you, Venerable Brothers, to those who work with you in pastoral activity and to all the Church community, I grant from my heart my paternal Apostolic Blessing.

JOHN PAUL II,
The Vatican.

AMERICAN GUNS, GUATEMALAN JUSTICE

The resumption of the sale of arms to Guatemala, terminated by the United States four years ago, is imminent. President Lucas Garcia has not requested arms nor is there any clear evidence that the alleged presence of 2,000 guerrillas cannot be controlled by the 18,000 members of the army of Guatemala.

The renewal of arms sales occurs despite a continued and brutal repression of human rights in Guatemala. The situation that I saw there on a human rights mission in 1980 continues and is probably worse. Amnesty International, in a recent 32-page report, declared that in Guatemala "people who oppose or who are imagined to oppose the government are systematically seized without warrant, tortured and murdered." The report, furthermore, has information published for the first time which shows that those who carry out the terrorism "can be pinpointed to secret offices in an annex of Guatemala's national palace under the direct control of the President of the republic."

The Reagan Administration promises feebly that it will grant the military aid only after warnings to the leaders of Guatemala that they should be more sensitive to human rights. But such a warning would be futile to a government that has engaged in ruthlessness for many years. The U.S. State Department Human Rights Report in 1980 conceded that kidnappings and assassinations reached higher levels in 1980 than in 1979. Politically motivated deaths now average between 75 and 100 per month. In 1980 the human rights officer at the U.S. Embassy in Guatemala City confessed to me that "the body count" estimated from newspaper accounts and from unofficial reports revealed an incredible number of murders. The victims included educators, students, priests, lawyers, trade unionists and journalists.

The 6.5 million people in Guatemala have been in agony for a long time. Seventy-two percent of the land is owned by 2 percent of the population. The illiteracy level reaches 80 percent. There is widespread unemployment, and 70 percent of those who work earn $74 annually. In a land of spectacular natural beauty, endowed with plentiful resources, the 60 percent of the people who are Indians, mostly of Mayan origin, lead lives marked by cruel economic oppression and severe political repression. It is the activity of some few of the Indians that has aroused the Reagan Administration to conclude that the Cubans or the Communists are organizing these incredibly deprived people.

Violence has been endemic to Guatemala at least since 1954, when the democratically elected Arbenz Government was overthrown with the help of the C.I.A. The violence became intense during the Montenegro Government (1966–1970). In 1966 the first organized death squads appeared. Since that time, according to the estimate of Amnesty International, almost 50,000 persons have been killed. Things were no better in the Arana Government (1970–1974). Amnesty International claims that over 7,000 people disappeared or were found dead in 1971 and that a total of 15,000 more were reported missing from 1971 through 1973.

On July 1, 1974, General Kjell Langerud became President through a fraudulent election. The violence escalated. Its tragedies were multiplied by the severe earthquake on Feb. 4, 1976, which left 22,000 dead and 80,000 injured. The country was torn apart when General Romero Lucas Garcia assumed the presidency on July 1, 1978. The decimation of the country was commented on by the 15 Catholic bishops of Guatemala in these words on May 15, 1980: "We believe that rarely in the history of our nation have there been days as bitter as these. All hearts are gripped by anger, fear and desperation. Each day, violence takes an alarming toll of victims; disappearances, tortures, murders. Bands of hired killers move and work throughout the country. No group or class escapes this uncontrolled wave of violence—neither the centers of wealth and power nor the peasants and Indians of the remotest regions of the country. Armed factions of the extreme right and the extreme left wage an undeclared war on each other, dragging along in their criminal madness our defenseless people, peaceful by nature. These people, deserving of a better fate, are the innocent victims of unrevealed interests and uncontrolled passions."

In this pastoral the bishops, saying that they could not remain indifferent to the desolation all about them, insisted that neither the fear of Communism nor the determination to rectify economic injustices could justify the killings.

Four weeks later on June 13, 1980, the bishops noted again that the violence in Guatemala had attained unimaginable proportions and was in effect a religious persecution. They lamented the vilification, calumny and defamation against the ministers of the church. The episcopal statement pointed out that many of the priests and nuns who were being treated unjustly by authorities were missionaries who with great personal self-sacrifice had come from other nations to help the people of Guatemala.

Despite the dramatic pleas of the bishops the persecution of the church goes on. The Lucas Government is continuing its systematic attempt to eliminate all democratic elements in Guatemala, and the church is probably the strongest inspiration for democratic initiatives. From May to August 1980, three priests were killed. In June and July two more were killed in the Quiché diocese. On July 19, 1980, an assassination attempt was made on El Quiche's bishop, Juan Gerardi Conedera, the president of the Guatemala Episcopal Conference. On July 30, 1980 Bishop Gerardi, after "intense suffering and . . . much . . . prayer," withdrew 18 priests and 25 nuns from the Quiché diocese lest all of them be murdered.

In other areas of Guatemala the church is also being persecuted. The Government realizes that since at least August 1976 the church in Guatemala has been wielding the sword of the spirit. In that month the bishops issued a pastoral "United in Hope" signed by all of the bishops except Mario Cardinal Casariego, the archbishop of Guatemala City. This was followed 18 months later by a statement, "Faith and Politics in the Christian Experience." These messages, along with the cry for justice of May 18, 1980, have helped to bring about the worst persecution of the church in modern times in Guatemala. Six priests and scores of religious teachers have been murdered in Guatemala in the last year. None of the slayings has been investigated. The feeling seems universal among church leaders that the killers were members of the government's security forces.

When Bishop Gerardi returned recently from a visit to the Pope in Rome, he was barred by the Lucas Government from returning to Guatemala even though he is a citizen of that country. President Lucas has also refused to accept the new Papal Nuncio nominated by the Vatican.

Feelings against the church are intense. The front-running candidate for the March 1982 election, Mario Sandonal Alareon, says that "the church favors and stimulates Communism." An association of farmers has stated that "the church in Guatemala is helping Marxists to destroy Christian civilization at its base and to enact in its place a dictatorship of the proletariat." When church personnel try to answer these charges they are told that they are stepping outside of their proper role and are interfering in the political life of the nation.

The fear of Marxism is pervasive in the Lucas Government and in the business community in Guatemala. When I met last year for two hours with the leaders of the Chamber of Commerce of Guatemala City, each of the businessmen present expressed the conviction that most of the killings were done by the left and that the Communists were militantly organizing to take over Guatemala and all of Central America. They even echoed the Lucas regime, which charged American officials in the Carter Administration with promoting "moderate Marxism," because in 1977 it withdrew military aid from Guatemala because of its miserable human rights record. The middle class in Guatemala, one of the largest in Central America, generally joins in the army's efforts to "stamp out Communism." It seems difficult, if not impossible, to convince any of these people that repression and economic injustice are the real causes of the insurgencies in Central America rather than Cuban involvement or left-wing terrorism. And it is not possible to dissuade them from their obsessional thoughts about Communist "dominoes" in Central America, especially when the Secretary of State, Alexander M. Haig, Jr., states that some of the nations on the Kremlin's "hit list" exist in Central America.

The fear of Communism may have diminished hopes that the election in March 1932 (in which President Lucas cannot run) will be impartial, since the leaders of the two left-of-center parties have been assassinated. Only six right-wing parties will be in contention in the election. Even if, unlike the last three presidential elections, the contest is not corrupt, the peasants and the trade unionists can legitimately complain that they had no real choice.

Indeed the slaughter goes beyond the leftists. Sixty-six leaders of the Guatemalan Christian Democratic Party, which is affiliated with the party of the same name in El Salvador headed by President José Napoleón Duarte, have been murdered in the last 10 months. Hence, it may be that the turnout in the March 1982 election will be less than the 35 percent in 1978 when President Lucas was elected.

The struggle in Guatemala is increasing in the predominantly Indian provinces. For dec-

ades insurgents in Guatemala have been predicting that their hopes for revolution will be attained on the day that the three million Indians rise up in some organized way. The Government of Guatemala fears that this is now happening, and hence the repression in Indian sections of the country is intense. Emotions with the Government have reached unprecedented levels. It reacted with vituperation to the report of Amnesty International terming it "ridiculous" and the work of an organization "which is headed by Communists." But the Government has to know that Guatemala is a pariah in the international community and that this reputation will not change until the number of deaths and disappearances diminishes.

There was jubiliation among the political and business leaders in Guatemala the night that Ronald Reagan was elected. They resent the estrangement imposed by Congress and the Carter Administration since 1977. They are now informing the new Administration of the discovery of deposits of oil that could be comparable to those in Alaska and that eventually might account for 10 percent of America's petroleum needs. Guatemala is also anxious to restore the lucrative tourist trade that until recently came each winter from the United States.

It is difficult to see how the new Administration can think that additional supplies of weapons and helicopter parts will really help Guatemala solve its problem. Guatemala can certainly buy this military hardware elsewhere, although it may be more difficult to get knowledgeable military advisers from nations other than the United States. But the policymakers at the Pentagon and Foggy Bottom now share the fears of Communism of the ruling elite in Guatemala—and Argentina, El Salvador and elsewhere—and hence will be anxious to help authoritarian regimes to repress "Communist agitation" and to wipe out "subversion."

Ultimately the struggle about America's role in Guatemala goes back to what one thinks of the intentions and capabilities of the Cubans and the Communists in Latin America. Anyone interested in a redistribution of land and wealth in Latin America will dismiss as almost irrelevant the traditional argument of national security to justify repression of labor unions and dissident groups. But the conviction among government officials in Latin America that the Communists are infiltrating overtly and covertly is everywhere. It entered the psyche of Latin America with Fidel Castro's coming to power in 1959. It received confirmation with the triumph of Dr. Salvador Allende in Chile in 1970 and was rekindled by the Cuban presence in the Sandinista victory in Nicaragua in 1979. It is this sometimes pathological fear of Communism that appears to be the principal premise of present U.S. policy towards Latin America. It is easy to see why religious and social leaders in South America look upon it as a naive, simplistic and indeed dangerous approach to the agonies of the 350 million people who reside in Latin America.

To the peasants of Guatemala and to people in the third world the arming of the Lucas Government by the United States is a throwback to the days of gunboat diplomacy and the maintaining of client states. It harkens back to the centuries-old alliance of sword and cross in Latin America, an alliance that the church began to terminate at Medellin and Puebla, where the 300 bishops of Latin America made it clear that the economic structures of the continent and the repressive military regimes were not consistent with justice or with Christianity.

A new factor now exists, however, which may alter U.S. policy towards Latin America. That factor is the seemingly abrupt emergence of an amazingly unanimous view within the Catholic Church in the United States against military aid to El Salvador and presumably to similarly situated nations in Latin America. A non-Catholic, seasoned observer of American politics recently gave me his opinion that if it were not for the militancy of the American Catholic bishops the United States might well now have Marines in El Salvador. The intensity of the feeling in the Catholic community against arms for El Salvador is not likely to diminish. It has supported and in turn been strengthened by the identical view firmly held by many non-Catholic peace and justice activist groups. It may be the one political factor which has the capacity to prevent a potential Vietnam in Central or South America.

The complexity of the political and social situations in the tiny republics of the Central American isthmus yield to no easy analysis or "quick fix." This is especially true of Guatemala, where in the Indian villages some priests have served as a bridge between the peasants and the guerrillas in a desperate search for some way to bring about relief from the institutionalized violence that is a daily way of life. For Washington to say that all of this can be changed by the United States selling arms to Guatemala is to reduce a complex, centuries-old class struggle to an East-West "cops and Communists" scenario. To suggest, furthermore, that U.S. policy is concentrating on deterring "terrorism" in Central America is to overlook the obvious fact that the terrorism of right-wing oligarchies and military governments has been just as devastating and cruel all over Latin America as the terrorism that would, it is assumed, prevail if authoritarian regimes become totalitarian. Hans Morgenthau spoke perceptively when he said that the issue is not "how to preserve stability in the face of revolution but how to create stability out of revolution."

A policy that seeks to transfer guns and military equipment to Guatemala after a pause of four years is based on the supposition that Cuba is capable of orchestrating and controlling the revolution which is seeking to be born in Guatemala and all over Latin America. The military government of Guatemala wants to put back in place the traditional triumvirate of oligarchy-army-church. It desires military assistance from the United States to help it accomplish this objective. Morally and politically it would be wrong for the United States to say yes.

AMNESTY INTERNATIONAL DESCRIBES GOVERNMENT PROGRAM OF MURDER AND TORTURE IN GUATEMALA

Amnesty International said today (Wednesday 18 February 1981) that a long-established government program of murder and torture in Guatemala was run from an annex of the National Palace, under the direct control of President Romeo Lucas Garciá.

In a new report, "Guatemala: A Government Program of Political Murder," published today, the international human rights organization said some 3,000 people were found murdered after being seized in the first ten months of 1980, and hundreds of others were missing.

The Guatemalan Government attributes such killings to independent groups outside its control, but the report summarizes detailed evidence that they are carried out by the army and police, and it adds two new pieces of evidence—interviews with a survivor and a former soldier.

Many thousands of people have been murdered by the security forces in Guatemala over the past two decades after being picked out as real or suspected critics of government policy. In 1976, Amnesty International estimated that about 20,000 people had been murdered or "disappeared" after being detained in the previous ten years, and it estimates that nearly 5,000 Guatemalans have been seized and killed since General Lucas Garcia became President in 1978. Bodies are found piled in ravines, at roadsides or in mass graves, often with the scars of torture. Most were killed by strangling, by being suffocated in rubber hoods or by being shot in the head.

The murder program is run, the report said, from offices in the palace complex by a presidential agency founded in 1964, known until recently as the Regional Telecommunications Center and before that by a series of other names.

Guatemalan authorities attribute the killings to the Escuadrón de la Meurte (Death Squad) and the Ejército Serreto Anticomunista (Secret Anti-Communist Army), described as independent groups, but Amnesty International said that no convincing evidence has been produced that such independent groups exist. It noted that there was violent guerrilla activity in Guatemala, but said this could not justify murder by a government.

The interview transcripts included in the new report contain recent eyewitness testimony corroborating other evidence of the security forces' responsibility. One of the interviews is with a man described as the only known survivor of political imprisonment in Guatemala in 1980. It tells of his detention at Huehuetenango army base where he says he witnessed the killing of three prisoners and saw the bodies of six others in the eleven days he was held. The other interview, with a conscript who was trained and sent out to take part in the detentions and killings describes the military units' license to kill "anyone who was a suspicious character", as well as people on target lists.

The report includes representative case histories of some of those seized by troops or police; some were later found dead and others are still missing.

Victims include people from all parts of Guatemalan society: peasants, urban workers, clergy, educators, students, lawyers, doctors, journalists, community workers. "By far the majority of victims were chosen," the report says, "after they had become associated—or were thought to be associated—with social, religious, community or labor organizations, or after they had been in contact with organizers of national political parties." In other words, it says, they "tend to be selected from grassroots organizations outside official control."

The escaped prisoner and former soldier whose interviews are included are not identified by name because of the danger of reprisals.

They said to me, if you discover your father is in subversive movements—I didn't understand the word—'subversive', they said is whatever is against the Government and is what causes disorder in Guatemala—if your father is involved in groups like that, kill him, because if you don't he'll try and kill us . . ."

From the testimony of a former conscript, included in the report.

AMENDMENT TO THE MINERAL LEASING ACT OF 1920

Mr. SYMMS. Mr. President, the House of Representatives, as part of its reconciliation package, adopted an amendment to the Mineral Leasing Act of 1920 which is potentially devastating in its impact. In addition to being extraneous to the general matter of budgets, the amendment displays substantial unfamiliarity with the way the oil and gas exploration industry works.

Essentially, the amendment would increase the filing fee for open field and simultaneous oil and gas lottery leases from the present $10 to $25, and increase

the annual rental on such leases from the present $1 per acre per year to $3 per acre per year for the first 3 years and to $5 per acre per year thereafter, with a provision that diligent development will maintain the rental fee at $3 per acre per year.

Mr. President, there is no reason for this rental fee increase to be a part of this legislation at all. There is no reason to think that it will increase revenue, as its sponsor claims. In fact, by driving out of the lease market many, many small drillers, the net effect will probably be to reduce revenue. At the same time, since these small drillers now lease 98 percent of open, unleased Federal lands, this increase in the rental would decrease our knowledge of oil and gas fields, decrease our domestic output, and maintain our present dangerous dependence on foreign sources of energy.

In addition, increasing the rental fee would give the major oil companies a greater advantage over the small, independent producer because they would be the only firms able to afford the lease costs.

There is a further reason why this amendment has no place in this legislation. The Secretary of Interior has full authority to increase rentals where rentals increases are justified. The present rental is above the statutory minimum now, and the Secretary is presently studying the rental structure to determine if increases are necessary. The Secretary is far more knowledgeable about these matters than the Members of Congress, and should be left with the discretion to adjust rentals for the maximum benefit of the people of the United States.

The proposed increase in the filing fee is not so damaging to independents. Certainly it will increase their costs, and every dollar paid out is a dollar less available for drilling. But the independents can probably live with it.

The rental increase is something else again. An increase of three to five times the present rental will disastrously affect exploration in the frontier areas, away from present oil and gas production. I refer in particular to the unexplored areas of Colorado, Montana, North and South Dakota, New Mexico, Utah, and to the entire States of Arizona, Nevada, Oregon, Washington, and my own State of Idaho. In these latter States, oil and gas production has been uncommon, but higher energy prices, coupled with new technology, is making them very attractive.

Independents lease over 98 percent of such frontier lands, and commit a considerable amount of exploration funds for seismic, gravity, and geologic studies during the first few years of a lease, to determine whether or not the lands leased are worthy of exploratory drilling. The proposed increase in delay rentals will force practically 100 percent of the independents to eliminate exploration in the frontier area and to concentrate their efforts in known producing areas.

The areas we must explore if we are to find giant new fields will remain unexplored. I do not know of a single independent operator who will pay such steep rental fees to own leases in the "wild" frontier areas. The major oil companies may pay such rentals on totally unknown lands, but even they will have to think very highly of a particular prospect to retain leases when the rental burdens are so high.

A rental of $1 per acre per year may not sound like much, but I remind my colleagues that we are talking about substantial tracts of land, many thousands of acres in size, in some cases. The overhead mounts rapidly, especially for small companies with cash flow problems, who typically hold these leases.

The timing of the proposed rental increase is particularly bad. All exploration companies and independents are being squeezed between falling oil prices, a steep "windfall" profit tax, a glut of natural gas, and drilling costs which have been escalating at a rate double the inflation rate. Every dollar spent on nonexploratory costs is a dollar not spent in drilling and developing wells.

It has been stated that this rental increase will produce $100 milion in additional revenue to the Treasury. This figure depends on the same old stale assumptions that have characterized the failed economics of the past few years. The assumption is that an increase in rentals will have no effect on the willingness of lessors. That is a silly assumption, and one greatly at variance with the facts.

Independent oil companies, who now hold most of these leases, will certainly react to a quintupling of their rentals. They will abandon leases, or fail to take them in the first place. The result will not be a revenue increase, but a revenue loss, coupled with a decline in oil and gas production, which will further stifle business activity, leading to additional revenue losses.

In short, Mr. President, the House-passed amendment is a blueprint for disaster, and I urge my colleagues in the House-Senate conference to hold fast to the Senate position and reject this ill-advised and dangerous proposal. For the information of my colleagues, the administration is also opposed to this proposal, ample evidence that its revenue-producing potential is less than promised.

CALIFORNIA VIETNAM VETERAN ELECTED AS NATIONAL COMMANDER OF THE DISABLED AMERICAN VETERANS

Mr. CRANSTON. Mr. President, I am delighted to inform my colleagues that last Thursday, July 16, Sherman E. Roodzant, a Vietnam veteran from Santa Ana, Calif., was elected national commander of the Disabled American Veterans for 1981–82.

Mr. President, the DAV, with 700,000 members, is the third largest veterans' service organization in the country. Its members generally are veterans who were disabled during service in our Armed Forces. The DAV provides valuable assistance to all veterans—service-connected disabled or not—and to their dependents and survivors. The DAV also contributes a variety of volunteer services in communities throughout the country. The DAV is a continuing source of counsel about veterans' matters for the Congress and the Veterans' Administration.

To be elected national commander of the DAV not only is an honor but also a great responsibility. In the case of Sherman Roodzant, I would add that his election is also a recognition of many years of expert, dedicated service in the DAV on behalf of his fellow veterans.

Mr. President, I would like to take this opportunity to express my personal congratulations to Sherman Roodzant—a friend of mine for many years—and to congratulate the DAV for its very wise choice. I am certain that Commander Roodzant will meet the challenges entailed in his new office with great success.

My association with Sherman Roodzant began when he was elected Commander of the California DAV in 1974. In 1977, he was elected a DAV National Junior Vice Commander, and he has been reelected each subsequent year to higher office by the DAV's national convention delegates.

Sherman Roodzant entered the U.S. Army in 1967 and saw combat in Vietnam. He was wounded severely in 1968 while on patrol near Saigon, resulting in the loss of one leg.

Following a medical discharge from the Army, he attended Cerritos College in Norwalk, Calif., and later joined H. & W. Computer Services, Inc., of Los Angeles. Commander Roodzant was vice president of that company when, in 1976, he left to serve as a professional staff member on the House Committee on Science and Technology, which was chaired then by my very good friend from Texas and certainly a friend to all veterans, the late Olin E. "Tiger" Teague. As a member of Chairman Teague's staff for 4 years, Sherman Roodzant was heavily involved in efforts to apply scientific advancements in space technology to the needs of disabled individuals.

Mr. President, Sherman Roodzant belongs to a number of professional and service organizations, including the American Management Association, the Data Processing Management Association, the Personnel and Industrial Relations Executive Association, the American Association for the Advancement of Science, the American Legion, the Veterans of Foreign Wars, the Military Order of the Purple Heart, the Elks, and the Boy Scouts of America in which he serves on both the National Committee on Scouting for the Handicapped and the National Camping Committee.

Mr. President, in sum, I believe Sherman Roodzant is very well qualified to take on his new responsibilities. During this very difficult time when we are working hard to reduce Federal spending, I strongly believe that we must set priorities ever mindful of the sacrifices our Nation's veterans. Veterans' organizations need thoughtful and articulate leadership to represent the needs of veterans to the Congress and to the rest of the Government. Sherman Roodzant is that kind of leader.

I look forward to our continued friend-

ship and to working closely with Sherman as national commander of the DAV—just as I did with his able predecessor, Stan Pealer—and with the DAV national headquarters staff in Washington on the very difficult issues that lie ahead in the coming year.

THE FUTURE OF SALT

Mr. PRESSLER. Mr. President, earlier this month, I traveled to Western Europe to learn first-hand more about the progress being made in implementing NATO's December 1979 "dual track" theater nuclear force (TNF) modernization and arms control decision. In the course of my discussions there with government officials and private individuals, I was struck by the extent to which Europeans view with extreme skepticism and distrust this administration's interest in moving forward with the process of limiting strategic nuclear weaponry. I was equally disturbed to discover that the Soviet Union has orchestrated a strident propaganda campaign which exploits current European concerns about the future of détente and depicts the United States as solely responsible for the supposed demise of SALT.

Contrary to the popular view in Europe, I believe that there is a solid basis for optimism with respect to SALT. Indeed, as I stated during the Foreign Relations Committee hearings on Lt. Gen. Rowny's nomination to be chief SALT negotiator, I think that history may well record that a triumph in SALT was President Reagan's equivalent of President Nixon's going to China. For just as it required a leader fully trusted by American conservatives to establish normal ties with the Communist leadership in the People's Republic of China, so does President Reagan have a unique opportunity to bring home a SALT treaty that will be accepted with confidence by the Senate and the American public.

Mr. President, I emphasize that my expectations in this regard are not based simply on hope or speculation. Rather, I believe that the record of this administration during its first half year in office confirms that the United States is moving prudently and patiently toward a resumption of SALT on terms that will promote achievement of a genuine arms reduction accord. Instead of dwelling on what has not yet happened, I encourage our European allies to take careful note of the policies and initiatives already embraced by this administration in the field of arms control.

First, I do not believe that one can overstate the significance of this administration's decision to reopen negotiations with the Soviet Union on limiting land-based nuclear missiles in Europe. This decision clearly shows that while determined to counter increased Soviet assertiveness with appropriate political and military initiatives, the administration at the same time recognizes that the specter of a nuclear holocaust demands that we continue to pursue efforts to establish cooperative strands in the fabric of United States/Soviet relations.

Furthermore, the fact that the May 1981 NATO communique states that TNF negotiations will proceed "in the SALT framework" demonstrates that TNF is not just a token gesture to arms control sentiment in Europe. Rather, TNF is integral to what will emerge as a much broader arms control endeavor.

Second, I believe Europeans should take heed of the fact that this administration has decided to continue to respect the SALT I and SALT II restrictions on strategic offensive armaments, even though some voices counseled a much more extreme and destabilizing course. As Assistant Secretary of Defense-designee Richard Perle stated in an Armed Services Committee confirmation hearing Thursday, there is no point in the United States going out to look for programs that would violate SALT I or SALT II when mutual adherence to these accords continues to serve U.S. national security interests. Assuming the Soviet Union continues to recognize the wisdom of this approach and exercises matching restraint, I anticipate that this interim SALT compliance/adherence understanding could effectively keep both sides' strategic programs within reasonable limits until a new SALT accord imposes more formal restraints.

Third, I hope that our friends in Europe recognize that the United States and Soviet Union have just completed what I believe to have been a constructive and modestly successful session of the Standing Consultative Commission. Contrary to the prevailing impression that the United States and the Soviet Union are not discussing SALT, the SCC again proved to be a useful forum for addressing, and in some cases resolving, concerns and ambiguities related to the implementation of the ABM Treaty and the SALT I Interim agreement on offensive arms. Although some officials in the administration had urged that the United States use the occasion of this SCC session to confront the Soviet Union with a wide range of alleged SALT violations, wiser heads prevailed and only those few issues of genuine concern were raised. As a result, some progress was registered and the SCC will continue to meet in future sessions.

These preliminary forays by the administration into the realm of SALT have, in my opinion, kept the SALT process intact and established a firm foundation for further progress. The next stage will involve the administration's preparations for resumed SALT negotiations, a process that I hope could be brought to completion in a timely manner. As officials participating in the administration's interagency review of our long-term SALT objectives conduct their deliberations, they will be guided by the basic policy approach outlined by Secretary Haig in his speech before the Foreign Policy Association in New York on Tuesday.

I believe the speech provides a commendable blueprint for integrating our national security, foreign policy, and arms control objectives. I was especially encouraged last evening to hear Lord Carrington, the British Foreign Minister, praise the speech during a television interview.

The third, and last, stage in this phase of the SALT process will be the negotiations themselves. It is obviously too soon to predict the specific outline of an eventual treaty. Nonetheless, I was greatly impressed during our hearings on the nominations of Eugene Rostow and Edward Rowny for the top posts at ACDA to hear the nominees' commitment to securing a new SALT accord that provides for meaningful reductions in current levels of strategic weaponry. If President Reagan can succeed in submitting for Senate ratification a balanced and verifiable SALT treaty that indeed reverses the upward spiral in strategic weaponry, he will have accomplished a diplomatic feat of historic proportions.

Mr. President, I ask unanimous consent that Secretary Haig's speech on arms control be printed in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY THE HONORABLE ALEXANDER M. HAIG, JR., SECRETARY OF STATE

ARMS CONTROL FOR THE EIGHTIES: AN AMERICAN POLICY

We are living in an age when man has conceived the means of his own destruction. The supreme interest of the United States has been to avoid the extremes of either nuclear catastrophe or nuclear blackmail. Beginning with the Baruch plan, every President has sought international argeement to control nuclear weapons and to prevent their proliferation. But each chief executive has also recognized that our national security and the security of our allies depended on American nuclear forces as well.

President Reagan stands on this tradition. He understands the dangers of unchecked nuclear arms. He shares the universal aspiration for a more secure and peaceful world. But he also shares the universal disappointment that the arms control process has delivered less than it has promised.

One of the President's first acts was to order an intense review of arms control policy, the better to learn the lessons of the past in the hope of achieving more lasting progress for the future. Two fundamental conclusions have emerged from this review.

First, the search for sound arms control agreements should be an essential element of our program for achieving and maintaining peace.

Second, such agreements can be reached if negotiations among adversaries about their national security interests are not dominated by pious hopes and simplistic solutions.

The task of arms control is enormously complex. It must be related to the Nation's security needs and perspectives. Above all, arms control policy must be seen in the light of international realities. As Churchill put it, "You must look at the facts because they look at you." An American arms control policy for this decade must take into account the facts about our security and the lessons that we have learned about what works—and what does not work—in arms control.

Despite the extraordinary efforts at arms control during the seventies the world is a less secure place than it was ten years ago. We began the process with the expectation that it would help to secure the deterrent forces of both the United States and the Soviet Union. But Moscow's strategic buildup has put at risk both our crucial land-based missiles and our bombers. Simultaneously, the Soviets have continued a massive buildup of conventional forces and have used them with increasing boldness. Their armies and those of their surrogates have seized

positions that threaten resources and routes critical to western security.

We cannot blame our approach to arms control alone for our failure to restrain the growth and use of Soviet power. The Soviet Union did not feel compelled to agree to major limitations and adequate verification in part because the United States did not take the steps needed to maintain its own strategic and conventional forces. Nor did we respond vigorously to Soviet use of force. The turmoil of the 1960's, Vietnam, and Watergate contributed to this passivity. As a result, the basis for arms control was undermined. We overestimated the extent to which the Strategic Arms Limitation Talks would help to ease other tensions. We also underestimated the impact of such tensions on the arms control process itself.

This experience teaches us that arms control can be only one element in a comprehensive structure of defense and foreign policy designed to reduce the risk of war. It cannot be the political centerpiece or the crucial barometer of U.S.-Soviet relations, burdening arms control with a crushing political weight. It can hardly address such issues as the Soviet invasion of Afghanistan, the Iran-Iraq war, the Vietnamese invasion of Cambodia, the Libyan invasion of Chad, or Cuban intervention in Africa and Latin America. Instead, arms control should be one element in a full range of political, economic and military efforts to promote peace and security.

The Principles of Arms Control. The lessons of history and the facts of international life provide the basis for a realistic set of principles to guide a more effective approach to arms control.

All of our principles are derived from a recognition that the paramount aim of arms control must be to reduce the risk of war. We owe it to ourselves and to our posterity to follow principles wedded to that aim.

Our first principle is that our arms control efforts will be an instrument of, not a replacement for, a coherent allied security policy. Arms control proposals should be designed in the context of the security situation we face, our military needs and our defense strategy. Arms control should complement military programs in meeting these needs. Close consultation with our allies is an essential part of this process, both to protect their interests and to strengthen the western position in negotiations with the Soviet Union. If conversely, we make our defense programs dependent on progress in arms control, then we will give the Soviets a veto over our defenses and remove their incentive to negotiate fair arrangements. Should we expect Moscow to respect parity if we demonstrate that we are not prepared to sacrifice to sustain it? Can we expect the Soviets to agree to limitations if they realize that, in the absence of agreement, we shall not match their efforts? In the crucial relationship between arms and arms control—we should not put the cart before the horse. There is little prospect of agreements with the Soviet Union that will help solve such basic security problems as the vulnerability of land-based missiles until we demonstrate that we have the will and capacity to solve them without arms control, should that be necessary.

Our second principle is that we will seek arms control agreements that truly enhance security. We will work for agreements that make world peace more secure by reinforcing deterrence. On occasion it has been urged that we accept defective agreements in order "to keep the arms control process alive." But we are seeking much more than agreements for their own sake. We will design our proposals not simply in the interest of a speedy negotiation but so they will result in agreements which genuinely enhance the security of both sides.

That is the greatest measure of the worth of arms control, not the money saved nor the arms eliminated. Indeed valuable agreements can be envisioned that do not save money and do not eliminate arms. The vital task is to limit and to reduce arms in a way that renders use of the remaining arms less likely.

Just as arms control should not aim simply at reducing numbers, so it should not try simply to restrict the advance of technology. Some technological advances make everyone safer. Reconnaissance satellites for instance discourage surprise attacks by increasing warning and make verification of agreements possible. Submarines and other means of giving mobility to strategic systems enhance their survivability, reduce the advantage of preemptive strikes, and thus help to preserve peace. Our proposals will take account of both the positive and the negative effects of advancing technology.

Whether a particular weapons system, and therefore a particular agreement, undermines or supports deterrence, may change with the development of other weapon systems.

At one time fixed ICBM's were a highly stable form of strategic weapons deployment but technical change has altered that. We need to design arms control treaties so that they can adapt flexibly to long-term changes. A treaty that, for example, has the effect of locking us into fixed ICBM deployments, would actually detract from the objectives of arms control.

Our third principle is that we will seek arms control bearing in mind the whole context of Soviet conduct worldwide. Escalation of a crisis produced by Soviet aggression could lead to a nuclear war, particularly if we allowed an imbalance of forces to provide an incentive for a Soviet first strike. American foreign and defense policy, of which arms control is one element, must deter aggression, contain crisis, reduce sources of conflict, and achieve a more stable military balance—all for the purpose of securing peace. These tasks cannot be undertaken successfully in isolation from each other.

Soviet international conduct directly affects the prospects for success in arms control. Recognition of this reality is essential for a healthy arms control process in the long run. Such "linkage" is not a creation of U.S. policy: It is a fact of life. A policy of pretending that there is no linkage promotes reverse linkage. It ends up by saying that in order to preserve arms control, we have to tolerate Soviet aggression. This administration will never accept such an appalling conclusion.

Our fourth principle is that we will seek balanced arms control agreements. Balanced agreements are necessary for a relationship based on reciprocity and essential to maintaining the security of both sides. The Soviet Union must be more willing in the future to accept genuine parity for arms control to move ahead. Each agreement must be balanced in itself and contribute to an overall balance.

Quantitative parity is important, but balance is more than a matter of numbers. One cannot always count different weapons systems as if they were equivalent. What matters is the capacity of either side to make decisive gains through military operations or the threat of military operations. Agreements that do not effectively reduce the incentives to use force, especially in crisis situations, do nothing to enhance security.

Our fifth principle is that we will seek arms control agreements that include effective means of verification and mechanisms for securing compliance. Unverifiable agreements only increase uncertainty, tensions, and risks. The critical obstacle in virtually every area of arms control in the 1970's was Soviet unwillingness to accept the verification measures needed for more ambitious limitations. As much as any other single factor, whether the Soviets are forthcoming on this question will determine the degree of progress in arms control in the 1980's.

Failure of the entire arms control process in the long run can be avoided only if compliance issues are clearly resolved. For example, there have been extremely disturbing reports of the use of chemical weapons by the Soviets or their proxies in Afghanistan and Southeast Asia. With full western support the UN is now investigating the issue of chemical weapons. Similarly in the spring of 1979, there was an extraordinary outbreak of anthrax in the Soviet city of Sverdlovsk. Despite continued probing, we still await a serious Soviet explanation as to whether it was linked to activities prohibited under the biological weapons convention.

Our sixth principle is that our strategy must consider the totality of the various arms control processes and various weapons systems, not only those being negotiated. Each U.S. weapons system must be understood not merely in connection with a corresponding Soviet system, but in relation to our whole strategy for deterring the Soviets from exploiting military force. In developing our theater nuclear arms control proposals, for example, we should consider the relationship of theater nuclear forces to NATO's overall strategy for deterring war in Europe. We cannot overlook the fact that our European strategy has always compensated for shortfalls in conventional capability through a greater reliance on theater and strategic nuclear forces. If we are to rely less on the nuclear elements in the future then the conventional elements will have to be strengthened.

The prospects for arms control. What then are the prospects for arms control in the eighties? We could achieve quick agreements and an appearance of progress if we pursued negotiations for its own sake, or for the political symbolism of continuing the process. But we are committed to serious arms control that truly strengthens international security. That is why our approach must be prudent, paced, and measured.

With a clear sense of direction and a dedication to the serious objectives of arms control, this administration will strive to make arms control succeed. We will put our principles into action.

We will conduct negotiations based upon close consultation with our allies, guided by the understanding that our objective is enhanced security for all of our allies, not just the United States.

We will work with the Congress to ensure that our arms control proposals reflect the desires of our people, and that once agreements are negotiated, they will be ratified and their implementation fully supported.

We will comply with agreements we make, and we will demand that others comply, too.

By the end of the year the United States will be embarked upon a new arms control endeavor of fundamental importance, one designed to reduce the Soviet nuclear threat to our European allies.

The impetus for these negotiations dates back to the mid-1970's, when the Soviets began producing and deploying a whole new generation of nuclear systems designed to threaten not the United States—for their range was too short—but our European allies. These new weapons, and in particular the nearly 3,000-mile range SS-20 missile, were not just modernized replacements for older systems. Because of their much greater range, their mobility, and above all the multiplication of warheads on each missile, these new systems presented the alliance with a threat of a new order of magnitude.

The pace of the Soviet build-up is increasing. Since the beginning of last year, the Soviets have more than doubled their SS-20 force. Already 750 warheads have been deployed on SS-20 launchers. The Soviet Union

has continued to deploy the long-range backfire bomber and a whole array of new medium- and short-range nuclear missiles and nuclear capable aircraft. This comprehensive Soviet build-up was in no sense a reaction to NATO's defense program. Indeed, NATO did little as this alarming build-up progressed.

In December 1979 the alliance finally responded in two ways. First it agreed to deploy 464 new U.S. ground-launched cruise missiles in Europe, and to replace 108 medium-range Pershing ballistic missiles already located there with modernized versions of greater range. Second, the alliance agreed that the U.S. should pursue negotiated limits on U.S. and Soviet systems in this category.

This two-track decision represents explicit recognition that arms control cannot succeed unless it is matched by clear determination to take the defense measures necessary to restore a secure balance. On taking office, and as one of its first foreign policy initiatives, this administration announced its commitment to both tracks of the alliance decision—deployments and arms control. Last May, in Rome, we secured unanimous alliance endorsement of our decision to move ahead on both tracks, and of our plan for doing so.

Since then I have begun discussions in Washington with the Soviet Ambassador on this issue. When I meet with Soviet Foreign Minister Gromyko at the U.N. this September, I will seek agreement to start U.S.-Soviet negotiations on these weapons systems by the end of the year. We would like to see U.S. and Soviet negotiators meet to begin formal talks between mid-November and mid-December. We intend to appoint a senior U.S. official with the rank of ambassador as our representative.

Extensive preliminary preparations for this entirely new area of arms control are already underway, in Washington, and in consultation with our NATO allies in Brussels. Senior U.S. and European officials will continue to consult after the beginning of U.S.-Soviet exchanges. We and our allies recognize that progress can only come through complex, extensive and intensive negotiations.

We approach these negotiations with a clear sense of purpose. We want equal, verifiable limits at the lowest possible level on U.S. and Soviet theater nuclear forces. Such limits would reduce the threat to allies and bring to Europe the security undermined by the Soviet build-up. We regard the threat to our allies as a threat to ourselves, and we will therefore spare no effort to succeed.

We are proceeding with these negotiations to limit the theater threat within the framework of SALT—the Strategic Arms Limitation talks designed to limit the nuclear threat to the United States and the Soviet Union. In this area, too, we have initiated intense preparations. These preparations must take into account the decisions we will make shortly on modernizing our intercontinental ballistic missiles and strategic bombers.

In the course of ten years of SALT negotiations, conceptual questions have arisen which must be addressed. For instance, how have improvements in monitoring capabilities, on the one hand, and new possibilities for deception and concealment, on the other, affected our ability to verify agreements and to improve verification? Which systems are to be included in a SALT negotiation, and which should be discussed in other forums? How can we compare and limit the diverse U.S. and Soviet military arsenals in the light of new systems and new technologies emerging on both sides?

In each of these areas there are serious and pressing questions which must be answered to insure the progress of SALT in the 1980s and beyond. Only in this way can SALT become again a dynamic process that will promote greater security in the US-Soviet relationship. We are determined to solve these problems and to do everything necessary to arrive at balanced reductions in the strategic arsenals of both sides.

We should be prepared to pursue innovative arms control ideas. For example, negotiated confidence-building measures in Europe could provide a valuable means to reduce uncertainty about the character and purpose of the other side's military activities. While measures of this sort will not lessen the imperative of maintaining a military balance in Europe, they can reduce the dangers of miscalculation and surprise.

We are eager to pursue such steps in the framework of a European disarmament conference based on an important French proposal now being considered at the Madrid meeting of the Conference on Security and Cooperation in Europe. We call upon the Soviets to accept this proposal, which would cover Soviet territory to the Urals. As we proceed in Madrid, we will do so on the basis of firm alliance solidarity, which is the key to bringing the Soviets to accept serious and effective arms control measures.

Our efforts to control existing nuclear arsenals will be accompanied by new attempts to prevent the spread of nuclear weapons. The Reagan administration is developing more vigorous policies for inhibiting nuclear proliferation. We expect the help of others in this undertaking and we intend to be a more forthcoming partner to those who share responsible non-proliferation practices. Proliferation complicates the task of arms control: It increases the risk of preemptive and accidential war, it detracts from the maintenance of a stable balance of conventional forces, and it brings weapons of unparalleled destructiveness to volatile and developing regions. No short-term gain in export revenue or regional prestige can be worth such risks.

It may be argued that the "Genie is out of the bottle," that technology is already out of control. But technology can also be tapped for answers. Our policies can diminish the insecurities that motivate proliferation. Responsible export practices can reduce dangers. And international norms can increase the cost of nuclear violations. With effort we can help to assure that nuclear plowshares are not transformed into nuclear swords.

In sum, the U.S. has a broad agenda of specific arms control efforts and negotiations already underway or about to be launched. The charge that we are not interested in arms control or that we have cut off communications with the Soviets on these issues is simply not true.

The approach I have discussed today stands in a long and distinguished American tradition. We are confident that it is a serious and realistic approach to the enduring problems of arms control. The United States wants a more secure and peaceful world. And we know that balanced, verifiable arms control can contribute to this objective.

We are also confident that the Soviet leaders will realize the seriousness of our intent. They should soon tire of the proposals that seek to freeze NATO's modernization of theater nuclear weapons before it has even begun, while reserving for themselves the advantages of hundreds of SS-20s already deployed. They should see that the propaganda campaign intended to intimidate our allies and frustrate NATO's modernization program cannot succeed. Arms control requires confidence but it also demands patience.

Americans dream of a peaceful world and we are willing to work long and hard to create it. This administration is confident that its stance of patient optimism on arms control expresses the deepest hopes and the clearest thoughts of the American people.

It is one of the paradoxes of our time that the prospects for arms control depend upon the achievement of a balance of arms. We seek to negotiate a balance of less dangerous levels but meanwhile we must maintain our strength. Let us take to heart John F. Kennedy's reminder that negotiations "are not a substitute for strength—they are an instrument for the translation of strength into survival and peace."

STUDENT FINANCIAL AID PROGRAMS PROVIDE ASSISTANCE FOR MANY STUDENTS

Mr. PRESSLER. Mr. President, 80 percent of the students in my home State of South Dakota pursuing post-secondary education in the 1980–81 school year received some form of student financial assistance. As these students and college financial aid directors prepare for the fast approaching school year, they find themselves waiting anxiously for decisions affecting the future of student aid programs. Having attended the University of South Dakota with the help of student loans, I realize that many low- and middle-income students would simply be unable to attend school without some form of aid.

Last week, I visited with the Secretary of Education, Dr. Terrel Bell, regarding the future of the student loan program. Secretary Bell and I discussed the proposed changes and how they will affect the middle income and truly needy students. While it is true that every effort should be made to control the growth of these programs, we must not overreact in ways which would severely cripple this important source of assistance to students.

In South Dakota, both loans and grants have been widely accepted. At least 50 percent of South Dakota students receive a guaranteed student loan. At vocational education schools, 64 percent of the student body received a guaranteed student loan for the 1979–81 school year. The average size of such loans was $1,900.

The national direct student loan was also well utilized with over 5,000 South Dakota students receiving this form of assistance. In addition, my home State has a 5-percent default rate for student loan programs—one of the best such rates in the Nation.

The grant programs have also assisted many students in meeting education costs. In the 1979–80 school year, approximately 13,000 South Dakota students received a basic grant while another 4,000 students received the supplemental educational opportunity grant. In addition, the college work study program provided nearly 6,000 South Dakota students with aid in the form of college-based jobs.

Students from farm, ranch, and small business families often have family assets that make them ineligible for the traditional need-based programs. These families may appear on paper to be financially able to send their children to post-secondary schools. However, most of these families have their finances tied up in income-producing assets, such as land, machinery, and livestock, rather than liquid assets. Therefore, I was pleased that the report language for the 1980 Education Amendments encourages

the Secretary of Education to develop a contribution schedule that takes into account the particular circumstances of farm, ranch, and small business families. We must make sure that these students are not excluded from participation in student aid programs.

I also commend the student financial aid directors at colleges and universities who administer these programs. By informing students of the various options available to them, financial aid directors help students realize that the lack of adequate financing does not have to exclusively prohibit a student from pursuing his educational goals.

Since coming to Congress, I have supported student aid programs. Education of our Nation's young people will always be a wise investment. Our Nation's plan for economic recovery cannot succeed without well-educated and skilled graduates eager and willing to enter the job markets.

HIGH INTEREST RATES

Mr BOREN. Mr. President, Hobart Rowen, in his Economic Impact Column in the July 19, 1981, edition of The Washington Post states:

> Interest rates are much too high. They threaten a national economic crisis, especially in the auto, housing and thrift industries.

In his article, Mr. Rowen goes on to explain that the high interest rates which currently plague our Nation are being "* * * pursued by the Federal Reserve Board," and that it is responsible for "pushing interest rates higher than they ought to be."

If we examine past and present CPI and interest rate figures as Mr. Rowen does, we arrive at a startling result. Only 2 years ago, the CPI figures reflected an annual inflation rate of about 13.3 percent. During this time, interest rates were also high, but the "real" rate of interest, the rate of interest charged minus the CPI figure, was actually a negative figure. Currently the CPI is running at an annual rate of 8.2 percent, yet when this is measured against a 14½ percent current Treasury bill rate, we see that the "real" interest rate is between 5 and 6 percent. This is well above the conventional level of a 2 to 3 percent markup.

The consequence of a policy which keeps interest rates at such a high level are dramatic. Domestic auto sales have collapsed to a 20-year low. Families can no longer afford mortgage payments on new homes. Small businessmen are being massacred because of their need to finance their inventories. Further, we learn in today's issue of the Post that President Reagan was "bluntly challenged" by Helmut Schmidt on the continuing high level of interest rates, during their meeting at the Ottawa Summit. Chancellor Schmidt blamed the current high interest rate policy of causing "suffering" in other countries of the world.

We must do something now to lower interest rates in the United States. We must take heed from Hobart Rowen's closing remarks, where he states:

> It may take a corporate bankruptcy or an international financial crisis to force a change in policy, and in the underlying monetarist dogma.

The reports in the morning newspapers indicate a broad expression of concern about high interest rates at the Ottawa summit. I regret that the Senate chose to reject the amendment which I offered last Friday urging President Reagan to take firm action to bring down interest rates and pledging support to him in that undertaking.

I again express the hope that on his return from Ottawa the President will hold another "economic summit"—this one with Mr. Volcker to urge him to halt his deliberate high interest rate policy. If Chairman Volcker refuses to act, the President should repudiate the Volcker policy and seek congressional action if necessary to reverse it.

THE EXPORT-IMPORT BANK

Mr. JACKSON. Mr. President, I continue to be concerned with proposed and pending reductions in funding for the operation of the Export-Import Bank.

In the July issue of Dun's magazine, there appeared an excellent article by Ann M. Reilly and a commentary in the same issue by Marjorie Siegel Lyons. I commend both articles to my colleagues and to the responsible budget officials in the administration.

Much of the problem facing Ex-Im is a lack of understanding of its role. One popular misconception is that it helps only big corporations. That is true in that the end products exported often are produced by huge companies and carry huge price tags. But the fact is many thousands of Americans are employed by subcontractors and suppliers who play a vital role in the production of those "big ticket" items. Every state, and every community, is benefited by Ex-Im.

Recently, I had occasion to write a commentary for publications interested in increasing public awareness of Ex-Im.

I ask unanimous consent that my commentary, as well as the two articles from Dun's magazine, appear at this point in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

EXIMBANK FUNDING CUTS THREATEN U.S. JOBS

(Commentary by Henry M. Jackson, U.S. Senator)

These are crucial weeks for the one in eight workers in America's manufacturing industries who are employed in export related jobs.

The Administration has recommended sharp reductions in the lending authority of the Export-Import (Exim) Bank. These proposals could result in the loss of more than one-half million jobs for American workers.

The Eximbank helps finance American exports through direct loans to foreign buyers of American-made goods, loan guarantees to institutions engaged in export financing, and insurance services to exporters.

The Eximbank is unusual in that it is not financed through tax revenues and Congressional appropriations, but through loans extended with money borrowed from the Treasury and later returned to the Treasury. The bank's operations are, in fact, paid for by its clients through loan repayments plus interest, fees on loan guarantees, and premiums for bank-extended insurance.

Far from being a drain on taxpayers, the Eximbank has actually operated at a profit since its incorporation by Congress in 1945. During its 47-year history the bank has returned a total of $1 billion in dividends to the Treasury and has amassed a surplus of $2 billion.

The bill signed by the President for fiscal year 1981 reduces the Exim's direct lending ability to $5.14 billion, an immediate eight percent reduction. The Administration recommends $4.4 billion for fiscal year 1982 and $4.6 billion for 1983.

The Senate has passed a bill approving funding levels for direct loans of $5.06 billion for fiscal year 1982, $5.41 billion in 1983 and $5.73 billion in 1984.

In other words, the Administration would slash the bank's lending authority by about $1 billion each year.

I am concerned about these reductions in the Eximbank's lending authority. It does not make sense to me to reduce a program that provides increased exports, domestic jobs, and equitable competition with subsidized foreign companies, especially when the Treasury makes money with the repayment of interest on Exim loans.

Today, the role played by the bank in promoting American exports is more vital than ever. To a growing degree, American companies and workers producing goods for sale abroad are not just competing with foreign manufacturers, but also with foreign governments and with the vast financial resources of these governments.

Japan and Western European nations are engaged in predatory export financing. They offer overseas buyers of goods made in their countries extremely attractive long-term loans with heavily subsidized low interest rates. Private American companies, acting on their own, cannot possibly match these credit terms.

In the case of such costly export products as heavy construction equipment or major telecommunications systems, differences in financing charges can make or break the outcome of sales competitions.

The Eximbank helps American firms offset the great competitive advantages available to European and Japanese companies by making loans to overseas buyers of American-manufactured products on terms close to those offered by foreign governments. To date, the bank has played a part in about $100 billion of export sales, in the process, creating over four million jobs for American workers.

Limitations on the bank's lending authority have prevented it from becoming fully competitive with official export credit agencies of other countries. With these foreign governments now further increasing assistance to their manufacturers, a powerful case can be made for increasing the bank's authority.

But the Administration advocates exactly the opposite, favoring large cuts in Exim direct lending assistance. Perhaps the President's advisors are among those who misunderstand the bank's true function and the extent of its importance to our economy.

One such misunderstanding is that the Export-Import Bank only helps big business. It is correct that prime contractors for typical products sold abroad with Exim assistance are large companies. This is logical because only sizeable companies have the plant capacity and expertise necessary for design and manufacture of such products.

However, only a fraction of the numerous parts of these items are manufactured by these large companies. The majority come from thousands of subcontractors and suppliers. For example, Boeing Corporation's first-level supplier and subcontractor network alone is comprised of over 1300 major

and 2200 small and minority enterprises in 44 states. Westinghouse Electric utilizes more than 1150 subcontractors and suppliers in 38 states in selling just one Exim-assisted electrical power plant.

The true victims of major cuts in the bank's operations are not a few wealthy shareholders in American's largest corporations, but hundreds of thousands of American workers.

Another misconception is that scaling down Eximbank operations would help taxpayers. This, too, is a fallacy. Because of the Eximbank's lending structure, the fiscal consequences of cutting its authority differ substantially from cuts in agencies receiving funds appropriated from Congress.

Of course with today's high interest rates a subsidy element exists in the difference between the rate at which banks borrow money and the maximum competitive rate charged borrowers. However, the additional jobs and taxes more than offset this cost.

It would be ideal for all governments to stop predatory export financing. Then American companies could compete with foreign companies (not foreign governments) purely on the basis of price and product excellence.

For the past three years, our government has worked on an international agreement to end this subsidized export financing war. Negotiations resumed recently in Paris.

The best way to strengthen our position in these talks is to increase the Exim Bank's lending authority. Astonishingly, the Administration is doing precisely the opposite.

If adopted, the proposed cuts would diminish our chances of reaching an agreement to limit credit subsidies. Congress must act quickly and definitively to ensure the continued strength of the Export-Import Bank to protect jobs here and American companies abroad.

OUTGUNNED IN THE EXPORT CREDIT WAR

(By Ann M. Reilly)

Last year, Westinghouse Electric Corp. lost to France's Framatome a $1 billion contract to construct two nuclear reactors in Korea. It wasn't that the French equipment was superior. Nor was Framatome's price significantly lower than Westinghouse was prepared to bid. But Westinghouse never even got to make a formal proposal because the French, using a winning combination of high-level political pressure and low-cost financing, made an offer that even America's Korean allies couldn't refuse. Compared to the best financing package typically offered by America's Export-Import Bank, France's bid, covering 85% of the project at a fixed interest rate of 7.6% over 22 years, will save the Koreans about $235 million, according to Westinghouse.

Unfortunately for American industry, the French offer was no isolated incident. Rather, it was just another salvo in the mounting export credit war being waged among the major industrial nations, a war in which the United States is badly outgunned. The Reagan Administration is planning some new maneuvers to strengthen the American trade position, but critics charge that the new tactics won't work and that in the process the government will be abandoning a tried-and-true weapon.

At stake is the burgeoning market for big ticket capital goods in the Third World, Eastern Europe and China. These countries need power-generating equipment, aircraft, machine tools and the like to build up their economies, yet they are cash-poor and increasingly debt-laden. So they desperately need easy credit, not available commercially, to finance their purchases. Meanwhile, European and Japanese governments, anxious to pay rising bills for imported oil and to rev up their sagging economies, are more than willing to spend billions of dollars to win that business and the jobs and foreign exchange it will generate.

FINANCING FEUDS

Last year, France backed 34% of its exports with official credits; Britain, 35%; Japan, 39%; but the U.S. only 18%. What's more, the financing packages the others made available were decidedly more generous than those offered by the United States. Typically, America's trading partners offer the best rates and terms allowable under the Arrangement on Guidelines for Officially Supported Export Credits, signed in 1978; specifically, 85% financing at rates ranging from 7.75% for developing countries to 8.5% for developed ones. The United States, on the other hand, has for the past two years financed only 47% of aircraft and 65% of non-aircraft deals at rates of 9.25% and 8.75%, respectively. Obviously, with commercial interest rates in the 18%-to-20% range, the difference can add up to quite a bit of money. The Ex-Im Bank estimates, for instance, that on a $100 million non-aircraft loan, a foreign buyer could save as much as $5 million by going with the French over the Americans.

In addition, America's competitors are increasingly sweetening their financings with innovative devices not covered under the Arrangement, such as extended repayment terms, inflation and exchange rate risk insurance, government guarantees of commercial loans and mixed credits (low-cost foreign aid loans or grants tied to specific export deals). Until recently, France was the only country that extensively used mixed credits, but now Britain, Canada, West Germany and Japan are beginning to wield this powerful trade weapon as well.

Under President Reagan, however, the United States is actually slowing the growth of its export subsidies. From 1977 to 1980, the Carter Administration increased the Export Import Bank's direct loan authorization 400%, to $4 billion last year. But the Reagan Administration, driven by its free-market, free-trade philosophy, plans to halt that upward trend. The President has proposed $4.7 billion in direct lending authority for 1981 and $4 billion for 1982, compared to $5.5 billion and $5 billion, respectively, under the Carter plan.

Reagan strategists believe that entering the credit war would simply be too costly; Ex-Im Director Donald Stingel has pegged the price of competing head-to-head with European and Japanese subsidies as high as $18 billion a year. Moreover, even at that price the Reagan team doubts that increased credit subsidies would significantly improve the nation's export performance. What they feel sure of, however, is that failing to cut Ex-Im's budget would splinter support for the President's economic package, which, they insist, will do more for U.S. exporters in the long run than any level of subsidy.

"Politically, the Ex-Im cuts were necessary because voters and the Congress had to realize that everybody's ox had to be gored," says Commerce Secretary Malcolm Baldridge, a former businessman-exporter who is known to have questioned the wisdom of the Administration position. "The government has mighty few aid programs for business, and Ex-Im is one of the biggest. So I'm supporting the cuts because I believe it's necessary for people to believe that we really are cutting the budget across-the-board."

Peace talks

At the same time, Administration sources say they are developing a series of tough new weapons to pressure the Europeans and Japanese into negotiating away many of their existing subsidies, an effort that has so far been fruitless. For three years, in talks sponsored by the Organization for Economic Cooperation and Development (OECD) in Paris, the U.S. has been pushing its trading partners to accept a higher interest rate floor on official export credits than is currently permitted under the Arrangement.

But the French and others, who believe that subsidized export credits give them an important edge over the U.S. in world markets, have consistently balked. And the Japanese, who because of their relatively low commercial interest rates do not need to subsidize official credits that much anyway, have actually been pushing for a lower floor. So the talks have broken down again and again, the last time in May, and the credit war goes on.

The Reagan Administration hopes to force its OECD competitors to the peace table by moving aggressively to extend the terms of Ex-Im Bank loans beyond the ten-year limit generally allowed under the Arrangement. The U.S., France and others have already done this in a few cases, but not in any comprehensive way. Should the U.S. move forcefully in that direction, experts agree, it would really sting competitors because they lack long-term bond markets deep enough to sustain a comparable attack.

In addition, the Administration plans to target its Ex-Im Bank financing against those countries that most flagrantly violate the spirit of the Arrangement, to look into the use of mixed credits in countries to which America already gives foreign aid and to raise the subsidies issue in other international forums such as the General Agreement on Tariffs and Trade (GATT). Says Acting Deputy Assistant Treasury Secretary John Lange: "Our gloves are beginning to come off."

But business leaders and their Congressional allies consider the Administration approach naive. "A strong Ex-Im Bank is the only U.S. lever to pressure foreign governments to moderate their aggressive concessionary financing practices," says William Durka, General Electric Co.'s manager of international trade policy. "The only way to put the financing of exports on a sound economic basis is to permit the Ex-Im Bank to compete so effectively that it convinces our foreign competitors that they have nothing to gain by unsound financing practices. Then perhaps they'd return to the bargaining table in a mood more receptive to our proposals."

Failing to beef up Ex-Im would not only weaken America's negotiating position, but deal a severe blow to the Nation's capital goods manufacturers, according to industry leaders. Most vulnerable are the nuclear and aircraft industries, which are the biggest users of Ex-Im financing and rely heavily on exports to maintain the economies of scale needed to stay ahead technologically and above water financially. These are also the industries that currently face the toughest foreign credit competition.

Over the next two years, fourteen nuclear-power plant projects, valued at about $6 billion, will come up for bids in the developing world, estimates Westinghouse Vice President Claude Hobbs. Since the U.S. market is virtually dead in the wake of Three Mile Island, and since industrialized nations refuse to buy American technology they can produce themselves, Hobbs argues that the Third World is the only market left that can keep the U.S. industry alive. Yet given the level of preliminary commitments made by Ex-Im, there will be little room for new busines financings through 1982. Thus, Hobbs concludes, "for all practical purposes, we are going to be out of that market for the foreseeable future."

Aircraft executives also fear the cutback in Ex-Im lending. Airbus Industrie, a consortium supported by the governments of France, Britain, Germany and Spain, has already succeeded in breaking America's near monopoly on the civil aircraft market, garnering 50% of all sales of wide-bodied, short-

haul jets and 15% of the total market. One way it has done this is through generous government-backed financing, and U.S. industry leaders fear that as the competition for a whole new generation of planes heats up, American companies will lose a good deal of business if Ex-Im can't match competing foreign credit offers.

"The first sale is the key to additional sales over a period of fifteen-to-twenty years," says T. A. Wilson, chairman of The Boeing Co. "Our market projections indicate that we will be competing for $2.5 billion-to-$3.5 billion worth of orders in the balance of 1981 and 1982, which we believe will require Ex-Im participation. The loss of these orders could result in the loss of follow-on orders that over the next decade could approximate $10 billion."

Others expected to suffer from the Ex-Im cuts include the manufacturers of machine tools, traditional power generating equipment and locomotives, as well as construction and engineering service companies. For example, China and Mexico are expected to buy billions of dollars' worth of plant and equipment over the next several years. Yet experts believe American companies will be virtually locked out of those markets because the U.S. government refuses to match the mixed credit and financing packages offered by Japan, France and others.

Big guys and small

The loss of this business will hurt not only big prime contractors such as Boeing, GE and Westingthouse, but their thousands of smaller subcontractors, industry leaders argue. In addition, they say, it will cost the nation tens of thousands of jobs. The Labor Department estimates that every $1 billion in lost exports means 40,000 fewer American jobs, and most business leaders consider such estimates conservative.

Reagan strategists, however, believe that industry's dire predictions are exaggerated. They argue that in many instances American goods are still technologically superior, so customers will buy them despite higher credit costs. And where export financing is critical, they note, American exporters often can find alternate sources of soft credit.

Nothing, of course, is as attractive as Ex-Im financing, but there are some second-bests. One is the Private Export Funding Corp. (PEFCO), a private financing company owned by major commercial banks and corporations whose loans are guaranteed by Ex-Im at fixed rates about one percentage point over Treasury bills. Another, used increasingly by U.S. multinationals, is export credit made available to U.S. companies by foreign governments when the companies produce part of their product in the foreign country. Still another, now under consideration by the nuclear industry, is the formation of a financing consortium, similar to the rural electric cooperatives, that would allow member companies to raise long-term debt off their books.

Even when the hurt is real, as it probably will be in the aircraft and nuclear industries, the political and economic gains of reduced Ex-Im activity far outweigh the risks to the overall economy, according to Reagan budget-cutters. Top OMB officials argue that it's not their purpose to focus on individual firms or industries. They say they're concerned about the overall economy, and the Ex-Im Bank is a very minor factor in determining the level of U.S. exports.

The Treasury Department estimates the bank's 1980 direct loan disbursements of $3.2 billion amounted to only 1.4 percent of total merchandise exports and 3.75 percent of capital goods exports. Forces like exchange-rate fluctuations are overwhelmingly more significant in terms of U.S. export performance, the budget-cutters argue. Indeed, from 1978 to 1980, when the U.S. dollar was relatively weak, and hence its exports relatively cheap, America's current account balance improved by $19.8 billion, from a deficit of $14.3 billion to a surplus of $5.5 billion. In contrast, France and Japan, whose export subsidy programs were hefty but whose currencies were strong, experienced a drop in their current accounts of $11.5 billion and $29.8 billion respectively.

Moreover, the Ex-Im cuts will have a negligible impact on national employment levels, OMB economists contend. Maintaining Ex-Im at higher levels would mean cutting some other programs, they explain, effectively trading off jobs in one sector for jobs in another.

More fundamentally, the Reaganites feel that a beefed-up Ex-Im would just cost too much for its limited benefits. Because the bank lends at rates considerably lower than its cost of borrowing, OMB projects that the Treasury will lose $100 million on its operations by 1982.

That wasn't always the case, of course. In the bank's early days, when interest rates were low, it was actually able to lend at higher rates than it borrowed and so return money to the Treasury. But in recent years, soaring commercial and government rates have pushed the bank's cost of money far above its lending rates, shifting its financial position into the red.

In the Administration's eyes, the long-term solution to the bank's financial problems is clear: reduce the Federal budget deficit, thereby easing pressures on interest rates, reducing the demand for Ex-Im credit and narrowing the troublesome spread between the bank's lending and borrowing rates. For the short term, the Reagan solution is a combination of reduced lending and stepped-up OECD negotiations. "We tried beefing up the Ex-Im under Carter and it didn't work," says Treasury's Lange. "Now we're trying the negotiation route. If that fails, we'll have to try something else. But we'd like to give the talks a good shot, at least for a year."

Powder-packed alternatives

Just in case they do fail—and most trade experts predict they will—business groups and their Congressional allies are developing a few powder-packed alternatives. The Labor-Industry Coalition for International Trade (LICIT) is drafting a petition under Section 301 of the 1974 Trade Act directing the President to take action against the French for subsidizing exports and stalling the Paris talks. The group, which includes such heavyweights as Boeing, Westinghouse, W. R. Grace and the Industrial Union Department of the AFL–CIO, is also developing a list of retaliatory weapons that the President could use against the French and other recalcitrant traders. These include quotas or other limits on foreign exports to the U.S.; Administration support for legislation already introduced in Congress creating a $1 billion "war chest" to match subsidized credits; and linking the export credit issue to other political and economic discussions underway with intransigent trading partners.

The Reagan Administration is certainly not ready to back these alternatives. But many observers feel that by next winter, after another round of Paris talks has come and gone with little if any progress; when the budget battle has subsided somewhat; and when America's export posture, thanks to a stronger dollar, is looking considerably dimmer than today, the White House may begin to look for some stronger weapons to end this costly credit war. "At that point," says LICIT attorney Michael Gadbaw, "we'll be there to enhance their ability to deal with the problem."

EX-IM BANK: WHERE U.S. EXPORTS GET A BIG BOOST

(By Marjorie Siegel Lyons)

The Export-Import Bank of the United States (Ex-Im Bank) is now in the eye of a Congressional storm as the Reagan Administration attempts to slash its budget. But such controversy is a rarity. In fact, one Ex-Im Bank old-timer reports that for most of its 47-year history, the bank was one of the best kept secrets in Washington.

Originally called the Export-Import Bank of Washington, D.C., it was created as a District of Columbia banking corporation in February 1934 by executive order of President Franklin Roosevelt through authority vested in him by the National Industrial Recovery Act. The bank was created to finance U.S. trade with the Soviet Union, which the Roosevelt Administration had officially recognized a year earlier.

The initial capitalization of the bank was $11 million. The first board of trustees consisted of officials of the Departments of State, Commerce and Agriculture and the Reconstruction Finance Corp. George N. Peek, special adviser to the President on foreign trade, became the bank's first president, and R. Walton Moore, an Assistant Secretary of State, became the first chairman of the board.

Ex-Im Bank got off to an ironic start. Despite its stated purpose of fostering U.S.-Soviet trade, the board of trustees decided that no credits would be extended to Russia until its old debts to the U.S. were settled. But the payment was never made, so a credit agreement was not struck.

That same year, the White House established the Second Export-Import Bank of Washington, D.C. to handle a request from Cuba for financial assistance to purchase U.S. silver. The mandate of the second bank was to facilitate U.S.-Cuba trade, and the U.S. lent $4 million to finance the purchase of silver bullion, which was coined at the U.S. mint in Philadelphia into 10 million Cuban silver pesos.

Following this transaction, there were numerous inquiries from other countries about financial assistance to help them buy U.S. goods. After some initial discussion about forming a third bank, it was decided that the second bank would handle all transactions except those involving the Soviet Union. But in 1936, when it became apparent that the old Russian debt would not be repaid and the first bank would be out of business before it even began, Roosevelt issued an executive order consolidating the banks. The second bank was liquidated, and all of its loans and commitments were transferred to the first.

Between its inception in 1934 and World War II, Ex-Im Bank led a fairly quiet existence, marked mainly by sporadic extensions of its lending authority, until in 1940, it reached $700 million.

The bank was very busy during the war years, making a number of key loans. Among the most noteworthy were $45 million for the steel industry in Brazil and $25 million to Universal Trading Corp., acting as agent for the Chinese government in the construction of the Burma Road.

After the war, it became apparent that the bank would have to make huge commitments to war-ravaged countries to help them get back on their feet economically. With this in mind, Congress passed the Export-Import Bank Act of 1945, which called for, among other things, raising the bank's loan authority to $3.5 billion, and designating Ex-Im Bank as an independent agency of the government. It stated, too, that loans should be for specific uses, as opposed to general economic development, and that the bank should supplement but not compete with private capital.

Ex-Im Bank immediately used its new lending powers, and virtually every Allied

country in Europe, as well as Japan, was a recipient of Ex-Im Bank reconstruction loans. With the establishment of the Marshall Plan in 1948, the bank returned to its earlier role of financing projects in developing countries.

Since then, Ex-Im Bank has proceeded on a fairly even keel, sticking to its mandate to foster the export of U.S. goods and services through its four basic programs of direct loans, export credit insurance, export credit guarantees and discount loans. Its influence in U.S. trade has varied over the years, mainly in line with the emphasis placed on it by the Administration in office and the strength and commitment of its chairmen, of which there have been fifteen.

In 1971, Congress passed the Export Expansion Finance Act, which removed the bank from the U.S. budget, increased its overall lending authority to $20 billion, and relaxed certain restrictions on financing East-West trade. In 1975, the bank was put back on budget, and in 1978 its lending authority was raised to today's limit of $40 billion.

Ex-Im Bank has turned a profit every year, and over its life has paid more than $1 billion in dividends to the U.S. Treasury. It has financed exports in excess of $100 billion, written off direct loans of only $8.3 million, and paid out $77 million in claims out of $70 billion in insurance and guarantee credits.

The bank prides itself on the fact that very few countries or companies have defaulted on their loans. This is true, among other reasons, because countries cannot obtain new loans until the old ones are repaid. However, the record is not 100 percent clean.

In 1951, a loan was made to Cuba to finance an electric power plant. When Fidel Castro took over Cuba in 1959, the plant was expropriated, and a senior executive of the bank, a tough little guy who is described as being afraid of nothing, went down to Cuba seeking repayment. He demanded a meeting with Cuban Finance Minister Ernesto "Che" Guevara—and got it, at 1:30 a.m. Guevara showed up wearing Army fatigues, combat boots, and had a big, shiny Colt-45 sitting on top of his business papers. The loan is still outstanding.

THE RIGHT DIRECTION

Mr. BIDEN. Mr. President, over the past weekend, the distinguished ranking Democrat on the Senate Budget Committee, Senator HOLLINGS, authored an article in the Washington Post on the potentially dangerous economic impacts of the tax reduction program currently under consideration by the Senate. The article, entitled "Tax Cuts: Are We headed in the Right Direction?", goes directly to the heart of the matter, as my friend from South Carolina always does.

He points out that, despite spending reductions of about $45 billion in 2 years, we are caught up in a vicious circle of "* * * inflation, causing deficits, causing inflation, causing deficits. * * *" And he notes that most tax cut proposals before Congress do not address "* * * the problem of big deficits, high inflation and high interest rates."

He goes on to say:

> The first order of business is to stop deficit spending. We can do this and at the same time stimulate investment, savings and productivity.

This week Senator HOLLINGS will demonstrate just how that can be done. He will be proposing that as "the first order of business" we reduce both business and individual taxes in the ways best calculated to increase savings and investment. This would be followed in 1983 by a general personal income tax reduction. I am proud to be a cosponsor of this sensible proposal, which will result in a balanced budget in fiscal year 1984—not a deficit of as much as $60 billion as the Finance Committee's proposal is most likely to do.

There is no question but what the Senator from South Carolina is headed in the right direction in the tax reduction package he will present to the Senate later this week. Therefore, Mr. President, I ask unanimous consent that his article which appeared in the Washington Post on Sunday, July 19, 1981, be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TAX CUTS: ARE WE HEADED IN THE RIGHT DIRECTION?

(By ERNEST F. HOLLINGS)

William Niskanen of the White House Council of Economic Advisors said last week that President Reagan's economic aides are "puzzled and confused" about the persistence of high interest rates. It was thought that the president's budget and tax programs would trigger a burst of confidence in the financial markets leading to lower inflationary expectations and lower interest rates. There is no question that President Reagan has obtained a dramatic breakthrough on the economic front. In six months, he has cut some $37 billion in spending—a feat thought impossible in January. But the Reagan strategy doesn't seem to be working. Why? Because of three significant misconceptions.

The first misconception is that we have had decades of irresponsible government and that one responsible administration could quickly balance the budget and boost public confidence. That fact is that, until the last decade, the federal government has been responsible. The cumulative deficit for the period 1951–1960 amounted to only $17.7 billion. For the next 10-year period, 1961–1970, it went to $57 billion. So for those 20 years, we had a cumulative deficit of $74.7 billion. But for the last 10 years, the cumulative deficit exceeds $400 billion. With this kind of surge in red ink, the cost of interest on the national debt is running at an annual rate of $90 billion. No president coming to office at the height of this surge could turn it around in a year. Economically, it shouldn't be done in a year's time because this would result in a deep recession, high unemployment and further revenue losses. But it can be done in three years, and, properly phased-in, the Reagan program can work. For now, the good news of a $37 billion cut in spending is offset by the $37 billion increase for defense and other programs. Economists looking at the bottom line don't consider this part of the Reagan program much of a change.

The second misconception is that Washington makes money from inflation. The administration's perception of Congress' meeting gleefully each year to distribute a huge pile of additional tax revenues collected by inflation is erroneous. True, taxpayers are ratcheted into higher brackets by inflation. True, the government will receive a windfall of $70 billion in tax revenues this year. But federal programs are indexed for inflation. So Social Security. Civil Service retirement, veterans, defense costs, interest costs, etc., will soar by $83.1 billion. To keep programs levelly funded, we have been cutting back either the program or the benefits. Last year's reconciliation bill amounted to an $8 billion reduction in the deficit. Even with $8 billion and $37 billion in savings, inflation will call next year for another cut—or a large deficit. Congress is caught up—inflation, causing deficits, causing inflation, causing deficits. . . .

The third misconception is that a tax cut always amounts to a tax cut. Not necessarily. We had a balanced budget and surplus for fiscal 1969. But since that time there have been seven tax cuts amounting to tax reductions, or a loss in revenue of $731 billion. These continuous deficits require the government to be constantly in the financial market borrowing money to pay for the deficit—thereby increasing inflation and increasing the rate of interest. Accordingly, a fiscal policy of deficit spending causes sustained inflation throughout the economy: wage and price increases; persons being ratcheted up into higher tax brackets; and millions coming into the income-tax system for the first time. In reality, this kind of tax cut results in a tax increase for millions.

When the president recommends a tax cut, Wall Street and the business community see it as more of the same. A cross-section of the best financial and economic minds recently met in Washington. Looking at the $150 billion tax cut for the next three years, observing that only $30 billion was for investment and savings but $120 billion was on the demand-inflationary side and studying the increases and decreases in spending, they projected roughly a $60 billion deficit for 1982, a $60 billion deficit for 1983 and a $60 billion deficit for 1984. As economists see it, Republicans and Democrats are submitting the same old program of large deficits for the next three years. Both parties favor the spending cuts (Democrats, on two occasions, voted in the Senate for the cuts by almost 2-to-1). Both parties call for an approximate $40 billion tax cut for two or three years. Some differ with respect to how the cut is kiltered, but it amounts to the same loss in revenue. Neither approach addresses the problem of big deficits, high inflation and high interest rates. So the judgment flowing back to the business and investment houses of the nation is that we will continue to have high interest rates. White House aides shouldn't be "confused."

The first order of business is to stop deficit spending. We can do this and at the same time stimulate investment, savings and productivity—do it exactly the way President Kennedy did it in 1962, when he first gave a tax cut solely to business. Then in 1964, it was followed with across-the-board individual income tax cuts. If we can restrict the tax cut for '82 solely to business and savings, we can stimulate plant modernization and make our industry competitive with the West Germans and the Japanese. The Finance Committee's provisions on depreciation allowance, capital gains, overseas earnings, the marriage tax penalty, and a savings certificate should be passed immediately at a cost of $12 billion—rather than the $40 billion cut. Across-the-board individual income tax cuts should be withheld until January 1983. Then we can give a 10 percent cut in 1983 and subsequent years. We would have a $35 billion deficit, rather than $60 billion in 1982. And other than a $60 billion deficit, we would have a balanced budget by 1984. In this way, we can bring interest rates down to size.

Adlai Stevenson, asked whether he was conservative or liberal, said that was not the important question. The important question is: Am I headed in the right direction? This is the need of the hour: to head America in the right direction. Most of the President's program can be accepted with a proper phase-in. But under the present proposal, huge deficits and high interest rates are guaranteed for the next three years.

DEATH OF DENVER DICKERSON

Mr. PELL. Mr. President, I was deeply saddened to learn of the death yesterday of Denver Dickerson, a man known and

admired throughout the Congress for his excellent work as staff director of the Joint Committee on Printing from 1973 until his retirement in March 1980.

Denver Dickerson was a thoroughly decent man who always conducted himself in an exemplary fashion and was always guided by commonsense and by a spirit of respect and compassion for his coworkers.

As a former member and chairman of the Joint Committee on Printing, I worked closely with him for several years and had the benefit of his wise counsel and his sound judgment.

His service with the Joint Committee capped a distinguished and diversified career of service to the public, both in Government and as a newspaper editor and columnist. A native son of Nevada, where his father was Governor, Denver was the youngest speaker of that State's assembly, at the age of 28. He served with honor in the Army in World War II, as an officer of the U.S. Information Agency in Burma, as a staff member for our former colleague Alan Bible of Nevada, and as Lieutenant Governor of Guam, a post to which he was appointed by President Kennedy in 1963.

Mr. President, Denver Dickerson was a fine man who served his State and his country most ably. He brought credit upon himself and his fine family throughout his life and his death is a loss for us all. My wife joins me in grieving for and with his wife, Maxine, and their daughter and son.

THE DANGER IN HIGH INTEREST RATE POLICIES

Mr. BIDEN. Mr. President, many of us here in the Senate have become increasingly alarmed by the persistence of high interest rates. These rates threaten to stifle economic activity, push up unemployment, create havoc in the housing and automobile industries, and threaten the viability of our thrift institutions.

Many of us have expressed our deep concern about the possibility of an approaching economic crisis as the Federal Reserve Board continues to pursue a monetary policy that holds interest rates at unnaturally high levels above inflation.

Perhaps of even greater concern is the fact that it is the administration's fiscal policies that are forcing this high interest rate policy. Despite protestations of fiscal responsibility, the administration supports policies of continued high Federal deficits that threaten to set off new waves of inflation should the Federal Reserve Board ease its unrealistic monetary policy.

Even though our national debt will soar above the $1 trillion level in 1981, the administration pursues policies that will continue budget deficits. The most recent example is the tax reduction proposal now being considered by the Senate. If adopted in its present form—which seems very likely—that proposal will very likely result in a deficit of $80 billion in fiscal year 1984—not the balanced budget that the administration insists is its goal.

Hobart Rowen had an interesting article on this very problem that appeared in the Washington Post on Sunday, July 19, 1981. Entitled "High Loan Rates May Be Too Costly for Economy," the article presents graphically the serious costs to the economy that can result from continued high interest rates.

It is a most valuable article, Mr. President, and I ask unanimous consent that it be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HIGH LOAN RATES MAY BE TOO COSTLY FOR ECONOMY

(By Hobart Rowen)

Interest rates are much too high. They threaten a national economic crisis, especially in the auto, housing and thrift industries.

Quite apart from the recent well-publicized complaints of European leaders that high U.S. interest rates are creating problems for them, the objective evidence is that a monetarist policy being pursued by the Federal Reserve Board has pushed interest rates higher than they ought to be—and higher than the Fed itself expected them to be.

Even President Reagan's economic advisers, according to one of them, are "puzzled" and "confused" about the persistence of high interest rates although they propose to stick with present policy, a decision based "more on confusion than conviction." This is the view of William Niskanen, one of the three members of the Council of Economic Advisers.

One gets the feeling that Federal Reserve policymakers are compulsively flirting with economic disaster because they are afraid to shift gears, believing that as bad as things are now, they would be even worse if policy were prematurely eased.

In part, the puzzlement cited by Niskanen arises because interest rates have continued to soar even though inflation has come down dramatically. The Consumer Price Index is running at an annual rate of 8.2 percent, compared with 13.3 percent two years ago. When measured against a 14½ percent Treasury bill rate, the "real" interest rate is more than 6 percent, well above the conventional level of 2 to 3 percent.

Even if one decides to measure inflation not by the CPI but by a higher, assumed underlying inflation rate of 9 percent or so, the "real" interest rate is at an historic peak. It's a complete reversal of the pattern two years ago when "real" interest rates were negative because a 10 percent yield was running behind the 13.3 percent inflation rate.

The consequences of a policy that keeps interest rates this high are dramatic. Domestic auto sales have collapsed to an annual rate of about 5 million, a 20-year low. Meanwhile, the savings and loan industry has been pushed to the edge of a disaster that could force the government into a bailout costing as much as $50 billion, according to economist Alan Greenspan.

Niskanen says that at a recent informal session among six government economists, including some from the Fed, "there were eight different explanations (for the peak level of real interest rates)—and we didn't have a good one."

It doesn't seem all that mysterious: In a telephone interview, Salomon Bros. money expert Henry Kaufman said the record real interest-rate level "reflects the heavy burden being placed on monetary policy. In the next 12 months, we'll have a major tax cut, increased defense spending and bigger federal deficits. In that environment, what can you expect from interest rates?" Kaufman predicts that within a year, unless the government curbs the big military build-up, the prime rate will top the 21½ percent level set last year.

Kaufman's basic theme isn't challenged at the Fed when officials speak off the record. A well-posted source uses these plain words: "We face a real dilemma: The financial markets don't believe Reagan will be able to cut the federal deficit. If they [the Reagan administration] were to cut their proposed defense spending increase in half, you'd see an immediate reduction in interest rates.

"But if we were to change monetary policy now by pumping more reserves into the market, we would lose all our credibility and long-term rates would rise at least 2 or 3 points. It's one hell of a problem because autos, housing, and the S&Ls are in trouble. But so long as Reagan puts all of the burden on us, we've got no choice."

In effect, the Federal Reserve has consciously made a decision that the economy overall is resilient enough to take its austere policy even though the interest-sensitive sectors such as housing and the thrifts are in serious trouble. "In a way," says a Fed source, "as we continue this policy—although I hasten to say that's not why we are doing it—we're putting pressure on the Reagan administration. We're forcing them to face up to the significance of the big budget deficit."

But how long can this lethal game go on? The economy appears to be entering a general downturn or recession. Richard Pratt, head of the Federal Home Loan Bank Board, says that fully one-third of the nation's 4,700 S&Ls "are not viable" under today's conditions of high interest rates.

Greenspan reports that because there is a limit to the number of strong institutions that can absorb weak ones, many S&Ls will have to be liquidated rather than merged out of existence. Insurance will protect depositors (up to $100,000), but the government may have to put up so much cash or credit that it could "seriously threaten the success of the president's anti-inflation program," Greenspan concludes.

Thus, the wisdom of blindly following a high-interest-rate policy needs to be reexamined. The Reagan administration is beginning to worry enough about the problem to be predicting that interest rates will be coming down. But you don't get that kind of soothing assurance from the Fed. In the end, it may take a corporate bankruptcy or an international financial crisis to force a change in policy, and in the underlying monetarist dogma.

THE NEED FOR A LONG-TERM PLAN FOR THE CIVILIAN SPACE PROGRAM

Mr. CANNON. Mr. President, I would like to call to the attention of my colleagues the Aviation Week and Space Technology editorial of July 6, "Dozing on the Goal Line." In it, William H. Gregory, the editor of Aviation Week, rightly points out the need for the United States to pull together the various threads of its space program, and—

To make broad policy decisions on where the U.S. should go in space and how it should get there.

The successful first flight of the Space Shuttle in April makes these decisions all the more appropriate and necessary. For we will soon have the capability to travel routinely from Earth to low Earth orbit in space and to stay there for about a week at a time. And, additional capabilities that the United States could de-

velop during the 1980's would permit us to work in and utilize space for a wide range of activities. Mr. President, we ought to develop this capability for our national security, to expand our commercial use of space, to advance our knowledge of the universe, and promote international cooperation.

With regard to commercial uses of the space environment, it is anticipated that the telecommunications industry will exhibit tremendous growth. A recent Business Week article indicated that the communications industry might grow from a $30 billion a year industry today to a $150 billion industry by 1990, and that a significant portion of this growth will occur in such new services as high-speed data communications and video teleconferencing. This growth will substantially expand the need for communications satellites over the next 10 to 20 years. Additional commercial revenue might be provided during this time period for an operational remote sensing system which could be used to gather information on our renewable and nonrenewable resources, and we are just beginning to examine the possible manufacture in space of such economically important products as pharmaceuticals and semiconductor crystals.

Mr. President, the Aviation Week editorial also discusses the decline in the U.S. space exploration effort. In March, Bruce Murray, director of the Jet Propulsion Laboratory stated:

The U.S. deep space program is in jeopardy and even may face extinction. Despite the widespread popularity and national significance of our remarkable deep space effort, this nation's unique capability to explore the solar system is fast eroding and approaching collapse.

I believe that we should not be so shortsighted that we allow this decline to occur.

Mr. Gregory's editorial should encourage us as a nation to open our eyes to the potential of space. Clearly, the accomplishments and plans of the Soviet Union, the European Community, the Japanese, and others indicate the significance they attach to space. As he aptly concludes:

Most of the framework for a long-term U.S. space plan already exists in NASA and the Pentagon. What is needed is the will to pull it together and to make the broad policy decisions on where the United States should go in space and how it should get there. If the planning decisions are not made now, the emerging space powers overseas, by acting, will shape the future of space for the United States.

I ask unanimous consent that the editorial be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

DOZING ON THE GOAL LINE

(By William H. Gregory)

U.S. space policy makers are still calling for public and political support for a post-shuttle national goal in the form of a large space station as the Soviet Union is taking the first steps toward building one. A successful automated docking of a Soviet prototype module for such a space station last month got surprisingly little attention in the U.S., although the Soviets, including President Leonid Brezhnev, subsequently made no bones about where they are heading: permanent orbital structures with rotating work forces.

It deserved wider attention. One more docking in space may not have the simple crackling public appeal of putting the first man-made object into space that Sputnik 1 had when it electrified the West in 1957. As the first step for the assembly of a large space station, though, it is equally significant. Sputnik 1 proved that space was open to unmanned, and potentially manned, exploration. Cosmos 1,267's docking with the Salyut spacecraft is the beginning of man's living and working in space on a sustained basis.

The galling aspect of the Soviet achievement for American space technologists is that the Soviets are moving into orbit with a large space station prototype with a lower order technology than this country has at its fingertips. America is honing this technology further with the orbital flight testing of the space shuttle, but without any rudder in the sense of explicit consensus of the national leadership on how this new technology will be applied.

Soviet aerospace technology in general on display at the Paris air show in powerplants and components was behind Western state of the art, although there were interesting space developments in pressure suits and tools. From the Apollo-Soyuz Test Program joint mission, U.S. astronauts saw firsthand that Soviet space technology was nowhere near the U.S. in instrumentation, avionics, propulsion and materials. None of this has deterred the Soviets in the least in running a busier launch schedule than the U.S. has.

A second achievement overseas was the successful launch of the European Space Agency Ariane booster from French Guiana. Both the Soviet docking and the Ariane launch coincidentally came on the same day, June 19. Both had a similar message for the U.S. Neither represents space technology as advanced as the U.S. space shuttle, but both are part of long-term national space plans.

European space planning—which includes the European-built Spacelab to fly on the U.S. space shuttle—runs out into the next century. A marketing group called Arianespace is in being to take over the manufacture and marketing of this European launch vehicle when the European Space Agency development program is over, in a calculated effort to find a space market niche. That is to capture customers for an expendable booster if unexpected development problems delay shuttle's flight schedule any further—or eventually head-to-head with an operational shuttle.

In the process, Europe is developing its independent space technology bank to cover the full spectrum: launch vehicle operations, launch site facilities, manned and unmanned spacecraft development and production. American illusions that space technology is a two-nation game, with the only U.S. rival a lagging Soviet technology, are due for shattering. Europe is developing a capable competitive team—not to mention Japan, India and China, which also will have hands to play eventually.

Most common prescription or what the U.S. needs is a new national goal, one like a large space station around which to focus a massive effort like Apollo. The trouble with that idea is that it smacks of trying to reenact the glories of the Apollo program 10 years after the fact.

Apollo was a fitting, single focus to spark the U.S. space program off the starting mark after the Soviets put the first man into orbit. It had the sweep and imagination to command public support to turn space from an embryonic concept to operational tehchnology. Now the technology is ready for service—military or commercial. It's time to put space to work and that means a long-term national plan, not a space spectacular. A few of many issues that should be considered:

Establishment of the respective military, civil and commercial roles in the U.S. space effort. Shuttle operations are doing this on an ad hoc basis, but there is no updated mandate like the clear-cut policy under which Apollo matured for establishment of a civil space agency, rather than military, to develop space technology.

Direction and scope of U.S. planetary exploration. It is a travesty that the U.S. planet program is atrophying, the program that brought the magnificent achievements of Mariner missions to Mercury, Venus and Mars, the Viking Mars landers and the Pioneer and Voyager missions to Jupiter and Saturn. Building on these technical triumphs of the century is now a function of bean counting, not national interests. Without a plan, opportunity is being frittered away.

International cooperation. Joint programs with other nations cannot be left to annual budgetary whims, as in the case of the International Solar-Polar Mission this year, without disillusioning future partners as to the reliability of the U.S.

Most of the framework for a long-term U.S. space plan already exists in NASA and the Pentagon. What is needed is the will to put it together and to make the broad policy decisions on where the U.S. should go in space and how it should get there. If the planning decisions are not made now, the emerging space powers overseas, by acting, will shape the future of space for the U.S.

WOMEN IN THE FOREIGN SERVICE

Mr. PERCY. Mr. President, I would like to call the attention of my colleagues to an article which appeared in the January issue of the Foreign Service Journal. "Women in the Foreign Service: A Quiet Revolution" traces the obstacles faced by women in the U.S. diplomatic corps since the foreign service was founded. The article is an inspiration in two ways.

It shows us how far we have come since the days when women were considered generally unsuitable for diplomatic service. And, on the other hand, it shows us how far we still must go to make women equal partners in formulating and carrying out foreign policy.

The article relates the history of the Women's Action Organization which has proven to be a compelling force seeking to remove the obstacles to women's advancement in the foreign service. The women who are now coming into the service owe a great debt to those women who have spent endless hours organizing, strategizing, and pressing for reform.

The path for women's advancement in the diplomatic corps has become wider, brighter, and increasingly better traveled as a result of WAO's activities.

I ask unanimous consent that the article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WOMEN IN THE FOREIGN SERVICE: A QUIET REVOLUTION

(By Barbara J. Good)

Any role for women in United States foreign policy and diplomacy is recent. Until just a decade ago, the Foreign Service to a large degree, and the domestic service to a lesser, reflected and applied all of the tradi-

tional prejudices against employed women known in American society as a whole.

Discrimination began when the Department of State itself began, under our first secretary of state, Thomas Jefferson, in 1789. His staff of seven clerks did not include any women. Jefferson as president (1800–1808) declared in a letter to Secretary of the Treasury Albert Gallatin, that women in public office were an innovation for which neither the citizenry nor he was prepared.

The first female employee of the Department of State was one Mrs. March, according to the historian Homer L. Calkin in *Women in the Department of State: Their Role in American Foreign Affairs*. On September 28, 1804 she received six cents a copy for "folding, stitching and covering with cartridge and blue paper" each of 3,467 copies of the laws passed by the first session of the eighth Congress. The modest beginning was auspicious only in one respect: there was no discrimination in pay; Mrs. March received the same amount given one William Duane for similar work. Still, for many years, no woman could be employed in the department except on a parttime basis, and usually the work was done at home because women were not allowed on government premises. The common task was that of copyist, the forerunner of today's typist.

Slowly, however, major barriers fell until one remained—the permission to join the diplomatic service. During the 19th century a number of women unsuccessfully sought appointments in U.S. diplomatic and consular missions abroad. In 1909 Frederick Van Dyne explained the problem as diplomats then saw it. He wrote: "Perhaps the greatest obstacle to the employment of women as diplomatic officers is their well-known inability to keep a secret."

The women's suffrage movement and World War I in all likelihood gave women inspiration and opportunity to enter more fields of employment. A woman took the examination for the diplomatic service in 1921, but alas, failed both the written and the oral examinations, which were then given together. In 1921–23 there were ten instances when women took the Foreign Service examinations—six for the diplomatic exams and four the consular exams. But it was Lucile Atcherson of Ohio who became the first woman to pass the examinations and become an officer in the US diplomatic service in 1922. Ms. Atcherson ranked third in the examination with a score of 86.60, only .57 percent behind the highest scoring candidate. A second woman entered the service in 1925. One senior officer (male) subsequently proposed a ban on admitting more women. He thought it a good idea to wait and observe the usefulness of those already in before opening the "floodgates," even though Secretary of State Charles Evans Hughes, in 1924, had supported fair treatment of all persons.

The "flood" of women recruits was at best only a trickle. Between 1921 and the onset of World War II, only six women were appointed as officers via the examination process. The all-male establishment had many simplistic and paternalistic notions about women, it was convinced, for example, that women serving abroad would be "compromised" by male officials in the country of assignment, that in Moslem countries they would be faced with purdah, and that women could not function in the traditional "macho" societies of Latin America. Women in the Foreign Service would, it was thought, also come in contact with the "wrong elements"; consular work overseas could mean dealing with rough and tough sailors, police officials, and prisoners. Furthermore, the department believed that foreign affairs ministries abroad might not take a woman seriously as a political officer. Finally, when women were admitted as Foreign Service officers, it was understood that they would remain single; a marriage certificate required a letter of resignation—policy which, though unwritten, remained for almost 50 years; that is, until mid-1971.

The policy of "femina non grata" was not equally true for secretaries. Few men were willing to do secretarial work, except in the earliest days of diplomacy when private male secretaries entered the service. Those men accepted secretarial duties as a means for entrance into an elite, if ill-paid, diplomatic service. Warren Frederick Ilichman in *Professional Diplomacy* wrote: "The preeminently masculine calling of diplomacy was exposed after the war to the 'onslaught' of the liberated and newly enfranchised American women."

A shortage of manpower during World War II and rapidly expanding global diplomatic relations after the war gradually increased the number of women serving in foreign affairs. A few women even managed to rise to senior positions, among them, Ruth Bryan Owen, who was named minister plenipotentiary to Denmark by President Franklin D. Roosevelt in 1933. Frances E. Willis served as ambassador to Switzerland, Norway and Ceylon (now Sri Lanka); Margaret Joy Tibbets, ambassador to Norway; Carol C. Laise, ambassador to Nepal and later the first woman director general of the Foreign Service. Many of these women have since retired. With peace and return to "normalcy" the male-dominated establishment reasserted its traditional attitudes. Recruitment of women into the Forign Service remained at the suspiciously constant low level of about seven percent for more than a decade prior to 1971. Among the few recruited, the rate of promotion was only a third that of men as late as 1969, and only a scant few managed to move to the top. The number in the Foreign Service reached its lowest point at 4.8 percent. These facts, plus the dynamic resurgence of the nationwide women's movement in the late '60s and early '70s spurred women in the State Department to organize in order to redress the long-standing discrimination and to demand equitable treatment. The reform group, the Women's Action Organization (WAO) represented not only the Department of State, but the Agency for International Development (AID), and the then-United States Information Agency (USIA)*, both agencies sending employees abroad and modeling their personnel policies almost entirely on those of the State Department.

When the reemergence of the women's movement provided a favorable climate for activism, I was fortunate to be in a position to help found the WAO. In 1951, as a struggling artist just out of Berkeley with no funds to continue my studies abroad as planned, I had jumped at the chance to join the State Department for a foreign assignment. My first job was as a cryptographer which sounded intriguing and important, though I was quickly to discover its limitations. All Foreign Service employees must agree to serve worldwide; I requested Rome so I could continue my studies. Luckily, I was assigned there. In those days the *dolce far niente* philosophy still permeated Italy, but it stopped short at the gate of the US embassy. There the Protestant work ethic prevailed. I soon found that constantly-changing work shifts precluded any courses at the School of Fine Arts. This displeased me, but by then I realized that life as a serious woman artist would mean far greater sacrifice than the possibility of the prospect of spinsterhood in a career that would take me around the world. Even though the work itself was routine and boring, by that time the glamour, excitement, and wanderlust of the foreign service life had captured me. Assignments took me to South America and the Orient. Despite my growing sense that management and my colleagues in the Foreign Service did not particularly favor women, I decided to make the most of it.

In 1965, the Department of State assigned me back to the office of personnel in Washington as a Foreign Service recruiter, traveling around the country promoting the Foreign Service and interviewing young men and women candidates. This job was a turning point for me. It was then I really learned for the first time how disproportionately difficult it was for women to overcome the hurdles as candidates for the Foreign Service and subsequently as officers. Fortunately, being on home territory gave me the opportunity to become an activist. I realize how difficult achieving change from within was going to be. Working alone I found that my repeated efforts and suggestions were eventually ground down in the bureaucratic mill. My experience was not unique. Some of the finest women officers had expressed great frustration. One woman assigned to the department's equal employment office, and who consequently knew the rather grim statistics on the status of women in the State Department and the obstacles to promotion and change, expressed her hopelessness by resigning from the Foreign Service.

In 1968 the department's professional association, the American Foreign Service Association (AFSA), began a thorough reevaluation of the conduct of our nation's foreign affairs in response to the challenges posed by the dramatic technological innovations of the electronic age. None of the AFSA recommendations dealt even peripherally with women's role and concerns. Some women expressed indignation at this lack of attention to their aspirations and potentials. One of them was Jean Joyce, then senior reports advisor in the bureau of educational and cultural affairs (CU), who told the president of AFSA that even in CU (where women were usually numerous) there were no women attending top policy-making meetings. No woman in CU was ever promoted to the position of office "director"—the level at which such meetings were held.

At that time (1970), I was the lone woman on the AFSA board of directors and Jean's observations were passed to me. As the staff corps' representative on the AFSA slate, I was the only member representing the interests of the non-officer group which consisted largely of women—secretaries, communicators (cryptographers), and other clerical and administrative elements.

A majority of the members of the AFSA board that year were already known as the "young Turks" because, contrary to past behavior, they raised voices of protest in an institution that prided itself on discipline and obedience. They were interested in changing old patterns of diplomacy; they were tired of the "striped pants" image in an age of shirtsleeve diplomacy. Some were liberals who had been active in the civil rights movement of the '60s and were becoming sensitive to human rights as well as women's rights. While the AFSA platform was not specific on women's issues, I nevertheless thought this would be an appropriate time to challenge attitudes toward the staff corps and women in general. The "young Turk" reformers promised me that they would work for more equitable treatment of men and women in the staff corps. I thus began to work with Jean and others to help organize a quiet revolution on broader women's issues. We found nine like-minded women from State, USIA and AID who were prepared, in spite of risks to their careers, to organize to do battle for the elimination of sex discrimination. Outstanding among them was Mary Olmstead, a high-ranking officer of the elite career service who agreed to serve first as our spokesperson and later, after we organized more formally, as our first president. Acting first in the summer of 1970 as the ad hoc committee to improve the status of women,

*Now the International Communications Agency (ICA).

we steadily added new members until by mid-August, we numbered about 50 from all ranks. Mildred Marcy, then in charge of women's affairs at USIA, was brought into our deliberations by Bernice Baer, one of the ad hoc committee members who early on had attempted to involve others from USIA in our quiet revolution. On the 50th anniversary of Women's Suffrage Day in August 1970, Mrs. Marcy arranged for the ad hoc committee to meet with the State Department's deputy undersecretary for management, William B. Macomber, to state our case. We were fortunate to have such a man in such a crucial post at that time. Secretary Macomber was willing and able to listen sympathetically and to lend effective support to our proposals for policy changes.

We asked for an opportunity for a broad meeting of women employed by all three foreign agencies. At Secretary Macomber's request, the ad hoc committee worked very hard to gather the necessary information on women's status and needs for inclusion in each of the 13 departmental task force reports. When the results of our combined efforts were presented at the meeting, many management officers appeared taken aback by the repeated inequities which we cited and which they were forced to face for the first time. Of course no ready answers were available, but at last the unspoken issues had been definitively raised.

Our early successes and the now-obvious willingness of management to work with us led us to consider what kind of a more permanent organization would best serve our needs. Should we be a committee with AFSA, a group linked to the American Federation of Government Employees, or one that would be totally autonomous and represent women in all categories? The AFSA president, William Harrop, wisely agreed with many of our members that we should become totally autonomous. It was felt that our voice would be strongest as an independent organization. First, it was formally agreed that we should serve all categories of women in the three foreign affairs agencies. Other extremely important decisions were that we would be a voluntary organization within State/AID/USIA which could act independently and quickly; but also that we would work, not by sharp confrontations or militancy, but by dealing directly with management, putting on and keeping on pressure to bring about reform. Our target continued to be chiefly persons in the top management of the State Department—such as, for example, Undersecretary Macomber since, as noted earlier, State personnel policies set the pattern for the other two foreign affairs agencies.

By November 1970 the Ad Hoc Committee formally became the Women's Action Organization (WAO) of State, AID and USIA. During this early period of WAO one of the reforms we called for—and got—was an end to the ban on marriage for women in the foreign affairs agencies. This new policy subsequently permitted the foreign affairs agencies to employ working couples. Other reforms included a reduction of the inequity between allowances granted men and women in living arrangements and other perquisites, and a reduction of discrimination in hiring and assignment practices. For these initiatives, our ad hoc committee was given a management award in 1972 by the president of the United States. Mary Olmsted, our first president, received the coveted Christian Herter Award in the same year for "intellectual courage."

More and more of our proposals were adopted and old inequities righted, and our worldwide membership rose to over 1,000. We realized that we were being helped not only by a cooperative undersecretary for management, but also by the growing strength of the women's movement nationwide. Women's reform movements were being pushed everywhere, especially in the organized professions and unions, and were making front-page news almost daily. The State Department's politically astute Undersecretary Macomber realized he was facing a national, not a purely internal, social revolution.

Our work as an organization independent of AFSA was also facilitated by the establishment in 1968 of the Federal Women's Program by the federal government. Agencies were directed to appoint a women's program coordinator to monitor and implement the program.

Finally, in August, 1970, and specifically in response to demands made on it by WAO members, the State Department appointed a part-time women's program coordinator, Elizabeth Harper, as well as an official committee. Jean Joyce, Alison Palmer and I were among those asked to serve on this first committee. By 1972, the coordinator position was made full-time with the title of special assistant to the deputy undersecretary of management. The first woman to hold that high-level position was an outstanding manager and feminist, Gladys P. Rogers. She recognized the tremendous value of a pressure group like WAO and, although a management representative, she worked closely with us in toppling the many blatant and archaic policies which discriminated against women. The timing of the mandated program greatly facilitated WAO's effort to press for change.

WAO's years since 1973 have been less dramatic since the most glaring inequities and practices, such as the ban on marriage, were eliminated early. Nevertheless, under a succession of committed presidents and with a growing worldwide membership, WAO has had plenty to do. Discrimination against women continued and persists today. Correcting such problems requires changes both in basic attitudes and in the power structure itself.

One particular field of concentration among the younger officers and their spouses, grouped in a department-sponsored organization called the Open Forum, was the demand for greater recognition of the professional (as contrasted with the "teapourer") status of spouses. WAO moved quickly to support their position. We also focused on the need to use the professional skills of Foreign Service spouses and initiated the first spouses' "skills bank" which Cynthia Chard, a Foreign Service spouse and WAO board member, both pioneered and carried out. This "skills bank" became the forerunner for the department's creation of a long-needed office, the Family Liaison Office (FLO), to deal with the many special problems and stresses of Foreign Service families.

WAO has also worked persistently to secure less sexist treatment of women employees. Here, equality in women's working conditions at posts around the world is an important goal. For example, WAO has urged an end to exclusion of women officers from overseas all-male clubs where important information is often exchanged, and valuable local contacts made. Ambassador Robert Strausz-Hupé served as a pioneer in this area by influencing the all-male American Club of Stockholm to accept women members. Other such clubs have now opened their doors to women, including the American Club in Madrid, Spain where Ambassador Terence Todman declined the traditional honorary membership afforded to chiefs of mission until the club charter was revised to drop discrimination.

WAO has recently been stressing the importance of implicit and explicit bias in the Foreign Service's performance evaluation and promotion system. These performance ratings often institutionalized discrimination against women, and remain crucial obstacles to the achievement of equal opportunity and promotion. Lois Roth (ICA) wrote a paper for WAO entitled "Nice Girl or Pushy Bitch: Two Roads to Nonpromotion," which said, in part: For instance, "kind and supportive" remarks about women officers often perpetuate myths and values that get read in the promotion process as weakness, and that, in calling women pushy or abrasive when they are properly ambitious, men are using a double standard that does women in the Service great disservice and ultimately men in the Service dishonor.

In reflecting upon WAO's first decade and its achievements, we are aware that our very existence is unique. To my knowledge, and from my conversations with UN colleagues, in no other career foreign service in the world have women organized with men voluntarily to accomplish similarly—and equally needed—reforms. WAO in this sense might be said to serve as a model for the rest of the world. WAO is also unique in that, unlike some feminists in other fields, we have encouraged men to join us and to serve on our board of directors.

Reflection as we go into our second decade (and the State Department's third century) must include the fact that WAO has had some failures, as well as successes, and has sometimes been criticized for its moderate position. For example, when the ad hoc committee was first moving in 1970, our early meetings included Alison Palmer, mentioned earlier. She chose, however, to pursue a militant course independently of WAO, and brought the first formal discrimination complaint against the Department of State. She charged discrimination against women in assignment to posts abroad which, as in her own situation, hampered career advancement. Her victory in 1971 was a landmark event for all Foreign Service women, resulting in a management directive categorically outlawing all discrimination in assignments. While this directive benefited all women employees, not all viewed Alison sympathically when she subsequently became the moving force behind a class action suit on behalf of women Foreign Service officers. WAO, after long discussion, joined her in that 1975 effort, which caused a temporary split in our ranks. Some WAO members believed that we had taken a "confrontation-with-management" posture in violation of our "work-with-management" philosophy. Although the WAO wounds have healed, we remain a somewhat silent partner in the suit, which has now dragged on without a decision into its fourth year. Meanwhile, in all activities and contact with management, we continue to work "within the system" in a policy of moderation, using sustained pressure to achieve our aims.

As to WAO's shortcomings, we clearly do not have enough low-ranking women and minority women among our members nor enough high-level women. In some instances, facing women who have "made it" in the system can present special problems. Some who have been successful in invading the virtually all-male "room at the top" often help perpetuate male-dictated attitudes.

There are many people, men and women, in power points at the top echelons who similarly are not ready for equal rights. While it may not be within WAO's power to change attitudes and behavior at all levels, we are certainly greatly indebted to those few outstanding men and women who, despite their high rank, have given us crucial help and encouragement. For example, in my opinion, Secretary of State Cyrus Vance was possibly, until his resignation in April 1980, the most enlightened and aggressive leader the State Department has ever had on the subject of equal employment opportunity. He came to the position understanding the problems, and one of his first tasks was to establish a special executive-level task force on affirmative action. WAO spent hundreds of hours helping this task force with studies and recommending remedies. Secretary Vance frequently took time, in spite of his tremendous other burdens, to review progress and problems with us.

One of the major accomplishments of the past two years has been the development of a new foreign policy directive on the worldwide status and rights of women, the first of its kind in the history of the Department of State. Ambassador Marshall Green played a major role in developing this directive, whose first dramatic sentence by Secretary Vance reads: "A key objective of U.S. foreign policy is to advance worldwide the status and condition of women." With the formulation of this foreign policy directive, one recently reaffirmed by Secretary of State Edmund Muskie, women's rights have now become internationally an integral part of the U.S. human rights policy.

Improving the conditioning and rights of women, both in the United States and worldwide, is a formidable task; we are aware that we have embarked on a long journey where progress is hard to measure. But, looking back over the last decade, progress is visible while far from enough. When the Foreign Service women began to organize to safeguard and enhance their status in 1970, less than 5 percent of the Foreign Service officer corps was female; at the end of 1979, women constituted 11.5 percent of that elite group—proportionately over twice as many. While increases at the top levels were minuscule (due to slow career promotion rates), female representation at the incoming junior level went from 9 percent to 20 percent in eight years—reflecting, I believe, reforms like elimination of the "no-marriage" rule and a more active recruitment of women. As to women in the department's civil service, while there has been no progress at the top, there has been a more than 6 percent gain among women in middle-level posts earning from about $25,000 to $50,000.

In the 36 years from 1933 (when the first woman, Ruth Bryan Owen, was named chief of a United States mission abroad) to 1969, 11 women have served in that top role (seven were political appointments, just as men have long been similarly chosen, and four were career officers). In the decade before October 1980, 26 women, one of them our first WAO president, Mary Olmsted, were named to ambassadorial posts (14 political and 12 career), a dramatic change reflecting, again, in my opinion, the positive impact that WAO and the women's movement have had on the United States foreign affairs agencies.

FDA APPROVES ASPARTAME

Mr. PERCY. Mr. President, I want to commend the Food and Drug Administration for its decision to approve at long last the low-calorie sweetener aspartame, which was developed by G. D. Searle & Co. of Skokie, Ill.

The FDA announced on July 15 that aspartame will be approved for sale as a tablet and as a free-flowing sugar substitute for dining table use and for use by manufacturers of cold cereals, drink mixes, instant coffee and tea, gelatins, pudding and fillings, and dairy products and toppings.

The road to approval has been a long one for G. D. Searle, which originally sought approval of aspartame in 1973. FDA OK'd the sweetener in 1974, but objections that aspartame might cause brain damage led to a stay of that approval.

Before that issue could be addressed, FDA called into question the quality of certain studies conducted for Searle drug approvals. An FDA audit of some 15 studies supporting aspartame's safety followed. The audit, which took more than 2 years, concluded that the sweetener studies were authentic. In December 1978, FDA accepted the findings which cleared G. D. Searle and recommended aspartame for marketing.

The agency then organized a scientific public board of inquiry of outside experts to study the issue of the link to brain damage. After hearings in January and February 1980 the board found that evidence did not support the charge that aspartame might kill clusters of brain cells or cause other brain damage.

Despite that finding, the board recommended that aspartame not be approved until further long-term animal testing could be conducted to rule out a possibility that aspartame might cause brain tumors. FDA's Bureau of Foods studied data already available and found the board's recommendation unwarranted. Commissioner Arthur Hull Hayes, Jr., agreed with the Bureau and announced approval of aspartame this week—8 years after Searle's original application.

I am pleased, Mr. President, that as a result of a recent Senate action, G. D. Searle will not be penalized under our patent laws. An amendment to the Patent Term Restoration Act offered by Senator HEFLIN, cosponsored by me, and accepted by the Senate will restore to aspartame patent life equal to the period of the FDA stay, which lasted 5½ years.

Mr. President, I ask unanimous consent that the text of the Commissioner's decision on aspartame be printed in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

INTRODUCTION

The purpose of this proceeding has been to determine whether aspartame has been shown to be safe under Section 409 of the Federal Food, Drug, and Cosmetic Act, 21 U.S.C. 348. The legal standard for approving Searle's food additive petition is whether there is a reasonable certainty in the minds of competent scientists that aspartame will not be harmful to the public under its proposed conditions of use. What is required of the agency, therefore, is the conscientious exercise of principled, scientific judgment. As Commissioner of Food and Drugs, my responsibility is to review the evidence and evaluate it fairly, state my reasons for crediting or not crediting certain evidence, weigh all the evidence, apply the correct legal standard, and decide.

This I have done, and I have concluded that aspartame has been shown to be safe for its proposed uses.[1] My reasons for this conclusion, with full citations to the administrative record, will be set forth in detail in the Final Decision to be published shortly in the Federal Register. In accordance with 21 U.S.C. 348(f)(3), the Final Decision will take effect ninety days after such publication.

A. The Brain Damage Issues: The first set of objections to the aspartame regulation concerned two distinct types of brain damage, one associated with each of aspartame's two amino acid components, phenylalanine and aspartic acid. The Board disagreed with these objections and found aspartame to be safe in terms of potential brain damage.

Two points stand out which require affirming the Board's decision on these brain damage issues. One is the enormously large amounts of aspartame that a normal person would need to consume before reaching even a cautiously estimated toxic threshold.[2] The second is the remarkably low amount of amino acid intake which would result, from even the 99th percentile of estimated aspartame consumption, in relation to the prevalence of these same amino acids in common protein foods.

1. Phenylalanine: The concern that has been raised over aspartame's phenylalanine (PHE) moiety is that sustained plasma-PHE levels above a certain toxic threshold may cause mental retardation, especially in the unborn fetus, similar to that resulting from phenylketonuria (PKU).

The toxic threshold for plasma-PHE levels is 100 μmol dl for normal persons, including infants, and 50 μmol/dl for pregnant women in order to protect their fetuses.[3] Normal plasma PHE levels range from 6–12 μmol/dl. Ingestion in a single sitting by an adult of a loading dose of aspartame, comparable to the 99th percentile of projected aspartame consumption for an entire day, caused plasma PHE levels to rise from a fasting level of 6 μmol/dl to a peak of only 11 μmol/dl, still within the normal range after eating and nowhere close to the toxic threshold. In clinical testing it took approximately six times that amount to induce plasma-PHE rise to the 50 μmol/dl level. For a 60 kg adult (132 pounds), this corresponds to 600 aspartame tablets or 24 liters (approximately 6½ gallons) of aspartame-sweetened beverage consumed in a single sitting. Such an enormous intake at one time, let alone continuously over a sustained period, is inconceivable. Thus, it appears that consumption of aspartame in reasonable amounts, or even in unreasonable but physically possible amounts, will not cause the type of brain damage of concern here (see generally, Board's Decision at 13–15).

I also agree with the Board's conclusion that the marketing of aspartame will not create any additional risk to PKU children not on a restricted diet, individuals heterozygous for PKU, undetected cases of PKU, or pregnant women with the special condition of hyperphenylalanemia (see Board's Decision at 15–20).

Another way to consider the phenylalanine issue is to compare the projected aspartame consumption to the amount of phenylalanine present in common protein products. For example, consumption of aspartame at the projected 99th percentile level (34 mg/kg/day) would increase the normal overall PHE daily intake by only about 6 percent. Even consumption of aspartame at the unlikely level of three times that projected 99th percentile level would increase the normal overall PHE daily intake by only 15–20 percent, still within expected, normal variations in protein consumption (Board's Decision at 20–21). Thus, from the standpoint of phenylalanine intake, aspartame appears to present no greater hazard than common protein rich foods considered essential for proper nutrition.

2. Aspartic Acid: The concern raised over increased aspartic acid (ASP) consumption stems from animal studies showing that extremely high doses of ASP, glutamic acid (GLU), and other "excitatory" amino acids can cause focal brain lesions, primarily in areas of the brain that regulate the endocrine system. With two important differences described below, the analysis parallels that in the phenylalanine section in terms of first setting a toxic threshold and then determining whether the projected consumption of aspartame will keep plasma levels sufficiently below that threshold. The first difference is that it is the combined plasma ASP+GLU levels which must be scrutinized, both because administration of either GLU or ASP increases plasma levels of both amino acids,

Footnotes at end of article.

and because the two amino acids are equipotent and mutually additive in producing the lesion (see Board's Decision at 22–23). Glutamic acid is prevalent in the food supply, often as the food additive monosodium glutamate (MSG). The second difference is the scientific belief that a single surge of plasma GLU+ASP levels above the toxic threshold can cause brain damage, unlike the case with phenylalanine toxicity where a sustained high plasma level is needed.

The Board established the plasma GLU + ASP level of 100 umol/dl as the toxic threshold for risk assessment purposes. This was an estimate, and an extremely conservative one, based on experimental findings in the most sensitive species at the most sensitive age (the infant mouse). Even with this cautious approach, the data clearly establish safety for anticipated aspartame consumption.[4]

Clinical testing in adults using high aspartame doses (equivalent to 1½ times those at the 99th percentile of projected daily consumption), administered at a single sitting, showed no significant rise in either the plasma ASP or GLU concentrations. Even with an enormous aspartame dose (equivalent to six times that at the 99th percentile of projected daily consumption, or 600–800 aspartame tablets) administered at a single sitting, the plasma GLU + ASP level rose from 2.7 umol/dl to only 7 umol/dl, still within the normal range found after eating. A further study using one year old infants showed similar minor rises in plasma ASP + GLU levels. Finally, other studies in adults showed that ingestion of aspartame (equivalent to the 99th percentile of projected daily consumption) did not further increase elevations of plasma GLU + ASP levels caused by the administration of very high doses of MSG alone (see generally, Board's Decision at 32–33).[5]

The Board also addressed the risk to the PKU heterozygote, the nursing infant, and the unborn fetus, and concluded that these groups were at least as safely protected as normal adults or children (id. at 33–34). I agree with these conclusions also.

An additional point worth noting is that the plasma ASP + GLU levels that were observed were short-lived, receding to their baseline value after three hours. Thus, as the Board explained, "repeat-doses of the same enormous magnitude, when spaced 3 hours apart, are unlikely to escalate the GLU + ASP concentration much beyond the level induced by the first dose" (id. at 37).

Finally, as was the case with the phenylalanine component, the ratio of projected aspartic acid consumption resulting from aspartame to that derived from a normal diet is quite small. For example, in the age group of most concern, young children, consumption of aspartame at the 99th percentile level of projected consumption (34 mg/kg/day) will only increase total aspartic acid consumption by approximately 4%, clearly an insignificant amount.

The conclusion compelled by these findings is that the addition of aspartame to the diet, in any conceivable amount (far beyond the upper projected consumption levels), will not cause focal brain lesions of the type alleged by the objectors to the aspartame regulation.

B. The Brain Tumor Issue: This was the issue on which the Board disagreed with the Bureau of Foods and concluded that further testing was necessary before aspartame could be marketed. With due respect to the Board, I agree with the Bureau of Foods that the data presented at the hearing establish that there is a reasonable certainty that aspartame does not cause brain tumors in laboratory rats. This conclusion is confirmed by additional evidence submitted after the Board issued its decision.

1. Spontaneous Incidence Rate of Brain Tumors: The most controversial issue at the hearing was whether a significant disparity existed between the brain tumor incidence rates as reported in the Searle studies in a certain strain of rat and the spontaneous incidence rate (or background rate) for brain tumors in this strain as reported in the scientific literature. The Board found that such a disparity existed, and that the disparity was so great as to preclude the key Searle rat studies (E–33/34 and E–70) from providing adequate evidence of aspartame's safety (Board's Decision at 43–45). The Bureau of Foods disagreed with the Board, believing that reliable data in the record established a spectrum of reported spontaneous brain tumor incidences that encompassed the rates reported in the Searle studies.

I agree with the Bureau's assessment of the background rate for brain tumors in the pertinent strain of rats. Although the Board placed considerable weight on published studies reporting spontaneous brain tumor incidence rates of less than 1 percent (.09 percent, .6 percent, and .7 percent), these studies all had some flaws and, in addition, must be supplemented by other data presented at the hearing reporting higher spontaneous incidences (e.g., 2.2 percent and 3.2 percent) which are consistent with those in the Searle studies. One reason for giving weight to these studies reporting higher incidences is that the chances are considerably greater that additional tumors may have been missed in the low-incidence studies than that tumors were included by mistake or misdiagnosed in the high-incidence ones.[6]

Of special significance is the reference reporting an incidence of 2.2 percent. These data were collected by the National Cancer Institute (NCI) from its carcinogenesis bioassay program. The participating organizations were NCI and Hazelton Laboratories, the same laboratory used by Searle for its key aspartame rat studies. Moreover, the rats used for the NCI data were all control animals of the same strain and commercial source used by Searle, and the size of NCI's sample population was nearly identical to the control groups (combined) in Searle's rat studies. The reported spontaneous incidence rates were also nearly identical: 2.2 percent (8/368) for the NCI data and approximately 2 percent (77/356) for the combined control groups in the Searle studies.

2. Comparison with Concurrent Controls: Given the consistency between the control incidence rates in the Searle studies and the background rate, I find that Searle's studies should be evaluated primarily by comparing the aspartame-treated animals to their concurrent controls. Using these comparisons, as analyzed by the Bureau of Foods, find that Searle studies E–70 and E–33/34 both are negative studies.

It is undisputed by the hearing patricipants that the E–70 study is a negative study when the treatment groups are compared to the concurrent controls. The only controversy lies in the E–33/34 study, where the Board found a possible dose response and accelerated tumor onset, both potential indicators of carcinogenicity. The finding of the dose response, however, is largely dependent on a single, very early-occurring, unusual tumor (a medulloblastoma), which was probably not aspartame related, and the finding of accelerated tumor onset was based in part on factual errors. For these reasons, as detailed in the Final Decision, I agree with the Bureau of Foods that E–33/34 is also a negative study.

Finally, a third long-term study assessing aspartame's carcinogenic potential using a different strain of rat, concluded recently in Japan and submitted into the record after the Board issued its decision, also appears to be negative in terms of brain tumors. Although this study has not been critiqued by the hearing participants, the data on their face provide additional support for my conclusion on this issue.

3. Conclusion on Brain Tumors: The available data, viewed as a whole, established that aspartame is safe in terms of brain tumors for its proposed uses.

C. Conditions of Use: The labeling conditions set forth in the aspartame regulation (21 CFR 172.804) before it was stayed shall still be required. These include a prominently displayed alert to persons with PKU that the product contains phenylalanine; directions not to use aspartame in cooking or baking because the compound loses its sweetness when exposed to prolonged heat; and labeling in compliance with FDA's special dietary foods regulations (21 CFR Part 105) where appropriate. In addition, because the safety assessment on the brain damage issues is tied closely to projected aspartame consumption levels, as a condition for approval Searle is to monitor the actual use levels of aspartame and to provide such information on aspartame's use to the Bureau of Foods as the Bureau may deem necessary.

D. Concluding Remarks: The safety evaluation of aspartame has been a long and arduous process, spanning the tenure of several FDA Commissioners. Although my conclusion is the same reached by the agency nearly seven years ago, the intervening years have not been without their benefits in terms of the evidence showing the safety of aspartame. Much of the data, especially clinical data, relied upon by Searle at the public hearing came from studies conducted at the firm's behest during that interim. Also taking place during this period was the detailed independent audit of Searle's preclinical data conducted by the Universities Associated for Research and Education in Pathology, Inc. (UAREP) and the agency. Few compounds have withstood such detailed testing and repeated, close scrutiny, and the process through which aspartame has gone should provide the public with additional confidence of its safety.

The pinnacle of this process was the hearing before the Public Board of Inquiry, the first of its kind to be convened. The scientific issues presented to it were intellectually complex and carried wide ranging public health ramifications. These scientific issues were debated vigorously at the hearing, and the Board performed admirably in maintaining a judicial decorum and crystalizing its views of the issues in its Initial Decision. I would be remiss if I did not express to each of the Board members the appreciation of both the agency and the public for the invaluable service which they performed.

As noted above, my Final Decision will be published shortly in the Federal Register.

FOOTNOTES

[1] These proposed uses include table top sweeteners (both tablets and powder-containing packages); cold breakfast cereals; chewing gum; and dry bases for (i) beverages; (ii) instant coffee and tea; (iii) gelatins, puddings and fillings, and (i) dairy products and toppings.

[2] Food additives presenting health risks may be divided into two categories for safety evaluation purposes: (1) those which are safe at or below certain levels but unsafe at other, higher levels; and (2) those which may be unsafe at any level. The analysis for these two categories is necessarily different. For example, the first issue in this proceeding, relating to possible "brain damage" (toxicity), concerns the former category whereby aspartame may be marketed so long as the projected consumption levels fall sufficiently below the estimated toxic threshold. In contrast, with respect to the second issue in this proceeding, relating to possible "brain tumors" (carcinogenicity), aspartame must be shown to a reasonable certainty not to cause brain tu-

mors at all, for food additives which may produce carcinogenic effects are deemed to be unsafe per se.

[3] The difference for fetuses is that the placenta maintains a 1:2 ratio gradient between the maternal and fetal circulation in the plasma PHE concentrations (Board's Decision at 13). Thus, a plasma PHE level of 100 umol/dl in an expectant mother creates a plasma PHE level of 50 umol/dl for her fetus.

[4] In contrast to the analysis in the phenylalanine section, the above analysis does not set the toxic threshold for pregnant women (for protection of the fetus) as half that for normal individuals because the placenta forms an effective barrier against the transfer of both ASP and GLU to the fetus (Board's Decision at 34).

[5] Dr. John W. Olney, one of the objectors to the aspartame regulation, has asserted that an additional study in children is necessary to measure the effects of aspartame administered in conjunction with MSG. For the reasons discussed in the Final Decision, I do not believe such an additional study is necessary.

[6] This wider spectrum of reported spontaneous incidence rates is further supported by data submitted into the record by Searle and the Bureau of Foods after the Board issued its decision.

CRIME IN AMERICA

Mr. THURMOND. Mr. President, crime continues in America on an upward spiral. Because of this serious situation, this Nation needs to return to swift apprehension of criminals, speedy trials, and sure punishment including, in some cases, capital punishment.

A recent editorial aired by WSPA–TV of Spartanburg, S.C., expresses my sentiments about crime and how Federal courts have tampered with the ability of police and prosecutors to arrest and prosecute criminals.

Mr. President, in order to share this excellent editorial with my colleagues, I ask unanimous consent that this viewpoint appear in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

MURDER IN THE CAROLINAS AND GEORGIA

On the United Press news ticker for one day, June 1, 1981, were these items concerning murder in the Carolinas and Georgia:

"Aiken, South Carolina—Convicted sex offender, Paul Koon, of Warrenville, South Carolina, goes on trial today for the September kidnapping and murder of a Georgia woman. Forty-year-old Koon is accused of killing 30-year-old Valerie Newsome of Martinez. Her body was found in Aiken County more than a month after she was abducted from an Augusta, Georgia, shopping center. Koon has pleaded innocent to the charges."

"Charlotte—A man charged with a shooting spree in Charlotte that left two people dead and two others severely injured waived his right to a preliminary hearing today and asked that his case be sent to a grand jury.

"Twenty-one-year-old Clinton Rondale Kirkley faces two first-degree murder charges and two charges of assault in the May 18th shooting."

"Dalton, Georgia—The murder trial of Bobby Lee Salmon begins in Dalton today with jury selection. Charges against Salmon stem from the shooting death last November of 21-year-old James Ridley, Junior, of Chatsworth. Authorities say the shooting occurred during an argument between the two men."

"Gaffney, South Carolina—Two Gaffney men testified Monday during General Sessions Court that they shot antique dealer E. E. Morgan to death during a robbery attempt at his shop on December 30. . . . The two testified that Solicitor Claude Taylor had agreed not to seek the death penalty against them in exchange for their testimony."

And finally, "The Supreme Court refused today to hear the appeal of a Georgia death row inmate. The decision came in the case of Son Fleming, who was sentenced to death for the slaying of Ray City Police Chief Ray Giddens in 1976."

It will be noted that the slaying of the police officer in Georgia took place in 1976.

In other words, because of the Supreme Court's various decisions those convicted for cold-blooded murder can delay their execution until the horror of the crime is forgotten by the people and there grows up a sympathy not to make the murderer pay for his crime with his life. The unfortunate victims who were raped and murdered, and their families are forgotten.

Crime is the greatest threat to our democratic way of life in this nation. Unless something is done to prevent the courts from delaying justice almost ad infinitum after the jury conviction and sentencing, the right of a free people to walk the streets without fear will become an idle gesture.

EXECUTIVE AND OTHER COMMUNICATIONS

The following communications were laid before the Senate, together with accompanying papers, reports, and documents, which were referred as indicated:

EC–1612. A communication from the Director of the Defense Security Assistance Agency, transmitting, pursuant to law, a report on the Department of the Navy's proposed letter of offer to Japan for defense articles estimated to cost in excess of $25 million; to the Committee on Armed Services.

EC–1613. A communication from the Chairman of the Board of Governors of the Federal Reserve System, transmitting, pursuant to law, the midyear monetary policy report of the Board; to the Committee on Banking, Housing, and Urban Affairs.

EC–1614. A communication from the Secretary of Commerce, transmitting, pursuant to law, the annual report of the Foreign-Trade Zones Board for fiscal year 1979; to the Committee on Banking, Housing, and Urban Affairs.

EC–1615. A communication from the Director of the Export-Import Bank of the United States, transmitting, pursuant to law, a report on loan, guarantee, and insurance transactions supported by Eximbank during April and May 1981 to Communist countries; to the Committee on Banking, Housing, and Urban Affairs.

EC–1616. A communication from the Director of the Office of Management and Budget, Executive Office of the President, transmiting, pursuant to law, a supplemental summary of the budget for fiscal year 1982; pursuant to the order of January 30, 1975 referred jointly to the Committee on the Budget and the Committee on Appropriations.

EC–1617. A communication from the Secretary of the Interior, transmitting, pursuant to law, financial exhibits of the Colorado River storage project and participating projects for fiscal year 1980; to the Committee on Energy and Natural Resources.

ED–1618. A communication from the Secretary of Health and Human Services, transmitting, pursuant to law, a summary report on the assessment of current State practices in title XX funded day care programs; to the Committee on Finance.

EC–1619. A communication from the Secretary of State, transmitting a draft of proposed legislation to authorize the participation of the United States in a multinational force and observers to implement the Treaty of Peace between Egypt and Israel; to the Committee on Foreign Relations.

EC–1620. A communication from the Assistant Secretary of State for Congressional Relations, transmitting a draft of proposed legislation to give effect to the Protocol Amending the Convention for the Preservation of the Halibut Fishery of the northern Pacific Ocean and Bering Sea, signed at Washington on March 29, 1979; to the Committee on Foreign Relations.

EC–1621. A communication from the Assistant Legal Advisor for Treaty Affairs, Department of State, transmitting, pursuant to law, a report on international agreements, other than treaties, entered into by the United States in the prior 60-day period; to the Committee on Foreign Relations.

EC–1622. A communication from the Assistant Secretary of the Treasury (Legislative Affairs), transmitting, pursuant to law, a report analyzing the impact on the provision of basic human needs of economic adjustment programs supported in 1980 by financing from the International Monetary Fund; to the Committee on Foreign Relations.

MESSAGES FROM THE HOUSE

At 12:19 p.m., a message from the House of Representatives, delivered by Mr. Gregory, one of its reading clerks, announced that the House has passed the following joint resolution, with amendments, in which it requests the concurrence of the Senate:

S.J. Res. 28. Joint resolution designating the week beginning March 8, 1981, as "Women's History Week".

The message also announced that the Speaker appoints Mr. JONES of North Carolina, Mr. BIAGGI, Mr. BREAUX, Mr. D'AMOURS, Mr. HUBBARD, Mr. STUDDS, Mr. SNYDER, Mr. MCCLOSKEY, Mr. FORSYTHE, and Mr. PRITCHARD as additional managers on the part of the House in the conference on the disagreeing votes of the two Houses on the amendment of the Senate to the bill (H.R. 3982) to provide for reconciliation pursuant to section 301 of the first concurrent resolution on the budget for the fiscal year 1982, from the Committee on Merchant Marine and Fisheries, solely for the consideration of title XI, subtitle B, chapter 4, title IX, and the portions of section 6531 on page 349, lines 25–37, and on page 350, lines 26–31 of the House bill, and section 426 and 1101–4 of the Senate amendment.

REPORTS OF COMMITTEES

The following reports of committees were submitted:

By Mr. DOMENICI, from the Committee on the Budget:

Report to accompany the resolution (S. Res. 160) waiving section 402(a) of the Congressional Budget Act of 1974 with respect to the consideration of S. 43 (Rept. No. 97–156).

By Mr. DOMENICI, from the Committee on the Budget, without amendment:

S. Res. 166. A resolution waiving section 402(a) of the Congressional Budget Act of

1974 with respect to the consideration of S. 755.

S. Res. 168. A resolution waiving section 402(a) of the Congressional Budget Act of 1974 with respect to the consideration of S. 1181.

S. Res. 170. A resolution waiving section 402(a) of the Congressional Budget Act of 1974 with respect to the consideration of S. 1085.

S. Res. 171. A resolution waiving section 402(a) of the Congressional Budget Act of 1974 with respect to the consideration of S. 1086.

S. Res. 172. A resolution waiving section 402(a) of the Congressional Budget Act of 1974 with respect to the consideration of S. 1087.

S. Res. 173. A resolution waiving section 402(a) of the Congressional Budget Act of 1974 with respect to the consideration of S. 1090.

By Mr. MATHIAS, from the Committee on Rules and Administration, without amendment:

S. Res. 182. An original resolution to pay a gratuity to Beatrice Moody:

S. Res. 183. An original resolution to pay a gratuity to Arthur J. Buto, David W. Buto, Kathleen A. Buto, and Robert C. Buto;

S. Res. 184. An original resolution to pay a gratuity to Shirley A. Nelson;

S. Res. 185. An original resolution to pay a gratuity to Margaret O. Riker;

S. Res. 186. An original resolution to pay a gratuity to Michael R. Seith;

S. Res. 187. An original resolution authorizing the revision and printing of the Senate Manual for use during the 97th Congress; and

S. Res. 188. An original resolution relating to the purchase of calendars (Rept. No. 97–157).

By Mr. PERCY, from the Committee on Foreign Relations, without amendment:

S. Res. 148. Resolution calling for a moratorium of indefinite duration on the commercial killing of whales.

By Mr. DENTON, from the Committee on Labor and Human Resources, with an amendment in the nature of a substitute:

S. 1085. A bill to provide a reauthorization for the Headstart program, and for other purposes (Rept. No. 97–158).

S. 1086. A bill to extend and revise the Older Americans Act of 1965, and for other purposes (Rept. No. 97–159).

By Mr. DENTON, from the Committee on Labor and Human Resources, without amendment:

S. 1087. A bill to reauthorize programs under the Domestic Volunteer Service Act of 1973, and for other purposes (Rept. No. 97–160).

By Mr. PACKWOOD, from the Committee on Commerce, Science, and Transportation, without amendment:

S. Res. 189. An original resolution authorizing expenditures by the Committee on Commerce, Science, and Transportation for the training of professional staff; referred to the Committee on Rules and Administration.

EXECUTIVE REPORTS OF COMMITTEES

The following executive reports of committees were submitted:

By Mr. PACKWOOD, from the Committee on Commerce, Science, and Transportation:

Michael J. Fenello, of Florida, to be Deputy Administrator of the Federal Aviation Administration.

(The above nomination was reported from the Committee on Commerce, Science, and Transportation with the recommendation that it be confirmed, subject to the nominee's commitment to respond to requests to appear and testify before any duly constituted committee of the Senate.)

INTRODUCTION OF BILLS AND JOINT RESOLUTIONS

The following bills and joint resolutions were introduced, read the first and second time by unanimous consent, and referred as indicated:

By Mr. McCLURE:

S. 1503. A bill to authorize the President to allocate supplies of crude oil and petroleum products during a severe petroleum supply shortage; to the Committee on Energy and Natural Resources.

By Mr. HAYAKAWA:

S. 1504. A bill to provide greater protection against the introduction and dissemination of plant pests; to the Committee on Agriculture, Nutrition, and Forestry.

STATEMENTS ON INTRODUCED BILLS AND JOINT RESOLUTIONS

By Mr. McCLURE:

S. 1503. A bill to authorize the President to allocate supplies of crude oil and petroleum products during a severe petroleum supply shortage; to the Committee on Energy and Natural Resources:

STANDBY PETROLEUM ALLOCATION ACT OF 1981

Mr. McCLURE. Mr. President, today I am introducing proposed legislation that would grant to the President broad authority to deal with a severe oil supply disruption. The legislation would authorize the President to allocate crude oil, residual fuel oil, and refined petroleum products. The bill incorporates certain safeguards to insure that the scope of the allocation controls will be appropriately limited.

The bill provides that intervention by the Federal Government would occur only if the President finds that a severe petroleum supply shortage exists. Such a shortage would not be defined in terms of a particular volumetric or percentage shortfall. Rather, it would be defined on the basis of its scope and duration, and the extent of its impact on the national security, the national economy, or the economy of any region of the United States.

The legislation would authorize the President to implement a program to allocate crude oil, residual fuel oil, and refined petroleum products on a nationwide or regional basis if he determines that a severe petroleum supply shortage exists. In order to prevent suppliers from circumventing the intent of the allocation program, the President is also authorized to impose price controls which are necessarily related to and required for effective administration of the allocation program. Such controls, however, are limited to margin controls and the prevention of discriminatory pricing. The allocation program must be implemented in a manner which will insure protection of public health, safety and welfare, and the national defense and provide for maintenance of public services and essential needs, including agricultural operations.

Within 90 days from the date of enactment of the legislation, the President would be required to promulgate standby regulations that would set forth the general framework for the allocation program. The regulations could be implemented only after the President transmits an energy action message to the Congress, and neither House has disapproved the message within 15 calendar days of continuous session.

During hearings held by the committee during May and June, a general consensus emerged from the testimony of witnesses representing a broad spectrum of interests. The consensus was that the President should have the authority to intervene in the market during a severe petroleum supply shortage, even if only on a last-resort basis. Moreover, the overwhelming majority view was that legislation may be necessary to insure that the President has clear and adequate authority to deal with a severe petroleum supply interruption after expiration of the Emergency Petroleum Allocation Act on September 30, 1981.

Several general principles are reflected in the proposed legislation. First, we should place maximum reliance on marketplace mechanisms to handle emergencies. Second, we must insure that the administration on or about September 30 is prepared fully to handle a severe oil supply emergency, should Federal action become necessary to supplement the market mechanisms. Simply stated, we cannot responsibly be dependent on anything less than full preparation after expiration of the Emergency Petroleum Allocation Act.

That preparation must include three key elements: First, clear, predictable and unambiguous legal authority, in terms of allocation and necessarily related margin or nondiscriminatory pricing authority must be available; second, full administrative capability, in terms of standby executive branch arrangements and industry liaison, must be organized and in place as a functional mechanism; and third, a clear public administration commitment must be made, supported by available legal authority and full administrative capability, to take decisive Federal action if a severe oil supply interruption requires action beyond responsible reliance on the marketplace.

Finally, we should insure that the International Energy Agency is continued as a viable institutional instrument to provide an international mechanism to deal with oil supply emergencies, as well as other critical energy issues. As part of our efforts to attain that objective, we need to have in place a sound and effective domestic program for allocating petroleum supplies during a serious shortage.

Mr. President, I ask unanimous consent that the text of the bill be printed in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 1503

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SHORT TITLE

SECTION 1. This Act may be cited as the "Standby Petroleum Allocation Act of 1981."

STATEMENT OF FINDINGS AND PURPOSES

SEC. 2(a)(1) Shortages of crude oil, residual fuel oil, and refined petroleum products caused by reduction in imports may occur at any time;

(2) Such shortages could be sufficiently large to cause severe economic dislocations and hardships within various segments of the economy, both regional and national, and constitute a threat to the public health, safety and welfare; and

(3) The national security and economic well-being of the United States require that the President have authority, during a severe petroleum supply shortage, to allocate crude oil, residual fuel oil and refined petroleum products so as to minimize adverse effects on the public health, safety, and welfare.

(b) The purpose of this Act is to grant to the President limited and temporary authority to allocate crude oil, residual fuel oil, and refined petroleum products in the event of a severe petroleum supply shortage. The authority granted under this Act shall be exercised for the purpose of minimizing the adverse impacts of such a shortage on the American people and the domestic economy.

DEFINITIONS

SEC. 3. As used in this Act, the term—

(1) "Severe petroleum supply shortage" means a national or regional petroleum supply shortage which the President determines.

(A) is, or is likely to be, of significant scope and duration;

(B) may cause major adverse impact on national security, the national economy, or the economy of any of the several regions of the United States,

(C) results, or is likely to result, from an interruption in the imported petroleum supplies of the United States, including supplies of imported crude oil, residual fuel oil and petroleum products, or from sabotage or an act of God, and

(D) may not be reasonably manageable

(1) by reliance on free market pricing and allocation, or

(2) under other authorities available to the President.

(2) "United States" means the several States, the Commonwealth of Puerto Rico, and the District of Columbia.

PRESIDENTIAL AUTHORITY

SEC. 4. (a) If the President finds that a severe petroleum supply shortage exists, he may, subject to subsection (d), implement a standby regulation providing for the mandatory allocation of crude oil, residual fuel oil, and any refined petroleum product throughout the United States or in any seriously affected region of the United States. Such allocation shall be administered in a manner which shall

(1) insure protection of public health, safety and welfare and the national defense and

(2) provide for maintenance of public services and essential needs, including, but not limited to, agricultural operations, and processing and transportation of agricultural products.

(b) The allocation authority pursuant to subsection (a) may include limitations on the price of crude oil, residual fuel oil, and any refined petroleum product, but only to the extent that

(1) such price controls are necessarily related to and required for effective administration of the mandatory allocation authority, and

(2) such controls are limited to margin and nondiscriminatory pricing.

(c) The President, not later than ninety days after the date of enactment of this Act, shall promulgate a general standby regulation for administration of the allocation authority pursuant to this section, to be implemented, with such additional provisions as may be determined to be necessary at the time, in the event the President institutes mandatory allocation pursuant to this section.

(d) The President shall not implement any mandatory allocation pursuant to this section unless he has transmitted notice to the Congress in an energy action message pursuant to section 551 of the Energy Policy and Conservation Act, as amended, and neither House of Congress has disapproved the message within 15 calendar days of continuous session of Congress in accordance with the procedures specified in section 551.

(e) The standby regulation under section 3 may continue in effect for no more than ninety days after implementation except that the period of effectiveness of such regulation may be extended for an additional sixty days upon a finding by the President that the severe petroleum supply shortage continues in effect and mandatory allocation must be continued to meet the objectives of subsection (a). Thereafter, the authority of the President pursuant to this section shall terminate, unless he has submitted a new message pursuant to subsection (d) and the message has not been disapproved.

(f) The authority of this Act shall not be used to impose or implement any tax, tariff, user fee or a program for the assignment of rights for end-user purchases of gasoline or diesel fuel, as described in section 203(a)(1)(A) and (B) of the Energy Policy and Conservation Act (42 U.S.C. 6263).

ENFORCEMENT AND ADMINISTRATION

SEC. 5 (a) Whoever violates the requirements of the standby regulation or any order issued pursuant to this Act shall be subject to a civil penalty not to exceed $40,000 for each violation.

(b) Any penalty under paragraph (a) may be assessed by the court in any action brought in any appropriate United States district court or any other court of competent jurisdiction.

Any such penalty collected shall be deposited into the general fund of the United States Treasury as miscellaneous receipts.

(c) There shall be available as a defense to any action brought for breach of contract in any Federal or State court arising out of delay or failure to provide, sell, or offer for sale or exchange crude oil, residual fuel oil, or any refined petroleum product, that such delay or failure was caused solely by compliance with the provisions of this Act or with the regulation or any order under this Act.

SEC. 6. The provisions of this Act shall cease to have effect on January 1, 1985, but such expiration shall not affect any action or pending proceeding, administrative or civil, not finally determined on such date, nor any administrative or civil action or proceeding, whether or not pending, based on any act committed or liability incurred prior to such expiration date.

By Mr. HAYAKAWA:

S. 1504. A bill to provide greater protection against the introduction and dissemination of plant pests; to the Committee on Agriculture, Nutrition, and Forestry.

THE MEDITERRANEAN FRUIT FLY CRISIS IN CALIFORNIA

Mr. HAYAKAWA: Mr. President, the Mediterranean fruit fly crisis in California has the potential to become a disaster of national proportion. One positive aspect of the infestation is that it provides us with an opportunity to review Government's ability to deal with a major plant pest.

A policy deficiency which surfaced early in the crisis has to do with the authority of the Secretary of Agriculture to take quick action in an infestation such as we are currently experiencing in California. Rather than having the authority to take action which would have eradicated the pest at an early stage—Secretary Block was limited to threatening a quarantine of host produce if the State did not take action.

The Secretary of Agriculture currently has the authority to move decisively on livestock disease outbreaks. The legislation I am introducing will provide the Secretary with similar authorities in dealing with plant pests. Specifically, the Secretary would be given the power to employ such effective measures as pesticide spraying and product seizure or quarantining. Mindful that the responsibility to deal with plant pests falls first with State officials, this legislation would authorize the Secretary to take action only if adequate measures are not being taken by the State.

All precautions must be taken to guarantee that plant pest crises, like the one we are dealing with in California today, do not occur in the future. This legislation which I am introducing today is a necessary step toward insuring that both the Nation's agriculture will be adequately protected and that the Nation's consumers will be able to continue to enjoy a plentiful supply of farm produce.

Mr. President, I introduce the legislation for consideration at the appropriate date, and I ask unanimous consent that the bill be printed in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 1504

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Federal Plant Pest Act (71 Stat. 31; 7 U.S.C. 150aa) is amended—

(a) in section 105 by renumbering subsections (b), (c), and (d) as (c), (d), and (e) and adding a new subsection (b) as follows:

"(b) Whereas the existence of a plant pest new to or not therefore known to be widely prevalent or distributed within and throughout the United States on any premises in the United States would constitute a threat to crops, other plant life and plant products of the Nation and thereby seriously burden interstate or foreign commerce, whenever the Secretary determines that an extraordinary emergency exists because of the presence of such plant pests on any premises in the United States, and that the presence of such plant pest anywhere in the United States threatens the crops, other plant life or plant products of the United States, he may (1) seize, quarantine, treat, apply other remedial measures to, destroy, or otherwise dispose of, in such manner as he deems appropriate, any product or article of any character whatsoever, or means of conveyance which he has reason to believe is infested or infected by or contains such plant pest; (2) quarantine, treat or apply other remedial measures to, in such manner as he deems appropriate, any premises, including articles on such premises which he has reason to believe is infested or infected by any such plant pest: *Provided,* That such action shall be taken under this section only if the Secretary finds that adequate measures are not being taken by the

State or other jurisdiction before any action is taken in any such State or other jurisdiction pursuant to this section."; and

(b) in section 107 by adding after the second semicolon the following: "to stop and inspect without a warrant any person or means of conveyance moving intrastate upon probable cause to believe that the person or conveyance is carrying any product or article subject to treatment or disposal under the provisions of this Act or the regulations issued thereunder;".

ADDITIONAL COSPONSORS

S. 131

At the request of Mr. INOUYE, the Senator from South Carolina (Mr. HOLLINGS), the Senator from Texas (Mr. TOWER), and the Senator from Ohio (Mr. GLENN) were added as cosponsors of S. 131, a bill to incorporate the Pearl Harbor Survivors Association.

S. 881

At the request of Mr. RUDMAN, the Senator from Idaho (Mr. SYMMS) was added as a cosponsor of S. 881, a bill to amend the Small Business Act to strengthen the role of the small, innovative firms in federally funded research and development, and to utilize Federal research and development as a base for technological innovation to meet agency needs and to contribute to the growth and strength of the Nation's economy.

S. 970

At the request of Mr. ROTH, the Senator from Montana (Mr. BAUCUS) was added as a cosponsor of S. 970, a bill to establish as an executive department of the Government of the United States a Department of International Trade and Investment, and for other purposes.

S. 1035

At the request of Mr. MATHIAS, the Senator from Arkansas (Mr. PRYOR) was added as a cosponsor of S. 1035, a bill to provide an opportunity to individuals to make financial contributions, in connection with the payment of their Federal income tax, for the advancement of the arts and the humanities.

S. 1235

At the request of Mr. D'AMATO, the Senator from South Carolina (Mr. HOLLINGS) was added as a cosponsor of S. 1235, a bill to exempt certain matters relating to the Central Intelligence Agency from the disclosure requirements of title 5, United States Code.

S. 1373

At the request of Mr. DECONCINI, the Senator from Maryland (Mr. SARBANES) and the Senator from New York (Mr. MOYNIHAN) were added as cosponsors of S. 1373, a bill to authorize the President to call a White House Conference on Veterans.

S. 1409

At the request of Mr. WALLOP, the Senator from Wyoming (Mr. SIMPSON) was added as a cosponsor of S. 1409, a bill to authorize the Secretary of the Interior to construct, operate, and maintain modifications of the existing Buffalo Bill Dam and Reservoir, Shoshone project, Pick-Sloan Missouri Basin program, Wyoming, and for other purposes.

S. 1429

At the request of Mrs. KASSEBAUM, the Senator from Pennsylvania (Mr. HEINZ) was added as a cosponsor of S. 1429, a bill to amend the Securities and Exchange Act of 1934 to make the margin requirements for domestic purchasers of securities applicable to foreign purchasers of securities in certain significant transactions involving the U.S. securities markets, and for other purposes.

S. 1448

At the request of Mr. MATHIAS, the Senator from Louisiana (Mr. JOHNSTON) was added as a cosponsor of S. 1448, a bill to provide for the issuance of a postage stamp to commemorate the 70th anniversary of the founding of the Girl Scouts of the United States of America.

SENATE JOINT RESOLUTION 98

At the request of Mr. LEAHY, the Senator from Minnesota (Mr. BOSCHWITZ), the Senator from Rhode Island (Mr. CHAFEE), and the Senator from Maryland (Mr. SARBANES) were added as cosponsors of Senate Joint Resolution 98, a joint resolution to authorize and request the President to issue a proclamation designating October 16, 1981, as "World Food Day."

SENATE RESOLUTION 148

At the request of Mr. PACKWOOD, the Senator from Pennsylvania (Mr. HEINZ) was added as a cosponsor of Senate Resolution 148, a resolution calling for a moratorium of indefinite duration on the commercial killing of whales.

SENATE RESOLUTION 182—ORIGINAL RESOLUTION REPORTED TO PAY A GRATUITY TO BEATRICE MOODY

Mr. MATHIAS, from the Committee on Rules and Administration, reported the following original resolution; which was placed on the calendar:

S. RES. 182

Resolved, That the Secretary of the Senate hereby is authorized and directed to pay, from the contingent fund of the Senate, to Beatrice Moody, widow of Johnnie Moody, an employee of the Senate at the time of his death, a sum equal to six and one-half months' compensation at the rate he was receiving by law at the time of his death, said sum to be considered inclusive of funeral expenses and all other allowances.

SENATE RESOLUTION 183—ORIGINAL RESOLUTION REPORTED TO PAY A GRATUITY TO ARTHUR J. BUTO, DAVID W. BUTO, KATHLEEN A. BUTO, AND ROBERT C. BUTO

Mr. MATHIAS, from the Committee on Rules and Administration, reported the following original resolution; which was placed on the calendar:

S. RES. 183

Resolved, that the Secretary of the Senate hereby is authorized and directed to pay, from the contingent fund of the Senate, to Arthur J. Buto, David W. Buto, and Robert C. Buto, sons of Ann K. Buto, and Kathleen A. Buto, daughter of Ann K. Buto, an employee of the Senate at the time of her death, a sum to each equal to one-fourth of eight and one-half months' compensation at the rate she was receiving by law at the time of her death, said sum to be considered inclusive of funeral expenses and all other allowances.

SENATE RESOLUTION 184—ORIGINAL RESOLUTION REPORTED TO PAY A GRATUITY TO SHIRLEY A. NELSON

Mr. MATHIAS, from the Committee on Rules and Administration, reported the following original resolution; which was placed on the calendar:

S. RES. 184

Resolved, That the Secretary of the Senate hereby is authorized and directed to pay, from the contingent fund of the Senate, to Shirley A. Nelson, widow of Raymond N. Nelson, an employee of the Senate at the time of his death, a sum equal to one year's compensation at the position gross rate he was receiving by law at the time of his death, said sum to be considered inclusive of funeral expenses and all other allowances.

SENATE RESOLUTION 185—ORIGINAL RESOLUTION REPORTED TO PAY A GRATUITY TO MARGARET O. RIKER

Mr. MATHIAS, from the Committee on Rules and Administration, reported the following original resolution; which was placed on the calendar:

S. RES. 185

Resolved, That the Secretary of the Senate hereby is authorized and directed to pay, from the contingent fund of the Senate, to Margaret O. Riker, widow of Reamer J. Riker, an employee of the Senate at the time of his death, a sum equal to seven months' compensation at the rate he was receiving by law at the time of his death, said sum to be considered inclusive of funeral expenses and all other allowances.

SENATE RESOLUTION 186—ORIGINAL RESOLUTION REPORTED TO PAY A GRATUITY TO MICHAEL R. SEITH

Mr. MATHIAS, from the Committee on Rules and Administration, reported the following original resolution; which was placed on the calendar:

S. RES. 186

Resolved, That the Secretary of the Senate hereby is authorized and directed to pay, from the contingent fund of the Senate, to Michael R. Seith, widower of Denise G. Seith, an employee of the Senate at the time of her death, a sum equal to nine months' compensation at the rate she was receiving by law at the time of her death, said sum to be considered inclusive of funeral expenses and all other allowances.

SENATE RESOLUTION 187—ORIGINAL RESOLUTION REPORTED RELATING TO THE PRINTING OF THE SENATE MANUAL

Mr. MATHIAS, from the Committee on Rules and Administration, reported the following original resolution; which was placed on the calendar:

S. RES. 187

Resolved, That the Committee on Rules and Administration hereby is directed to prepare a revised edition of the Senate Rules

and Manual for the use of the Ninety-seventh Congress, that said rules and manual shall be printed as a Senate document, and that two thousand additional copies shall be printed and bound, of which one thousand copies shall be for the use of the Senate, five hundred and fifty copies shall be for the use of the Committee on Rules and Administration, and the remaining four hundred and fifty copies shall be bound in full morocco and tagged as to contents and delivered as may be directed by the committee.

SENATE RESOLUTION 188—ORIGINAL RESOLUTION REPORTED RELATING TO THE PURCHASE OF CALENDARS

Mr. MATHIAS, from the Committee on Rules and Administration, reported the following original resolution; which was placed on the calendar:

S. RES. 188

Resolved, That the Committee on Rules and Administration is authorized to expend from the contingent fund of the Senate, upon vouchers approved by the chairman of that committee, not to exceed $58,240 for the purchase of one hundred and four thousand calendars. The calendars shall be distributed as prescribed by the committee.

SENATE RESOLUTION 189—ORIGINAL RESOLUTION REPORTED AUTHORIZING EXPENDITURES FOR THE TRAINING OF PROFESSIONAL STAFF

Mr. PACKWOOD, from the Committee on Commerce, Science, and Transportation, reported the following original resolution: which was referred to the Committee on Rules and Administration:

S. RES. 189

Resolved, That section 2 of Senate Resolution 52, 97th Congress, agreed to March 3, 1981, is amended (1) by inserting "(1)" after "amount"; and (2) by inserting before the period at the end thereof the following: ", and (2) not to exceed $7,000 may be expended for the training of the professional staff of such committee (under procedures specified by section 202(j) of such Act)".

AMENDMENTS SUBMITTED FOR PRINTING

ECONOMIC RECOVERY TAX ACT OF 1981

AMENDMENT NO. 501

(Ordered to be printed and to lie on the table.)

Mr. MELCHER (for himself and Mr. EXON) submitted an amendment intended to be proposed by them to the joint resolution (H.J. Res. 266) to provide for a temporary increase in the public debt limit.

IMPUTED INTEREST RATE

Mr. MELCHER. Mr. President, I ask unanimous consent that the text of the amendment relating to imputed interest rates be printed in the RECORD.

There being no objection, the amendment was ordered to be printed in the RECORD, as follows:

At the end of subtitle F of title II, insert the following new section:

MAXIMUM RATE OF IMPUTED INTEREST

SEC. . (a) IN GENERAL.—Subsection (b) of section 483 (defining total unstated interest) is amended by adding at the end thereof the following: "The maximum interest rate used in determining the total unstated interest under such regulations shall not exceed 7 percent, compounded semi-annually.".

(b) EFFECTIVE DATE.—The amendment made by this section shall apply to payments made after June 30, 1981, pursuant to sales or exchanges occurring after such date.

AMENDMENT NO. 502

(Ordered to be printed and to lie on the table.)

Mr. MATTINGLY submitted an amendment intended to be proposed by him to House Joint Resolution 266, supra.

TAXATION OF FRINGE BENEFITS

● Mr. MATTINGLY. Mr. President, on May 31, 1981, the temporary moratorium prohibiting the Internal Revenue Service from issuing regulations regarding the taxation of fringe benefits expired. With the expiration of this moratorium, the opening of a so-called can of worms is conceivable. If an individual parked on a lot owned by an employer, the value of free parking could amount to taxable income. If an individual worked in a store and received an employee discount, that individual could conceivably pay income tax on the amount of the discount. An individual could be required to pay income tax on the amount of employer-paid civic organization dues, and the cost of the company picnic or Christmas party could be considered taxable income to participating employees.

In an effort to prevent the Internal Revenue Service from issuing regulations regarding the taxation of fringe benefits, I introduced legislation to extend permanently the expiring moratorium. In addition, Senator JEPSEN and I, along with 62 other Senators from both political parties, wrote Secretary of the Treasury Regan requesting that he halt the publications, since the possibility is remote that the Congress would allow such regulations to take effect.

In response to these efforts, Secretary Regan recently announced that—

> No regulations or rulings altering the tax treatment of fringe benefits will be issued by the Treasury prior to July 1, 1982.

I was pleased by this announcement.

Although we have temporarily won the battle, the war is not over. Next year, we will again be confronted with the threat of regulations by the Internal Revenue Service in the area of fringe benefits. I think we all agree that if fringe benefits are to be taxed, they should be taxed by the Congress, which must answer to a constituency at election time. Unfortunately, the bureaucrats at the Internal Revenue Service have no constituency to answer to and, therefore, their actions are obviously less sensitive to the wishes and desires of the electorate.

To put the issue to rest, at least temporarily, I am submitting an amendment to the comprehensive tax bill which will extend the existing moratorium which prohibits the Internal Revenue Service from issuing regulations regarding the taxation of fringe benefits until December 31, 1984. While having no negative revenue effect, enactment of my amendment would eliminate a potential administrative burden for employers and prevent a gross injustice to employees.●

AMENDMENT NO. 503

(Ordered to be printed.)

Mr. RIEGLE proposed an amendment to House Joint Resolution 266, supra.

AMENDMENT NO. 504

(Ordered to be printed.)

Mr. RIEGLE proposed an amendment to amendment No. 503 to House Joint Resolution 266, supra.

NOTICES OF HEARINGS

COMMITTEE ON ENERGY AND NATURAL RESOURCES

Mr. MCCLURE. Mr. President, I would like to announce for the information of the Senate and the public the scheduling of public hearings before the Committee on Energy and Natural Resources to consider S. 1503, to authorize the President to allocate supplies of crude oil and petroleum products during a severe petroleum supply shortage; S. 1476, S. 1354, and S. 409, to provide standby authority to deal with petroleum supply disruptions; and S. 445, to establish a State set-aside system for propane, middle distillates, motor gasoline, residual fuel oil, and aviation fuels.

The hearings have been scheduled for Tuesday, July 28, beginning at 10:30 a.m., to receive testimony from administration witnesses and Thursday, July 30, beginning at 9:30 a.m., to receive testimony from public witnesses, in room 3110 of the Dirksen Senate Office Building.

Those wishing to testify or who wish to submit written testimony for the hearing record should write to the Committee on Energy and Natural Resources, room 3104, Dirksen Senate Office Building, Washington, D.C. 20510.

For further information regarding these hearings, you may wish to contact Mr. David Doane of the committee staff at 224–7144.

AUTHORITY FOR COMMITTEES TO MEET

PERMANENT SUBCOMMITTEE ON INVESTIGATIONS

Mr. STEVENS. Mr. President, I ask unanimous consent that the Permanent Subcommittee on Investigations of the Committee on Governmental Affairs be authorized to meet during the session of the Senate on Thursday, July 23, to hold oversight hearings on fraud and abuse involving the Federal workers' compensation program.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. STEVENS. Mr. President, I ask unanimous consent that the Permanent Subcommittee on Investigations of the Committee on Governmental Affairs be authorized to meet during the session of the Senate on Wednesday, July 22, to hold oversight hearings on fraud and abuse involving the Federal workers' compensation program.

The PRESIDING OFFICER. Without objection, it is so ordered.

SUBCOMMITTEE ON CRIMINAL LAW

Mr. STEVENS. Mr. President, I ask unanimous consent that the Subcommittee on Criminal Law of the Committee on the Judiciary be authorized to meet

during the session of the Senate on Tuesday, July 21, at 2 p.m. to hold hearings on S. 1434, Act of State Doctrines.

The PRESIDING OFFICER. Without objection, it is so ordered.

SUBCOMMITTEE ON ENERGY, NUCLEAR PROLIFERATION, AND GOVERNMENT PROCESSES

Mr. STEVENS. Mr. President, I ask unanimous consent that the Subcommittee on Energy, Nuclear Proliferation, and Government Processes of the Committee on Governmental Affairs be authorized to meet during the session of the Senate on Tuesday, July 21, to hold hearings on conservation strategy for the 1980s.

The PRESIDING OFFICER. Without objection, it is so ordered.

SUBCOMMITTEE ON REGIONAL AND COMMUNITY DEVELOPMENT

Mr. STEVENS. Mr. President, I ask unanimous consent that the Subcommittee on Regional and Community Development of the Committee on Environment and Public Works be authorized to meet during the session of the Senate on Tuesday, July 21, to hold oversight hearings on the Disaster Relief Act.

The PRESIDING OFFICER. Without objection, it is so ordered.

SUBCOMMITTEE ON ENVIRONMENTAL POLLUTION

Mr. STEVENS. Mr. President, I ask unanimous consent that the Environmental Pollution Subcommittee of the Committee on Environment and Public works be authorized to meet during the session of the Senate today at 2 p.m. to hold hearings on Superfund legislation.

The PRESIDING OFFICER. Without objection, it is so ordered.

SUBCOMMITTEE ON TOXIC SUBSTANCES AND ENVIRONMENTAL OVERSIGHT

Mr. STEVENS. Mr. President, I ask unanimous consent that the Subcommittee on Toxic Substances and Environmental Oversight of the Committee on Environment and Public Works be authorized to meet during the session of the Senate on Thursday, July 23, to hold hearings on the environmental impact of chloroflouric carbons.

The PRESIDING OFFICER. Without objection, it is so ordered.

ADDITIONAL STATEMENTS

WHERE THE GOVERNMENT WILL GET $700 BILLION

● Mr. GARN. Mr. President, as we continue our deliberations over the important issue of tax reductions, it is timely to ask where the Federal Government will really get the $700 billion it intends to spend. Dr. Joseph S. Peery, economist at the University of Utah Graduate School of Business, answers this question in his most recent Tracy Trend-Letter.

In so doing, Dr. Peery analyzes three problems:

First, the various ways the Government can get its $700 billion;

Second, in reality, where the Government does get it; and

Third, whether the Government should even be engaged in much of this spending business at all.

Mr. President, I highly recommend this thoughtful analysis to all of my colleagues, and ask that it be printed in the RECORD.

The article follows:

TRACY TREND-LETTER

(Dr. Joseph S. Peery, Economist)

WHERE WILL THE FEDERAL GOVERNMENT REALLY GET THE $700 BILLION IT INTENDS TO SPEND?

The intense debate going on in Washington about slowing the growth of federal spending, and whether the government should continue to fund this or that program, is one-sided.

The general assumption seems to be that the government will automatically have about $700 billion to spend, instead of $750 billion, and so the only questions are how this huge pool of money should be divided, and who will be disappointed because they don't get as much as they think they are "entitled" to receive.

The question of who is supplying the $700 billion that the government is spending or giving away is not part of the debate.

The basic question of whether or not the government should be giving or spending money for particular programs is avoided entirely, as is the entire question of "What is the proper role of government in our society?"

This letter will analyze three problems:

1. the various ways the government can get its $700 billion;

2. in reality, where the government does get it;

3. whether the government should even be engaged in much of this spending business at all.

THE FEDERAL GOVERNMENT CAN FUND ITS SPENDING THREE WAYS

The federal government has three options for funding its spending:

1. it can print the money it spends;

2. it can borrow;

3. it can take money from the people in the form of taxes.

The option of printing money to fund government spending is in actuality severely limited. For several hundred years it has been known that when governments do resort to the printing press that hyper-inflation quickly follows, and that if the practice continues, the government's money will become worthless.

This happens for two reasons. The first effect of printing extra money is to increase total spending. As sales increase, so do output, employment and income. The economy appears to prosper. Soon, however, the increases in spending cause the economy to reach its productive limits. No longer can the increased spending caused by printing money be matched by increasing output. The point is soon reached when "too much money is chasing too few goods." The inevitable result will be to bid up the prices of the goods and services that are available.

Inflation begins, and if fed by the money printing press, will get worse. As inflation accelerates the people will recognize that the real value of their money income is falling, and they will try to protect themselves by spending any money they receive as quickly as possible to buy physical things. This increase in the velocity of spending is the second reason why inflation accelerates.

As the rate of inflation increases, savings collapse. Who will lend money when they believe that by the time it is repaid it may be worthless?

As savings dries up, so does investment, and output contracts. Increasing shortages drive up prices even faster. Finally, money itself becomes worthless. This happened in Germany in 1923.

GOVERNMENT'S ABILITY TO BORROW IS ALSO LIMITED

The U.S. Treasury and the Federal Reserve know they cannot fund Federal spending by printing money without disastrous results. In reality, printing money is not an option.

They also know the government's ability to borrow is limited.

When the government borrows, it sells its new debt to the public in the form of Treasury Bills, or Treasury Notes or U.S. Bonds. The difference in these government debt instruments is their maturity. Treasury Bills come due in a year or less, notes mature in from two to ten years and bonds have a longer life of ten to thirty years or more.

When federal debt instruments are sold to the public, the federal government competes directly with the private economy for the available supply of loanable funds.

The supply of loanable funds is limited. With the growth of the money supply held constant, the supply of loanable funds comes primarily from personal saving and business "saving" or business funds temporarily available for others to borrow.

Thus we see that the supply of loanable funds comes from that part of the total income of the American people that is not spent on current personal consumption, or from business income not currently being spent by the firm on its own investment.

The private supply of loanable funds is strictly limited. If the supply of personal and business saving is more than sufficient to satisfy all private borrowing needs, then the government could borrow the surplus saving without great harm to the economy. But that is not now the case.

Business saving is now depressed because of weak corporate profits. Personal saving has fallen to dangerous levels. Productivity has not increased since 1976. Taxes have grown, so the standard of living of the average American family has fallen. In our attempt to maintain our standard of living, we are saving less. Saving is also discouraged by the heavy tax penalty assessed by the government on the interest income we earn on our saving. Up to 70 percent of this interest income is now being taken from savers by federal taxes.

Our personal saving, as a percentage of our total income, has fallen forty percent during the past five years. Our family saving would be $60 billion a year larger than it now is if we were saving the same percentage of our income as we were five years ago.

As our saving decreased, federal deficits increased. Today there is not enough private saving to fund both the current large federal deficit and also to provide the loanable funds required for a healthy private economy.

The government always gets our saving first to fund its growing debt. The government is, in fact, bidding up interest rates as it sells its new debt each week. The shortage of loanable funds facing business, home buyers and consumers, and the high interest rates on the limited credit available are now being caused by heavy government borrowing.

No longer is there enough saving to supply both the needs of the government and the private economy, so the private economy is being hurt.

Instead of increasing its borrowing, the government should reduce it. The government can no longer increase its borrowing to fund the $700 billion it spends without disastrous impact on the private economy.

THE GOVERNMENT MUST ASSESS HEAVY TAXES ON THE AVERAGE FAMILY

We have seen that theoretically the federal government can get the $700 billion it spends by printing or borrowing, but in practice it cannot. Printing money will cause money to become worthless, and increased borrowing would drive the private economy into a depression. This means that the government must and will get most of the $700 billion it intends to spend from taxes on the private economy.

The government can't get much tax revenue from the poor or from the rich. Their total income is simply not large enough.

All governments—federal, state and local—must get the bulk of the money they spend by heavily taxing the working families of this country.

This statement should be factually supported, and is, by the following data.

GOVERNMENT SPENDING TO THE TOTAL INCOME OF THE POOR

Total federal spending is now running at an annual rate of about $650 billion, and state and local spending is at a yearly rate of about $375 billion, for a total of $1,025 billion. The federal government, however, is transferring about $85 billion to the state and local government, so this amount should be deducted from the $1,025 billion total to avoid double counting. Doing this leaves total government spending at about $940 billion.

The following information was obtained from the Bureau of Internal Revenue and was adjusted to present income levels.

Today about 31 million Americans would report they are making under $10,000 a year. Their total earned income would be about $155 billion. The total earned income of those making less than $10,000 a year would only pay for 16½ percent of government spending.

The earned income of $155 billion of this 31 million people was not their entire income. This year government transfer payments to individuals will be over $320 billion, most of which will go to this group. Transfer payments, including all social security payments, are not subject to income taxes. About 11 million of this group will pay some federal income tax on their earned income. The total tax will be about $4 billion, or less than one percent of federal spending. It is worth noting that the 31 million who report making less than $10,000 represent 35 percent of all income earners, and they pay 2 percent of the federal income tax.

GOVERNMENT SPENDING COMPARED TO THE INCOME OF THE RICH

About 87 million households in this country earn some income. 23 million of these households are single individuals, and 65 million have two or more persons.

About 300,000, or one-third of one percent of these households have incomes of $150,000 a year or more.

These are the high-incomed people we envy. Some people feel that no person is worth $150,000 a year except perhaps jockeys, rock stars, TV entertainers, baseball, football, basketball and hockey players, and professional tennis and golf stars.

There seems to be general agreement that people making this much or more should be heavily taxed, and they are. They receive 5 percent of total household income and pay 12 percent of the total federal income tax. The average income tax of the 300,000 households making over $150,000 a year is $100,000.

Taxing these rich people doesn't help much. Their total income equals 7 percent of all government spending.

UPPER MIDDLE INCOME FAMILIES CAN'T SUPPORT GOVERNMENT SPENDING

Six million households have incomes of $43,000 a year or more.

The total income of this group is about $430 billion. This is a very large amount, but not large enough to pay for government spending.

For example, assume that a law had been passed stating that $43,000 for the maximum income any household could keep and that all income above $43,000 would be taxed away. The total taxes taken from the six million households making more than $43,000 would than be $163 billion. This is a huge amount, but would only pay for 17 percent of all government spending. Even in this extreme example, those making less than $43,000 would still have to pay for 83 percent of all government spending.

High income people cannot pay for government spending. Their total income is simply not large enough.

MIDDLE INCOME FAMILIES MUST PAY THE TAXES

Fifty-eight million households, or 63 percent of all households, earn between $10,000 and $72,000 a year. They earn 81 percent of all family income.

This, of course, means that this group having 81 percent of all personal income must of necessity pay most of all taxes.

There are 23 million households that make between $10,000 and $20,000 a year. This group earns 20 percent of total family income and pays roughly 12 percent of the federal income tax.

There are 33 million households that make between $20,000 and $72,000 a year. This group earns 62 percent of all family income and pays 62 percent of the federal income tax. They also pay over 60 percent of all taxes—sales, property, excise and social security.

This is something that everyone should know and understand. Middle income working families pay for government spending. Most of the $700 billion now being included in the new federal budget will be taken in taxes from the income earned by America's working families.

When pressure groups lobby Washington for money, they should be reminded that the money they want for themselves was taken by coercive federal taxation from the income of working families.

BUSINESS CANNOT PAY FOR GOVERNMENT SPENDING

Not knowing the facts, many people believe that state, local and federal governments should get the money they spend by taxing business.

A basic fallacy in this line of reasoning is that "business" pays taxes. Business does not pay taxes—only people pay taxes. Taxes assessed on business will be paid either by the owners, or employees (by lower wages), or consumers through higher prices.

The household income data presented earlier in this letter includes all proprietorship and partner income, all dividends paid to the owners of proprietorships and all capital gains income.

Current business taxes are mostly paid by the working families of this country because these receive the bulk of the nation's income, including the bulk of business income.

There are about 14 million businesses in this country which operate as proprietorships or partnerships. About 3 million of them are family farms. The total income of all these 14 million businesses, as currently reported by the U.S. Department of Commerce, is $134 billion.

It is obvious that if all of the income of these businesses were taxed away, it would only cover 14 percent of the $940 billion government spending.

These small businesses really don't make much anyway. When 14 million is divided into the total small business income of $134 billion, we find the average income per business to be $9,570 a year. The way we currently define poverty income, most small business could qualify.

Total after tax corporate profit is currently running at an annual rate of $165 billion. It is clear that corporate profit cannot pay for the $940 billion of government spending. Corporate profit is only equal to 17 percent of government spending. Corporate profit is too little to support a healthy private economy as it is. Attempts to increase corporate taxes would hurt all of us. Either we would pay these taxes in higher prices, or investment would decline even more, causing unemployment to rise and our standard of living to fall.

CAN HUGE GOVERNMENT SPENDING BE JUSTIFIED?

Now we come to the question that is not usually addressed at all in the current debate on how to spend the government's $700 billion.

The question is, "How can such a huge budget be justified?"

The people who supply the $700 billion through taxes have never had the opportunity in a national referendum to approve or disapprove of the vast array of spending programs that Congress has enacted and funded in recent years.

Isn't it reasonable to conclude that if those who were going to have to pay for the numerous spending programs passed by Congress had to directly approve each, that very few would now be law?

Spending programs were enacted because of the lobbying pressure of special interest groups, academics, so-called "intellectual" reformers and public policy professionals. The problem of how government spending programs were to be funded was largely ignored.

If Congress had required the sponsor of each new spending bill to clearly state in the bill's preface, "We expect the working families of America to pay for this through increased taxes," how many would have passed?

The difficult moral problem of why should Congress use its taxing power to take income from working families and give it to others was not asked or answered. Why should some people be "entitled" to take income from others for food stamps, or send their children to college or get rent subsidies?

Why should less productive people be "entitled" by Congress to take income from the more productive?

Why do we define "poverty" in relative instead of absolute terms?

Questions such as these have not been adequately answered.

The national debate on reducing the growth of government spending should constantly include this question: "Why should the working families of this nation be forced to pay for this program?"●

SEVENTH ANNIVERSARY OF TURKISH OCCUPATION OF CYPRUS

● Mr. KENNEDY. Mr. President, 7 years ago Turkey invaded the Republic of Cyprus. Today, 30,000 Turkish troops continue to illegally occupy Cyprus, and 200,000 people remain separated from their homes and lands. Today we must renew our pledge to do all we can to restore, at long last, that nation to its own people.

On July 8, the latest round of the U.N.-sponsored intercommunal talks began. I call on Turkey and the Turkish Cypriots to take this opportunity to end their unacceptable record of intransigence and to come forward with serious proposals to achieve a just and lasting political settlement in Cyprus, which recognizes the legitimate rights of all Cypriots.

I call on the administration to press for such a settlement and to pursue the full implementation of United Nations Resolution 3212, including the withdrawal of all Turkish military forces from Cyprus, the return of all refugees to their homes, the cooperation of all parties in achieving a negotiated solution, with full peace and respect for human rights in Cyprus.

The people of Cyprus deserve far better than another year of occupation and

division. They deserve far more than anniversary after anniversary of the failure to achieve Turkish military withdrawal from their proud nation.

America and Turkey's other NATO allies must not allow stubbornness and shortsightedness to perpetuate the injustice against Cyprus, to weaken the southern flank of the alliance, and to further strain relations between Greece and Turkey—two key allies of the United States.

Mr. President, the tragic situation in Cyprus has festered too long. Let us today resolve that by next year we will work to see a new dawn of freedom, justice, and peace in Cyprus.●

FOREIGN CORRUPT PRACTICES ACT

● Mr. CHAFEE. Mr. President, in addition to the articles I submitted for the RECORD on Friday, July 10, I ask that an article which appeared in the Washington Post on May 21, and an article appearing in the June 22 U.S. News & World Report, both of which deal with the Foreign Corrupt Practices Act, be printed in the RECORD.

The material follows:

[From the Washington Post, May 21, 1981]

REAGAN REQUESTS CHANGES IN CORRUPT PRACTICES ACT

(By Martha M. Hamilton)

Reagan administration officials yesterday called for major changes in the Forign Corrupt Practices Act, including limiting the enforcement role of the Securities and Exchange Commission, the agency that brought the issue of overseas bribery by American firms to public attention.

U.S. Trade Representative William E. Brock said the administration supports substantial changes in the law proposed by Sen. John H. Chafee (R-R.I.). Democratic Sen. William Proxmire of Wisconsin characterized the proposed Chafee bill as a slug through the heart of the Foreign Corrupt Practices Act.

Brock and other administration officials testifying before the Senate Committee on Banking, Housing and Urban Affairs echoed the business view that the act has damaged American sales abroad—a negative they conceded is difficult to prove. Faced with uncertainties about what is proper and what is not, some companies have simply ceased trying to do business abroad, he said.

Chafee's proposed changes would clarify a murky law while maintaining strong sanctions against bribery, Brock said.

Among other things, the Chafee bill would eliminate a provision in the law that prohibits payments to an agent while "having reason to know" that the payment might be used to bribe a foreign official. It would also require that corporate records reflect only information that is "material" rather than keeping records in "reasonable detail." Critics of that approach say it would allow large companies to ignore all but the biggest payments.

Brock said that the administration also wants to remove accounting and bookkeeping provisions that require all publicly owned businesses, whether engaged in overseas trade or not, to maintain accurate books and records and a system of internal controls to guarantee that management knows how a company's assets are being used. Instead, Brock said, the administration prefers to set criminal sanctions for concealing information about illicit foreign payments.

The accounting and bookkeeping provisions represent "a significant extension of the jurisdiction of the SEC over business practices unrelated to the protection of investors and unnecessary for the effective operation of the prohibitions against illicit payments overseas," Brock said. SEC officials and former officials do not share that view.

"The accounting and record-keeping provisions are not an extension of our powers," said SEC Commissioner John R. Evans. Evans said that before the Foreign Corrupt Practices Act was adopted in 1977, the SEC believed it had the power to enforce the requirements later spelled out in the law. The agency recommended inclusion of the provisions, believing it "would be helpful for Congress to give it their endorsement," he said. "To take that endorsement away might be considered kind of a negative."

The SEC has not yet developed a position on the Chafee bill or the administration proposal.

"There's something to be said for 'Actions speak louder than words,' " said John Burton, former chief accountant for the SEC who now teaches at Columbia Business School. "I would view this as symbolic rather than an act that really deals with substance very much. Most companies are not going to dismantle their control systems because of this. But I think it is a bad message to send." Burton also said that most companies have already incurred any costs connected with setting up those systems.

Brock said the accounting and record-keeping requirements "are highly inflationary, having caused U.S. companies to develop expensive new accounting systems and to utilize costly accountants and auditors with no assurance from the SEC that such systems meet SEC requirements."

[From the U.S. News & World Report, June 22, 1981]

DOING BUSINESS ABROAD

(By Marvin Stone)

Here's a thorny question: In the interest of selling more goods overseas, is the U.S. going to have to relax its law that forbids American companies to pay off foreign officials and influence peddlers?

Three and a half years ago the Foreign Corrupt Practices Act passed through Congress without a dissenting vote. That law, strictly barring bribery, accurately expressed the American consensus at that time—and it still does. Of course, we still oppose bribery.

But now, after watching the effects of that 1977 law, many Americans are having second thoughts about the way it was written and the ways it is being applied. They see U.S. firms losing billions of dollars' worth of sales abroad because they can't make payments that foreigners demand. The business they lose is going to foreign firms that are willing—and able—to make such payments. The American share of world markets is decreasing, and the U.S. trade balance is suffering as a result.

So it is not surprising that moves are afoot in Congress—with the backing of the Reagan administration—to modify the 1977 law.

It is our opinion that some of the proposed modifications have merit. We refer specifically to such changes as those proposed in S. 708, a bill sponsored by Senator John H. Chafee (R-R.I.) and 13 other members of the Senate.

At the outset of any discussion of this bill, this should be made clear: It would not legalize bribery or other corrupt activities.

What the bill would do, primarily, is clarify the 1977 law and make it easier for businessmen to know what they may or may not do in making sales abroad. It would also reduce the complexity and cost of the bookkeeping a company must do to prove it is obeying the law.

Endorsing the bill in tesimony before a Senate subcommittee, U.S. Trade Representative William E. Brock said that, under present law, "many problems arise from confusion over what makes a payment a bribe."

To reduce this confusion, the bill adopts what seems to us a reasonable test: A payment is a bribe only if it is intended to induce a person to do something that violates the law or his legal responsibility.

True, the bill would permit some kinds of payments that are now proscribed and that to most Americans would appear to be bribery.

One such change is this: It would not forbid Americans to make payments that are considered legal in the country where they are made, even though they might be illegal in the U.S.

Sponsors of the measure point out that many countries, especially in the so-called Third World, do not have the same code of business ethics as the United States, and payments called criminal here are accepted in those countries as normal business expenses. American firms, barred from making such payments, are at a disadvantage because their foreign competitors are under no such restrictions.

Several businessmen told the subcommittee that they lost rich sales abroad because they could not match payments that foreign bidders make as standard practice. They added that foreigners tend to resent this country's attempt to impose its own code of conduct on their traditional ways of doing business, and often are reluctant to deal with American firms.

The Chafee bill also aims at other problems, such as: So-called grease payments commonly demanded by minor officials abroad before they will perform such simple legal duties as processing forms or unloading perishable goods, what is permitted as entertainment expenses or gifts, and the responsibility a U.S. firm must assume for acts of its foreign agents.

When the Foreign Corrupt Practices Act was passed, it was hoped that other countries would follow suit in regulating business. But that hasn't happened, and until it does, officials say, foreign companies will continue to profit at American expense under the present law.

The Chafee bill seems a reasonable attempt to give U.S. businessmen a better chance—without giving them a license to bribe.●

NRTA–AARP INCOME POLICY RECOMMENDATIONS

● Mr. SASSER Mr. President, in late November, our Nation will hold its third White House Conference on Aging.

We have made considerable progress in improving the economic well-being of the elderly since the first White House Conference on Aging was held in 1961.

But in many respects today, we seem to be going backward. Nearly 400,000 persons 65 or older were added to the poverty rolls in 1979, from 3.2 million in 1978 to 3.6 million in 1979.

Figures are not yet available for 1980. Most experts, though, expect another increase in poverty for the elderly.

The harsh reality is that a retirement income crisis affects millions of older Americans and threatens to engulf many more.

The administration's proposed cutbacks in social security will only intensify the economic plight that grips so many older persons now.

I oppose these cuts because I believe that they are unfair to older Americans.

A recent Louis Harris poll points out that the overwhelming proportion of Americans believes that the administration's economic policies will be inequitable for the elderly.

The Nation's largest senior citizen organizations—the National Retired Teachers Association and the American Association of Retired Persons—have developed comprehensive recommendations to strengthen social security's short-term financing as well as assure a sound, secure, and equitable system over the long term.

The associations' legislative council also called for changes to promote employment opportunities for older Americans, rather than discourage work.

In addition, the legislative council developed other important recommendations to strengthen the economic well-being of the elderly.

The entire NRTA–AARP income policy package deserves the close and careful consideration of all Members of Congress. It is a clear, frank, and thoughtful expression by people who fully understand the problems and challenges confronting older Americans.

Mr. President, I ask that the NRTA–AARP income policy recommendations be printed in the RECORD.

The material follows:

INCOME POLICY

THE ELDERLY'S INCOME SECURITY: SERIOUSLY THREATENED IF PRESENT ECONOMIC TRENDS CONTINUE

Throughout the 1970's, the nation has experienced historically high inflation rates, periodic recessions with their accompanying high rates of unemployment, and low (and recently negative) rates of growth in productivity, real wages and real Gross National Product (GNP). These economic trends are jeopardizing the degree of income security—inadequate though that may be—achieved by the elderly over the last fifteen years.

Inflation has been rapidly dissipating the purchasing power of all significant components of the elderly's income, especially those, like private pensions, for which little or no automatic compensation for inflation losses is available. Moreover, inflation in conjunction with the other economic trends is undermining the financial soundness of the public income support programs that serve the elderly. These economic adversities are rapidly driving up the costs of these programs while restricting the growth of resources necessary to fund them. Not only has it become virtually impossible to legislate expansions of government programs to provide needed benefits and services, but the nation's ability to deliver what has already been promised is being impaired.

The growth of government programs during the late 1960's and early 1970's increased the elderly's real income and dramatically reduced the incidence of poverty among them. But now continued inflation has begun to wipe away that progress.

By 1978, the elderly poverty rate, which had been 25% as late as 1969, had declined to 13.9%. But by the end of 1979, that poverty rate, under the influence of continuing high inflation, jumped to 15.1%, the largest increase since the Census Bureau began collecting such statistics.

The 1979 poverty data also revealed that the elderly, relative to younger population groups, are more vulnerable to the effects of inflation. While the aged's poverty rate escalated in 1979, the rate for persons under age 65 remained static at 11.1%. Additionally, rates of near-poverty (defined as income within 125% of the poverty threshold) for the elderly rose; in 1979, 24.7% of the aged were concentrated in this income category, compared with 15.2% of the under 65 population.

Other statistics demonstrate how economically disadvantaged the elderly continue to be relative to the rest of the population. In 1979, while only 9% of the non-elderly-headed households had annual incomes below $5,000 and only 21% of them had incomes under $10,000, 31% of the elderly-headed households found themselves in the former category while 62% were included in the latter. Even adding the cash-value of the in-kind benefits the elderly receive to their income levels cannot change the fact that the elderly, as a group, generally subsist on low and, in many cases, extremely inadequate incomes.

As for the future, the situation for the elderly appears bleak. Data Resources Inc. (DRI) forecasts that even if current government programs remain in place with no legislated cutbacks, the elderly's share of income relative to that of the non-elderly will decline sharply beginning in 1981. While the reasons for this decline are complex, the major factor remains the continuing high rate inflation.

Although in the past much progress was made in terms of improving the income status of the aged, this data indicates that the elderly are most vulnerable to inflation and that they are sustaining disproportionately large losses as a result of it. In short, continued high rate inflation could reduce the elderly to an economic situation worse than that which prevailed a decade ago when nearly one-third of them were poor.

INFLATION AND THE ELDERLY'S INCOME COMPONENTS

Inflation is dramatically altering the balance and relative importance of the various components of the elderly's income. It is constricting the "real" income received from private sources (such as private pension payments, income from savings, etc.). Little or no compensation for inflation is available for those forms of income and inflation rapidly erodes the value of the underlying assets. Consequently, the elderly's real total incomes are falling and an increasing share of the income support responsibility is being shifted to public programs like social security and Supplemental Security Income (SSI) which provide some degree of protection against inflation.

But even the public programs do not fully compensate for inflation losses. Although social security benefits and those of other public programs are indexed to the Consumer Price Index (CPI), they are not fully protected against inflation for two reasons: first, benefit adjustments occur long after inflation impacts on the purchasing power of the benefits; and second, the standard used in making the adjustments, the CPI itself, understates the true impact that inflation is having on elderly budgets.

The validity of this last point appears clear. Compared to the non-elderly, the elderly devote a much greater share of their income to basic necessities, particularly food, medical care, and fuel and utilities—items that have been increasing the most rapidly in price in recent years. As a result, the cost of living for the elderly has been rising faster than the cost of living for younger consumers. Between 1970 and 1979, the all-urban CPI rose an average 7.2 percent per year compared to 8.3 percent for food at home, 9.4 percent for fuel and utilities and 7.9 percent for medical care. Since 1970, these costs have risen at an average rate of 8.4 percent per year versus a CPI increase of 7.2 percent.

Since these high inflation rates among core necessities are expected to continue to outpace increases in the overall CPI in the 1980's, the CPI's understatement of inflation's impact on elderly budgets will continue as well. To compensate the elderly more fully for inflation under the public programs, automatic benefit adjustments should be made more frequently during periods of rapid inflation. Moreover, the index used in making the adjustments should be constructed so that it accurately reflects the elderly's expenditure patterns.

Given the precariousness of the elderly's income status in the current economic environment, the Associations will oppose legislative proposals to reduce or curtail cost-of-living protection presently available to the elderly, or specific groups among them, under the various government income support programs. Any such reductions would only accelerate the already rapid deterioration that is occurring in the elderly's real income position.

INFLATION AND THE RETIREMENT PLANNING OF CURRENT WORKERS

A continuation of high rate inflation holds serious consequences for current workers. Inflation makes their retirement planning difficult—if not impossible—because it creates large areas of uncertainty about the expected real income contribution of many traditional retirement income sources. Most private pension plans do not offer cost-of-living adjustments and many privately accumulated assets cannot be relied upon to produce income that will keep pace with inflation. In addition, inflation encourages consumption and discourages saving for retirement, a phenomenon which could foster greater dependence on government programs among the future elderly population. (See TAX POLICY for a discussion of savings incentives.)

Until the inflation rate is brought down to tolerable levels, it will severely constrict the amount of resources available for income support at a time when the elderly population will be expanding greatly. To avoid the potentially catastrophic consequences for the future elderly that the current combination of economic and demographic trends might otherwise entail, fundamental changes must be made in the income support structure to accommodate and help reverse these trends and, at the same time, assure the most effective and least wasteful allocation of resources possible. Such changes would give the future elderly reasonable prospects for achieving an adequate income, avoiding poverty and maintaining their living standards throughout their later years.

SHORT-TERM SOCIAL SECURITY FINANCING DIFFICULTIES

Social Security is faced with a serious short-term deficit. Congress has little choice but to develop a remedy for this deficit in 1981, since exhaustion of the Old Age and Survivors' Insurance (OASI) fund's contingency reserve is otherwise expected to occur in 1982. In the aggregate, the social security cash benefit programs could be facing as high as a $70 to $100 billion shortfall over the next five-year period.

This short-term deficit situation has been caused by adverse economic conditions. Higher than expected inflation rates have increased social security expenditures (by driving up benefit costs) while, at the same time, the combination of higher than expected unemployment rates and lower than expected real wage and real GNP growth rates have curbed revenue to the system.

Since these adverse economic conditions are not likely to subside significantly over the next few years and similar future events cannot be accurately forecast, the Associations recommend that general revenues be channeled into the system in a manner that specifically isolates and addresses the economic causes of the problem. Specifically, to augment the payroll tax mechanism, two

general devices should be established—one to compensate the system for a portion of the increased costs it must bear to finance automatic cost-of-living adjustments, and the other to replace some of the revenue lost by the system as a result of high unemployment rates and lower than expected productivity growth.

Proposals to reduce or tax social security benefits to deal with the short-term financing problem should be rejected. Given the elderly's increasing poverty rates, their disadvantaged income situation and the magnitude of the inflation losses they are already sustaining they represent one segment of society that should not be subject to legislated benefit curtailments. (See TAX POLICY section for further discussion.)

Mandating social security coverage for public employee groups has been proposed as a source of short-term social security revenue. The Associations oppose such measures on the grounds that employee groups which are presently not covered by social security should not be forced into the system, especially in the obviously unfair manner contemplated by these proposals. Instead, all such groups should have the option and be encouraged to elect social security coverage.

Also surfacing in the context of the short-term financing problem are proposals to finance all or part of the Hospital Insurance (HI). Medicare Part A program out of general revenue and, at the same time, shift part of all of the HI portion of the payroll tax to the cash benefit programs. The Associations view this proposal as an inappropriate and inadequate response to the financing dilemma. First, the amount of payroll taxes freed up by this proposal is likely to be insufficient to cure the short-term deficit. Second, it would not infuse general revenue into the cash benefit programs in a manner that would provide the kind of automatic protection from economic adversity that these programs need. Furthermore, over the longer term, funding Medicare out of general revenue will not only make expansions of program benefits difficult, but it could also weaken the entitlement concept of the program and lead to a means-testing.

SOCIAL SECURITY LONG-TERM FINANCING DILEMMA: COMPREHENSIVE CHANGES ARE NEEDED

Over the long term, social security's financial situation will reflect the effects of several major trends. First, there are the previously discussed economic trends which will continue to restrict the amount of resources, available for social programs. Second, there is the demographic trend which portends a relatively smaller working population being called upon to support a larger, older population. Third, there is the declining elderly labor force participation rate which could exacerbate the consequences of the demographic trend and cause a dangerously high degree of dependence among the elderly on government programs for income. Finally, there are the changing family and social patterns which are causing the systems benefit and financing structures to be increasingly perceived as unfair, particularly by working wives and single workers.

The combined impact of all these factors will make it clearly undesirable and probably impossible to continue social security as presently structured into the next century. If that were attempted, either a massive payroll tax increase or benefit cuts of equal magnitude (through such steps as raising the age for full benefits and/or price indexing the earnings record or benefit formula used in calculating benefits) would be prompted.

To avoid having to choose between large payroll tax increases and a piecemeal dismantling of the system's benefit protections, the Associations recommend comprehensive changes in the system's benefit and financing structures. The primary goals of changes in social security, as well as changes in the other components of the income support structure serving the elderly, must be the elimination of poverty and reasonable guarantees that older persons will be able to achieve and maintain an "adequate" income. To be adequate, an older person's income should be sufficient to maintain in the later years of life the highest standard of living achieved in earlier years. Social security must continue to be relied upon to provide the major component of the elderly's income. But to achieve the adequacy goal, social security must be reinforced by income from private sources, particularly employment, private pensions, savings and other assets. To the extent that income from all sources is insufficient, then the underlying welfare programs should be relied upon to guarantee at least a minimum income above the poverty threshold.

Any plan for changing social security to accommodate the trends and achieve these goals must be gradually phased in. Lengthy transition periods must be provided to protect the reasonable benefit expectations of people.

To be comprehensive, the changes must attempt to accommodate and, in some cases, help reverse the trends which are adversely affecting the system. These changes should encourage employment (especially among the elderly), assure that scarce resources are utilized in an effective and efficient manner, improve public support for the programs, and alter the financing structure so that it contributes to, rather than detracts from, the nation's economic health.

To achieve these objectives, social security, after having undergone comprehensive change, should include the following:

A benefit structure that strongly encourages older persons to maximize their work effort and delay their retirement dates;

A more diverse and less inflationary financing structure that would use separate tax mechanisms to finance social security's divergent functions of earnings replacement and social adequacy; and

A benefit structure which clearly separates the system's earnings replacement and social adequacy objectives and, in the process, treats individual workers (particularly working wives and single individuals) in a more equitable manner and targets benefits in a more cost-effective way.

CHANGING SOCIAL SECURITY SO THAT IT PROMOTES RATHER THAN DISCOURAGES ELDERLY WORK EFFORT

A number of changes need to be made in social security in order to promote elderly labor force participation. These include the phasing out of work disincentives, including the earnings limitation and the phasing in of work incentives such as larger benefit credits for those who elect to delay their retirement past age 65.

Because the earnings limitation is a major and visible work disincentive, it should be phased out over a fixed number of years for persons 65 and over. Having a factor in social security that causes people to limit their work effort imposes a significant net "cost" on society. It is estimated that the economic "cost" in terms of the value of the lost output of goods and services and the total of lost tax receipts that results from having the earnings limitation is far greater than the "cost" of the additional social security benefit outlays that repeal would entail. A Social Security Administration (SSA) study released in late 1979 concluded that the abolition of the social security earnings test for persons age 65 and over would generate enough revenue ($1.65 billion) from payroll and federal income taxes alone to offset nearly 80% of the $2.1 billion which SSA has estimated it would cost to repeal the test.

In order for social security to provide strong work incentives, the Associations recommend, as a first step, that the delayed retirement credit be substantially increased. Under present law, individuals who elect to delay applying for social security benefits are entitled to a 3% bonus (beginning in 1982) for each full year they continue to work after age 65. By increasing the delayed retirement credit to a level of 8 to 10%, the credit would provide a strong incentive to delay retirement.

When considering changes in social security that would encourage elderly employment, it is important to rule out proposals that appear as though they should be—but actually ought not to be—considered in this context. Under one such group of proposals, the age at which full social security benefits are available would be raised from age 65 to 68. Some of these proposals envision that, at the same time, the early retirement age would be raised from 62 to 65. Presumably the age for entitlement to Medicare would also be raised to age 68.

This proposal appears to provide a simple, straightforward response to the adverse demographic and employment trends. However, in our opinion, the age 68 proposal—simplistically appealing though it may be—will not yield the additional work effort its proponents expect and at this time would be the wrong policy option to exercise. Not only would these "age 68" proposals substantially decrease and, in some cases, eliminate benefits for future older persons between the ages of 62 and 65 who are involuntarily unemployed or physically unable to continue working, but they would also represent a highly visible benefit cut (and reduction in the expected return on contributions) that could undermine younger workers' support for the programs.

Although life expectancy rates have been increasing, nevertheless, the majority of the elderly, particularly minority groups, are continuing to elect early retirement benefits despite the 20 percent actuarial reduction in benefits they incur when they elect benefits at age 62. One recent survey indicated that about half of the persons surveyed who had recently retired cited impaired health as the reason for their retirement decision.

These trends indicate that, instead of getting additional work effort and therefore additional tax revenue from the future elderly population, the age 68 proposal would merely cut social security expenditures, leaving a large segment of the future elderly population to subsist on substantially reduced benefits with an enhanced likelihood of poverty.

To be successful in getting the elderly to maximize their work effort, the social security benefit structure must be changed so that first, it ceases to penalize older persons for continuing to work, and second, it clearly compensates them for working longer. Changes in the benefit structure that have, in the aggregate, good prospects for increasing elderly work effort will, in turn, help raise the tax revenues needed to finance social security (as well as other income support programs) at benefit levels that will be adequate for the future, larger, elderly population.

SEPARATING SOCIAL SECURITY'S EARNINGS REPLACEMENT AND WELFARE/SOCIAL ADEQUACY FUNCTIONS TO ACHIEVE A MORE EFFICIENT, LESS WASTEFUL UTILIZATION OF SCARCE RESOURCES

The current social security structure contains a mix of earnings replecement and welfare/social adequacy functions. To carry out the earnings replacement function, benefits are loosely tied to prior earnings histories. To carry out the welfare/social adequacy functions, benefits are computed utilizing a heavily weighted formula which provides relatively higher benefits (in relation to prior earnings) to lower wage-earners and relative-

ly lower benefits to higher wage-earners. Minimum benefits are also provided with the intention of assisting long-term, low wage-earners. In addition, benefits are also provided to workers' dependents whether or not they have ever contributed to the system.

Certainly, the carrying out of both earnings replacement and welfare/social adequacy functions is appropriate within the context of programs that constitute social security. However, social security, as currently structured, attempts to perform these often divergent and conflicting functions utilizing one benefit structure and one tax mechanism—the payroll tax. This intermingling of functions has led to many benefit and payroll tax inequities and generated much waste and duplication. Indeed, it has financially impaired the system's ability to achieve fully either of the goals of sufficient earnings replacement and the elimination of poverty.

As a result of the intermingling of functions in the current structure, many higher-income persons, for example, receive unintended benefit subsidies from the system's welfare/social adequacy elements and, ironically, these benefits are largely financed by the tax payments of lower and middle-income workers and their working spouses. At the same time, many lower-income persons who are truly needy and who have borne a disproportionate share of the payroll tax burden throughout their working lives are unable to attain even a bare subsistence level of living on their social security benefits. These situations have led to the perception by an increasing number of workers, especially wives who work outside of the home and single workers, that the system's benefit and financing structures are unfair, wasteful, and do not yield a fair rate of return on their contributions.

In the past, social security mixed the earnings replacement and welfare/social adequacy functions without suffering any significant decline in public support. A favorable ratio of beneficiaries to workers and healthy economic growth rates made it financially possible for the system to provide large benefits in relation to what beneficiaries had contributed to the system throughout their working lives. In the future, however, beneficiaries may receive diminishing, and perhaps in some cases, negative rates of return on their social security contributions. This is likely to occur due to several factors: the dramatic age shift in the population, the large payroll tax increases that are already scheduled (and the additional ones that are expected), the possibility of large benefit cuts (such as raising the age for full benefits), unfavorable economic conditions, and the relative scarcity of financial resources.

Under these conditions, the system is bound to be scrutinized as to how it functions, who pays the taxes and who receives the benefits. Therefore, to reduce the increasing benefit and tax inequities inherent in the present structure and assure that the system as a whole operates in a cost-effective manner, the Associations recommend that social security's earnings replacement function be clearly separated from its welfare/social adequacy functions. These functions should be retained within the social security system's total structure but sorted out between at least two separate benefit and financing mechanisms.

The earnings replacement functions should be carried out through a benefit structure which utilizes a proportional (or uniform) benefit formula and stresses individual equity in awarding benefits. This benefit structure should be financed from payroll taxes. The welfare/social adequacy functions should be carried out through a benefit structure specifically designed to meet those objectives. This latter structure should be financed out of general revenues generated from diverse and progressive tax mechanisms. Since the escalating payroll tax burden, which is inherently inflationary and leads to higher unemployment, only aggravates current economic problems and makes them more intractable, it makes sense to shift the financing of social security's welfare/social adequacy functions to alternative and less economically damaging revenue sources.

Should healthy economic growth rates such as those the nation enjoyed in the 1960's fail to resume in the future or should the cost pressures that will accompany the aging of the post-war baby boom population prove more difficult to deal with than is anticipated, then at least a restructured system would allow future policymakers to make coherent and rational choices regarding the allocation of scarce resources. Government would be better able to target benefits on the more economically disadvantaged segment of the elderly population. This is something that is nearly impossible to do under social security's current structure.

OTHER POSSIBLE CHOICES FOR DEALING WITH SOCIAL SECURITY'S LONG-TERM DEFICIT

Given the magnitude of the projected long-term social security deficit, proposals have been advanced that would alter the way in which future benefit awards would be computed. Generally, these proposals would substitute price indexing for the wage indexing in the current method used to calculate initial benefit awards. Since increases in wages generally outpace increases in prices, these proposals would greatly reduce future social security benefits and do damage to the economic well-being of the future elderly.

According to the recent Social Security Administration estimates, using price-indexing in computing initial benefits would cause replacement rates (the rate of initial benefit awards to final years' earnings) for average earners (retiring at age 65) to fall from 51.1% in 1980 to 33.2% in 2010 and to 22.3% by 2055. Under price-indexing, social security income for most earners would be reduced by over one-third by 2010 and cut in half by 2055 when compared to the income that the present system yields to current retirees.

Clearly, these price-indexing proposals would substantially shrink the role of social security, causing it to contribute far less than the current system would to the future income of the elderly. Proponents of these proposals argue that the purchasing power of future benefit awards would be maintained at current levels under a price-index system. This argument, however, attempts to mask the fact that price-indexing would cause the living standards of the future elderly to decline greatly, because a far smaller share of pre-retirement earnings would be replaced by the system. Since social security is, and is likely to continue to be, the primary source of income for the elderly, it is inevitable that price-indexing of the benefit formula will not only cause a significant deterioration in living standards, but also a resurgence of extremely high poverty among the future elderly.

In attempting to deal with social security's long-term difficulties, Congress can choose between two reform strategies. Either it can risk an erosion of public support by attempting to perpetuate the system's present benefit and financing structures and thereby be forced either to raise payroll taxes or reduce benefits. Or it can attempt to restructure the system so that the system, first, encourages (rather than tries to force) older persons to work longer and elect to delay their retirement, and, second, allocates scarce resources as cost efficiently and effectively as possible by using separate benefit and financing structures to carry out the divergent earnings replacement and welfare/social adequacy functions. The Associations support this latter reform strategy. Not only would it relieve cost pressures on the system, make it a more equitable and therefore popular program, and improve its financial viability, but it would also increase the future elderly's prospects for achieving income adequacy and avoiding poverty.

SUPPLEMENTAL SECURITY INCOME PROGRAM RECOMMENDATIONS

The Supplemental Security Income (SSI) Program was created in 1972 to provide policymakers with a more effective instrument for reducing the extremely high incidence of poverty prevailing among the elderly. Even though socal security benefits have been increased substantially, especially during the late 1960's and early 1970's, SSI benefits have been needed by many elderly persons who either lack social security coverage or receive very low social security benefits.

However, even receipt of both social security and SSI benefits still fails to guarantee a minimum income above the poverty threshold. For aged families with SSI and social security income alone, 50 percent were living below the official poverty line in 1977; for single persons in these circumstances, 60 percent were in poverty. To address this situation, the Associations recommend several improvements in the SSI program.

With respect to payment levels, the federal portion of the SSI payment should be increased to at least 125 percent of the poverty level as defined by the Census Bureau. State supplements to the federal payment must also be encouraged so that recipients can be compensated for regional cost-of-living variations.

Because the participation of the elderly poor in the food stamp program has been extremely low, food stamps should be cashed-out for SSI recipients. Until this is done, however, the Congress should refrain from further reducing food stamp benefits for older recipients and should restore the semi-annual adjustment in benefits that was eliminated by the 1980 Food Stamp Amendments.

SSI's partial disregard of unearned income (usually social security benefits) should be made on a progressive rate basis (at least 20 percent disregard) rather than on a flat dollar ($20 per month) basis. Due to automatic cost-of-living increases in social security benefits, many SSI recipients have either lost their SSI eligibility or experienced a net reduction in total income from SSI and social security combined.

In order to encourage employment, SSI's $65 per month earned income disregard should be raised substantially and thereafter, automatically indexed to wages. Also, public service job opportunities and job training and referral mechanisms should be created specifically for SSI recipients.

The Associations also recommended elimination of the one-third SSI payment reduction imposed upon individuals who live in the household of another. This arbitrary reduction discourages the elderly poor from living with relatives and often results in their premature institutionalization.

Finally, SSI's current assets limitations of $1,500 for individuals and $2,250 for couples should be substantially increased and eventually eliminated. An estimated 12 percent of elderly families with incomes below SSI payment standards were denied benefits because of the assets test.

ENERGY ASSISTANCE

Between 1972 and 1979, fuel costs increased almost 200 percent—three times more than the increase for any other item in the CPI. This escalation in the cost of fuel has caused many low and moderate income elderly persons to face severe financial (and physical) hardship. The elderly, who are living on relatively fixed income and already using less energy on a per capita basis than other age

groups, have little financial ability to absorb higher fuel costs and little flexibility to cut consumption significantly.

Since escalating fuel prices can no longer be considered a temporary phenomenon, much needs to be done to expand, integrate and better coordinate recently created federal, state and local energy relief assistance programs.

With respect to the Low Income Energy Assistance Program, income eligibility standards should be expanded to include at least those with incomes up to 150 percent of poverty level; sufficient funds should be made available to pay benefits to all who are potentially eligible; older persons should be allowed a special exemption for medical expenses in determining eligibility to take account of their higher out-of-pocket costs; and, finally, the program should continue to be administered through block grants to states.

As part of the program's federal guidelines, states should be required to implement comprehensive energy assistance programs that include provisions for local coordination of all relevant social services, and to develop local outreach plans to assure broad dissemination of information, to the elderly who tend not to participate in these types of programs. Finally, the states should be encouraged to provide the bulk of energy assistance in the form of direct cash payments.

National energy relief assistance efforts should also emphasize weatherization and conservation. The materials and incentives to weatherize and the information on weatherization and conservation must be made available to the elderly. In the long run, this would provide one of the most cost effective methods of energy assistance.

EMPHASIZING EMPLOYMENT AS A SOURCE OF INCOME

Given current economic, demographic, and elderly labor force participation trends, government policy ought to permit and encourage greater elderly labor force participation. Increased elderly employment activity would generate additional tax revenue for use at all levels of government. The economy in general would benefit from the added value of goods and services produced. The elderly would benefit by being able to supplement their incomes from other sources with income from employment, thus increasing their ability to maintain their standard of living and do it with a form of income (wages) that has better prospects for keeping up with inflation than most other forms of income. Given the national commitment to the maintenance of reasonable levels of income among the elderly, any share of that income that can be generated through the work effort of willing and able elderly individuals represents a share that need not be borne by other workers through taxes.

To reverse the elderly's labor force participation trend, a national, coordinated older worker employment strategy is needed. One component of such a strategy entails the elimination of existing elderly employment barriers, the greatest of which is mandatory forced retirement.

In 1978, Congress enacted amendments to the Age Discrimination in Employment Act (ADEA) that prohibit mandatory retirement before age 70, with a few exceptions, and protect most federal employees completely against age-based retirement. These amendments, however, do not go far enough. First, we recommend that forced retirement based solely on age should be completely prohibited under ADEA. Statutory sanctions which exist in current law, such as the bona fide occupational qualification provision, should be eliminated. Finally, the Equal Employment Opportunity Commission should enforce the ADEA as vigorously as possible to assure that the Act's full potential is realized in the case of middle-aged and older workers who continue to be victims of various discriminatory practices.

The second major component of an older worker employment strategy involves the elimination of existing work disincentives. Although the social security earnings limitation and other factors wtihin the structure of the social security programs have already been discussed, other factors exist which serve to discourage work effort by older groups. One such disincentive that must be addressed is a law which mandates that states reduce a person's unemployment compensation by the amount of any pension income received. Although the law was amended in 1980 to limit the applicability of the offset, a person's unemployment compensation will still almost always be reduced by one-half of the amount of any social security benefits received. The Associations recommend that the unemployment compensation offset be repealed in its entirety.

The third component of an older worker employment strategy involves the creation of strong work incentives—some focused on the older workers themselves, others on potential employers. One such incentive focused on the individual worker, an increased delayed retirement credit, was discussed in the context of social security. However, other incentives could be created that would fall outside of social security. For example, credits against federal income tax liability could be established for older workers who avail themselves of job training or retraining programs that are designed to prevent skill obsolescence.

To provide employers with incentives to employ and/or retain older workers, the federal tax structure appears to be the most appropriate vehicle. For example, the employer portion of the social security payroll tax that would otherwise have to be paid with respect to older workers could be reduced or eliminated. A tax credit for a certain portion of the older worker's wages could also be used to encourage employers to hire them. Such changes would effectively reduce the cost of hiring older workers, compensating to some extent for any real or imagined productivity decline associated with age that an employer might otherwise entertain. These changes would also tend to counter any disincentive effect that the minimum wage might have on an employer's willingness to hire or retain an older worker. In addition, the tax laws could be used to encourage employers to introduce a host of job training, retraining, part-time and flex-time programs aimed at older workers.

To complement the other components of an older worker employment strategy, job opportunities must be made available to older workers through federal government employment programs. At present, there are only two such programs—the Senior Community Services Employment Program (SCSEP), funded under Title V of the Older Americans Act, and the Comprehensive Employment and Training Act (CETA) Program.

The SCSEP is the only categorical program focused exclusively on older workers. It provides a small number (50,250) of part-time jobs for workers age 55 and over who have been chronically unemployed and are below the poverty level at program entry. This program emphasizes on-the-job training and placement of trained workers in permanent unsubsidized jobs.

The Associations support increased funding for SCSEP so that the number of jobs provided by the program can be expanded. SCSEP has been an effective program, free from fraud and abuse. But it has only begun to fill the large need which the low-income elderly population has for jobs.

Over the longer-term, a nationwide, categorical, centrally directed older worker program like the SCSEP should be created that would include full as well as part-time jobs.

The other primary vehicle for dealing with the employment difficulties of older persons is CETA. Older worker participation in CETA, however, has been well below what might be expected on the basis of the number of unemployed older workers.

In an attempt to correct this situation, Congress added to the 1978 CETA Amendments an older worker section and an emphasis on displaced homemakers. These Amendments require prime sponsors to submit comprehensive plans which must describe specific services for those workers facing severe handicaps in obtaining employment, including those 55 years of age or vision be more effectively implemented and older. The Associations urge that this probacked up by adequate funding to enable CETA manpower programs to respond to the special needs of older workers. Should Congress decide to phase out or eliminate the CETA program, the needs of the elderly workers should be addressed in any program that replaces it.

THE PRIVATE PENSION SYSTEM: CURRENT INADEQUACIES AND FUTURE POTENTIAL

The Associations have always supported reform and expansion of the private pension system so that it would become, over time, a more universally available and more significant source of income for the elderly. However, there are clearly many inadequacies in the private pension system as it exists today. Only about 25 percent of persons age 65 and over presently receive private pension benefits. Moreover, since less than half of all workers in the private sector are covered by a pension plan and only 25 percent of the total working population age 18 and over has acquired a right to receive benefits (i.e. have become "vested") from a pension plan provided by their current employer, the private pension system is likely to continue to fall far short of being the universally available source of supplemental retirement income that it ought to be.

In addition to lack of coverage, there are other serious inadequacies. Only about 5 percent of all private pension plans, for example, provide automatic inflation adjustments and, even then the adjustments are usually limited to a maximum of around 3 percent a year. Although many more plans provide ad hoc adjustments, the private pension system as a whole provides very little in terms of compensation for the inflation losses recipients sustain with respect to their private pension benefits.

Clearly, many individuals are not being well served by the private pension system. Although the Employee Retirement Income Security Act (ERISA) sets minimum vesting standards for pension plans, these standards do not guarantee that plan participants will actually acquire a right to a pension. Not only do those who fail to satisfy vesting requirements fail to receive any benefits, but they also suffer serious impairment of their retirement planning efforts because, while they were participating in the pension, they were barred by law from establishing and contributing to an Individual Retirement Account (IRA) on their own. (See TAX POLICY for further discussion.)

Even for those who acquire a vested right to a benefit plan, job change (i.e., "mobility") is still a problem. Pension rights and credits earned by a worker are very rarely transferable (i.e., are not "portable") from the pension plan of one employer to that of another.

The private pension system's failure to provide universal coverage, adequate inflation protection, early vesting and portability of pension rights and credits has seriously constricted its importance as a reliable source for a significant amount of supplemental retirement income. Clearly, social security has been far more successful in overcoming the

inadequacies associated with private pensions. However, there is one major factor that makes it unlikely that social security alone could ever provide an adequate retirement income and displace the private pension system—social security's funding.

Social security is funded on a pay-as-you-go basis. That means that current payroll tax receipts are used to pay current benefits. However, in the case of private pension plans, assets are set aside in trusts to cover benefit obligations as they accrue. Thus they are said to be advance funded.

Advance funding of a portion of the cost of providing an adequtae income for the future elderly population appears increasingly desirable as a matter of public policy. The most important reason is that it assures that the post World War II baby boom population will, in effect, have savings of their own, and will not be totally dependent on a pay-as-you-go system for retirement income. A pay-as-you-go system, such as social security, would have to increase tax rates sharply to provide an adequate level of income for future retirees at a time when the proportion of active workers to retirees is diminishing. Additionally, since advance funding provides savings to finance investment, the private pension system is being looked upon increasingly as a tool for fostering economic growth.

While a portion of social security could be advance funded, there would be serious problems with this approach. Control of a tremendous pool of capital would be centralized in a single source, and investment decisions might end up being removed from marketplace considerations.

Given these factors, the Associations recommend that the private pension system be called upon to assume responsibility for providing a more significant and more universally available share of the income of the future elderly and that necessary changes be made to assure the full and efficient discharge of that responsibility. To start, present law (ERISA) should be amended to shorten vesting periods and a mechanism for pension portability should be designed and implemented. For example, a central clearinghouse could be created to act as a "bridge" between pension plans so that credits can be readily transferred. Additionally, the Associations are favorably disposed to a proposal outlined by the President's Commission on Pension Policy that would require all employers to provide a minimum amount of pension coverage for their workers.

When put in final form, we would expect the Commission's proposal to express a strong preference for defined benefit as opposed to defined contribution plans. A defined benefit plan provides a pension according to an average of the highest years' earnings. This type of plan thus contains an implicit inflation adjustment mechanism, which virtually assures that upon retirement the worker will receive a benefit that will have kept pace with the inflation which occurred while that benefit was being earned. In the case of defined contribution plans, however, the employer simply puts funds aside for the worker and the worker assumes the risk that the inflation which occurs before retirement may have eroded the value of these funds.

If the future elderly are to be better able to maintain their living standards throughout their later years of life, ways must be devised to mitigate the effect of inflation on private pension benefits from the time they are awarded. Under the present legal framework, the Associations know of no mechanism for mandating cost-of-living adjustments without risking massive pension plan terminations by employers because of the large cost increases the making of such adjustments would entail. However, those employers should be induced to provide at least some innation compensation to their retirees through, for example, tax breaks, the extension of federal labor law to specify that retirees' benefits are a mandatory subject of collective bargaining, and the issuance by the federal government of indexed bonds that would be available to private pension plans and would guarantee a real rate of return.

In another respect, private pension plans are going to have to change to treat older workers more fairly than they presently do. Under a current Labor Department interpretation of ERISA and the ADEA, employers do not have to provide additional pension credits to workers who stay on the job beyond age 65. This interpretation discourages older workers by denying them any additional deferred compensation despite extra years of work. Moreover, these older workers may actually lose some of their benefits if the plan's payments do not commence until the workers actually retire. The Equal Employment Opportunity Commission, which enforces the ADEA, could change the interpretation in this area, but legislation appears needed to remedy the problem.

One final element in the existing pension structure that must be strengthened and extended is the guarantee of pension benefits which ERISA provides through the Pension Benefit Guaranty Corporation. In the 96th Congress, an effort was made to cut back on guarantee levels in the case of multi-employer pension plans. This effort was defeated with respect to current retirees and those within three years of a plan's normal retirement date. However, future retirees receiving benefits from multi-employer pension plans that get into financial difficulties could see their promised benefits reduced. This is a dangerous precedent which should be reversed.

OTHER PRIMARY RETIREMENT SYSTEMS

Although social security is generally thought of as the basic component of the elderly's income, other existing primary retirement systems such as the federal civil service retirement system, the railroad retirement system, and the approximately 6,000 state and local systems cannot be ignored, because these supply the basic income component for the retirees they serve. Since many of the states and local systems are already integrated with social security, they would change as social security changes over time. With respect to non-integrated state and local retirement systems, the trend has been toward consolidation into larger county, regional or statewide systems. That trend should continue.

Given the millions of retirees, their dependents and survivors who are served by the civil service, railroad and other non-social security federal retirement systems, their financial well-being is a matter of concern to the Associations. To the extent that these systems may face financial difficulties in the future, detailed knowledge of these difficulties and plans to avoid them should be made public well in advance to allow ample time to avoid any potential crisis.

While recent attempts were defeated that would have reduced the number of cost-of-living adjustments (and thus the degree of inflation protection) for federal retirees from twice to once a year, these efforts are likely to be renewed. The Associations will continue to oppose such efforts because even semi-annual adjustments do not fully compensate retirees for the inflation losses they are incurring with respect to their benefits. Additionally, the Associations have consistently opposed legislation that would deliberalize retirement systems in a manner that defeats the reasonable benefit expectations of persons who are retired or are about to retire.

Finally, with respect to the primary state and local retirement systems, there is an increasing need for national fiduciary standards to protect pension funds and assure sound investment practices. The security of these benefits can be too easily jeopardized if assets are mishandled or not invested solely in the interest of employees and beneficiaries.

OTHER SOURCES OF INCOME

In addition to social security, employment and private pension plans, other savings and retirement income instruments, like Keogh plans and IRA's, must continue to be relied upon as potentially significant sources for supplementing income during the later years of life. (See TAX POLICY for further discussion.) In addition, privately accumulated savings will have to be relied upon to contribute significantly to the income of the elderly.

However, private savings, as an important source of income is gravely threatened. High inflation is rapidly diminishing the value of small savings accounts which are widely held by the elderly, but which continue to pay interest rates that are artificially constrained at levels well below the inflation rate by the Federal Government's Regulation Q. Even though the Regulation Q ceilings are to be phased out, little progress has been made in that direction. The Associations therefore continue to advocate that this regulation be eliminated immediately so that interest rates may rise to free market levels. Not only would interest income to present elderly small savers increase, but younger workers would be encouraged to save more for their retirement. In addition, highest interest rates would help make saving an attractive alternative to consumption and help dampen inflation at the same time.

While much can be done to encourage the growth and expansion of private savings and other sources of income on which the elderly have traditionally relied, new sources should be explored. One potentially important new income source is the reverse annuity mortgage (RAM). Under this type of financial arrangement, it would be possible for an older person to turn the appreciating value of his home into a steady source of income while still retaining both possession of the home and the title to it during his lifetime.●

THE NOMINATION OF DR. C. EVERETT KOOP

● Mr. JEPSEN. Mr. President, I call attention to an article which appeared in the July 19, 1981, issue of the Washington Post entitled, "Dr. Koop is the Man For the Job."

I wholeheartedly commend the author of this article, Mary Meehan, for her astute analysis of the pending nomination of Dr. C. Everett Koop as U.S. Surgeon General.

The article follows:

DR. KOOP IS THE MAN FOR THE JOB

(By Mary Meehan)

If Congresses lets President Reagan appoint the person he wants for surgeon general of the United States, he will name Charles Everett Koop, a brilliant pediatric surgeon who currently holds the post of deputy assistant secretary for health. But Dr. Koop has the misfortune of being 64 years old—just over the age ceiling for the job of surgeon general. He has the added misfortune of having political opponents in Congress who, although on record against age discrimination, are using the age limit to delay his nomination. The usual faint

whiff of fakery floats over Capitol Hill as liberal Democrats try to explain the difference between their principles and their actions, and as the 68-year-old speaker of the House helps block the appointment of a 64-year-old.

Age, of course, has nothing to do with the real issues at stake. No one suggests that Koop is over the hill or in the least bit decrepit; in fact, he appears to be healthier and more vigorous than many younger men. The main issue is abortion of Koop's articulate opposition to it. He is a special target of the proabortion lobby because, prior to joining the government this year, he served on the boards of three of the most effective right-to-life groups, spoke and wrote strongly against abortion, and helped put together the antiabortion movie, "Whatever Happened to the Human Race?" The movie, and a book with the same title that Koop coauthored, suggest that abortion, infanticide and euthanasia are connected, that one leads to the other. This is, to say the least, an unpopular view among supporters of abortion.

It was said of the great Confederate cavalry leader, Nathan Bedford Forrest, that he won his battles by always reaching the scene "fustest with the mostest."

Dr. Koop's opponents managed to do the same thing in reaching the media. His friends and family probably do not recognize him as he appears in the press. One observer suggests that Koop has been made to appear as a "bare-foot fundamentalist down from the hills," and others that he has been painted as a "neanderthal" and a "jerk."

To some extent these impressions result from deeply rooted stereotypes about antiabortionists; and to some extent they result from quotes taken out of context from the doctor's speeches and given the worst possible interpretation. Newsweek, for example, lifted one vague sentence from a Koop speech to support its contention that "he has no brief for equal opportunity for women." In fact, he was training women surgeons long before this was popular. Dr. Louise Schnaufer, one of the surgeons he trained and worked with for many years, says that "he's trained a lot of women, and I think he's all for women in medicine. . . . He's very favorable."

Similarly with Koop's religion, which has been pictured as a negative force in his life, yet is clearly a constructive one.

A Presbyterian and an evangelical, he takes his religion seriously as a guide to action. He has long worked with a nondenominational agency called MAP International to provide substantial medical aid to Third World countries. He and his wife took an orphan into their home and raised her with their own children, and he helped set up an adoption agency in Philadelphia to find homes for other children who needed them.

His approach to religion includes humility: He has told parents who have tried to thank him for aiding their children, "My surgical skills are a gift from God. Thank Him for them." And he is not superficial about religion: Acknowledging to one interviewer that he had prayed before a critical operation, he added, I don't pray in the sense of trying to cast a magic spell. Praying doesn't necessarily mean asking for something, you know. There's a lot of value in just sitting still and listening.

While allegations of religious fanatacism and antiwoman attitudes have been used against him, the up-front opposition to Koop is based on charges that he is unqualified for the job of surgeon general. This opposition is led by the American Public Health Association, whose executive director says that Koop's position on abortion has nothing to do with their opposition to him. Right-to-life lobbyists find this hard to believe, since APHA has long been active on the proabortion side. But its charges about lack of qualification have been widely adopted by editorial writers and others, so they are worth a careful look.

The public health professionals do not dispute Dr. Koop's international reputation as a pioneer in pediatric surgery. He helped make anesthesia safe for children, did intensive work on the treatment of children with cancer, and performed difficult surgery in the separation of Siamese twins and in other cases previously thought to be hopeless. His awards include the highest that the French government bestows, the Legion of Honor.

In addition, Koop has accumulated much administrative experience in building and leading the outstanding pediatric surgery department at the Children's Hospital of Philadelphia. (This is something the public health people do not talk about; listening to them, one might have the impression that Koop is a Lone Ranger type.) And his whole record is one of much personal interest in his patients and their families. In 1978 he made a remark that sounds rare indeed for a great surgeon: "If you told me that I could never operate again, that would not bother me. But if you told me I couldn't have a relationship with patients' families I would be upset."

Given all of this, the average layperson is likely to think that we would be lucky to have Koop as chief health officer of the country. But the public folks say that private medicine is focused on the cure of ailments in individuals, while public health is concerned more with prevention of disease in entire populations.

Dr. William H. McBeath, executive director of the American Public Health Association, recently told a congressional committee that the "almost exclusive orientation for one-to-one, provider-patient relationships, so advantageous for the clinician, can actually be a disadvantageous distortion for the community practitioner committed to the broader target of equitable programming for a total population."

"If Dr. Koop's reputation were that of a narrow-gauged, "cut and run" surgeon, McBeath might have a point. But Koop's whole career indicates the very opposite of that. And he has extensive volunteer experience with public health problems in Third World nations: working against a dysentery epidemic in the Dominican Republic; teaching young women of an isolated Indian tribe in Mexico to dispense antidysentery and antiworm medicines, vitamins and protein supplements; helping set up a medical school in Ghana. He also established a fellowship program to send medical students to rural hospitals in Third World nations, so they could obtain a realistic experience of international medicine and possibly decide on careers in it.

The public health professionals appear to be unimpressed with all of this, which leads one to believe that they are rather hard to please. There is also a hint of self interest in their position; while they do not say it this way, one message that comes through loud and clear is: "This is our turf and we're going to keep it." The APHA leaders make a point of saying that never before in its 109-year history has their group opposed the nomination of anyone to be surgeon general. But this becomes somewhat less impressive when one discovers that the decision to oppose Koop was made by a 16-member executive board. And APHA president Larry J. Gordon, who started the public controversy last March when he wrote President Reagan in opposition to Koop, is not even a doctor. He is an environmenal health specialist.

All of which brings us back to the troublesome issues that underlie so much of the hostility to Koop: His opposition to abortion in general and to "selective abortion" in particular. Koop notes that his position "is not so outlandish," that it is shared by the president, the secretary of health and human services and the assistant secretary for health. "I'm always amazed to see how their statements arouse no ire," he remarks, "but things I said two years ago, I have to die for." The list of abortion opponents outside the political right includes Lindy Boggs, Thomas Eagleton, Mark Hatfield, Jesse Jackson, Mary Rose Oakar, Graciela Olivarez and William Proxmire. Koop has some good company.

But he reached his position on his own, and largely as a result of his 35 years of medical practice. When koop entered his specialty in the 1940s, he was one of only six surgeons in the country to devote his practice to children alone. And, he says, he found himself "very rapidly becoming an advocate for children, particularly for children who are handicapped or abused." He has probably seen nearly every birth defect that can occur, including ones that laypeople find hard to imagine.

He has successfully treated infants with intestinal obstructions, ones born with no connection between throat and stomach, ones with severe problems of the urinary tract, ones with dangerous and disfiguring tumors, and even a boy born with his heart outside of his chest. He has corrected problems of Down's Syndrome children and babies with spina bifida (cleft spine). In short, he has successfully treated many children who today might be aborted after amniocentesis detected their problems.

Amniocentesis is the procedure of withdrawing amniotic fluid from the womb when a fetus is 14 weeks or older. Analysis of the fluid for diagnostic purposes was first done in order to help both mother and child affected by the Rh problem, and Koop favors it when done for this purpose. But increasingly over the last 10 years, amniocentesis has been used to detect genetic problems so that the parents can have affected children aborted—even though the extent of their handicaps may not be known. Koop and others of the right-to-life persuasion call the amniocentesis/abortion combination a "search-and-destroy mission." Koop is a markedly effective critic of it because he knows how much handicapped children can be helped, he admires the way "they have such a good spirit and don't feel sorry for themselves" and he has seen many of them contribute substantially to their families and communities.

This is not to say that Koop or any other doctor can correct all birth defects. No cure has been found for the devastating Tay-Sachs disease, which kills all affected infants in their early years. There is no cure for sickle cell anemia, although some researchers now believe they can find a remedy for it. Some are also hopeful about finding a way to prevent or cure the mental retardation that usually accompanies Down's Syndrome. Today, most Down's Syndrome children, with proper training, can learn to walk and run, engage in sports and do household chores. Those who work with them often describe them as happy and very affectionate children. Many eventually learn and hold jobs in sheltered workshops. Yet the medical literature indicates that more children are aborted for Down's Syndrome than for any other genetic problem.

Koop says that it was his concern about infanticide that led him into the pro-life movement, "so you could say I came in by the side door or the back door." He remarks that "I don't think we ever would have come to our current practice of infanticide in this country if it hadn't been for the fact that we were performing well over a million abortions a year. I think that does something to the medical profession's understanding of its healing ministry. And when you make exceptions for the unborn, there's very little difference between making them for that group and for the newly born."

Koop's opponents suggest that he is alarmist about infanticide, but he points to an impressive amount of evidence: a 1973 arti-

cle in the New England Journal of Medicine in which two pediatricians reported that, over a 2½-year period at the Yale-New Haven Hospital, 43 handicapped babies died after treatment was withheld or withdrawn from them; a 1973 proposal by Nobel laureate James D. Watson that a child not be declared alive until three days after birth, so that a doctor "could allow the child to die if the parents so chose and save a lot of misery and suffering"; and cases of Down's Syndrome children who starved to death after denial of simple operations to remove intestinal obstructions.

He also notes the recent case of Jeff and Scott Mueller, Siamese twins who were born in an Illinois hospital where one or more persons apparently felt it was all right to starve them to death rather than allow them to face life with serious handicaps. This, says Koop, shows that he "wasn't far off" in his early concern about infanticide.

There is also the case of Phillip Becker, which Dr. Koop calls a "tragic miscarriage of justice." In the Becker case, denial of treatment has been moved up into the teens and sanctioned by the courts. Phillip Becker is a 14-year-old Californian with Down's Syndrome who parents have refused consent for heart surgery their son needs. Without the surgery, doctors say, he will suffer unnecessarily and probably die at an early age. Yet California courts upheld the parents in their refusal to give consent, and last year the U.S. Supreme Court refused to hear an appeal on the boy's behalf.

How about the Koop suggestion that euthanasia of the elderly will be the next slide down the slippery slope? The same arguments made for abortion and infanticide can easily be made—and are made—for doing in older people who have serious disabilities. Such people, Koop believes, are in danger—"particularly if they're elderly, disabled and expensive."

But the one thing old folks have that babies lack is the vote. It is conceivable that sheer voting power will protect older people from euthanasia enthusiasts. One could say that political protection is better than no protection at all. On the other hand, it is not a firm barrier against the psychological pressures that Dr. Koop and theologian Francis A. Schaeffer spoke of in their book. "Whatever Happened to the Human Race?" They suggested that consideration of euthanasia "leads to a degradation of the elderly and, ultimately, to inferior health care for the elderly—as well as encouraging the thought that those who do not want to 'shuffle off' quickly are somehow failing in their contribution to society."

Dr. Koop indicates that, if he becomes surgeon general, one of his chief goals will be to aid the handicapped and the elderly and to encourage more positive attitudes toward them. Liberal Democrats have long championed these groups; so if the Democrats can put down their brickbats long enough to listen to Koop, he may have a chance. The young, the old and the disabled will never have a finer or more compassionate advocate.

IN OBSERVANCE OF CAPTIVE NATIONS WEEK

● Mr. BRADLEY. Mr. President, I am proud to participate in the 23d observance of Captive Nations Week and to commemorate the brave struggle of Eastern European peoples to maintain their national identities and secure basic human rights for their brethren subjected to Soviet domination.

The Captive Nations list contains over 2 dozen countries. Afghanistan is the most recent addition. One is tempted to ask, "Who's next?" But because fundamentally all people cherish freedoms, the Captive Nations list does not symbolize defeat, nor concede that the rest of the world condones such activity. Rather it expresses our commitment never to accept it.

The Afghan episode is the latest in a long series of imperialist episodes. There is still hope for the brave Afghanis, who are still fighting heroically to resist Soviet domination. Since the administration has decided to lift the embargo on grain sales to the Soviet Union, our major expression of condemnation against Soviet occupation of Afghanistan, it would be appropriate for us to explore new avenues to express our concern and support.

Poland is another Captive Nation of long standing whose current struggle against Soviet repression of basic freedoms is in today's headlines. For close to a quarter of a century the Soviet Union has sought to suppress the forces for reform in Poland. Even so, Poland is alive again. There is no more vivid evidence of the power of freedom than the renewed struggle of a nation subjugated for so long a period. It is a striking symbol for the Captive Nations movement.

Our 23d observance of Captive Nations Week coincides with the commencement of the Polish Communist Party. Let us hope that the forces for freedom given life by the solidarity of workers shall be successful in peacefully bringing about a responsive order in a land too long subjected to Soviet control.

There is some solace in observing that the Captive Nations list has not grown over the past year. Unfortunately, neither has it been shortened. During Captive Nations Week we give voice to our belief that all men everywhere have the same inherent right to freedom that Americans enjoy. And this belief is a powerful weapon. No single idea breeds deeper concern in Moscow than the strength of the commitment of a freedom-loving people to be free again. Let us remind the world, and particularly those within the Soviet sphere who listen for our words, that we have not forgotten.●

IN APPRECIATION OF JEREMIAH DENTON

● Mr. EAST. Mr. President, Friday marked the 15th anniversary of the shooting down by the North Vietnamese of the plane of JEREMIAH DENTON, our distinguished colleague from Alabama. I wish to take this opportunity to express my own admiration for Senator DENTON and the profound sense of honor that I feel for being able to serve in the U.S. Senate with him.

Mr. President, the world knows today the story of Senator DENTON's bitter experiences in a Communist prison camp for 7 years and 7 months from his own moving account in his book, "When Hell Was In Session." The world also knows the story of how it was JERRY DENTON who first revealed to the world that American prisoners of war were being tortured by courageously blinking his eyes in Morse code when he was forced to appear in a North Vietnamese propaganda film.

There were, of course, some who insisted that our prisoners were being well treated by their captors and who claimed, even that they had come to see the error of their participation in the Vietnam war, JEREMIAH DENTON, however, by his words and by his example, gives the lie to these distorters of truth. The tale of JEREMIAH DENTON's secret communication with the outside world is, I am convinced, one of the great patriotic and heroic tales of American history as well as testimony to the immense personal courage and presence of mind of one of our country's authentic heroes.

Mr. President, JEREMIAH DENTON was born on July 15, 1924, in Mobile, Ala. He graduated from the U.S. Naval Academy at Annapolis in 1946 and served in the U.S. Navy in 1946 to 1977. He flew combat missions in Vietnam as the commanding officer of Attack Squadron 75 and was captured by the North Vietnamese after being shot down. Upon release from prison in 1973, Captain DENTON continued to serve in the Navy until 1977, when he retired as a rear admiral. He is the recipient of many awards, including the Navy Cross and the John Paul Jones Award, and twice the recipient of the Valley Forge Freedom Foundation Award. Most recently he has been created a Knight of Malta.

Yet the bare facts of his biography do not do justice to the integrity and courage and leadership of this man. Mr. President, I can personally attribute to his abilities in every respect, because I serve with Senator DENTON on several committees and have had opportunity to observe and appreciate the talents of a military leader in the role of a statesman. On the Subcommittee on Security and Terrorism, of which he is chairman, Senator DENTON has brought his own experience of Communist totalitarianism to bear on the dreadful subjects of that body's work.

He knows, better than almost any other man in the Senate and more than most men in the country, the lies, the brutality, the concerted attempts to destroy the human spirit and personality that are the essence of communism. I have listened to him bring this experience and knowledge to bear on the subjects of terrorism and propaganda in the subcommittee, and I cannot think of any of my colleagues who are better fitted to lead this vitally important body. I also have had the benefit of his counsel and assistance in the Subcommittee on Separation of Powers, and I want to thank him for the great contributions he has made to our work in that subcommittee.

Mr. President, I believe that JEREMIAH DENTON should be a model for myself and our colleagues in the Senate and indeed for all citizens of our great country. It is precisely his personal qualities—his courage, his integrity and character, and his ability as a leader of men—that America needs in its counsels today more than ever. I cannot think of a more fitting means of closing this statement than to quote once more those stirring words

that JEREMIAH DENTON uttered when he stepped off the airplane that carried him and his fellow prisoners to freedom after so many years. These were not the words of a public relations artist or professional speechwriter; these were sentiments—I use the word in its deepest meaning—that came from the heart and the soul that our enemies so despise and deny and which prove that their empires and slaveries are founded on falsehood.

Captain Denton said:

We are honored to have had the opportunity to serve our country under difficult circumstances. We are profoundly grateful to our Commander in Chief and to our nation for this day. God bless America.

Mr. President, there is no trace of self-pity or of self-promotion in this simple statement. There is only great pride—in America—and great candor and humility, and it should be our motto as it is that of JEREMIAH DENTON.●

HARRY CHAPIN

● Mr. BRADLEY. Mr. President, I should like to take this opportunity to join some of my colleagues in paying tribute to Harry Chapin. He was a musician and entertainer of considerable talent, but we remember Harry Chapin as a man who proved, with unrelenting spirit, that one person can make a difference.

His tireless crusade to eradicate the pain of hunger in the world helped raise millions of dollars for the cause. But just as importantly, his efforts focused attention on the problem.

Walt Whitman wrote, "All music is what awakes from you when you are reminded by instruments." Harry Chapin reminded us of our best instincts. But he did not rely on his poetry and guitar. He awakened what was good in so many people by the way he committed his life.

A large part of that life was Harry Chapin's family. Just as he was known for his inexhaustible performances and energetic social activism, so, too, was he known as a devoted husband, father, son and brother.

We will all miss Harry. But he has left behind his music and a legacy that reaffirms for each of us that one man can make a difference.●

WORLDWIDE NUCLEAR PROLIFERATION

● Mr. FORD. Mr. President, in November 1976, I was a member of a Senate delegation that visited six countries in the Middle East and Europe to study U.S. security and foreign policy interests with particular emphasis on worldwide nuclear proliferation. At that time there were five members of the so-called "nuclear club": the United States, the Soviet Union, France, the United Kingdom, and the People's Republic of China. India's 1974 detonation of a nuclear device signaled its potential to become a sixth member.

Our mission report stated "IAEA officials said that although there have been some discrepancies in material balances there has never been a violation of the IAEA safeguards system."

How times have changed. A recent Washington Post articles says that now, 5 years later, 15 countries are ready to become members of the nuclear club. Look at what has happened just since the Israeli raid on the Iraqi reactor at Osirak.

Within days of each other, Iraq's President Saddam Hussein called on all countries to help the Arab nations develop a Moslem bomb as a counter to Israel (Saudi Arabia just agreed to finance one); former Israeli Foreign Minister Moshe Dayan replied that Israel has the capacity to make nuclear weapons within a few days and would do so if provoked; South Korean President Chun Doo Hwan threatened to reduce North Korea to ashes, extreme language hinting of the ability to build nuclear weapons; and Pakistan, an implacable foe of India and to whom the administration wants to supply billions of dollars of military assistance in defiance of the Symington amendment, has reportedly been using Turkish companies as covert purchasing agents to buy sensitive equipment that could be used to build a bomb. Nuclear weapons, the most deadly force known to man, are being cavalierly used in saber-rattling.

Until last month, international nonproliferation efforts rested somewhat optimistically on the pillars of the Treaty on the Non-Proliferation of Nuclear Weapons (NPT) and the International Atomic Energy Agency (IAEA). Israel's raid on Iraq shows that the foundations of this international system are shakey indeed. There is strong indication that, although a signatory of the NPT and therefore having renounced nuclear weapons for the sake of peaceful nuclear energy development, Iraq was diverting weapons-grade material for military purposes.

The debate rages on as to what Iraq, who has never been accused of violating IAEA safeguards, was actually doing. The fact remains that Israel's legitimate lack of confidence in NPT promises of intent and IAEA assurances resulted in preemptive action—a grave precedent.

The loopholes in our nonproliferation mechanism are staggering. One is considered to have violated the NPT only if a nuclear device is actually built. It is thus technically possible to obtain the technology and materials necessary for weapons construction and to receive and use special technical assistance without violating the treaty.

Similarly, the IAEA has no teeth. Its safeguard system has two principal objectives: To assure timely detection of any diversion of significant quantities of sensitive nuclear material which could be used to manufacture a nuclear explosive device, and to deter such diversion by establishing the risk of detection and the consequent threat of international exposure. Unfortunately, these safeguards are narrowly applied only to the question of fuel diversion and not to the monitoring of equipment or to technology transfer.

If fuel is unaccounted for, a report is made by IAEA inspectors to headquarters. Sanctions—the marshaling of world opinion, a request that fuel supplies be cut off—are meaningless. If a country decides to cross the Rubicon, divert fuel and build a bomb, it can do so in a matter of days. At this point, negative public reaction would scarcely measure up against the prestige of owning an atomic bomb and the power of being able to use it as a deterrent and a threat

Mr. President, I think the United States must address absolute nuclear nonproliferation. It is imperative that nuclear suppliers impose the most rigid restrictions on technology transfers and the sale of fuel. We are talking about world survival here, not free enterprise, not discrimination against individual states. No nation who is not a NPT signatory should be allowed nuclear technology; no NPT signatory needs anything more than a civilian nuclear power program; no nation needs its own reprocessing or enrichment facilities.

Nuclear suppliers must cease exporting such sophisticated technologies as spent fuel reprocessing plants and such nuclear fuel as weapons-usable enriched uranium. Only uranium-efficient, proliferation-resistant light water breeder reactors and low enriched uranium or caramel fuel should be permitted to be sold.

Finally, international safeguards must apply to all nuclear facilities in a recipient country, to equipment as well as to material.

I call upon President Reagan to act to reconvene the nuclear suppliers conference in order to discuss the imposition of stricter nonproliferation controls and to work through the IAEA to improve that agency's safeguards.

A good place to begin would be the upcoming conference at Ottawa where leaders of the seven most powerful industrial nations in the West will meet. I am pleased to note that France's new President Mitterand has already said that contracts for any new sales to Iraq will not be signed without the assurance that they cannot be diverted to military purposes and that this principle will be the same for every potential client.

President Reagan should also notice the concern here in the Congress. My colleagues, Senators GLENN and HART, have been particularly active in voicing the urgency of a new international proliferation system and have introduced legislation focusing on this problem. I hope the administration will pay close attention to their suggestions. The consequences of maintaining or, worse, weakening the status quo are too horrible to dwell on—terrorism, blackmail, holocaust. For its own security interests and those of the rest of the world, the United States needs to act now before it is too late.

THE SITUATION IN CYPRUS

(By request of Mr. ROBERT C. BYRD, the following statement was ordered to be printed in the RECORD).

● Mr. TSONGAS. Mr. President, Cypriots will mark the seventh anniversary of the Turkish invasion on July 20. They

will remember the thousands that died during Turkey's "peacekeeping" operation and the thousands that are still missing. They will remember their towns and villages and their ancestral homes that lie behind the lives of the Turkish occupation army.

This tragedy must not be allowed to continue indefinitely. Cyprus' artificial division is pregnant with dangers and like all forced divisons, it is inherently unstable. It jeopardizes our security interests in the eastern Mediterranean and is the major impediment in the restoration of friendly relations between our NATO allies Greece and Turkey.

In his first report to Congress on Cyprus, President Reagan has stated that "it is time to see a fair settlement that will benefit and serve all of the Cypriot people" and that funding "a just fair and lasting resolution" for Cyprus will remain a priority for his administration. I cannot agree with him more. The United States can do much to see that tension is reduced and stability returned. We must use our influence to persuade Turkey, in particular, to cooperate in the peacemaking process. The return of Cypriot refugees to the Famagusta region and the submission of specific territorial proposals by the Turkish side can open the way for a visible solution, one that restores Cyprus's independence and territorial integrity. Allowing the situation to fester bodes well for nobody.●

ABOUT CRIME CONTROL

● Mr. HELMS. Mr. President, everybody is concerned about crime these days, but not much is being done about it.

I received the other day an article written by a distinguished friend of mine in North Carolina, Albert W. Cowper, who served with distinction as senior resident superior court judge in my State. Judge Cowper lives in Kinston.

Mr. President, every Senator should read Judge Cowper's observations about crime control. For that reason, I ask unanimous consent that the full text of his article be printed in the RECORD.

The article is as follows:

ABOUT CRIME CONTROL

There is near universal agreement today on the fact that crime is out of control. Obviously, the situation becomes worse by the day. But when it comes time to define the causes and cures, the voices are multiple and conflicting. Franklin D. Roosevelt, back in the 30's, launched his program for public housing with the statement that if every man had a decent place to say, there would be no cause for crime. Time proved him wrong; the grand new buildings were looted, burned, and eventually dismantled.

In the closing days of World War II, J. Edgar Hoover gave ample warning of the approaching flood-tide of juvenile crime. Our courts failed to deal with the situation efficiently, as we shall see. In due course, President Johnson launched his "Great Society" program. He took his text from the political scientists whose books proclaimed, "The basic cause of crime, as we know, is poverty". And this: "In the long run . . . broad programs of social reform, leading to the reduction of poverty, discrimination, poor housing, broken homes, and many other factors . . . is the answer". It certainly wasn't made clear just how reforms would rid us of broken homes. At any rate, millions, even billions came pouring out of the public treasury in this effort to cure the nation's ills. It is interesting to note that in this period of great prosperity, the crime rate actually increased. We cannot overlook the fact that in 1920, at a time when half of the nation's population was below the poverty line, and at a time when discrimination was greater than at any time since, the crime rate was at an all time low. But still our Raleigh paper proclaims to the world that crime will surely increase in the event human services programs are cut back by the new administration.

Ernest Van Den Haig, in his new work Punishing Criminals, stated after making a study of high school textbooks, that the following notions are either plainly wrong or unsupported by evidence: 1. Crime is caused by society; 2. imprisonment would be useful if it lead to rehabilitation; 3. deterrence is useless; 4. mostly lower-class people are imprisoned because of a discriminatory justice system; 5. the death penalty is useless and immoral; 6. prison embitters and criminalizes the prisoner.

There are three great deterrants to youth crime. They are:

1. The fear of God (which is the beginning of wisdom).

2. Reverence and respect for one's parents, even a healthy fear of them.

3. Respect for and faith in our government.

In my humble opinion, here are the root causes of crime. There is a failure of religion, a failure of the home, and a failure of the public schools. The teaching of the Bible is not permitted in public schools nor is it taught much in the average home, and to some extent our schools substitute themselves for parents. Today patriotism is laughed at, and students are impressed by imperfections of our American form of government. Viet Nam is too disgraceful to recall.

Without question, the reluctance and failure of the courts to punish persons under the age of twenty-one, is a tremendous factor on our failure to curb youth crime. In New York and many other states, authorities say that young murders are not looked upon as criminals, but as just "sick". Already we have heard this kind of talk being circulated about the young man who tried very hard to kill our President and two law enforcement officers.

With respect to college students, Dr. George C. Taylor, late Professor of English literature at UNC Chapel Hill, made this observation after his retirement:

"Any education which fails to put more emphasis on character, ethics, even morals, if you please, than on intellectual development, is a farce and a devastating farce at that. Without such emphasis on character, education degenerates as it has frequently done, into merely training us to become more technically skillful, shrewder and shrewder, in cheating the eyeteeth out of each other. I have been driven to the conclusion that the educated are running the uneducated a close race in the perpetration of crimes of the most brutal and bestial types, and in crimes of the most bizarre types, they are, in fact excelling the uneducated.

Of course we know that laws and punishment can never eliminate crime. They merely manage to reduce it—they can do no more in the most ideal of societies. Crime is as unavoidable as the conflict between social rules and individual ambitions. Regardless of the society, people are still tempted to assault and to murder. They still get drunk and some cheat. And any fool knows that criminal behavior is encouraged when there is no risk of punishment.

Today there is an ample supply of well trained law enforcement officers; there are ample District Attorneys to prosecute the dockets; there are enough Courts and Judges, yet cases take too long to try and there is a growing congestion. So you say, "What is wrong with the system?" A few weeks ago the Chief of Police of Culver City, California had this to say: "The thing which impacts crime is the swiftness of apprehension and the certainty of punishment. Most criminals are caught over and over again. The court system is unable or unwilling to convict guilty persons. As a result, certainty of punishment is almost laughable." As one who has spent his life in the courts, the Chief's appraisal is accurate. He has stated the sad truth.

In order to understand the revolution through which the criminal justice system has passed in the past fifty years, one would have to start with the "New Deal" of Franklin D. Roosevelt. The country was in a great depression at the time and our President was willing to experiment with new social theories to get the economy going again. But the new legislation failed to receive the stamp of approval of an ultra conservative Supreme Court. We all know that it would take years to get public approval for constitutional amendments. Roosevelt proposed to force the retirement of members of the court. Some of you will recall a book on the subject by Drew Pearson appeared at the time entitled, "The Nine Old Men."

Both Congress and the people rose up and gave President Roosevelt a resounding defeat in the opening battle, but that which could not be achieved by legislation, was accomplished by time. The entire membership of the court came to be made up of carefully selected Judges who agreed with their President. As time passed, the constitution took on new meaning; old decisions were replaced with the new, and a new document was forged. A Chief Justice once said, "The constitution is what the Judges say it is."

This brings us up to the great Era of Civil Rights which was brought on by the school decisions. With Earl Warren serving as Chief Justice, the court dropped all pretense and set out about the business of rewriting the Constitution. In 1966 the Miranda decision was handed down by the court which said that unless law enforcement officers safeguarded the defendant's rights by first warning him that he had a right to remain silent; that any statement made could be used against him in court; that he had a right to have a lawyer present and that one would be provided for him if he could not afford to pay for one, and others. Unless the defendant was so warned in advance, his confession would not be admissable in a court of law. Chief Justice Burger had this to say recently: "No one questions that a criminal conviction should always be open to correct a miscarriage of justice. But no other system in the world invites our kind of never-ending warfare with society, long after criminal guilt has been established beyond a reasonable doubt with all of the safeguards of due process."

In other words, guilt or innocence may become irrelevant in the never ending search to make sure one's civil rights are not violated. It is not unusual for a criminal trial to take several weeks from the tedious selection of a jury until judgment. The court has to walk a tight rope to insure fair trial under the present concept. With the entering of judgment, then an endless number of appeals may take place in both state and federal appellate courts. The Wilmington Ten had their convictions set aside after almost ten years of litigation. Chief Justice Burger has recommended that a limit be placed on the number of criminal appeals a defendant

can be entitled to. Surely it would not be unreasonable to say that all issues must be raised in one appeal which should go to the State Supreme Court and then to the U.S. Supreme Court.

Vermont Royster in the Wall Street Journal paid his respects to the criminal justice system with these remarks: "But somewhere in the evolution of modern trial procedure the substance of what constitutes a fair trial got lost in the observation of form. Impartial (jury) came to mean ignorant. A fair trial came to be seen only as one fair to one party, the defendant. The rules of evidence, the procedure in the courtroom, the multiplication of technicalities to protect a defendant have become so complex that the rights of society have been nearly forgotten. You never hear an outcry about injustice after an acquittal".

"This change more than anything else accounts for the rumblings of discontent among the people about the handling of criminal cases in our courts. There's a widespread feeling that is becoming increasingly difficult to bring common criminals to account. As any poll of public sentiment will show, people are asking, What of the victims of assault, rape or murder? What of the rights of peaceful citizens to protect themselves against malefactors?"

To sum up what has been said before:

It appears that there is no serious evidence to show that feasible social reform, whatever its merits otherwise, reduces crime. The crime rate depends on two factors: 1. Very general social conditions which cause it to be low in Japan and high in the United States. 2. The criminal justice system.

There is abundant evidence that deterrent punishment is the major element in reducing crime rates. It is not the only element, it is hard, if not impossible, for any government to control the frequency and severity of punishment.

The criminal justice system has utterly failed in its mission of swift apprehension and certainty of punishment as a result of a tangling network and constitutional safeguards to insure that the defendant shall receive due process of law without any thought for the victims and the public. The appointment of more conservative minded justices to the highest court would help the situation, but in the long run it may take some constitutional amendments to get the system back on course.●

COMMISSION ON WARTIME RELOCATION AND INTERNMENT OF CITIZENS

● Mr. INOUYE. Mr. President, a distinguished panel of citizens has embarked on a study which will, I hope, illuminate a dark page of American history which vitally concerns us all.

The Commission on Wartime Relocation and Internment of Citizens has concluded 2 days of hearings in Washington, D.C. on the incarceration of Japanese-Americans, Alaskan Aleuts and Pribiloff Islanders during World War II. This is an instance of an entire group of American citizens forcibly interned by their Government, strictly on the basis of their racial origin, without regard to their constitutional rights. Every loyal American should pray that this abridgement of human rights will never be repeated.

In the next several months, the commission will hold hearings throughout our Nation to investigate this issue. Its findings will be presented to Congress for consideration by January 15, 1982.

Mr. President, so that all Americans may be aware of the deliberations of this important commission, I ask that the following be reprinted in the RECORD: A fact sheet published by the commission which provides background historical information, with an explanation of the duties of the commission; and an editorial and feature article from the Washington Post which provide further views on this issue.

The material follows:

PUBLIC LAW 96-317: DATED JULY 31, 1980

WHY A COMMISSION?

Almost forty years have passed since the U.S. government ordered 120,000 civilians evacuated and detained in relocation camps, pursuant to Executive Order 9066 and Civilian Orders of the U.S. military forces.

President Franklin Delano Roosevelt signed Executive Order 9066 on February 19, 1942, despite arguments by the Attorney General and FBI Director against the military necessity for mass evacuation. The Executive Order authorized military commanders designated by the Secretary of War to exclude persons from prescribed military zones or areas. Congress backed the Executive Order by passing Public Law 77-503, which authorized imprisonment and fines for civilians convicted of violating these orders. The Western Defense Command and Fourth Army subsequently issued over 100 orders which were applied exclusively to persons of Japanese ancestry living in the Western states.

All persons of Japanese ancestry in California and portions of Washington, Oregon, and Arizona were ordered to leave their homes, taking with them only what little they could pack and carry. Businesses, property, homes, farmlands, and personal goods were left behind. Assets were frozen by the U.S. government. In 1942, the United States government built 10 relocation centers in Arizona, Arkansas, California, Colorado, Idaho, Utah and Wyoming. Japanese American citizens and permanent resident aliens were moved to these camps. In March, 1946, the last detention camp closed.

The released Japanese had great difficulty in reconstructing their lives. Many faced poverty; others found themselves homeless. All faced uncertainty regarding their future.

The policy process which resulted in the evacuation and incarceration of 120,000 civilians has never been fully documented, nor has the economic, social and psychological impact of the years in relocation centers been comprehensively recorded or told.

The Aleut residents of both the Aleutian and Pribilof Islands were removed by the U.S. military authorities from their homes during June and July of 1942. The initial decision to evacuate was based on the Japanese bombing of Dutch Harbor in the Aleutian chain, and the Japanese invasions of Attu and Kiska islands. More than 850 Aleut citizens were taken to temporary camps in southeastern Alaska, some times without adequate food, clothing, shelter, or medical supplies. Non-native residents of the Aleutian chain were allowed to remain in their communities.

In May 1944, the Aleuts were returned to their homes. Some had perished due to disease. They found their homes had often been vandalized and property stolen. The returning Aleuts faced the same uncertainty about their future as did the Japanese. "It seems funny if our government can drop so many people in a place like this and forget about them altogether," said Lee McMillin, agent and caretaker of the Punter Bay camp for the Aleuts.

CHRONOLOGY

Japanese

1941 December 7—Japan's attack on Pearl Harbor. Presidential Proclamation No. 2525 gives blanket authority to Attorney General for a sweep of suspects.

December—U.S. declares war against Japan.

1942—January 29—U.S. Attorney General issues first of a series of orders establishing limited strategic areas along the Pacific Coast and requiring the removal of all enemy aliens from these areas.

February 19—Roosevelt signs Executive Order 9066 authorizing Secretary of War, or any military commander designated by Secretary to establish "military areas" and exclude therefrom "any or all persons."

March 2—General DeWitt issues Public Proclamation No. 1, designating military areas in the states of Washington, Oregon, California and Arizona. Restrictions are placed on Japanese, German and Italian aliens and Japanese Americans. Period of voluntary evacuation begins.

March 18—President Roosevelt signs Executive Order No. 9102 creating the War Relocation Authority (WRA), a non-military agency with the authority to formulate and carry out a program for a planned and orderly relocation of persons evacuated under E.O. 9066.

March 21—President Roosevelt signs Public Law 77-503 making it a federal offense to violate any order issued by a designated military commander under authority of E.O. 9066.

March 22—First large contingent of Japanese and Japanese Americans moves from Los Angeles to the Manzanar Assembly Center operated by the Army.

May 19—Western Defense Command issues Civilian Restriction Order No. 1 establishing all assembly centers and relocation centers in the eight far western states as military areas and forbidding evacuee residents to leave these areas without expressed approval of the Western Defense Command.

July 13—Mitsuye Endo petitions for a writ of habeas corpus, alleging that she was a loyal and law-abiding U.S. citizen, that no charge had been made against her, that she was being unlawfully detained, and that she was confined in a relocation center under armed guard and held there against her will.

August 7—Western Defense Command announces the completion of evacuation of 110,000 from their homes in the military areas either to assembly centers or to WRA centers. The last of the residents of Japanese descent in eastern California are moved to relocation centers.

1943 January 23—Secretary of War Stimson announces plans for formation of a special combat team of Japanese American volunteers from both the Mainland and Hawaii.

February 8—Registration ("loyalty" questionnaire) of all persons over 17 years of age for Army recruitment, segregation and relocation begins at most of the relocation centers.

June 21—*Hirabayasbi* v. *U.S. and Yasui* v. *U.S.* Supreme Court rules that a curfew may be imposed against one group of American citizens based solely on ancestry, and that Congress in enacting Public Law 77-503 authorized the implementation of E.O. 9066 and provided criminal penalties for violation of orders of the Military Commander.

August, September and early October—More than 15,000 people are moved in and out of the Tule Lake Center as a result of the segregation program. Those ordered out are redistributed to other centers.

1944 June 6—D-Day.

July 1—President Roosevelt signed Public Law 78-405 permitting U.S. citizens to renounce their citizenship on American soil in time of war under procedures approved by the Attorney General.

December 17—Western Defense Command rescinds exclusion and detention orders, freeing Japanese Americans to return to their homes on the west coast, effective January 2, 1945.

December 18—Korematsu v. U.S. Supreme Court rules that one group of citizens may be singled out and expelled from their homes and imprisoned for several years without trial, based solely on their ancestry.

December 18—In ex parte Endo, Supreme Court rules that WRA has no authority to detain a "concededly loyal" American citizen.

1945 August 15—VJ Day.

September—Western Defense Command issues Public Proclamation No. 24 revoking all individual exclusion orders and all further military restrictions against persons of Japanese descent.

1946 June 30—War Relocation Authority program officially terminates.

1948 July 2—Evacuation Claims Act passed, giving evacuees until January 3, 1950 to file claims against the government "for damages to or loss of real or personal property . . . that is a reasonable and natural consequence of the evacuation . . ." Total of $38 million paid by the government, or less than 10¢ per dollar lost.

1976—President Gerald Ford formally rescinds Executive Order 9066.

Aleut and Pribilof Islanders

1942 June 3—Japanese bomb Navy facilities in Dutch Harbor (Unalaska) Aleutian Islands.

June 6—Japanese secure a beachhead on Kiska Island, Aleutian Islands, Japanese take all 10 Navy personnel prisoners.

June 8—Japanese army lands unopposed at Holtz Bay, Attu Island, Aleutian Islands, and takes 42 Aleuts and 2 U.S. government civilian employees prisoner, occupies Kiska Island.

June 14—Atka villagers are found by the U.S.S. Hulbert and evacuated.

June 15—Interior Department officials learn of the Aleutian evacuation. Initially, the Fish and Wildlife Service was given the responsibility for Pribilof Aleuts, with the office of Indian Affairs responsible for all other Aleuts.

June 16—U.S. military evacuates St. George, Pribilof Islands. Less than 24 hours are given for departure. Natives' cattle are killed and their houses booby-trapped but not destroyed. St. Paul Island, Pribilof Islands is evacuated.

June 25—Atka Aleuts are discharged at Killisnoo where the office of Indian Affairs has decided to locate them in a fish cannery.

St. Paul and St. George villagers are discharged at Funter Bay.

June 26—All Aleuts have been evacuated.

1943—Midsummer—Japanese withdraw entirely from the Aleutian Island chain.

December 13—Secretary of War Henry Stimson gives final approval for all Aleuts to return home.

1944 May 4—U.S. Air Transport returns the Aleuts to the Pribilofs.

August 7—President Roosevelt authorizes the allocation of $10,000 from his emergency fund for claims for damages.

COMMISSION MANDATE

Public law 96-317, passed July 31, 1980, established a Commission to gather facts to determine whether any wrong was committed against those American citizens and permanent resident aliens affected by Executive Order 9066, and for other purposes.

Duties of the Commission

To review the facts and circumstances surrounding Executive Order 9066, issued February 19, 1942, and the impact of such Executive Order on American citizens and permanent resident aliens.

To review directives of United States military forces requiring the relocation, and in some cases, detention in internment camps of American citizens, including Aleut civilians, and permanent resident aliens of the Aleutian and Pribilof islands.

To recommend appropriate remedies.

The Commission shall hold public hearings in such cities of the United States that it finds appropriate.

The Commission shall submit a written report of its findings and recommendations not later than one year after the date of its first meeting.

COMMISSION MEMBERS

Joan Zeldes Bernstein, Chair

Ms. Bernstein is a partner with Wald, Harkrader & Ross. She has served as General Counsel for the U.S. Department of Health and Human Services and the Environmental Protection Agency, and was named Vice Chair of the council of the Administrative Conference of the United States. Ms. Bernstein received her B.A. from the University of Wisconsin, and her LL.B. from Yale Law School.

Daniel E. Lungren, Vice Chair

Congressman Lungren is a second term member from Long Beach, California, and serves on the House Judiciary Committee, the Select Committee on Aging, and the Republican Task Force on Congressional and Regulatory Reform. Mr. Lungren received his B.A. from Notre Dame University and J.D. from Georgetown University.

Senator Edward W. Brooke

Mr. Brooke is partner with O'Connor & Hannan. He has served as attorney general for Massachusetts and United States Senator.

Father Robert F. Drinan

Father Drinan is president of Americans for Democratic Action. He has been active in civic affairs and was a member of Congress from 1970-1980. He is an ordained Jesuit priest.

Dr. Arthur S. Flemming

Dr. Flemming is Chairman of the United States Civil Rights Commission. Dr. Flemming has been Secretary of HEW, Chairman of the White House Conference on Aging, Special Counsel to the President on Aging, and many other important positions in public service.

Justice Arthur J. Goldberg

Justice Goldberg has been Secretary of Labor, Associate Justice in the United States Supreme Court, U.S. Representative to the United Nations, and Ambassador at-large for the United States. He is president of the American Jewish Committee.

Father I. V. Gromoff

Father Gromoff is an ordained Russian Orthodox priest from Unalaska in the Aleutian Islands. He has been active in the Aleutian/Pribilof Island Association and was relocated to Funter Bay camp during World War II.

Judge William M. Marutani

Judge Marutani presently serves on the bench for the Court of Common Pleas of Philadelphia County, Pennsylvania.

Senator Hugh B. Mitchell

Senator Mitchell was appointed to the U.S. Senate from Washington state, and served as a member of Congress from the 1st District of Washington for two terms.

COMMISSION HEARINGS

Washington, D.C., July 14 and 16, 1981.

Los Angeles, Calif., August 4, 5, and 6, 1981.

San Francisco, Calif., August 11, 12, and 13, 1981.

Seattle, Wash., September 9, 10, and 11, 1981.

Anchorage, Alaska, September 15, 1981.

Aleutian Islands (Unalaska), September 17, 1981.

Pribilof Islands (St. Paul), September 19, 1981.

Chicago, Ill., September 22 and 23, 1981.

HOW TO PARTICIPATE

The Commission is interested in hearing from you. The members of the Commission would like to be informed of the views of concerned individuals and would like to encourage statements which will provide a framework for discovering the facts of the relocation and internment of civilians. The Commission welcomes your views and suggestions.

The Commission on Wartime Relocation and Internment of Civilians, New Executive Office Building, 726 Jackson Place, NW, Suite 2020, Washington, D.C. 20506, Telephone: (202) 395-7390.

[From the Washington Post, July 15, 1981]

THE JAPANESE-AMERICANS

A Japanese-American named Fred Korematsu, after being rejected by the Army because of an ulcer, volunteered after Pearl Harbor to serve his country as a welder in a war plant. Instead, he and 120,000 other Japanese-Americans and Japanese resident aliens on the West Coast were driven from their homes and forced under military supervision into distant "relocation" camps, where the majority lived out the war. The would-be welder sued, but the Supreme Court upheld the military in 1944 in *Korematsu v. U.S.*, although dissenting justice Robert H. Jackson described Korematsu's "crime" as solely the act of "being present in the state whereof he is a citizen, near the place where he was born, and where he lived all his life." Today, we recalled the locations of the major internment camps used—Manzanar, Tule Lake, Minidoka, Topaz, Gila River, Poston, Heart Mountain, Granada, Jerome and Rohwer—only as desolate monuments to this nation's lingering sense of shame.

Yesterday, a federal commission began its hearings into the Japanese-American internment experience, the worst instance in modern American history of an entire group being stripped overnight of its civil liberties as a result of calculated government policies. The Commission on Wartime Relocation and Internment of Civilians, created by Congress last year, must determine (first) how and why the actions of military and political leaders, both in Washington and on the West Coast, caused the uprooting of the entire Japanese-American community when even the attorney general and the FBI director did not consider most internees a national security threat. Next, the commission has the difficult task of determining what financial compensation, if any, should be recommended for those who suffered internment. But its members recognize also that they must consider what steps might be taken to ensure that—in some future national emergency—another whole group of Americans do not find themselves in collective jeopardy because of their race, ethnic background or national origins.

At the time, the much larger "enemy" communities of German-Americans and Italian-Americans largely escaped harassment, while the Japanese-Americans—clustered on the West Coast—bore the brunt of their fearful neighbors' post-Pearl Harbor mixture of racial antagonism, economic envy and genuine hysteria over a possible Japanese invasion. As for distinguishing between the overwhelming number of loyal citizens and resident aliens and the small handful who might be working for or willing to work for imperial Japan, officials such as Lt. Gen. John L. DeWitt, West Coast military commander (who urged rounding up and interning the whole community) saw no problem: "A Jap is a Jap. It makes no difference

whether the Jap is a citizen or not." In February 1942, President Roosevelt signed the infamous executive order 9066 authorizing internment, and the roundup began.

Of the 120,000 who then lost their homes, farms, businesses and most other worldly possessions, two-thirds led a spartan existence during the war in closely guarded confinement at concentration camps in the western interior. But over 33,000 Japanese-Americans served in the armed forces, including the famous 442nd Regimental Combat Team, reportedly the most highly decorated U.S. fighting unit of the entire war.

The military irrelevance of the detention process soon became obvious. Unlike the wholesale internment that occurred on the mainland, in Hawaii (far closer to the actual theater of war) only about one percent of the Japanese population was detained. In the Aleutian islands, by contrast, about 1,000 Aleut-Americans—whose treatment the commission also intends to study—were placed in squalid camps for the entire war.

Few attempts have been made since World War II to compensate Japanese-Americans financially, and even the most extensive of these—the Japanese Evacuation Claims Act of 1948—led to payments of only 10 cents on the dollar based on 1941 assessments of lost property. Whether Congress should spend billions now in a belated full-scale effort at genuine restitution is considered the most troublesome issue confronting the commission. Some congressmen and Japanese-American spokesmen have argued in favor of "reparations" for all the former internees, with each person receiving a stipend that—in some of the plans—would reach $25,000. This is extravagant and wrong. Even if across-the-board "reparation" funds were available, it is to cheapen the moral issue and to degrade the victims to suppose there is some kind of monetary buyoff for the affront. A proper approach would involve compensating only for the actual property losses suffered. But whatever the settlement, there is merit alone in the 16 days of public hearings planned by the commission to study that dreadful time when most of us incarcerated some of us solely for reasons of race and national ancestry.

[From the Washington Post, July 14, 1981]

SHADOWS OF WAR: JAPANESE-AMERICANS & THE 1948 "RELOCATION"

(By Liz Nakahara)

The FBI imprisoned my grandfather on Dec. 8, 1941, the day after Pearl Harbor was bombed. Agents suspected him of disloyalty because he owned a shortwave radio and operated a fish market that sold foodstuffs to Japanese fishermen docking in San Pedro harbor, south of Los Angeles.

They took him from his sickbed, as he recuperated from an asthmatic seizure for which he had been hospitalized. They took him before he could gather up his medication.

The agents interrogated Grandfather at the Immigration Detention Center on Terminal Island. They refused him visits by family members.

Finally, agents allowed Grandfather to see his son, who had enlisted in the American Army and later went overseas as a military intelligence interpreter.

The son, in uniform, explained he felt an obligation to defend his country, the country that had imprisoned his father, that later relocated his mother, sister and brother. But Grandfather's eyes were glazed, his words barely coherent.

"This is not my son," he said in a bizarre way. Grandfather could not be dissuaded that the uniformed figure was an interrogator impersonating his son.

Stunned by his father's confusion, the son left the small cell-like room. It was the last time the two men saw each other. Grandfather died shortly thereafter. They never got to say goodbye.

May Asaki Ishimoto was in her late teens, living with her parents and nine brothers and sisters in Hanford, Calif., on Dec. 7, 1941, when the Japanese bombed Pearl Harbor. "I was naive," she says now, "but my parents felt the hostility" toward Japanese-Americans.

She remembers that her older brother enlisted in the American Army as soon as he could after the attack. And she remembers her mother going into the back yard of their farmhouse to burn the children's Japanese-language textbooks, some bamboo swords and Japanese magazines. "Dad and I might have to go away because we're Japanese citizens," her mother told her. Japanese immigrants were forbidden by federal law from becoming American citizens, but in many cases their children were citizens by birth.

"Mother was certain we kids would be left behind, so she gave us instructions on how to conduct ourselves." But within the year, Ishimoto and her family—except her older brother in the Army—were taken from their home and evacuated to a "relocation center" in Jerome, Ark.

THE FIRST REACTIONS

On the night of Dec. 7, 1941, Chicago attorney Arthur J. Goldberg sat at home contemplating "the terrible news" of the Pearl Harbor attack.

"I got a call from the FBI that they had picked up my assistant, a Japanese-American woman named Elizabeth Ohi," Goldberg recalls. "I immediately went down and asked the FBI clerk, 'What are the charges against her?' "

"None," the clerk replied, "but you know about Pearl Harbor."

"Then release her to me immediately or I'll get a writ of habeas corpus," said Goldberg, who became a Supreme Court justice 21 years later.

Ohi was released that night. She soon enlisted in the Navy, where she served as an ensign.

THE HEARINGS

Suspicions of disloyalty on the part of Japanese-Americans, who populated a large portion of the California coast, intensified after Pearl Harbor. "People thought, if the Japanese can hit Pearl Harbor this week, why can't they come and bomb the West Coast next week," says James H. Rowe, Jr., who was assistant to the attorney general from 1941 to 1943.

Forty years after the fact, a commission has been established to study the justification of Executive Order 9066 of Feb. 19, 1942, which forced the evacuation of about 120,000 citizens and resident aliens of Japanese ancestry, mostly from the West Coast, and put them into 10 guarded camps across the United States.

The Commission on Wartime Relocation and Internment of Civilians today begins hearing testimony on whether the United States government committed a wrong against those affected by Executive Order 9066 and other related orders of the U.S. military forces.

Over the next year, the nine-member commission will conduct hearings across the country, then submit a report to Congress. According to Rep. Norman Mineta (D-Calif.), the hearings are necessary if only to prevent a recurrence. "When the hostages were taken at the embassy in Tehran," says Mineta, "people were saying arrest all Iranians, deport all Iranians—even though they had committed no crimes here."

Says commission chairman Joan Z. Bernstein, "In the course of our work, the commission will take care to listen to those who have not been listened to before."

THE DECISION

James Rowe, a government witness scheduled for today's hearings, says people in government weren't "doing much thinking" about civil liberties in 1942 because they were too busy worrying about the war.

"There were no great liberals charging down to help the Justice Department, which was against concentration camps from the beginning," says Rowe. Attorney General Francis Biddle, "a great civil liberties man," Rowe says, didn't want to inherit the reputation of A. Mitchell Palmer, the post-World War I attorney general who conducted "a lot of Red raids."

FBI chief J. Edgar Hoover gave Biddle a memo advising against mass evacuation, says Rowe. "Hoover said, 'The Japanese-Americans are not dangerous. There are some bad ones and if I want them, I'll grab them.' "

But as Rowe remembers it, the War Department wanted to purge the West Coast of Japanese-Americans. And the Army said mass evacuation was a "military necessity."

"That's a great phrase," says Rowe. "Edward J. Ennis, also with the Justice Department, and I would go talk to the whole damn mass of congressmen and senators sitting in an informal group. They'd say, 'The Army says evacuation is a military necessity. So whom should we believe—generals or a couple of lawyers like you?' "

"The great journalist Walter Lippmann favored" evacuation, Rowe says. "California Attorney General Earl Warren, who became a great civil liberties chief justice, was the leader of putting Japanese-Americans in camps."

When evacuation seemed inevitable, Ennis, Biddle and Rowe held a last meeting with Secretary of War Henry Lewis Stimson, "one of the country's great lawyers."

"Everybody sort of bowed down to this man who was quite old at the time," recalls Rowe. "Somebody once said two hours with Stimson was worth 20 hours with anybody else.

"Biddle, a younger man, was impressed with Stimson. But Ennis told him, 'You just can't do this.' Stimson looked at him and said, 'Mr. Ennis, you just have to assume that we are all of us men of good will.' "

At first the military evacuated "restricted areas"—power plants, shipyards and other possible targets. Then counties were evacuated. And finally, the entire West Coast.

THE EVACUATION

The first evacuations were chaotic, recalls Paul Bannai, who was interned and is now serving as the commission's executive director. "I went down to help move the people by Terminal Island, which is near the Long Beach naval yards. Many of the men were fishermen and had already been picked up. The women and children were given 24 hours to get out.

"We went down there with any kind of truck we could find," says Bannai, who was 22 at the time. "There were hordes of scavengers who knew the circumstances and were taking advantage of it. They'd say, 'I'll give you $5 for that stove or $50 for that car.' They knew the evacuees could only take what they could carry."

Few, if any, resisted the evacuation order, because Japanese-Americans "are law-abiding people," says Bannai.

But William M. Hohri, who spent a couple of years in the Manzanar, Calif., camp, offers another explanation: "Those of Japanese ancestry suffered discrimination in jobs, housing and ownership of property. So our removal was consistent with the general pattern of discrimination already established."

THE ASSEMBLY POINT

May Asaki Ishimoto vaguely remembers her parents selling their car, storing furniture in a shed and asking neighbors to watch their property.

She can't remember how she got to the assembly center in Fresno, but she recalls having to wear a tag with a number on it and having to stand in line to be inoculated.

"People were told to be orderly, not to question any of this," she says. "The idea spread that if we were loyal to our country, then we would not object to any of this."

Families were assigned to single rooms in barracks that had been hastily constructed from cheap knotty pine and tar paper. "In a corner was a pile of hay," says Ishimoto. "They told us to fill flour sacks with the hay. We put these filled sacks on army cots and used them as mattresses."

In the assembly center, Ishimoto's mother had to be hospitalized for high blood pressure, a condition she had never had before. A doctor advised the family to go to the Gila (Ariz.) Relocation Center because it was closest to Fresno. But the ailing woman insisted on going to the Jerome, Ark., camp, because it was closest to the Illinois Army camp where her oldest son was training for combat.

GUARDS AND GARDENS

George Wakiji was 12 years old when he and his family were evacuated from Pasadena to the Santa Anita Assembly Center. The center was actually a race track and some of the families had to live in the horse stables. The Wakijis were lucky; they got to live in makeshift, tarpaper barracks.

"We were in the assembly center about six months before going by train to the Gila Relocation Center in Arizona," recalls Wakiji. "All the windows on the train were covered because the Army didn't want people to see us or know what was going on."

Paul Bannai went by bus to Manzanar Relocation Center. After a seven-hour bus ride through dry, dustry desert, he found himself standing in a haze of windblown sand.

"It was a typical day," says Bannai. "It was late afternoon, but you couldn't see the sun because there was so much sand in the air."

The camp was enclosed by barbed wire and tall watchtowers manned by armed soldiers. Barracks, arranged in blocks, shared mess halls and communal bathrooms.

"There was no privacy, even in the toilets," says Bannai. "Eventually, people used scrap lumber and built partitions between the toilets. They also built tables for their barracks. Although deprived of ordinary necessities, everyone used his own resources to make the best of the situation."

Many people planted gardens or built fish ponds, recalls Wakiji. "People went into the desert and brought back plants that could live in the dry conditions. There were little canals nearby and people would catch live fish and bring them back to put in the ponds."

Wakiji and his friends devoted most of their time to sports. "People in the Gila camp built two tennis courts and a golf course on sand."

Ishimoto recalls that elderly people in the Jerome camp did woodcarving and other handicrafts. "There were a lot of talent shows, some dances and movies."

But gardens and talent shows didn't make up for all the other deprivations. The camp schools were substandard, says Wakiji. "We had to use wooden benches and tables. Some teachers were evacuees with no teaching experience. Some of the teachers from the outside probably were unable to get jobs at any of the other school systems."

Adult evacuees worked and were paid $12, $16 or $19 a month, depending on skill level, says Bannai. Doctors who worked in the camp hospital earned the top wage of $19 a month.

VISIT TO THE CAMP

Sen. Daniel Inouye (D-Hawaii) never was forcibly interned, but he knows something about the camps' pall of frustration.

He was in the Hawaiian contingent of the 442nd Japanese-American Infantry Regimental Combat Team. "There was conflict between Hawaiian and mainland [Japanese-American] contingents," says Inouye. "We used language differently and came from different environments. Then somebody had the bright idea of sending a selected group of Hawaiians to one of the camps."

Inouye and about 200 other Hawaiian GIs went by truck from Camp Shelby, Miss., to the Rohwer (Ark.) Relocation Center. "The barbed-wire enclosure and high towers with machine guns looked like Stalag 17. We were wearing American uniforms, but bayonet-toting soldiers searched us. Normally that would be a signal to fight, but I didn't want to fight someone carrying a bayonet."

"We were told several of the stark rooms in the barracks were set aside for us, and the families who lived there would spend two nights in the mess hall. When we saw what they had to live with—paper-thin walls—we all slept in the trucks."

"We came to appreciate the mainland soldier—to think that he volunteered to serve a country that imprisoned him. I have searched my soul and to this day I cannot say whether I would volunteer if I had been in a camp like that."

THE BITTER LEGACY

Ishimoto's mother, Mine Asaki, succumbed to her blood pressure ailment shortly after being relocated in Arkansas. Mother and daughter had been very close. "Mother would talk about how disappointed she was that the whole family was evacuated," says Ishimoto, whose father was a World War I Navy veteran.

"Her death was traumatic for me. I knew it would not have happened if we were not going through the relocation."

Like many evacuees, Ishimoto deeply resented her situation and periodically felt angry and bitter. "Being in camp made me hate everything Japanese," she says. "I thought if Japan hadn't bombed Pearl Harbor, then we wouldn't have to go through all this. When I came out of camp, I couldn't even remember how to speak the Japanese language."

THE ISSUE OF REDRESS

There is no way to quantify this type of anguish, so "you can't put a price tag on it," says Inouye. "Putting a price tag on it would cheapen the whole thing."

Inouye, therefore, does not favor the direct-payment redress bill sponsored by Rep. Mike E. Lowry (D-Wash.).

Rowe also opposes redress. "I think things happen in times of war that are regrettable," he says. "I don't think anything should be done. Who would you pay and how would you put a value on their property?"

"I don't want the money," says Ishimoto, who now lives in Silver Spring. "And I don't think punishment would make me feel better. There's nobody around any more to take the punishment." She mentions the late Gen. John L. DeWitt, the military commander who carried out the evacuation order and described evacuees as an "enemy race"—"There was such a hatred for that man, people called him nitwit."

Lowry's bill would provide each interness $15,000 plus $15 for every day of detention. "The bill had 17 sponsors of a pretty broad range. Everybody I've heard has said the relocation was a terrible thing."

"Besides the fundamental question of justice, redress has a deterrent factor," says Masaru Ed Nakawatase, national representative of native American affairs for the American Friends Service Committee. In this most capitalist of nations, it would be known that if this should happen again, there would be a price to pay."

The commission hearings and redress issues have influenced some people who sometimes don't differentiate between Japanese nationals and American citizens of Japanese ancestry.

"Soon after N introduced the redress bill, the phone calls and hate mail were terrible, just unreal," says Lowry. People said why give money to those who bombed Pearl Harbor."

William Hohri, who will be testifying as chairman of the National Council for Japanese-American Redress, says Japanese-American acceptance of whatever resolution the government offers would be like their acceptance of the evacuation in 1942. "A lot of us are saying we don't want to back off again—not twice."

Says Wakiji: "Like most Japanese-Americans, I can forgive my country for what it did to me. But I can never forget."

THE HIDDEN HISTORY

In 1974, I was on the last leg of a three-month-long nebulous search for identity. I had roamed through South Korea and parts of Japan.

And now I was standing in Tokyo's Haneda Airport, waiting for my plane to California, smiling and saying goodbye to a relative I had only recently become aware of—my grandmother's sister.

But Great-Aunt wasn't smiling back. She was sitting straightbacked on a chair in the waiting area. Her voice crescendoed, and she started getting tears in her eyes as she spoke her parting words.

I don't understand the Japanese language. I asked her bilingual daughter, Kimiko, "What is she telling me?"

Kimiko replied, "She says the American Army killed your grandfather."

I was 24 years old at the time and I didn't know anything about how my grandfather had really died or what had really happened to my relatives during World War II. I had barely known about the camps.

I had stumbled onto direction.●

CAP. JAMES LAWRENCE'S BIRTHDAY

● Mr. BRADLEY. Mr. President, it is my pleasure as a Senator from New Jersey to recognize and celebrate the 200th anniversary of the birth of Capt. James Lawrence this October 1, 1981. Captain Lawrence is one of New Jersey's many illustrious and heroic sons. His historical importance has long been acknowledged in our State—both towns and townships bear his name in memorial.

Born in the city of Burlington, N.J., he served valiantly in the U.S. Navy during the war of 1812. He was cited for heroism in the engagement between the U.S. Frigate *Chesapeake* and the British Frigate *Shanon*, a battle in which he suffered mortal wounds. On June 5, 1813, he died a hero's death. Best remembered for his famous phrase "Don't give up the ship," he unselfishly served New Jersey and the United States. It is with great pride that I commemorate Captain Lawrence's 200th birthday.●

MORATORIUM ON THE KILLING OF WHALES

Mr. PACKWOOD. Mr. President, I ask unanimous consent that the Senate proceed to the immediate consideration of Senate Resolution 148.

The PRESIDING OFFICER (Mr. STEVENS). The resolution will be stated.

The legislative clerk read as follows:

A resolution (S. Res. 148) calling for a moratorium of indefinite duration on the commercial killing of whales.

Mr. ROBERT C. BYRD. Mr. President, this matter has been cleared on this side of the aisle and the minority interposes no objection to its immediate consideration.

There being no objection, the Senate proceeded to consider the resolution.

Mr. PACKWOOD. Mr. President, I ask unanimous consent to add Senator HEINZ as a cosponsor to this resolution.

The PRESIDING OFFICER. Without objection, it is so ordered.

The resolution (S. Res. 148) was agreed to.

The preamble was agreed to.

The resolution, with its preamble, is as follows:

S. RES. 148

Whereas whales are a unique marine resource of great esthetic and scientific interest to mankind and are a vital part of the marine ecosystem; and

Whereas the protection and conservation of whales are a particular interest to citizens of the United States; and

Whereas the United States, which effectively banned all commercial whaling by United States nationals in December 1971, has sought an international moratorium through the International Whaling Commission on the commercial killing of whales since 1972; and

Whereas in 1971 the Congress enacted the Pelly amendment to the Fishermen's Protective Act of 1967 (22 U.S.C. 1978(a)), giving the President of the United States the right to embargo the fishery products of foreign nations whose nationals have conducted whaling operations that interfere with international conservation programs; and

Whereas in 1979 the Congress enacted the Packwood-Magnuson amendment to the Magnuson Fishery Conservation and Management Act of 1976 (16 U.S.C. 1824(b)(6)(A)), which limits access to the United States fishery conservation zone to any nation found by the Secretary of Commerce to be in violation of whale conservation programs; and

Whereas in 1979 the Congress enacted a provision urging the International Whaling Commission to agree to a moratorium on the commercial killing of whales (Public Law 96-60, title IV, section 405, August 15, 1979); and

Whereas the management regime established by the International Convention for the Regulation of Whaling, signed in 1946 and implemented by the International Whaling Commission, is not providing adequate protection to the world's whale populations: Now, therefore, be it

Resolved, That it is the sense of the Senate that the United States delegation to the International Whaling Commission is urged to work toward the adoption of a moratorium of indefinite duration on the commercial killing of whales.

Mr. PACKWOOD. Mr. President, I move to reconsider the vote by which the resolution was agreed to.

Mr. ROBERT C. BYRD. Mr. President, I move to lay that motion on the table.

The motion to lay on the table was agreed to.

EXECUTIVE SESSION

Mr. STEVENS. Mr. President, I move that the Senate go into executive session to consider the nomination on the Executive Calendar under New Reports.

Mr. ROBERT C. BYRD. Mr. President, reserving the right to object, Mr. President, I have no objection.

There being no objection, the Senate proceeded to the consideration of executive business.

THE JUDICIARY

The PRESIDING OFFICER. The clerk will state the nomination.

The legislative clerk read the nomination of William W. Wilkins, Jr., of South Carolina, to be U.S. district judge for the district of South Carolina.

Mr. THURMOND. Mr. President, I rise today to state my support for an impressive and capable attorney from South Carolina, Mr. William W. Wilkins, Jr., to be U.S. district judge for the district of South Carolina. I have known Mr. Wilkins for many years and I have no hesitation in attesting to his credentials.

Mr. Wilkins is a native of Greenville, S.C., a graduate of Davidson College, and an honor graduate of the University of South Carolina School of Law. While in law school, he served as the editor in chief of the South Carolina Law Quarterly, captain of the South Carolina moot court team, member of the Order of Wig and Robe Academic Honor Society and he was named the outstanding graduate for the year 1967 by the law school faculty.

After graduating from law school, Mr. Wilkins served 2 years in the U.S. Army. He has since attained the rank of lieutenant colonel in the Army Reserves. He was selected as law clerk to the former chief judge of the fourth circuit court of appeals, Clement F. Haynsworth, Jr.

In 1970, I appointed Mr. Wilkins as my legislative aide and he did an excellent job serving in that capacity. He thereafter returned to Greenville and entered the practice of law.

In 1975, Mr. Wilkins was sworn in as solicitor for the 13th judicial circuit. At that time he was one of the youngest chief prosecutors ever elected in the State of South Carolina. He was reelected in 1978 and presently serves in that capacity. During his work as solicitor, he created the first victim/witness assistance unit in the State of South Carolina. This unit deals with the special problems of victims and witnesses of crime. Mr. Wilkins also created the first pretrial diversion program in our State which has proven to be a meaningful alternative to the traditional justice system.

Mr. Wilkins has been admitted to practice before the U.S. Supreme Court, South Carolina Supreme Court, the U.S. Court of Appeals for the Fourth Circuit, and the Federal district courts in the State of South Carolina. He is a member of the American Bar Association, the South Carolina Bar Association, South Carolina Trial Lawyers Association, and the National District Attorneys Association.

Mr. Wilkins has broad experience and is widely respected in his profession and in the community at large. He is a man of unquestionable integrity and ability and I am confident he will make an outstanding Federal judge. It was my privilege to recommend Mr. Wilkins and I urge my colleagues to vote for his confirmation.

The PRESIDING OFFICER. Without objection, the nomination is considered and confirmed.

Mr. STEVENS. Mr. President, I move to reconsider the vote by which the nomination was confirmed.

Mr. ROBERT C. BYRD. Mr. President, I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. STEVENS. Mr. President, I ask that the President be immediately notified.

The PRESIDING OFFICER. Without objection, it is so ordered.

LEGISLATIVE SESSION

Mr. STEVENS. Mr. President, I ask unanimous consent that the Senate return to legislative session.

The PRESIDING OFFICER. Without objection, it is so ordered.

USE OF THE FRANK

Mr. STEVENS. Mr. President, I ask unanimous consent that the Senate proceed to the consideration of Calendar No. 203, S. 1224.

The PRESIDING OFFICER. The bill will be stated by title.

The legislative clerk read as follows:

A bill (S. 1224) to amend the provisions of title 39, United States Code, relating to the use of the frank, and for other purposes.

There being no objection, the Senate proceeded to consider the bill which had been reported from the Committee on Governmental Affairs with amendments.

Mr. STEVENS. Mr. President, I ask unanimous consent that the committee amendments be considered and agreed to en bloc.

The PRESIDING OFFICER. Without objection, it is so ordered.

The committee amendments agreed to en bloc are as follows:

On page 1, strike line 3, through and including line 4 on page 2, and insert the following:

That section 3210(a)(3)(F) of title 39, United States Code, is amended to read as follows:

"(F) mail matter expressing congratulations to a person who had achieved some public distinction;".

On page 2, after line 10, insert the following:

(1) by inserting the words "unless it is a brief reference in otherwise frankable mail" before the semicolon at the end of subparagraph (B)(i);

On page 2, line 14, strike "(1)", and insert "(2)";

On page 2, line 16, strike "(2)", and insert "(3)";

On page 2, line 19, strike "(3)", and insert "(4)";

On page 3, after line 23, insert the following:

"(C) No Member of the Senate may mail any mass mailing as franked mail if such mass mailing is mailed fewer than 60 days

immediately before the date of any primary election of general election (whether regular, special, or runoff) for any national, State or local office in which such Member is a candidate for election.

On page 4, line 5, strike "'(C)", and insert "'(D)";

On page 4, line 17, strike "'(D)", and insert "'(E)";

On page 6, strike line 1, through and including line 12, and insert the following:

"(5) The Senate Committee on Rules and Administration and the House Committee on Congressional Mailing Standards shall prescribe for their respective Houses rules and regulations governing any franked mail which is mailed under this subsection and shall by regulation limit the number of such mailings allowed under this subsection.".

On page 7, line 1, strike "subsection.'.", and insert "subsection.";

On page 7, after line 1, insert the following:

"(B) The Senate Select Committee on Ethics may require any Member of, or Member-elect to, the Senate entitled to make any mailings as franked mail under this subsection to submit a sample or description of the mail matter to the Committee for an advisory opinion as to whether the proposed mailing is in compliance with the provisions of this subsection.".

On page 8, after line 9, insert the following:

SEC. 6. (a) Section 3216(a)(1)(B) of title 39, United States Code, is amended by striking out "surviving spouse" and substituting "survivors".

On page 8, line 13, strike "Sec. 6. (a)", and insert "(b)"; and

On page 8, line 20, strike "(b)(1)", and insert "(c)(1)";

So as to make the bill read:

S. 1224

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 3210(a)(3)(F) of title 39, United States Code, is amended to read as follows:

"(F) mail matter expressing congratulations to a person who has achieved some public distinction;".

SEC. 2. (a) Section 3210(a)(5) of title 39, United States Code, is amended—

(1) by inserting the words "unless it is a brief reference in otherwise frankable mail" before the semicolon at the end of subparagraph (B)(i);

(2) by inserting the word "or" after the semicolon at the end of subparagraph (B)(ii);

(3) by striking out the semicolon and the word "or" at the end of subparagraph (C) and substituting a period; and

(4) by striking out subparagraph (D).

(b) Section 3210(a) of title 39, United States Code, is amended by adding the following new paragraph:

"(6)(A) It is the intent of Congress that a Member of, or Member-elect to, Congress may not mail any mass mailing as franked mail—

"(i) if the mass mailing is mailed fewer than 60 days immediately before the date of any primary election or general election (whether regular, special, or runoff) in which the Member is a candidate for reelection; or

"(ii) in the case of a Member of, or Member-elect to, the House who is a candidate for any other public office, if the mass mailing—

"(I) is prepared for delivery within any portion of the jurisdiction of or the area covered by the public office which is outside the area constituting the congressional district from which the Member or Member-elect was elected; or

"(II) is mailed fewer than 60 days immediately before the date of any primary election or general election (whether regular, special, or runoff) in which the Member or Member-elect is a candidate for any other public office.

"(B) Any mass mailing which is mailed by the chairman of any organization referred to in the last sentence of section 3215 of this title which relates to the normal and regular business of the organization may be mailed without regard to the provisions of this paragraph.

"(C) No Member of the Senate may mail any mass mailing as franked mail if such mass mailing is mailed fewer than 60 days immediately before the date of any primary election or general election (whether regular, special, or runoff) for any national, State or local office in which such Member is a candidate for election.

"(D) The Select Committee on Ethics of the Senate and the House Commission on Congressional Mailing Standards shall prescribe for their respective Houses rules and regulations, and shall take other action as the Committee or the Commission considers necessary and proper for Members and Members-elect to comply with the provisions of this paragraph and applicable rules and regulations. The rules and regulations shall include provisions prescribing the time within which mailings shall be mailed at or delivered to any postal facility and the time when the mailings shall be deemed to have been mailed or delivered to comply with the provisions of this paragraph.

"(E) For purposes of this section, the term 'mass mailing' means newsletters and similar mailings of more than five hundred pieces in which the content of the matter mailed is substantially identical but shall not apply to mailings—

"(i) which are in direct response to communications from persons to whom the matter is mailed;

"(ii) to colleagues in the Congress or to government officials (whether Federal, State, or local); or

"(iii) of news releases to the communications media.".

SEC. 3. (a) Section 3210(d) of title 39, United States Code, is amended by—

(1) striking "the House" and substituting "Congress" in paragraph (1);

(2) inserting "or State" after district" in subparagraph (A) of paragraph (1);

(3) inserting "with respect to a Member of the House of Representatives" after "(B)" in subparagraph (B) of paragraph (1);

(4) striking "House of Representatives" and substituting "Congress" in paragraph (2);

(5) inserting "or the State" after "district" in paragraph (2);

(6) redesignating paragraph (4) and paragraph (5) as paragraph (7) and paragraph (8), respectively; and

(7) inserting after paragraph (3) the following new paragraphs:

"(4) Any franked mail which is mailed under this subsection shall be mailed at the equivalent rate of postage which assures that the mail will be sent by the most economical means practicable.

"(5) The Senate Committee on Rules and Administration and the House Committee on Congressional Mailing Standards shall prescribe for their respective House rules and regulations governing any franked mail which is mailed under this subsection and shall by regulation limit the number of such mailings allowed under this subsection.".

"(6)(A) Any Member of, or Member-elect to, the House of Representatives entitled to make any mailing as franked mail under this subsection shall, before making any mailing, submit a sample or description of the mail matter involved to the House Commission on Congressional Mailing Standards for an advisory opinion as to whether the proposed mailing is in compliance with the provisions of this subsection.

"(B) The Senate Select Committee on Ethics may require any Member of, or Member-elect to, the Senate entitled to make any mailings as franked mail under this subsection to submit a sample or description of the mail matter to the Committee for an advisory opinion as to whether the proposed mailing is in compliance with the provisions of this subsection.".

(b) This section shall become effective 120 days after the date of enactment of this Act.

SEC. 4. (a) Section 3210(e) of title 39, United States Code, is amended by striking out the last sentence.

(b) Section 3210 of title 39, United States Code, is amended by redesignating subsection (f) as subsection (g), and by inserting after subsection (e) the following new subsection:

"(f) Any mass mailing which otherwise would be permitted to be mailed as franked mail under this section shall not be so mailed unless the cost of preparing and printing the mail matter is paid exclusively from funds appropriated by Congress, except that an otherwise frankable mass mailing may contain, as an enclosure or supplement, any public service material which is purely instructional or informational in nature, and which in content is frankable under this section.".

SEC. 5. (a) Section 3211 of title 39, United States Code, is amended by striking out "until the first day of April" and substituting "during the 90-day period immediately".

(b) Section 3213(2) of title 39, United States Code, is amended by striking out "until the thirtieth day of June" and substituting "during the 90-day period immediately".

SEC. 6. (a) Section 3216(a)(1)(B) of title 39, United States Code, is amended by striking out "surviving spouse" and substituting "survivors".

(b) Section 3218 of title 39, United States Code, is amended by inserting after "such Member" the following: "(or, if there is no surviving spouse, a member of the immediate family of the Member designated by the Secretary of the Senate or the Clerk of the House of Representatives, as appropriate, in accordance with rules and procedures established by the Secretary or the Clerk)".

(c)(1) The heading for section 3218 of title 39, United States Code, is amended by striking out "surviving spouses" and substituting "survivors".

(2) The table of sections for chapter 32 of title 39, United States Code, is amended by striking out the item relating to section 3218 and substituting the following new item:

"3218. Franked mail for survivors of Members of Congress.

SEC. 7. (a)(1) Section 5(d) of the Act entitled "An Act to amend title 39, United States Code, to clarify the proper use of the franking privilege by Members of Congress, and for other purposes", approved December 18, 1973 (Public Law 93-191; 87 Stat. 742), is amended by striking out "and" the second place it appears therein, and by inserting after "United States Code," the following: "and in connection with any other Federal law (other than any law which imposes any criminal penalty) or any rule of the House of Representatives relating to franked mail,".

(2) The first sentence of section 5(e) of such Act is amended by inserting after "of this section" the following: "(or any other Federal law which does not include any criminal penalty or any rule of the House of Representatives relating to franked mail)".

(b) Section 5(d) of such Act is amended—

(1) by inserting "any former Member of the House or former Member-elect, Resident

Commissioner or Resident Commissioner-elect, Delegate or Delegate-elect, any" after "Delegate-elect,";

(2) by inserting "(or any individual designated by the Clerk of the House under section 3218 of title 39, United States Code)" after "any of the foregoing";

(3) by inserting "any" before "other House official"; and

(4) by inserting "or former House official" after "House official".

(c) Section 5(e) of such Act is amended by inserting after the eighth sentence thereof the following new sentence: "In the case of a former Member of the House or a former Member-elect, a former Resident Commissioner or Delegate or Resident Commissioner-elect or Delegate-elect, any surviving spouse of any of the foregoing (or any individual designated by the Clerk of the House under section 3218 of title 39, United States Code), or any other former House official, if the Commission finds in its written decision that any serious and willful violation has occurred or is about to occur, then the Commission may refer the matter to any appropriate law enforcement agency or official for appropriate remedial action.".

The bill was ordered to be engrossed for a third reading and was read the third time.

The PRESIDING OFFICER. The bill having been read the third time, the question is: Shall it pass?

So the bill (S. 1224) was passed.

Mr. STEVENS. Mr. President, I move to reconsider the vote by which the bill was passed.

Mr. ROBERT C. BYRD. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

CONCLUSION OF MORNING BUSINESS

Mr. STEVENS. Mr. President, is there further morning business?

The PRESIDING OFFICER. Is there further morning business? If not, morning business is closed.

ORDER FOR THE RECOGNITION OF CERTAIN SENATORS ON TOMORROW

Mr. STEVENS. Mr. President, I ask that on tomorrow, Tuesday, July 21, Senators THURMOND, NICKLES, and KENNEDY each be recognized for a special order of 15 minutes each.

The PRESIDING OFFICER (Mr. PACKWOOD). Without objection, it is so ordered.

REDUCTION OF LEADERSHIP TIME ON TOMORROW

Mr. STEVENS. Mr. President, I ask unanimous consent that the time of the leaders on each side be reduced to 2 minutes each for tomorrow.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER FOR RECESS UNTIL 9:15 A.M. TOMORROW

Mr. STEVENS. Mr. President, I ask unanimous consent that the time for convening the Senate be changed to 9:15 a.m. tomorrow in lieu of 10 a.m.

The PRESIDING OFFICER. Without objection, it is so ordered.

RECESS UNTIL TOMORROW AT 9:15 A.M.

Mr. STEVENS. Mr. President, if there is no further business to come before the Senate, I move, in accordance with the previous order, that the Senate stand in recess until 9:15 a.m. tomorrow morning.

The motion was agreed to and, at 7:10 p.m., the Senate recessed until tomorrow, July 21, at 9:15 a.m.

CONFIRMATION

Executive nomination confirmed by the Senate July 20, 1981:

THE JUDICIARY

William W. Wilkins, Jr., of South Carolina, to be U.S. district judge for the district of South Carolina, vice Robert W. Hemphill, retired.

EXTENSIONS OF REMARKS

U.S. PLANES ARE KILLING CHILDREN

HON. PAUL FINDLEY

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, July 20, 1981

● Mr. FINDLEY. Mr. Speaker, the United States can check the rising cycle of violence in the Middle East and restore its own prestige and promise as a force for peace by suspending further military shipments to Israel. To do so we must not ship the 10 F-16 fighter aircraft and we must suspend all other military shipments to Israel until Prime Minister Begin has pledged his Government will henceforth honor the restrictions we place on these weapons.

Israel's use of U.S. aircraft to bomb Beirut is the latest defiance of U.S. interest and laws by Mr. Begin. Unless the Reagan administration quickly forces a change in policy, the cycle of violence will explode, many more innocent Israelis and Arabs will die, and the ability of the United States to bring peace will be severely impaired.

Arab countries, long suffering under a U.S. policy heavily tilted toward Israel, may conclude there is little reason for restraint—and less reason for them to consider American foreign policy and security interests in the Middle East.

When Israel bombed the Iraqi nuclear facility, most Americans—indeed most of the world—reacted with shock and dismay. President Reagan was so embarrassed, American planes were used in clear violation of U.S. law, he postponed the shipment of four sophisticated fighter-bombers scheduled to be delivered to Israel. And the United States joined other nations in a U.N. condemnation of the attack.

Now, 40 days later, the shipment of warplanes to Israel is still undecided, and Secretary Haig's special emissary, Robert McFarlane, was unable to secure any agreement that Israel would in the future act with restraint in using U.S. weapons. All indications are that the United States will permit Israel to continue to ignore U.S. law which restricts the use of such military equipment to legitimate self-defense.

In fact, in a direct and personal affront to the United States, and a calculated embarrassment to Egypt's President Sadat, Prime Minister Begin broke a moratorium on bombing in Lebanon two weekends ago while McFarlane was en route to Israel to try to win concessions on how U.S. weapons would be used in the future. Compounding the affront, U.S. Ambassador Habib was also in the Middle East trying to avert yet another illegal Israel attack, this one on Syrian missile implacements. In further violation of U.S. law, Begin ordered bombing raids on several towns and Palestinian camps in Lebanon—most recently the city of Beirut. Press accounts report that hundreds of people were killed and wounded, most of them civilians. Predictably, the Palestinians retaliated with rockets, killing three Israelis and wounding many others.

Responsibility for this new cycle of violence, death, and destruction must rest squarely with those who have the ability to stop it. In this case, it was Prime Minister Begin who broke the moratorium, as he had broken an 8-year de facto ceasefire with Iraq in ordering the June 6 bombing mission.

But beyond Begin's personal responsibility is that of the United States. We too have had the opportunity to stop the rising tide of violence in the Middle East and we have chosen not to do so.

The United States could demand an amendment of our agreement with Israel which would clarify the circumstances under which U.S. arms can be used by Israel beyond its borders. We have not done so.

The United States could unilaterally decide when Israel is permitted to use our military equipment against civilian and military targets and present the Israeli Government with a simple edict. We have not done so.

The United States could even require Israel to seek prior approval from U.S. military officials already in Israel before bombing raids in Lebanon and elsewhere are undertaken. But again we have not done so.

And if all else fails, the United States could repeat the demand made forcibly and effectively by President Carter in 1979, threatening a reduction in aid to Israel if the attacks against Lebanon continue. His resolute action brought the attacks to an end for a full year. Unfortunately—except for the Iraqi incident—President Reagan has not yet seen fit to challenge the legality of any Israeli military operations.

And because the United States has failed to act, the attacks and the bloodshed go on. Using American warplanes, Prime Minister Begin commits the same senseless terrorist attacks for which he rightfully condemns Yasser Arafat. But now President Reagan and Congress must share the responsibility—and the blame.

Yet as grim as the situation appears, the United States still has a chance to be a force for peace instead of war. All President Reagan has to do is to enforce U.S. laws which limit the ways in which our weapons can be used by another country. Mr. Reagan is capable of great surprises and great statesmanship, qualities desperately needed at this critical time.

The following article by Richard Cohen of the Washington Post tells graphically how U.S. warplanes are being used to kill children in Lebanon.

CHILDREN OF BEIRUT ARE UNFAIR TARGETS

This is about the children I have seen—the children of the Sabra camp for Palestinian refugees in Beirut and the children of Damour and, of course, the Jewish children of Metulla and Kiryat Shemona, which is across the border in Israel. Children are dying in all these places.

The other day, the Israelis bombed the Sabra camp and other Palestinian installations in and around Beirut, killing about 300 persons, according to the Lebanese government. They hit places that are called camps, but they are not camps. They are neighborhoods. The Sabra camp has been in Beirut since 1948. It is old. It has taken root. What were tents are now cottages and what were huts are now homes.

In the Sabra camp, there are courtyards with wild flowers and orange trees. In the Sabra camp, there are stores and streets and schools, and when you walk into the place, you do not realize that you have entered a camp. It does not look like a camp. It looks like a neighborhood.

To bomb the Sabra camp is like bombing a neighborhood in Washington. It is like bombing Adams-Morgan. It is like bombing Harlem or Coral Gables or Westwood or any neighborhood you can think of in any city you can think of. It is not like bombing a camp with tents and where everything is military. It is like bombing the street where you live.

It means killing children. It means killing old people and women and men and widows and shopkeepers and killing them all because they happen to live in a Palestinian neighborhood. Some may not even be Palestinians. Lebanese live in the camps. No matter. When the bombs fall, they too must die.

When I was in the camp, there were kids everywhere. They followed me wherever I went. They do not see many light-skinned, fair-haired people. There are lots of kids—lots of kids and lots of women but not too many men. Some of the men work elsewhere in Beirut, and some work elsewhere in the Middle East and some, of course, are in the South, either attempting to kill Israelis or learning how to kill Israelis.

Only a fool could fail to understand why the Israelis took action. Only a fool does not know that the PLO also kills children—sometimes only children. Only a fool could fail to remember the attacks on the nurseries, the children's houses at the kibbutzes where the kids all sleep together. In the

● This "bullet" symbol identifies statements or insertions which are not spoken by the Member on the floor.

Middle East, grown men kill babies and call themselves Freedom Fighters.

Only a fool could fail to understand what it is like to live up on the northern border of Israel. The artillery can come down any minute. The rockets can be deadly. The other day, three persons were killed. At night, you can hear the Palestinians and the Lebanese militia exchange artillery fire. It is like thunder in the distance. In the children's houses, baby sitters sit with weapons cradled in their arms.

Still, there is a scale to these things—a proportion. To fire a Katyusha rocket at a border settlement is an act of war. To kill an innocent child is an outrage. But to use the most complex airplanes known to man to bomb a city neighborhood is not even in the same ballpark. What is supposed to be the proper ratio here, 300 to 3? This is what happens when a sovereign state adopts the terrorist morality of its enemies and when its leaders become captive of their own, awful personal experiences.

But the Reagan administration is not the captive of these experiences. It has to take the larger view. So far, though, its response to the bombings and the earlier raids has been timid. It admonishes Israel in a very mild way, postpones delivery of the planes that make such raids possible and then postpones delivery again. What is missing is a sense of outrage and shock that American planes are being used to kill innocent civilians in the neighborhoods of Beirut.

No one would suggest that America reconsider its friendship with Israel. This is basic and rooted in moral and democratic values that the two countries share—not to mention strategic concerns. For these reasons, the administration seems reluctant to deal with Israel as forcefully as it should. It thinks that the issue is friendship or alliances or the Russians, but that is no longer the case. In the latest bombing of Beirut, it is the killing of innocent civilians that is the issue. If you don't condone it for your enemies, you can't for your friends, either.●

A TRIBUTE TO RAY MANCINI

HON. LYLE WILLIAMS

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, July 20, 1981

● Mr. WILLIAMS of Ohio. Mr. Speaker, I would like to call attention to the accomplishments of Raymond Mancini, a young man from Youngstown, Ohio. Mr. Mancini, who is known to fight fans as Boom Boom Mancini, is the North American Boxing Federation lightweight champion. This 20-year-old man is expected to fight for the world title in early October.

An honor student and class president at Cardinal Mooney High School in Youngstown, Ray passed up opportunities to go to college to enter the field of professional fighting. Through perseverence, dedication, and much hard work, Ray has now brought himself to the pinnacle of his profession and, in so doing, brought great credit and fame to himself and to the 19th Congressional District of Ohio, which I have the honor to represent.

Ray's motivation for seeking the world championship is a rather elementary one, but one which is heartwarming. Ray fights for his father, Lenny. The elder Mancini was a professional fighter also known as Boom Boom. Lenny's career was disrupted by World War II and he never got the title shot so many sports writers believed he richly deserved. Ray plans to win that title for his father.

Just yesterday, Ray successfully defended his North American title on national television. As soon as the bout ended, Ray ran to the edge of the ring. I could not hear his words, but I could read his lips as he asked where his father was and asked that his father be brought into the ring with him to share his triumph. The scene brought to mind the scene at Lake Placid after the 1980 U.S. Olympic Hockey team defeated the Russian team. Who can ever forget the sight of our goalie Jim Craig draped in the American flag, looking into the stands and asking where his father was.

Ray Mancini's actions yesterday mirror Mr. Craig's and showed the world the good traits, the traits of courage, love, and consideration, that he possesses and which are among the best traits of America, Americans, and the entire human race. Ray Mancini is to be highly commended for being a topflight fighter and a topflight human being.●

ON THE BASEBALL STRIKE

HON. JOHN L. BURTON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 20, 1981

● Mr. JOHN L. BURTON. Mr. Speaker, George Andros, a well known and beloved sportsman and night club entrepreneur in San Francisco, has come up with a series of proposals that would provide that the public receive a fair return for their contributions to the financial success of present day owners and players in professional sports. I would hope that the Members would read this very provocative proposal by George Andros.

ON THE BASEBALL STRIKE

DEAR JOHN: For years I have been upset in the manner the people have been taken advantage of in respect to sports. In the past two weeks or so since the baseball strike it is even more obvious that again the people are the ones who will again suffer financially and for the lack of entertainment in person. I think it is about time that the people who elected those to represent them are heard in this matter and certainly Congress should take steps to avoid further costs to its citizens.

I would like to make a suggestion which to me would seem fair to everyone, yet it could bring things back to reality and possibly save the future of sports.

1. I believe everyone using stadiums or property for any sporting event that receives income from television should pay 25 percent of the income received from television to the city or state as rent.

(a) The people pay tens of millions of dollars for the facilities in which to play in, yet they do not even get in rent what it costs in interest to build these stadiums, so the people who have paid in taxes for these facilities now have to pay even more for the privilege of going to see games in person. This is very unfair, and the athletes of today do not take into consideration that it is the fans who are the ones that really suffer, especially large families who do not have an enormous income.

(b) I believe in order to help solve the economy of our country that any owner who now pays any athlete in excess of $500,000.00 annually shall also pay 25 percent in additional rent to the community that made the facilities available and this would stop the very rich who try to buy a pennant in securing the best players, and it would also keep the costs down so in reality it would benefit everyone including the players who do not make the high income by preventing additional strikes and will enable families which paid for these stadiums to be able to afford to attend games once in a while.

(c) Owners should be required to pay higher rents according to the income and profits which should be worked out for the use of stadiums which were paid for by the taxpayers. Also private owned stadiums should be required to pay equal rents as they have the use of many tax paid facilities enabling the citizens to get to these stadiums.

John what I am talking about is around 100 or less owners of most of the major sports in America and less than one player out of every 5000 citizens who have paid all these years for the priviledge of making sports figures wealthy.

I am sure most Americans do not mind seeing sports figures get good salaries, but it is now getting out of hand and if these players and owners do not make adjustments regarding the people who give them their salaries and profits, then it is about time Congress steps in and enacts laws to protect the people.

Sincerely,

GEORGE D. ANDROS.●

A TRIBUTE TO THE VOLUNTEER WORK DONE BY ROSE HINES

HON. CLAUDINE SCHNEIDER

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES

Monday, July 20, 1981

● Mrs. SCHNEIDER. Mr. Speaker, at a time when so many are speaking out in request of a greater commitment to America's war veterans, I would like to call the attention of this body to Miss Rose Hines, an individual who not only speaks out in behalf of our veterans, but has spent her life in dedication and service to these individuals.

Earlier this year I had the honor to present Miss Hines with a certificate commemorating her 35,000 hours of volunteer service to the Davis Park Veterans' Administration Hospital in Providence, R.I. Working as a volunteer for the past 25 years, she has also been presented the Administrator's Volunteer Service Award, the highest

honor awarded by the Veterans' Administration.

During her many years of service, Miss Hines has cheered hundreds and eased the loneliness of patients too numerous to count. A recently retired clerk-typist for the State, Miss Hines spends 5 hours, 3 nights a week, and 20 hours each weekend in service at the hospital, the equivalent of working a full-time job without vacation for well over 12 years.

Mr. Speaker, on behalf of all who have benefited from the good works of Rose Hines, and of my colleagues in the House and Senate, I express my deepest appreciation to an outstanding and deserving servant of the veteran community.●

THE MESSAGE FROM MISSISSIPPI

HON. DON EDWARDS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 20, 1981

● Mr. EDWARDS of California. Mr. Speaker, I would like to call to the attention of my colleagues an editorial which appeared in the Washington Post on July 18, 1981.

Thus far, the Reagan administration has failed to announce its support for extension of the Voting Rights Act. The editorial examines the widespread support which full extension of this most successful of our civil rights laws has garnered, and encourages President Reagan to put the weight of his office behind the extension effort.

I think my colleagues will find the editorial of interest.

THE MESSAGE FROM MISSISSIPPI

The truly beady-eyed Reaganologist could discern a political signal of some importance from the Justice Department announcement that it had filed its first lawsuit seeking to enforce the Voting Rights Act earlier this week. Although the president has yet to declare whether he favors extending the statute and, if so, whether in its present form or with potentially hobbling amendments, so far the issue of opposition to voting rights extension appears to be a nonstarter.

The supporters of simple extension, a politically mixed bag of liberals and conservatives, dominated the recent House hearings on the subject. Some legislators who had declared their skepticism about maintaining strict Justice Department oversight of electoral procedures in states covered by the act—now disproportionately in the South because of historic interference there with blacks attempting to exercise their franchise—have wavered after listening to the arguments of those persuaded of the measure's continued necessity, especially in the South.

If Mr. Reagan required further evidence of this support, he received it last week from an unlikely quarter. In Mississippi's Fourth Congressional District, Democrat Wayne Dowdy edged out his Republican opponent in a closely contested special election for a seat previously held by Republican Jon C. Hinson, who had resigned after being charged with attempted sodomy. Understandably, the Republican chose to deny that Mr. Dowdy's 1,000 vote margin in a district solidly Republican for almost a decade marked a turning point for Democratic fortunes elsewhere. Instead, they stressed the local factors—for example, voter response to Mr. Hinson's difficulties. Also, Republicans noted that—at least on economic questions—while Mr. Dowdy attacked the administration's proposed cuts in Social Security, at the same time he avoided attacking the entire Reagan economic program and even reminded voters regularly that he intended to keep independent of the Democrats' national leadership.

But what has last week's contest to do with the political price of voting rights? This: the voters of Mississippi's Fourth District made it plain that they favored an unrestricted extension of the Voting Rights Act. First during the Democratic primary and then in the special election campaign, Mr. Dowdy alone took the incautious position that the act should be extended in its present form without further delay. A substantial majority of the district's black voters endorsed him (45 percent of the Fourth District's population is black). They were joined by many white voters in the district, which includes much of the state's urban, business-oriented and professional classes on whose support the resurgence of Republicanism in the region has been based.

Southern Republican state chairmen, who called weeks ago for renewing the Voting Rights Act, appear to have heard the message long before Mississippi voters drove it home with Mr. Dowdy's election. The future of their party in the South may depend upon Mr. Reagan's ability to recognize its newly evolved biracial electorate as it strives to eliminate the residue of racism from political life. In filing its initial Voting Rights lawsuit, the administration in turn may be testing for the presence of substantial southern or congressional opposition. If, however, there emerges no groundswell of complaint, perhaps the possibility exists for the measure's surprisingly early and unabrasive extension. This would please most of the parties directly concerned—including the southern Republicans.●

WHAT THE MONETARIST TEXTBOOKS DON'T TEACH

HON. JAMES L. OBERSTAR

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 20, 1981

● Mr. OBERSTAR. Mr. Speaker, a recent Washington Post article quoted Reagan administration economic officials as saying that they were puzzled and confused by continued high interest rates.

It is, however, the administration and the Federal Reserve Board which have decided to hold fast to a tight money policy. Administration officials have admitted that this policy only increases the possibility of a recession. I would like to share with my colleagues John Kenneth Galbraith's comments on monetary policy and high interest rates which appeared in the Washington Post today, July 20, 1981.

[From the Washington Post July 20, 1981]

WHAT THE MONETARIST TEXTBOOKS DON'T TEACH

(By John Kenneth Galbraith)

The lessons from the civil disorder in the British cities will not be lost in this country. It is something on which, more than Englishmen, we have had experience. Where people have jobs, reasonably good housing, other urban amenities, and find life, if not perfect, at least benign, these outbreaks do not occur. Where there is despair and especially among the young, there is risk. This we know, but there is one aspect of the British experience that, to our sorrow, we are less likely to notice. That is the relationship between economic policy and urban distress and disturbance. It is a relationship that all, liberal or conservative, should recognize, and the British experience is a powerful signal as to its importance.

In most discussion and in much university and textbook teaching, monetary policy is pictured as socially neutral. It is a technical arbitration between the central bank, the bankers and the business community; it may work or not work, but there is no remarked difference in its impact on different income groups or otherwise on the social structure. Decisions in the calm boardrooms of the Federal Reserve System or the Bank of England are safely distant from such concerns. This is sadly, seriously and dangerously wrong, and the British reliance on monetary policy in these last years, the most committed in the industrial world, makes it a matter not of theory but of harshly realized experience.

Monetary policy works, and on this there is general agreement, by restricting bank and other lending and by rationing the credit so allowed by high interest rates. It will occur to most that those who receive the high interest rates—banks and individuals with loanable cash—do not suffer from such rates. On the contrary. And neither do affluent citizens who do not need to borrow money. Or cash-rich corporations that are similarly situated. Or those that, though they borrow, have the market power and position that allow them to pass the higher costs of money along to the public.

But, as one passes down the income scale, there comes the deprivation and restraint that it is the purpose of monetary policy to induce. Those who must borrow money for their business, to find housing, to replace an automobile are subject to its effects. Again, this is a matter of experience. In this country the effect of high interest rates on the housing industry, other small business and automobile purchases has been evident to all. In Britain, it has produced the largest failure rate among small businesses in half a century. But the really disastrous effect is yet farther down the income scale.

For monetary policy works against endemic inflation not through some technically neutral nexus that relates the money supply to prices. It works against inflation in a highly organized society such as our or that of Britain only as it creates enough unemployment so that this restrains trade union claims and enough idle plant capacity so that price increases are forgone, discounts initiated and the unions resisted. Or, a notable recent feature, it forces the removal of production to less unionized, lower-wage areas. Again there is the experience. This is how the claims of the United Auto Workers on Chrysler were contained, how discounts were forced upon the automobile companies and how this became a

pattern of restraint in rubber, machinery and other industries. And this is how the policy has worked against the rather more stubbornly resistant unions of Britain.

But long before the UAW and its counterparts succumb to monetary policy, there is the terrible social tragedy for those who have never had a job, are in the wrong place, are of the wrong sex or have the special disadvantage of being of the wrong color or race. A policy sufficiently strong to act against the organized sector of the economy—the world of the unions and the big corporations—comes down with exponential force on the young, unorganized, black and central-city workers or would-be workers. Their unemployment rate, as we and the British have learned, can run to 30, 40 or 50 percent of such workers in the cities. Many do not have unemployment compensation entitlement; and none has supplementary unemployment benefits. This has been the effect of monetary policy in the British cities. It is the way it works or will work everywhere.

I do not believe the monetarists see their policy as a deliberate design for rewarding the rich at the cost of the very poor, although the sources of some of their applause should make them very uneasy. There is, rather, the tendency already mentioned to see the policy as a technical exercise, to ignore its social consequences as somehow unworthy of practical thought. Or the proponents move directly from the money supply to the effect on inflation without consideration of the intervening process and the pain associated therewith. One can even be slightly mystical about the relationship. Responding to British critics last year, Professor Milton Friedman, the supreme protagonist in both countries, said: "We can know that a bird flies and have some insights into how it is able to do so without having a complete understanding of the aerodynamic theory involved." Most important of all, we are made uneasy about anything that suggests an opposition of interest between rich and poor. That is not the way a society is supposed to work. So we suppress mention of it.

Well, we now know what makes monetary policy fly, and we know that—unlike strong fiscal and incomes policies, these being the required alternatives and supplements—its flight does reward the fortunate, penalize the poor. Better the truth. The British are now paying the price for their heavy reliance on monetarism. It is a price no American, whatever his or her income bracket or political faith, can ignore. Social tranquillity is just as important for the affluent as for others and for conservatives as for liberals.

NOTE: The writer is professor emeritus of economics at Harvard University.●

U.S. CHAMBER GOES ALL OUT FOR REAGAN ECONOMIC PROGRAM

HON. GERALD B. H. SOLOMON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, July 20, 1981

● Mr. SOLOMON. Mr. Speaker, I can think of few Americans who have worked harder in recent months to convince Congress to enact President Reagan's economic program than Dr. Richard Lesher, president of the U.S. Chamber of Commerce. Under his leadership, the U.S. chamber, the Nation's largest federation of business representatives, has played an indispensible role in demonstrating to Congress in no uncertain terms that an overwhelming majority of Americans want us to support the Reagan program in full. Now that the debate over that program has shifted to taxes, I would like to share with my colleagues an article by Dr. Lesher which appeared in today's Washington Star—an article which should end all doubts about where the Nation's business—large and small—stand when it comes to tax relief.

The article follows:

[From the Washington Star, July 20, 1981]

DEMOCRATS OFFERING TOO LITTLE

(By Richard L. Lesher)

If someone had told you several months ago that the House leadership and Democrats on the Ways and Means Committee would be fighting tooth-and-nail for such proposals as a reduction in corporate tax rates from 46 to 34 per cent and a one-year write-off of business investments, you probably would have thought that person crazy.

But those Democrats have done that and more, proposing in addition a two-year, 15 per cent cut in individual tax rates, a reduction of the maximum rate on so-called unearned income from 70 to 50 per cent, and a cut in the top capital gains tax rate from 28 to 20 per cent. If nothing else, the Ways and Means package provides dramatic illustration of an emerging national consensus that future economic prosperity requires relief from a crippling tax burden which for the average worker, has increased by 49 per cent in just the last two-and-a-half years. The Laffer Curve is laughed at no more.

Nevertheless, despite a perceived attractiveness of certain individual proposals in the Ways and Means plan, most members of the business community are saying "thanks, but no thanks" to the committee, and are sticking with President Reagan's bipartisan tax package.

The political loyalty that many in the business community feel for the president may explain part of it; so too does the suspicion with which many view the sudden conversion of the House leadership to the tax cut cause. After all, many of the same liberal Democrats who now advocate these tax proposals supported, not too many months ago, a candidate for president who called for wage-and-price controls, immediate rationing of energy, more regulation and higher taxes.

But political loyalties and suspicions aside, the main reason why business is standing firm behind the president is the economic soundness of his proposals. It is the best program for business. It is the best program for America.

BUSINESS CLIMATE

The president's plan to cut individual tax rates across-the-aboard by 25 per cent over 33 months is desperately needed by business—not only because 90 per cent of businesses (mainly small ones) pay taxes under these personal rates, but because the increased savings and worker productivity encouraged by this incentive-oriented tax cut would improve the overall business climate. The other main feature of the Reagan tax plan—faster and simpler depreciation of plant and equipment—would spur investment and increase productivity. It would be of great benefit to small businesses which, according to the latest figures, claim about 40 per cent of total depreciation. In addition, thousands of other small businesses which do not have the resources to meet the complex reporting requirements necessary for depreciation, would be able to write off investments under the vastly simplified schedule the president has proposed.

On the other hand, the Ways and Means approach of a 15 per cent tax rate reduction would not even make up for the "bracket creep" most taxpayers will suffer over the next two years. The promised corporate tax relief would not even begin until 1984, and the phase-in of the "expensing" provision for investment write-offs would not be completed until 1990.

A LIKELY VICTIM

All these between-the-lines stipulations have earned the Ways and Means plan the label of "too little, too late," to which I might add: too close to the 1984 elections, at which time a yet-to-be-effective corporate tax cut would be the easiest victim to sacrifice for an election-eve congressional spending binge.

In recent weeks, I have talked to hundreds of business people from large and small companies. They are mindful that their allegiance to one of the two tax plans under scrutiny in Washington today could be the most important investment the business community will ever make—for themselves and their country. Almost all of them support the president's bipartisan tax proposals. The president's tax plan, formulated in the context of his comprehensive economic program, is sound, dependable and worthy of the support of all workers and businesses in America.●

SENATE COMMITTEE MEETINGS

Title IV of Senate Resolution 4, agreed to by the Senate on February 4, 1977, calls for establishment of a system for a computerized schedule of all meetings and hearings of Senate committees, subcommittees, joint committees, and committees of conference. This title requires all such committees to notify the Office of the Senate Daily Digest—designated by the Rules Committee—of the time, place, and purpose of the meetings, when scheduled, and any cancellations or changes in the meetings as they occur.

As an additional procedure along with the computerization of this information, the Office of the Senate Daily Digest will prepare this information for printing in the Extensions of Remarks section of the CONGRESSIONAL RECORD on Monday and Wednesday of each week.

Any changes in committee scheduling will be indicated by placement of an asterisk to the left of the name of the unit conducting such meetings.

Meetings scheduled for Tuesday, July 21, 1981, may be found in the Daily Digest of today's RECORD.

MEETINGS SCHEDULED

JULY 22

9:00 a.m.
Commerce, Science, and Transportation
To hold hearings on the nominations of James H. Quello, of Virginia, and Henry M. Rivera, of New Mexico, each to be a member of the Federal Communications Commission.
1318 Dirksen Building

Foreign Relations
East Asian and Pacific Affairs Subcommittee
To hold hearings on U.S. trade and economic policies and development problems in Southeast Asia.
4221 Dirksen Building

*Veterans' Affairs
To hold hearings on S. 5, S. 7, S. 25, S. 26, S. 48, S. 105, S. 248, S. 417, and S. 742, bills providing educational assistance to members of the Armed Forces.
318 Russell Building

9:30 a.m.
Banking, Housing, and Urban Affairs
To hold oversight hearings on the conduct of monetary policy.
5302 Dirksen Building

* Commerce, Science, and Transportation
Science, Technology, and Space Subcommittee
To hold joint hearings with the House Subcommittee on Space Science and Applications of the Committee on Science and Technology on the proposed operational remote satellite sensing system.
235 Russell Building

Governmental Affairs
Permanent Subcommittee on Investigations
To hold oversight hearings on alleged fraud and abuse involving certain claims within the Federal workers compensation program.
3302 Dirksen Building

Judiciary
* Constitution Subcommittee
To resume oversight hearings on the implementation of the Freedom of Information Act, and to resume hearings on S. 1247, S. 1235, and S. 587, bills providing for the protection of certain confidential information from the disclosure requirements of the Freedom of Information Act.
424 Russell Building

10:00 a.m.
Conferees
Senate Committee on Agriculture, Nutrition, and Forestry conferees and House Committee on Agriculture conferees on agriculture and food stamp provisions of H.R. 3982, providing for reconciliation pursuant to section 301 of House Concurrent Resolution 115, the first concurrent resolution of the congressional budget.
1302 Dirksen Building

Energy and Natural Resources
Energy Conservation and Supply Subcommittee
To hold hearings on S. 506, reinstating and validating certain numbered U.S. oil and gas leases.
3110 Dirksen Building

* Environment and Public Works
Business meeting on pending calendar business.
4200 Dirksen Building

Governmental Affairs
Subcommittee on Governmental Efficiency and the District of Columbia
To resume hearings on S. 744, authorizing the District of Columbia to issue general obligation bonds to pay specified eligible liabilities.
6226 Dirksen Building

Joint Economic
International Trade, Finance, and Security Subcommittee
To continue hearings on the economics of defense procurement, focusing on the Army's M-1 Tank and NATO readiness.
5110 Dirksen Building

1:30 p.m.
Joint Economic
Economic Goals and Intergovernmental Policy Subcommittee
To resume hearings on block grants and intergovernmental systems.
H-236, Capitol

2:00 p.m.
Governmental Affairs
*Intergovernmental Relations Subcommittee
To hold hearings on State governments' implementation of certain Federal regulations, focusing on standards relating to the Clean Air Act.
3302 Dirksen Building

2:30 p.m.
Foreign Relations
To hold hearings on the nomination of Arthur W. Hummel, Jr., of Maryland, to be Ambassador to the People's Republic of China.
4221 Dirksen Building

JULY 23

9:00 a.m.
Office of Technology Assessment
The Board, to hold a general business meeting.
S-126, Capitol

*Veterans' Affairs
To continue hearings on S. 5, S. 7, S. 25, S. 26, S. 48, S. 105, S. 248, S. 417, and S. 742, bills providing educational assistance to members of the Armed Forces.
1202 Dirksen Building

9:30 a.m.
*Commerce, Science, and Transportation
Science, Technology, and Space Subcommittee
To continue joint hearings with the House Subcommittee on Space Science and Applications of the Committee on Science and Technology on the proposed operational remote satellite sensing system.
2218 Rayburn Building

*Energy and Natural Resources
Energy and Mineral Resources Subcommittee
To hold hearings on S. 1032, S. 1383, and S. 1484, bills promoting the development of oil shale resources.
3110 Dirksen Building

Governmental Affairs
Governmental Efficiency and the District of Columbia Subcommittee
To continue hearings on S. 744, authorizing the District of Columbia to issue general obligation bonds to pay specified eligible liabilities.
6226 Dirksen Building

Judiciary
Agency Administration Subcommittee
To hold hearings to review section 912 of S. 815 (Department of Defense Authorizations for fiscal year 1982), relating to liability of the United States for certain tort actions of members of the National Guard.
2228 Dirksen Building

Judiciary
Constitution Subcommittee
To resume hearings on S. 584, S. 585, and S. 990, bills creating a Federal cause of action for the violations of a person's civil rights under color of State law relating to constitutional rights or laws providing for equal rights of citizens or all persons within U.S. jurisdiction.
5110 Dirksen Building

*Labor and Human Resources
Aging, Family and Human Services Subcommittee
To hold hearings on adoption services in the United States.
4232 Dirksen Building

10:00 a.m.
Banking, Housing, and Urban Affairs
To continue oversight hearings on the conduct of monetary policy.
5302 Dirksen Building

Foreign Relations
To hold hearings on the nominations of Kenneth L. Adelman, of Virginia, to be the Deputy Representative to the United Nations, with the rank and status of Ambassador, and Robert J. Hughes, of Massachusetts, to be an Associate Director of the International Communication Agency.
4221 Dirksen Building

Governmental Affairs
Permanent Subcommittee on Investigations
To continue oversight hearings on alleged fraud and abuse involving certain claims within the Federal workers compensation program.
3302 Dirksen Building

Joint Economic
To hold hearings on the reindustrialization of specific sectors of the economy, focusing on the substance of H.R. 4028, and related proposals, providing for the development of high-speed rail passenger service in the United States.
1318 Dirksen Building

1:00 p.m.
Judiciary
To resume hearings on monopolization and competition in the telecommunications industry.
2228 Dirksen Building

2:00 p.m.
*Banking, Housing, and Urban Affairs
International Finance and Monetary Policy Subcommittee, and the Securities Subcommittee
To resume joint hearings on S. 708, clarifying the intent and modifying certain provisions of the Foreign Corrupt Practices Act of 1977.
5302 Dirksen Building

Environment and Public Works
Toxic Substances and Environmental Oversight Subcommittee
To hold hearings on the environmental impact of chlorofluorocarbons.
4200 Dirksen Building

JULY 24

9:30 a.m.
Commerce, Science, and Transportation
To hold hearings on the nomination of James C. Miller III, of the District of Columbia, to be a Federal Trade Commissioner.
235 Russell Building

Finance
Taxation and Debt Management Subcommittee
To hold hearings on miscellaneous tax proposals, including S. 805, S. 1214, S. 1304, S. 1320, and S. 1369.
2221 Dirksen Building

10:00 a.m.
Energy and Natural Resources
To hold hearings on the nominations of Anthony G. Sousa, of Hawaii, to be a member of the Federal Energy Regulatory Commission, J. Robinson West, of Pennsylvania, to be an Assistant Secretary of Interior for Policy, Budget and Administration, Jan W. Mares, of Connecticut, to be an Assistant Secretary of Energy for Fossil Energy, and Alvin W. Trivelpiece, of California, to be director of the Office of Energy Research, Department of Energy.
3110 Dirksen Building

Environment and Public Works
*Water Resources Subcommittee
To hold hearings on S. 1493, deauthorizing certain water resources projects within the jurisdiction of the U.S. Army Corps of Engineers, and on other related issues.
4200 Dirksen Building

Foreign Relations
To hold hearings on S. 854, establishing an Office of Foreign Missions responsible for providing benefits for foreign missions on terms approved by the Secretary of State.
4221 Dirksen Building

Judiciary
To continue hearings on monopolization and competition in the telecommunications industry.
2228 Dirksen Building

1:30 p.m.
Judiciary
Immigration and Refugee Policy Subcommittee
To hold hearings to examine the enforcement of U.S. immigration laws.
412 Russell Building

JULY 27

9:30 a.m.
Finance
International Trade Subcommittee
To hold hearings on proposed legislation extending the President's authority to waive the freedom of immigration provision of the Trade Act.
2221 Dirksen Building

Labor and Human Resources
Alcoholism and Drug Abuse Subcommittee
To hold oversight hearings on research activities of the National Institute on Alcohol Abuse and Alcoholism and the National Institute on Drug Abuse.
4232 Dirksen Building

10:00 a.m.
Agriculture, Nutrition, and Forestry
Agricultural Research and General Research Subcommittee
To hold hearings on proposed revisions of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA), Public Law 96-539.
324 Russell Building

*Environment and Public Works
Business meeting, to consider pending calendar business.
4200 Dirksen Building

2:00 p.m.
Agriculture, Nutrition, and Forestry
Agricultural Research and General Research Subcommittee
To continue hearings on proposed revisions of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA), Public Law 96-539.
324 Russell Building

JULY 28

9:00 a.m.
*Select on Ethics
To resume hearings on matters involving Senator Williams.
6226 Dirksen Building

9:30 a.m.
Commerce, Science, and Transportation
Science, Technology, and Space Subcommittee
To hold hearings on proposed legislation to provide title to contractors receiving Federal research and development funds.
235 Russell Building

10:30 a.m.
Energy and Natural Resources
To hold hearings on S. 1503, authorizing the President to allocate supplies of crude oil and petroleum products during a severe petroleum supply shortage, S. 1476, S. 1354, and S. 409, bills providing standby authority to deal with petroleum supply disruptions, and S. 445, establishing a State set-aside system for propane, middle distillates, motor gasoline, residual fuel oil, and aviation fuels.
3110 Dirksen Building

2:00 p.m.
*Governmental Affairs
Intergovernmental Relations Subcommittee
To hold hearings to review alternatives for delivering public services, focusing on certain private sector involvement in social services.
3110 Dirksen Building

Select on Ethics
To continue hearings on matters involving Senator Williams.
6226 Dirksen Building

JULY 29

9:00 a.m.
Commerce, Science, and Transportation
Business meeting, to consider pending calendar business.
235 Russell Building

Governmental Affairs
Intergovernmental Relations Subcommittee
To continue hearings to review alternatives for delivering public services, focusing on certain private sector involvement in social services.
357 Russell Building

*Labor and Human Resources
To resume oversight hearings on the activities of the Office of Federal Contract Compliance Programs of the Department of Labor, focusing on Executive Order 11246, regulations relating to affirmative action.
4232 Dirksen Building

*Select on Ethics
To continue hearings on matters involving Senator Williams.
6226 Dirksen Building

10:00 a.m.
Energy and Natural Resources
Business meeting, to consider pending calendar business.
3110 Dirksen Building

*Environment and Public Works
Business meeting, to consider pending calendar business.
4200 Dirksen Building

Select on Indian Affairs
To hold hearings on S. 792, establishing a National Institute of Native American Culture and Arts Development.
5110 Dirksen Building

2:00 p.m.
Governmental Affairs
Intergovernmental Relations Subcommittee
To continue hearings to review alternatives for delivering public services, focusing on certain private sector involvement in social services.
357 Russell Building

Select on Ethics
To continue hearings on matters involving Senator Williams.
6226 Dirksen Building

Special on Aging
To hold hearings on proposals relating to medicare reimbursement to competitive medical plans.
5110 Dirksen Building

JULY 30

9:00 a.m.
*Governmental Affairs
Intergovernmental Relations Subcommittee
To continue hearings to review alternatives for delivering public services, focusing on certain private sector involvement in social services.
318 Russell Building

*Labor and Human Resources
To continue oversight hearings on the activities of the Office of Federal Contract Compliance Programs of the Department of Labor, focusing on Executive Order 11246, regulations relating to affirmative action.

SENATE—*Tuesday, July 21, 1981*

(Legislative day of Wednesday, July 8, 1981)

The Senate met at 9:15 a.m., on the expiration of the recess, and was called to order by the President pro tempore (Mr. THURMOND).

The PRESIDENT pro tempore. The morning prayer will be delivered by the Reverend Robert K. Degges, Baptist clergyman of Reisterstown, Md., son of Mr. Randall Degges, floor assistant, Senate Sergeant at Arms.

PRAYER

The Reverend Robert K. Degges, Baptist clergyman, Reisterstown, Md., offered the following prayer:

Let us pray.

Almighty God, both Creator and Redeemer of all, look upon this august body of men and women and grant that they may well execute the stewardship with which Thou and the people of this land have endowed them. As we turn again to waiting tasks, give to all who labor in this Chamber the wisdom, humility, and charity sufficient for the day. Through the confrontation with seemingly overwhelming obstacles, give us the courage to see and do what is right. Keep our hearts and minds attuned to Thy spirit. Let our trust in Thy goodness allay all fear. May our faith withstand the many pressures which surround us. May we indeed, through Thy grace alone, overcome at last.

We pray in His name who said:

Come to me, all who labor and are heavy laden, and I will give you rest. Take my yoke upon you and learn from me; for I am gentle and lowly in heart, and you will find rest for your souls. For my yoke is easy and my burden is light.—Matthew 11: 28–29.

Amen.

RECOGNITION OF THE MAJORITY LEADER

Mr. BAKER. Mr. President, I ask unanimous consent that the Journal of the proceedings of the Senate be approved to date.

The PRESIDENT pro tempore. Without objection, it is so ordered.

ORDER FOR ROUTINE MORNING BUSINESS

Mr. BAKER. Mr. President, I ask unanimous consent that following the recognition of the two leaders under the standing order and the three Senators under special orders provided for on yesterday, there be a period for the transaction of routine morning business, to extend not longer than 20 minutes, in which Senators may speak for not more than 5 minutes each.

The PRESIDENT pro tempore. Without objection, it is so ordered.

ORDER OF PROCEDURE

Mr. BAKER. Mr. President, I inquire of the Chair: After the end of the period for the transaction of routine morning business, what will be the business before the Senate?

The PRESIDENT pro tempore. The Riegle amendment, for 40 minutes.

Mr. BAKER. The Riegle amendment is a first or second degree amendment?

The PRESIDENT pro tempore. There are two Riegle amendments—first and second degree.

Mr. BAKER. Yes; the time agreement is on the second degree amendment, as I understand.

The PRESIDENT pro tempore. The Senator is correct.

Mr. BAKER. Is there a time agreement on the first degree amendment?

The PRESIDENT pro tempore. No; there is no time agreement.

Mr. BAKER. I thank the Chair.

Mr. President, I say to all our colleagues—and I invite the comment, if he wishes to do so, of the minority leader—that during the day, I will complete a listing of known amendments on this side of the aisle. We began that on yesterday. Members are on notice that I will close that list at 10:30 this morning on our side.

I urge Senators who have amendments—that is to say, amendments they intend to offer; I do not mean possible amendments, but amendments they intend to offer—that they make that known to the Republican cloakroom before 10:30 a.m.

I have discussed this matter with the minority leader, and I hope we may be able, at some time today, to meet and to discuss the number of amendments yet to be dealt with before we reach final consideration of the tax measure.

In the meantime, as Senators contact our cloakroom, I hope they will indicate their willingness to accept time limitations on their amendments. I express the further hope that those time agreements they suggest may be as brief as possible.

This is the sixth day of consideration of this measure, and it is clear that there is much work yet to be done. It is equally clear that we must deal with this measure. Every day that goes by imperils the chance that we can complete the work of the Senate on July 31 and adjourn according to the order previously entered.

So, I urge Senators to be sparse and sparing in their requirement for amendments to this measure and to agree to time limitations in every event and as brief as possible.

With that statement, which of course has application primarily to Members on this side, I am prepared to yield to the minority leader for any comments he wishes to make.

Mr. ROBERT C. BYRD. Mr. President, on yesterday I initiated action by the policy committee staff in an endeavor to ascertain what amendments would be called up on this side of the aisle and whether or not the sponsors thereof would be willing to enter into time agreements on such amendments.

That process is proceeding, and I hope that before the day is over we will be able to suggest some amendments and some time limits with respect to those amendments on this side of the aisle.

Mr. BAKER. Mr. President, I thank the minority leader, and it appears, then, that later in the day we will have a much better idea of the work yet before us and how this might be scheduled to the maximum convenience of all Senators in an effort to work the will of the Senate on this measure within a reasonable time.

Mr. President, I have no further requirement of this time, if any time remains under the abbreviated order for the two leaders this morning, and I yield the floor.

RECOGNITION OF THE MINORITY LEADER

The PRESIDENT pro tempore. The minority leader is recognized.

Mr. ROBERT C. BYRD. Mr. President, I yield such time as I may have to Mr. PROXMIRE.

Mr. PROXMIRE. Mr. President, I thank my good friend, the minority leader.

THE SOCIAL SECURITY FUND SHORTFALL

Mr. PROXMIRE. Mr. President, I wish to call attention of the Senate and both leaders to the fact that the social security fund is in difficulty very largely because the money that has been paid into the social security fund by workers and by employers has been so poorly invested. Not many people realize this. But last year the social security fund earned 8.3 percent. The law requires that that fund be invested exclusively in Federal securities.

Private funds invested exclusively in Federal securities earned typically 13.6 percent. That is a difference of $2 billion.

That $2 billion if it had been earned directly, the social security fund would have taken care of 60 percent of the shortfall.

I am not blaming this certainly on this administration. Last year this administration was not in office. This is something that has been going on for years and years. It has been going on because we have a direct explicit conflict of interest. We have the Secretary of the Treasury who has, of course, a vested interest in keeping the cost of servicing the

---

● This "bullet" symbol identifies statements or insertions which are not spoken by the Member on the floor.

national debt low. He is judged in part on how good a debt manager he is, and he sells and the social security fund will buy special issues of the Treasury Department, issues that yield far below the market rate. This is wrong. This is just wrong as it could be.

If any of us had an investment manager who was making 8.3 percent in these days we would fire him. We might even go to court. And if we were a bank that said, "Now look, we have to look out for the interests of the bank, we are paying you a lower return because the bank has an interest in keeping this down," how long would you stand for that? You would not stand for it for a minute.

Social security recipients are being deprived of $2 billion a year. I do not say this on the basis of just the investigations that my staff and I have made. Paul Douglas, the one truly eminent economist who has ever served in this body, president of the American Economic Association, called attention to this years ago. Wilbur Cohen, the former Secretary of Health, Education and Welfare, and a great expert on social security, called attention to this.

Paul Douglas, incidentally, was one of the people who drafted the social security law when it went into effect in the 1930's. He was then a professor at the University of Chicago.

At that time people felt what difference does it make, the social security fund is awash with money, we do not need it.

But these days it makes a difference on a policy issue. The issue is do we or do we not have to reduce the benefits people on social security are going to receive?

Mr. President, I think we have an absolute obligation and duty to see that the social security funds that are lost are restored. If we are going to have integrity in our social security process, we should honor the social security funds and treat them as any other investment funds with the same kind of respect and not with this gross disregard that in effect has deprived the fund of, as I say, $2 billion a year and has done so for a number of years.

Mr. President, I intend to introduce legislation to overcome this problem, and I do hope that Senators on both sides of the aisle will give it very careful consideration because I think it merits consideration.

I expect to bring that forward in the next few months.

KEEPING THE MEMORY

Mr. PROXMIRE. Mr. President, I call attention to a recent article that appeared in the Washington Post titled, "B'nai B'rith Museum: Keeping the Faith." The article notes the opening of an expanded museum in Washington, D.C. to house articles of Jewish culture.

Some of the articles on display are miniature Torahs and menorahs which could be transported easily in times of trouble. Many of these objects survived the holocaust although their owners did not. The musuem, too, has struggled for its existence—surviving a robbery, a siege, and the ransacking of its galleries.

No matter how impressive the facility and no matter how many visitors pass through its doors, no museum can do what we as leaders have the power to do. Museums house relics of the past. We have the power to affect the present and future. We have the power to prevent the events that are destined to be commemorated as parts of museum exhibits. We have the power to save people's lives, and not just to insure the safety of people's objects.

Even this museum with its 5,000 objects serves only as a silent reminder of a culture which was threatened with elimination.

We can do more. We can ratify the Genocide Convention, a treaty which has been before the Senate for over 30 years. Since 1949 we have had the opportunity to act, to join 84 other countries in ratification of the treaty.

Must we wait for something to happen, to be reduced to looking at surviving relics enclosed in a glass case? We have a responsibility to prevent and punish genocide as an international crime. Let us act on our responsibility. Let us ratify the Genocide Treaty.

I thank the minority leader and yield the floor.

Mr. ROBERT C. BYRD. Mr. President, the distinguished Senator is welcome.

The PRESIDING OFFICER (Mr. WARNER). Who seeks recognition?

Mr. PROXMIRE. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. BAKER. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. BAKER. Mr. President, at the request of the distinguished Senator from South Carolina (Mr. THURMOND) I ask unanimous consent to vitiate the special order in his favor this morning.

The PRESIDING OFFICER. Without objection, it is so ordered.

RECOGNITION OF SENATOR NICKLES

The PRESIDING OFFICER. Under the previous order the Senator from Oklahoma (Mr. NICKLES) is recognized for a period not to exceed 15 minutes.

Mr. NICKLES. Thank you, Mr. President.

S. 1505—A BILL TO REPEAL THE DAVIS-BACON ACT

Mr. NICKLES. Mr. President, I wish to offer legislation to relieve the strain on the Federal deficit, cut Federal spending, and reduce the rate of inflation.

Today I am introducing a bill to repeal the Davis-Bacon Act. I am proud and pleased to be joined by other Senators: Mr. THURMOND, Mr. EAST, Mr. GOLDWATER, Mr. GRASSLEY, Mrs. HAWKINS, Mr. HELMS, Mr. HUMPHREY, Mr. MATTINGLY, and Mr. SIMPSON as cosponsors of this legislation.

One of the most devastating indictments of the Davis-Bacon Act to date is a report from the U.S. General Accounting Office to the Congress entitled "The Davis-Bacon Act Should Be Repealed" which was issued in April 1979. The report is a result of almost two decades of oversight by GAO. I heartily encourage my colleagues to review it because it details example after example of wasteful Government spending. GAO concludes that the Davis-Bacon Act is outdated, poorly administered, inflationary, and should be repealed.

The Davis-Bacon Act allows the Secretary of Labor to determine the minimum wage to be paid to various classes of laborers and mechanics working on Federal Government contracts, in excess of $2,000. Minimum wages are defined by the act as those prevailing in the locality of the project for similar occupations on similar construction work.

I find it ludicrous that the Department of Labor in Washington, D.C., is in the business of setting local wage rates for projects all across the United States—wages which in virtually all cases are higher than those dictated by the market. Because of Davis-Bacon and 77 other statutes that mandate prevailing wages it is the taxpayer who ultimately suffers. At a time when we must cut Federal spending, I suggest we repeal the inflationary and wasteful Davis-Bacon Act. Not one job will be lost, not one project will be canceled, in fact, the unemployed would benefit because more jobs and more projects would be created with the same amount of tax dollars.

When the act was passed in 1931, the U.S. economy was sliding into the Great Depression. Employment in the construction industry had declined. Competition for contracts and for jobs was great, especially for Government construction. There were no minimum wage laws and no unemployment compensation programs or other laws to protect the wages of workers, such as we have today.

The act was intended to discourage nonlocal contractors from successfully bidding on Government projects by hiring cheap labor from outside the project area, thus disrupting the prevailing local wage structure and displacing many local people.

Mr. President, this law has far outlived its original purpose. Changes in the economic conditions and in the economic character of the construction industry make the law obsolete and unnecessary. Since its enactment Congress has passed a number of other laws to protect the wages of construction workers, including laws requiring that minimum and overtime rates be paid and laws prohibiting contractors from requesting kickbacks of wages.

The act has been and continues to be impractical to administer. After nearly 50 years of administering the act, GAO's survey indicates the Department of Labor has not adequately and accurately determined wage rates based on local prevailing rates. They have yet to develop an effective system of planning, controlling, or managing the data collection.

There have been many abuses regarding the determination of wages. First of all, the 30-percent rule, which was not in the original act, but, rather, was instituted administratively in 1935 by a former Secretary of Labor, has come under much scrutiny. The rule states that the prevailing wage can be determined by taking an estimate of wages paid to as few as 30 percent of construction workers in an area. Second, many of these prevailing wages are based on union-negotiated rates and are often determined from a city 100 miles or more away. There are adverse economic consequences created by setting artificial wage rates for an area that does not reflect wages actually paid.

Another administrative problem for the Department of Labor is the requirement for the submission of weekly payrolls by construction contractors. This requirement falls under the jurisdiction of the Copeland Anti-Kickback Act, enacted in 1934, which was passed to help enforce the Davis-Bacon Act. Its original purpose was a depression measure to protect the wage of workers. It is not needed today because of the fact that few violations of the act have ever been disclosed as a result of departmental reviews and verification of salary matters. In fact, hearings held in October 1979 on "Reducing Paperwork in the Administration of Construction Contract Provisions of Law Relating to Wage Rates" revealed that most of these reports are simply filed and never even looked at. Millions of dollars a year are spent for filling out a form that nobody uses. The cost is exorbitant to contractors and, worse still, this cost is necessarily passed on to the Government in the form of higher bids and further passed on to the taxpayer in this country.

These weekly payroll reports inundate the Federal agencies with paperwork. Reducing paperwork in the administration of certain construction contract provisions of law relating to wage rates would eliminate 2½ million submissions containing perhaps 10 sub-submissions, each submitted in duplicate and triplicate. A total of 50 to 100 million pages of forms could be eliminated each year.

The Davis-Bacon Act is inflationary on the local and national economy. It has resulted in Federal and federally assisted construction costing more than other contracts. This is due to those prevailing wages paid to construction employees that are often incorrect. GAO's 1979 report states that the unnecessary cost to the American taxpayer is approximately $715 million a year, an increase of 5 to 15 percent over similar private sector. In addition to the direct cost of Davis-Bacon, the GAO report estimated total public and private added administrative costs at $215 million a year.

The act not only affects Federal projects but also has a "spillover" inflationary impact on local construction wages paid on private work. In the tough competition for skilled craftsmen, contractors on private work must pay wages that are competitive with inflated Davis-Bacon wages. It is very difficult for contractors to return to the truly local prevailing wages on private projects in his area once he pays the same men higher Davis-Bacon prevailing wages for identical work on a public project. The result is less competition in terms of both the quality and costs of federally sponsored projects. Many contractors simply just refuse to bid.

The private sector cost on local construction wages paid on private work is estimated by the Economic Policy Center of the U.S. Chamber of Commerce at $1.8 billion a year; on new home building alone, at $470 million annually. The total Davis-Bacon inflationary annual price tax is approaching $2.7 billion.

A report issued in February of this year by the Congressional Budget Office stated that the repeal of Davis-Bacon might result in cumulative outlay savings of $776 million by 1986 in just the three largest Federal construction grants, and ground transportation construction.

Hearings held in July 1979 revealed that military construction projects had a backlog of $35 billion because of high construction costs and lack of funds. Repeal of the Davis-Bacon Act could result in a savings of $2 billion and encourage more contractors to compete for military contracts.

Our Nation's housing and community development programs have been drastically curtailed because of these inflated costs.

The Labor Department has already admitted that the Davis-Bacon adds $50 million a year to the cost of public housing. Because the effect of Davis-Bacon is to reduce the amount of construction available for each Federal dollar spent, the act has slowed the building of such needed items as pollution control projects, the strategic petroleum reserve, and housing on Indian reservations.

It is ironic that inflated wage costs have had the most adverse effect on the local contractors and their workers—the groups the act was intended to protect. Higher rates have discouraged contractors from bidding. A good example of this is Indian housing. The direct result of Davis-Bacon has been discrimination against the local hiring of Indians because few have had the opportunity to gain a marketable skill on their reservation, to the degree that it is feasible for a contractor to hire these workers at Davis-Bacon rates.

The act bars local unemployed Indians from working on their own housing projects until the Department of Labor makes a concerted effort to develop an Indian apprenticeship and training program that works on Indian reservations. Currently, reservation Davis-Bacon rates are prohibitively high. The rate is established for the nearest metropolitan area and increased by an amount sufficient to transport a worker from the metropolitan area to the reservation and back each work day. Under the HUD Indian public housing program most of the house construction is on detached, if not scattered, single family units in isolated rural areas. No other federally assisted housing program of a similar nature is subject to Davis-Bacon.

The Davis-Bacon Act has had an extremely negative impact on minority contractors, minority home buyers, and minority communities. The prevailing wage rates freeze small and minority firms out of bidding on Federal construction. In the area of housing, If Davis-Bacon were not in effect, it would be possible to build or renovate, in minority communities, more housing units with the same amount of money presently spent. In the area of unemployment, which plagues minority communities at a menacing rate, the job picture would brighten for young minority persons as contractors would be encouraged to hire them as laborers and helpers, affording them the opportunity to break into the construction labor force.

Here in our Nation's Capital, the inflationary Davis-Bacon wages have contributed to the high costs of the construction of the Washington Regional Rapid Transit System (Metro). GAO determined, in their October 1980 report that setting prevailing wages for Metro construction, as required by the Davis-Bacon Act, may increase the construction costs by about 6.8 percent. The Transit Authority's initial cost estimate for building the 100-mile rail system was $2.5 billion in 1969. The authority's latest estimate may be projected as high as a $10 to $12 billion range over the next 20 years. It is estimated that, as a result of labor establishing wages at higher rates than those actually prevailing in the area of Metro projects, Metro construction costs could be increased by a range of $272 to $408 million. The magnitude of these increased construction costs resulting from the Davis-Bacon wage determinations is astonishing and further enhances the need for a repeal of the act.

Individual States—currently there are 38—have experienced the inflationary impact of having "little Davis-Bacon Acts" on their books. However, five States have recently repealed the act, four more are in the process of repeal, and legislatures in six States have introduced measures to modify prevailing wage payment statutes covering public works projects. Hopefully, this trend for repeal will continue throughout the States.

Since the issuance of the GAO study in 1979, other associations and the Department of Labor, itself, have conducted studies and offered suggestions regarding Davis-Bacon. The American Bar As-

sociation has recommended that the 30-percent rule be eliminated, and that State and local governments receiving Federal assistance should determine their own wages.

In support of a Davis-Bacon reform package, is a 19-page study by the Carter administration interagency task force. The report advocated administrative reform to "minimize unwarranted inflationary pressures." The study cited several changes to improve the act, one being the elimination of the 30-percent rule. Improvement in job classifications and a reduction of weekly payroll reporting were also suggested. The study concluded that administrative changes in the way the Department of Labor manages its laws could reduce Federal expenditures by $1.9 billion and drop inflation 0.3 percent.

Mr. President, the Davis-Bacon Act is a Federal giveaway that forces State and local governments to spend more for affected contribution projects, thereby placing an additional tax burden on local citizens. Its present long-term impact on stabilizing local wage structure is minimal, or even negative. Its inflationary impact is significant. The Labor Department record has proven the act is difficult, if not impossible, to administer and almost equally difficult to comply with. Only the repeal of the Davis-Bacon Act will return the determination of labor costs on federally funded construction projects to the efficiencies of the freely competitive marketplace.

I invite your support of this bill to repeal an archaic Federal law that makes Government an accomplice in cost and price excesses in the construction industry.

Mr. President, there are many reasons why this bill should be repealed. As stated before, it is wasteful and there have been countless Government studies to support that fact. A GAO study in 1979 stated that by repeal we could save $715 million a year, which were savings of 5 to 50 percent over contracts that did not have Davis-Bacon provisions.

In 1979 when the number of contracts, the dollar volume of contracts, was considerably less and also administrative costs were less, they estimated that by the repeal of the act we could save $215 million a year, that just by repeal of the administrative costs and the requirements for contractors to fill out weekly payroll forms.

OMB has stated we should make significant changes. The Comptroller General stated, and I will just quote a paragraph from the report of the Comptroller General of the United States dated April 1979:

This is our report to the Congress, "The Davis-Bacon Act Should Be Repealed."

We are recommending that the Congress repeal the Davis-Bacon Act because (1) there have been significant changes in the economy since 1931 which we believe make continuation of the act unnecessary, (2) after nearly 50 years, the Department of Labor has yet to develop an effective program to issue and maintain accurate wage determinations, and it may be impractical to ever do so, and (3) the act is inflationary, and results in unnecessary construction and administrative costs of several hundred million dollars annually.

Mr. President, another aspect and another good reason this outdated law should be repealed is because of the social implications. In the Labor Subcommittee, which I headed, we had testimony from individuals, one individual being the Commissioner of the Chicago Housing Authority, who stated that because of Davis-Bacon he was not able to maintain the units under the jurisdiction of the Chicago Housing Authority, to keep them up to date.

There are presently 140,000 people living in the Chicago housing units, but a lot of the living conditions were such, Mr. President, that they would appall you and me both. Yet they were not able to maintain the units, paint the walls; they were not able to clean the restrooms, they were not able to provide the ordinary, routine type maintenance facilities in Chicago because of Davis-Bacon. Why? Because Davis-Bacon provided the lowest level of wages allowed would have been under their wage classification, $11.50 an hour. They did not have enough money at $11.50 an hour to maintain those units.

I asked them what they could get. I asked, "You have a high level of unemployment?" They said, "Yes, we have 90-percent unemployment in Chicago housing." I said, "Can't you employ these people, have them paint the walls, have them wash the windows?" He said, "No, we cannot because of Davis-Bacon." He could employ any number of people for $5 or $6 or $7 or $8 or $9, $10 an hour and save millions of dollars if we repealed Davis-Bacon.

Mr. President, there are a lot of things that need to be done, and I compliment the Reagan administration for their proposed changes and for their reforms. I think what they have done are definitely steps in the right direction. We need to reform this act.

But, Mr. President, reform is not enough. We need to repeal this act. There is no way in the world that the U.S. Government, the Department of Labor in Washington, D.C., can possibly come up with enough wage determinations as to what the wages should be in Federal projects, construction projects, maintenance projects, all across the country for any project in excess of $2,000.

The marketplace is the only efficient, the only proven mechanism to be able to determine the supply and demand of labor. Every time we have the Federal Government trying to regulate, control, and manipulate our precious resources—and, Mr. President, we do not have a resource that is any more precious than the labor of our fellow men and women in our country—then we are in for serious trouble.

The marketplace has worked efficiently and effectively.

That law is outdated. It does protect a very small group of employees. At the Chicago Housing Authority, to which I referred earlier, there are 3,000 employees who benefit from Davis-Bacon at the expense of over 140,000 tenants, not to mention the people of this country, when they look at our public housing and see what kind of shape it is in, and have the embarrassment coming from it.

We can make a substantial change not only in savings in the public housing administration all across the country of millions of dollars but in helping those people, allowing the black unemployed youths to be able to go work and not have a law that would prevent them from entering the marketplace.

Mr. President, we have Indian housing where the Federal Government goes in and finances and builds houses for unemployed Indians all across the country. Yet those Indians in many cases are not allowed to work on the construction project. Why? Because of Davis-Bacon requirements.

We have military projects, Mr. President—I know you are aware of them—and in today's climate to stretch our dollars and get the most and the maximum availability that we possibly can out of our military budget as well as the rest of our budget, we find ourselves with the Federal Government coming in and saying, "Yes, we will pay," and possibly drive the costs of those projects 5 to 10 percent higher than what they would have to be. Why? Because of Davis-Bacon.

I think it is crucial, I think it is vital, at a time when we are making economic moves, when we are trying to limit the growth of spending, when, of necessity, we have to cut Federal spending in order to balance the budget, when we need to look at every area we possibly can to eliminate waste, fraud, and abuse, there is not a better way to start than by repealing Davis-Bacon.

Mr. President, I ask unanimous consent to have printed in the RECORD the bill which I am introducing, together with the report dated April 1979 of the Comptroller General of the United States.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

S. 1505

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Act of March 3, 1931, entitled "An Act relating to the rate of wages for laborers and mechanics employed on public buildings of the United States and the District of Columbia by contractors and subcontractors, and for other purposes" (40 U.S.C. 276a–276a–5), is repealed.

SEC. 2. Any provision of law requiring the payment of wages at prevailing rates determined by reference to determinations of the Secretary of Labor under the Act of March 3, 1931, shall cease to be effective on the effective date of this Act.

SEC. 3. This Act shall take effect upon enactment except that nothing in this Act shall be construed to impair or otherwise

affect rights and duties under contracts entered into prior to such date.

COMPTROLLER GENERAL
OF THE UNITED STATES,
Washington, D.C., April 1979.

To the President of the Senate and the Speaker of the House of Representatives:

This is our report to the Congress, "The Davis-Bacon Act Should Be Repealed."

We are recommending that the Congress repeal the Davis-Bacon Act because (1) there have been significant changes in the economy since 1931 which we believe make continuation of the act unnecessary, (2) after nearly 50 years, the Department of Labor has yet to develop an effective program to issue and maintain accurate wage determinations, and it may be impractical to ever do so, and (3) the act is inflationary, and results in unnecessary construction and administrative costs of several hundred million dollars annually.

We are sending copies of this report to the Secretaries of Labor; Commerce; Defense; Health, Education, and Welfare; Housing and Urban Development; Transportation; and the Treasury; the Administrator, Environmental Protection Agency; the Postmaster General; and the Director, Office of Management and Budget.

ELMER B. STAATS,
Comptroller General
of the United States.

COMPTROLLER GENERAL'S REPORT TO THE CONGRESS: DIGEST

The Davis-Bacon Act is no longer needed. Other wage legislation and changes in economic conditions and in the construction industry since the law was passed make the law obsolete; and, the law is inflationary. GAO believes it should be repealed.

The Davis-Bacon Act requires that each contract for the construction, alteration, or repair of public buildings or works in excess of $2,000 to which the United States is a party—or, under 77 related laws, in which the United States shares the financing—state the minimum wages to be paid to various classes of laborers and mechanics. The minimum wages (including fringe benefits) are those determined by the Secretary of Labor to be prevailing for the laborers and mechanics employed on projects of a similar character in the area in which the work is to be performed.

The act was intended to discourage nonlocal contractors from successfully bidding on Government projects by hiring cheap labor from outside the project area, thus disrupting the prevailing local wage structure.

GAO believes that the Davis-Bacon Act should be repealed for the following reasons.

SIGNIFICANT CHANGES IN ECONOMIC CONDITIONS AND WORKER PROTECTION LAWS SINCE THE 1930S

When the act was passed in 1931, the United States was rapidly sliding into the great depression. Construction, which was about $10.8 billion in 1929, fell to $2.9 billion by 1933, and most of that was Government financed.

During the same period, employment in the construction industry declined from 1.5 million in 1929 to about 800,000 in 1933. Competition for contracts and for jobs was great—especially for Government construction. There were no minimum wage laws and no unemployment compensation programs or other laws to protect the wages of workers.

Since the act was passed, the Congress has enacted a number of other laws to protect the wages of construction workers, including laws requiring that minimum and overtime rates be paid and laws prohibiting contractors from requesting kickbacks of wages. (See ch. 3.)

In 1977 about $172.5 billion was spent on new public and private construction projects. About 78.1 percent ($134.7 billion) was for privately financed projects without the prevailing wage protection of the Davis-Bacon Act. The remaining $37.8 billion was for direct Federal or federally assisted construction spent by State and local agencies and involved an estimated 600,000 prime and subcontracts and an estimated 22 percent of the Nation's 3.8 million construction workers. (See ch. 1.)

THE ACT HAS BEEN AND CONTINUES TO BE IMPRACTICAL TO ADMINISTER

After nearly 50 years of administering the Davis-Bacon Act, the Department of Labor has not developed an effective system to plan, control, or manage the data collection, compilation, and wage determination functions. GAO's review of the wage determination activities in five regions and headquarters showed continued inadequacies, problems, and obstacles in Labor's attempt to develop and issue wage rates based on prevailing rates.

Evaluation of the wage determination files and inquiries regarding 73 wage determinations at five regions and headquarters showed that, in many instances, wage rates were not adequately or accurately determined.

About one-half of the area and project determinations reviewed were not based on surveys of wages paid to workers in the locality, but on union-negotiated rates.

When surveys were made, the data collection and compilation practices were varied and inconsistent within and among regions, and at the headquarters level. There were also problems in identifying similar projects and collecting data from contractors on a voluntary basis.

Further, Labor deleted, added, and changed the wage data received without adequate reason or rationale. As a result, many of the worker classifications and rates issued did not represent the prevailing wages paid in the locality.

In GAO's opinion, Labor's procedures for developing and issuing wage rate determinations provide no assurance that the rates stipulated actually prevail for corresponding classes of workers on similar private construction projects in the locality. (See ch. 4.)

INCORRECT RATES ARE INFLATIONARY ON THE LOCAL AND NATIONAL ECONOMY

GAO's review of 30 Federal or federally assisted projects, costing an estimated $25.9 million, showed that the majority of the rates issued by Labor were higher than the prevailing rates in 12 of the localities and lower in the other 18. In the 12 determinations where Labor's rates were higher, wage costs paid on the projects averaged 37 percent more than the comparable wage costs at rates prevailing in the localities. The higher wage costs ranged from a low of 5 percent to a high of 123 percent. As a result, Federal construction costs may have been inflated by an average of 3.4 percent. The increases ranged from 1 to nearly 9 percent. (See ch. 5.)

While GAO's selection of the 30 projects was made on a random sample basis, the sample size was insufficient for projecting the results to all Federal or federally assisted construction costs during the year with statistical validity. However, even in the absence of statistical certainty, the random nature of GAO's sample leads it to believe that, if these projects are representative (and GAO has no reason to believe they are not), the act results in unnecessary construction costs of several hundred million dollars annually. (See pp. 77 and 78.)

The inflated wage costs may have had the most adverse effect on the local contractors and their workers—those the act was intended to protect—by promoting the use of nonlocal contractors on Federal projects. Nonlocal contractors worked on the majority of these projects, indicating that the higher rates may have discouraged local contractors from bidding.

In the 18 projects where Labor's rates were lower than those prevailing locally, local contractors were generally awarded the contracts. They generally paid workers the prevailing rates in the community—higher rates than those stipulated by Labor. Thus, the act's intent—to maintain the local prevailing wage structure—is carried out only when the administration of the act has no effect.

In addition, the act and a related weekly payroll reporting requirement of the Copeland Anti-Kickback Act result in unnecessary contractor costs—which are passed on to the Government—estimated at almost $191.6 million for 1976 and $189.1 million for 1977. In addition, estimated unnecessary costs of $10.9 million in 1976 and $12.4 million in 1977 were incurred by Federal agencies to attempt to administer and enforce the act. (See ch. 6.)

The excessive wage determinations have an inflationary effect on areas covered and, because of the large volume of covered construction (about $37.8 billion in 1977), on the construction industry and the national economy as a whole.

CONCLUSION

GAO believes that Davis-Bacon Act wage determinations could be eliminated with the same success achieved by eliminating wage determinations for workers on Federal contracts for supplies and materials under the Walsh-Healey Public Contracts Act. For the past 14 years Labor has issued no determinations under that act for the largest segment of Federal contractor employees, and apparently no adverse effect on wage rates of the workers involved has been evident. (See pp. 25 to 27.)

GAO believes that the significant changes in the Nation's economic conditions and the economic character of the construction industry since 1931, plus the passage of other wage laws, make the Davis-Bacon Act unnecessary. Moreover, the legislative intent—not to disturb local wage standards—is often not met; it is met only when Labor's wage determinations are lower than the wages prevailing in the project area.

RECOMMENDATIONS TO THE CONGRESS

The Congress should repeal the Davis-Bacon Act. GAO also recommends that the Congress rescind the weekly payroll reporting requirement of the Copeland Anti-Kickback Act.

In addition, the Congress should repeal the provisions in 77 related statutes which involve federally assisted construction projects and which require that wages paid to contractor employees be not lower than those determined by the Secretary of Labor to prevail in the locality, in accordance with the Davis-Bacon Act.

AGENCY COMMENTS

Officials of the Office of Management and Budget disagreed with GAO's recommendations and said that problems in implementing the Davis-Bacon Act could be resolved through administrative action including, where appropriate, modification of Labor's implementing regulations.

GAO disagrees. It believes the problems and inadequacies it has identified—over almost

20 years of reviews—cannot be corrected or improved significantly by any administrative action, regulation modification, or application of additional resources to program administration. (See p. 13.)

Labor officials also disagreed with GAO's recommendations, and in many cases they questioned GAO's findings and conclusions. The Secretary of Labor stated that he was satisfied that, on balance, the Davis-Bacon Act was being competently and effectively administered.

GAO believes that Labor was less than objective in its comments. GAO's analysis showed that Labor's comments for the most part were misleading, inaccurate, taken out of context, unsupported, and often did not reflect the information in its files.

As a result of Labor's voluminous comments, GAO had to make an extraordinary effort to review and evaluate Labor's comments and claims. GAO believes that its findings are accurate and representative of Labor's administration of the Davis-Bacon Act. GAO believes also that, in administering the act, Labor has been consistently inconsistent.

Indeed, in GAO's opinion, its analysis of Labor's largely unsupported comments further supports GAO's view that the act is not susceptible to practical and effective administration. Therefore, the results of GAO's analysis are included in the report in some detail. (See the end of chs. 3, 4, 5, and 6 and apps. IV through XII.)

Mr. NICKLES. Mr. President, I look forward to working with my colleagues in order to substantially change the law and allowing the marketplace to work and helping the working men and women and taxpayers of this country.

I thank the Chair.

The PRESIDING OFFICER. Who seeks recognition?

RECOGNITION OF SENATOR KENNEDY

The PRESIDING OFFICER. Under the previous order, the Senator from Massachusetts (Mr. KENNEDY) is recognized for a period of time not to exceed 15 minutes.

MILITARY ESCALATION IN EL SALVADOR

Mr. KENNEDY. Mr. President, earlier this month the world was once more shocked by the brutality that daily characterizes the conflict in El Salvador. In Chalatenango Province near the Honduran border, awash with refugees and the scene of many of the most violent outbreaks in the current civil war, 28 peasants were murdered, their bodies marred and many mutilated, and all dumped beneath a local bridge some time after midnight on July 7.

While the Salvadoran Armed Forces officially "lament such a horrendous crime," the archbishop of San Salvador, other prominent Salvadorans, and the peasants themselves in Chalatenango have pointed to these same forces as being responsible for this latest atrocity. Despite the army's denial of complicity, the mass burial of these bodies by the armed forces occurred in secret, without notifying the authorities responsible for issuing burial permits.

Repeating instances of brutality and terrorism, and the helplessness of those who are caught between the warring factions and appealing for peace, are saddening enough. But what is even more disturbing is that in the wake of this repression and violence, the Reagan administration appears to be preparing to further increase U.S. military assistance to the ruling junta, and to send even more U.S. military advisers to replace those whose tours of duty are ending in El Salvador.

Nothing is more inappropriate, Mr. President, than for the Reagan administration to consider further military assistance at the same time as those who receive this military assistance, the security forces, are escalating their attacks on the civilian population.

Instead of increasing our military aid, we should heed the pleas of the archbishop of San Salvador and both the Catholic and Protestant leadership of our Nation against any further military assistance to El Salvador. On April 10, the archbishop wrote to me to ask:

> That military aid to my country will cease and that support is given to a process of dialogue that will bring about a just and peaceful solution to the present conflict and violence.

It is not too late to listen and act on the archbishop's words, and I call upon the Senate and Congress to do so.

We must end our military aid and we must pursue a political solution to a tragic conflict in this land which has seen too many deaths and too much violence.

We must seek a settlement, not a prolonged or wider war. The Reagan administration should end its obstinate refusal to seek a political solution through international mediation—for example, through Mexico and Venezuela which have important ties with the opposing sides of the conflict.

Through mediation, we can hope to reach an agreement acceptable to political moderates of the left and the right in El Salvador. We can hope to create the necessary basis for the people of El Salvador to decide their future freely and without outside interference.

Mr. President, I call upon the administration to end its policy of military escalation and to begin a policy of political mediation. I call upon the administration to press for a negotiated political solution to the conflict in El Salvador. And I believe that if the administration is not prepared to alter its policy, then the Congress should mandate policies which will achieve a political solution so vital to our national interest and to the interests of El Salvador and all nations in this hemisphere.

Last July 12, Archbishop Arturo Rivera y Damas delivered a homily which deplored the government's violence, and renewed his call for both sides of the conflict to achieve "the peace for which this country is so anxious." The Archbishop pointed out that several weeks before, the Salvadoran Army had raided and forcibly removed the priest and nuns of the church and convent in Chalatenango—the same province in which Ita Ford and Maura Clarke, two of the four American missionaries brutally murdered last December, served the people of El Salvador.

Six months after the tragic murders of these four American missionaries and then two American labor representatives, six members of Salvadoran security forces were arrested under suspicion of involvement. But new and incriminating facts in the nuns' case—including intercepted radio transmissions between security force units the night of their slayings—suggest far wider and officially sanctioned complicity in the deaths of these religious workers.

The Government of El Salvador has yet to bring to trial, let alone to justice, a single one of the killers of these six Americans. It has yet to apprehend, let alone to prosecute, a single one of the killers of the 28 Salvadorans executed on July 7. Yet the Reagan administration chooses not only to continue U.S. military aid to this government, but to actively consider increasing this aid despite the gross injustices which persist in El Salvador.

The administration announced last week—in a speech by Assistant Secretary of State Enders before the Washington World Affairs Council—the beginning of a new sales promotion of its Salvador policy. Secretary Enders sought to convince his listeners that the policy stands on two feet, political as well as military. But the administration's approach fails, as it did before, to offer means to achieve the mutual confidence among Salvadoran factions necessary for representative political negotiations which can end the violence. The Reagan administration still rejects a cease-fire and international mediation to assure that neither side will gain an unfair advantage during the negotation process.

It is essential that the United States require discipline on the part of the government forces it supports, and not rush ahead with a military response to a political crisis. Further aid requested by the government forces in El Salvador is reported to include troop-carrying helicopters, fighter bombers, observation aircraft, and transport planes. If approved, such a sale would undermine further what military discipline remains, by providing an air arsenal on a scale unprecedented in Central America.

This military escalation would occur in the face of a resolution adopted by the United Nations Commission on Human Rights on March 11, 1981. The resolution calls "upon governments to refrain from the supply of arms and other military assistance in the current circumstances," and deplores "the murders, abductions, disappearances, terrorist acts and all grave violations of human rights and fundamental freedoms in El Salvador."

Further U.S. military aid would defy the May 6 appeal from Amnesty International to Secretary of State Haig, asking the United States not to "provide the current Salvadoran junta with military assistance which would be used to perpetrate such gross human rights violations" in El Salvador. It would disregard the opposition of Archbishop

Rivera y Damas to military assistance. It would ignore the warning of the former U.S. Ambassador, Robert E. White, that this would threaten the virtual elimination of the already weakened civilian component of the ruling junta from any role in decisionmaking.

The United States must encourage civilian rule and the process of peaceful change. We must encourage land reform efforts and the work of free trade unions to achieve social and economic justice and to secure a democratic government and human rights for the people of El Salvador.

Mr. President, I think all of us support the efforts to intercept and interdict military supplies that are coming from actual or potential adversaries of the United States. Those steps have been effective. The Secretary of State has made a number of announcements that these interdictions have been effective through Nicaragua and other countries in Central America.

All of us support the deescalation of violence, and I support the halting of military supplies from Eastern European countries and from Cuba. What we are talking about is the deescalation of military activity and outside military supplies on the one hand, while we continue to support military solutions on the other.

I think what is called for at this time is a halting of the military assistance so that we can see the political process move forward. As I mentioned earlier, the countries in the area have offered their good offices for meditation, to try and see a peaceful resolution to this tragedy, and yet those efforts I do not believe have received the full support of this administration.

We are missing an important opportunity. By missing this opportunity and by stressing the military solution, we are going to see the continued escalation of violence which has brought death and destruction to thousands of innocent people in that country.

Administration plans for renewed military assistance are diametrically opposed to the efforts and wishes of our democratic allies who continue to call for mediation and a political solution as the only answer to the conflict. President Reagan's initial military assistance package was based on the conclusions of a "white paper" viewed skeptically by many close to the volatile situation in El Salvador and sharply criticized by several leading national journals. The administration's justifications for further military aid only serve to compound their disregard for political alternatives to military escalation. While no one doubts that arms flow to the guerrillas, no one close to the current conflict in El Salvador believes that halting those arms flows or matching them many times over will end the conflict.

We all oppose the foreign shipment of arms into El Salvador from countries that are the actual or potential adversaries of our own. But we must not let their transgressions tempt us into an escalating military commitment without conditions.

Mr. President, I welcome the efforts of church and political leaders both here and abroad to bring about a political alternative to senseless military escalation in El Salvador—an effort that I and other Senators present with me today have joined, with legislation providing for an end to military escalation and the pursuit of a mediated solution to the conflict. I now ask unanimous consent that the United Nations call for an end to military escalation mentioned earlier, and the Amnesty International release of its letter to Secretary of State Haig, be inserted at this point in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

AMNESTY NTERNATIONAL APPEALS TO SECRETARY OF STATE HAIG, CITES MURDER AND TORTURE BY EL SALVADOR TROOPS

Amnesty .nternational today (Wednesday, June 10, 1981) disclosed it had urged Secretary of State Alexander Haig to take steps to ensure that the U.S. did not give El Salvador's government military aid that would be used for murder, torture and other abuses.

In a letter sent to Mr. Haig on May 6, 1981, the international human rights movement said there was conclusive evidence of "a consistent pattern of killing by the security forces of peasants, young people and other victims who had no part in guerrilla activity."

It called on the U.S. government to review the effects of its aid on human rights in El Salvador and to make public its findings.

Amnesty International said today it had received a reply from the State Department disagreeing with its conclusions but expressing willingness to discuss the situation in El Salvador.

The organization's letter to Mr. Haig cited case after case of abduction, murder and torture by troops and police of non-violent opponents, human rights workers, priests, teachers, students, journalists, medical workers and others. It pointed to mass killings, including the shooting down of hundreds of refugees, most of them women and children, as they tried to cross into Honduras in May 1980.

The letter noted that there was fighting between guerrillas and government forces, and that there had also been reports of human rights violations by anti-government groups. "However," it added, "analysis of all available data suggests that the majority of the reported violations, including torture, 'disappearance' and deliberate cold-blooded killings, have been carried out by the security forces, and have been directed against people not involved in guerrilla activities."

Amnesty International pointed out that the murders of three American nuns and a lay worker in December 1980—still under investigation in El Salvador—"were grimly typical of many thousands attributed to 'right-wing death squads'." It pointed to plentiful evidence, including official U.S. reports, implicating troops and police in this and other crimes attributed to such groups. Salvadoran President Jose Napoleon Duarte had said in a radio interview in February 1981 that his security forces were not prepared to control such groups as they supported government goals and policies, the letter said.

The organization said it shared international concern over the effects of military aid to El Salvador, and noted that the United Nations General Assembly had called on all governments last December to refrain from giving such aid.

Amnesty International recalled that it had urged the Carter Administration last year to re-examine its policy on aid to El Salvador, and that Deputy Secretary of State Warren Christopher had replied that the U.S. would not continue any assistance which it believes was being used for repressive purposes. The letter noted that both President Reagan and Mr. Haig had said it was still U.S. policy to try to protect human rights in the area. The organization welcomed that commitment, but said it was still receiving reports of abduction, torture and murder.

It appealed to the U.S. Government "not to provide the current Salvadorian junta with military assistance which would be used to perpetrate such gross human rights violations," and to make public any evidence that U.S. aid was not being used in that way, as well as the nature of the measures it was taking to prevent such use.

Replying for the State Department, Deputy Secretary William P. Clark, Jr., said he disagreed with Amnesty International's views on El Salvador, but he expressed willingness to discuss the situation in more detail.

The organization said today it welcomed the invitation for discussions.

32 (XXXVII). *Question of the violation of human rights and fundamental freedoms in any part of the world, with particular reference to colonial and other dependent countries and territories.* [72]

THE COMMISSION ON HUMAN RIGHTS

Guided by the principles embodied in the Charter of the United Nations and the Universal Declaration of Human Rights,

Conscious of its responsibility to promote and encourage respect for human rights and fundamental freedoms for all,

Noting that all Member States have an obligation to promote and protect human rights and to carry out responsibilities they have undertaken under various international human rights instruments,

Recalling that in its resolution 35/192 of 15 December 1980, the General Assembly stated its deep concern about the serious violations of human rights and fundamental freedoms in El Salvador and requested the Commission on Human Rights to examine, at its thirty-seventh session, the situation of human rights in that country,

Deeply disturbed by the continuing reports about murders, abductions, disappearances, terrorist acts and all grave violations of human rights and fundamental freedoms in El Salvador,

Deeply alarmed by the armed clashes in El Salvador and by the climate of violence and insecurity prevailing in the country,

Mindful of the rules of international law, as contained in article 3 to the Geneva Convention of 12 August 1949, which are applicable to armed conflicts not of an international character and which requires the parties to the conflict to apply a minimum standard of protection of human rights and of humane treatment,

1. Expresses its deep concern at the grave violations of human rights and fundamental freedoms in El Salvador;

2. Deplores the murders, abductions, disappearances, terrorist acts and all grave violations of human rights and fundamental freedoms reported in El Salvador;

3. Calls upon all parties to bring about a peaceful settlement and to seek an end to acts of violence in order to end the loss of lives and the suffering of the people of El Salvador;

4. Recalls that in its resolution 35/192 of 15 December 1980 the General Assembly calls upon Governments to refrain from the supply of arms and other military assistance in the current circumstances;

5. Urges the Government of El Salvador to take the necessary steps to ensure full respect for human rights and fundamental freedoms in the country;

[72] Adopted at the 1638th meeting, on 11 March 1981, by 29 votes to 1, with 11 absentions. See chap. XI.

6. Emphasizes that the people of El Salvador have the right, as soon as appropriate conditions have been established, to establish a democratically elected Government, in an atmosphere free from intimidation and terror, and to determine their own political, economic and social future, free from outside interference;

7. Requests its Chairman to appoint, after consultations within the Bureau, a Special Representative of the Commission whose mandate will be:

(a) To investigate the reports about murders, abductions, disappearances, terrorist acts and all grave violations of human rights and fundamental freedoms which have taken place in El Salvador, based on information from all relevant sources;

(b) To make recommendations as to what steps the Commission could take to help to secure the enjoyment of human rights and fundamental freedoms, including economic, social and cultural rights;

(c) To report on his findings to the Commission on Human Rights at its thirty-eighth session;

8. Requests the Secretary-General to give all necessary assistance to the Special Representative of the Commission;

9. Invites the Government of El Salvador as well as all other parties concerned to extend their co-operation to the Special Representative of the Commission;

10. Requests the Special Representative of the Commission to submit an interim report to the General Assembly at its thirty-sixth session;

11. Decides to continue the examination of the situation of human rights in El Salvador with high priority at its thirty-eighth session.

Mr. KENNEDY. Mr. President, I now yield to the Senator from Rhode Island.

Mr. PELL. Mr. President, I wish to join my colleagues in expressing deep concern over the brutal murder of at least 27 peasants at the Metayate Bridge in El Salvador's Chalatenango Province. According to El Salvador's Acting Archbishop, Msgr. Rivera y Damas, these peasants were killed by government security forces. Msgr. Rivera y Damas also charged that recently 70 other civilians had been taken from their homes and tortured and killed. In addition, another priest condemned the Salvadoran Army for the rough manner in which an inspection was made of church facilities in Chalatenango. This along with other recent harassment by the military have led the Acting Archbishop to openly complain about the increasing difficulty in conducting church work.

These are but the latest indications that the level of violence perpetrated by El Salvadoran Government's security forces against the civilian population has not been contained much less reduced. In that regard, the Metayate massacre and other recent incidents belie the view that the Government of El Salvador is making much progress in bringing its security forces under control.

Bringing those forces under control is absolutely essential if the Duarte government is to succeed in putting down the Communist-supported insurgency. For every time that government forces are involved in acts of violence against Salvadoran civilians, it is the Communists who benefit. As we learned too painfully in Vietnam, no amount of American arms or military advisors will have any lasting effect if the government we are supporting is losing the battle for the hearts and minds of its own people.

Assistant Secretary Enders last Thursday emphasized the need for a political solution in El Salvador but it was couched in terms of the necessity for maintaining a level of military assistance. Although Secretary Enders made reference to the problem of controlling security force violence, I would underline that the Salvadoran Government must do more than it is now doing to rein in its security forces. In this connection, the United States should exercise the leverage it has, through the sizable military and economic aid programs that we have been asked to fund, in order to insist that the atrocities committed by the security forces be brought to an end.

The Salvadorans must be made to understand that these atrocities against innocent peasants only serve to alienate the population and increase the ranks of the opposition forces. As the people learn that their enemy is the army, the ranks of the guerrilla forces will swell in greater numbers than if they were recruited by opposition leaders. The government has to be made aware that these incidents prove counterproductive to their efforts to gain the support of the populace.

This administration has gone pretty far down the line with the Salvadoran Government. New requests for assistance should only be considered in the context of the performance of the Government of El Salvador in doing what it should have been doing to help restore peace. Strong gestures from the United States would go far in giving the Salvadoran Government the necessary resolve to assert itself over perhaps its worst enemy—the rightist security forces.

Mr. President, I commend and congratulate the senior Senator from Massachusetts for bringing this colloquy to the floor of the Senate in order to alert all of our colleagues and, hopefully, more of the American public, to the really very bad job that is being done in bringing security forces to heel in El Salvador.

Mr. KENNEDY. Mr. President, I thank the Senator from Rhode Island, the ranking minority member of the Foreign Relations Committee, for his continued interest and concern in this problem.

Mr. CRANSTON. Mr. President, the recent massacre of 27 El Salvadoran civilians at the Metayate Bridge north of San Salvador is a graphic reminder that violence and civil strife remain the order of the day in El Salvador.

I continue to believe that it is essential for the United States to condition any and all aid to the El Salvadoran authorities upon their support for reform, for democratic institutions, and for efforts to bring an end to violence by all parties including not just leftist guerrillas but also the uniformed military and right-wing hit squads.

I welcome the notable change in Reagan administration rhetoric on this issue. No longer is it administration policy to naively cast the El Salvadoran civil war as fundamentally an East-West issue. The policy statement delivered last week by Assistant Secretary of State Thomas Enders acknowledges that "just as the conflict was Salvadoran in its origins, so its ultimate resolution must be Salvadoran."

Secretary Enders stated that "All parties that renounce violence should be encouraged to participate in the design of new political institutions and the process of choosing representatives for them."

Mr. President, an important part of the American effort to bring about an end to the violence in El Salvador is our conditional aid to the El Salvadoran regime. A bipartisan majority of the Senate Foreign Relations Committee has voted 11 to 1 to attach important conditions on our aid to El Salvador, conditions which are designed to insure that American aid will advance American interests by speeding an end to the fighting in El Salvador and the reestablishment of democratic institutions in that country. It is noteworthy that opinion surveys have consistently shown that the American people will not support policies which do not advance these goals.

Thus, when the full Senate considers the foreign aid bill which contains this conditional aid, I urge support for the important restraints the Foreign Relations Committee has established on funds for El Salvador.

U.S. POLICY TOWARD EL SALVADOR

Mr. HATFIELD. Mr. President, it is most appropriate that a number of colleagues in the Senate have chosen to address the issue of U.S. policy toward El Salvador at this time. In recent months a number of developments have taken place which serve to broaden our understanding of the nature of that tragic conflict and the policies which the administration can be expected to pursue.

Most recently Mr. Thomas Enders, the Assistant Secretary for Latin American Affairs, delivered a speech intended to clarify U.S. policy. Prior to his address, speculation abounded that the administration would seek to vitalize the as yet cool reception in Congress and the public to the attempt to make El Salvador the first test of American resolve to resist Soviet and Cuban-inspired Communist insurgency. While I am not certain that this was precisely Mr. Enders' objective, I do not think that strong public support will ever be forthcoming because the Nation's heart is not in this war. If it is not in it now—after the intensive efforts of the proponents to sell the policy—it is unlikely that it will ever find cause for change.

Some hoped that the challenge would free us from the grip of the so-called Vietnam syndrome. The term is used to describe a nation weary of conflict, unwilling to use force, to pay the price which freedom sometimes requires of us. I do not believe in the existence of such a syndrome. The American people have never shunned their responsibilities when there was no other choice. But we do not quickly embrace the prospect of another round of suffering, needless bloodshed, division, and loss of purpose. I submit that our societal claim to sound ideals

and judgment should be questioned if we were not weary, suspicious, of the need for more war.

Mr. President, I suspect that the absence of national enthusiasm for the El Salvador policy may have saved us from speaking in this Chamber under very different circumstances today. Fortunately, there are no young American soldiers dying in El Salvador. This does not, however, diminish the justification for fear that the potential exists, and that rational, peace-loving men can find themselves swept up in a current of virtually uncontrollable events.

But Salvadorans are dying today. Innocent Salvadorans. Innocent children and women and young men driven by the torrent of romanticism and patriotism, duty and revenge, and all the other factors that feed the illusory necessity of war. The origins of this conflict can no more be traced to Moscow than they can to Washington.

The origins are social, economic, and political, as will be the solution. But we must be at least as willing to risk peace as we are to risk war to achieve this objective. I have been impressed by the consistency of the belief held by those close to the conflict that, given the will, the United States holds the key to peace in that nation.

I am encouraged by the subtle change in tone of the administration's El Salvador policy. There is, at long last, reason for hope. The President should be commended for taking the first small step toward support for a political solution to the tragic conflict which engulfs that country.

Several points of departure from established policy are worth noting. First, there is a hint of acknowledgment that no one is exempt from responsibility for the senseless violence which endures in El Salvador. Formerly, blame was focused exclusively on the insurgents and groups that act independently of the military. Second, the administration now appears to recognize that certain factions within the opposition are worthy of participation in a democratic process. Third, and perhaps most importantly, the administration has admitted that the United States is capable of facilitating a peace process. In the past, we have operated on the hollow pretense that has no political role to play while simultaneously engaging in unilateral military operations.

We now have the first glimpse of a posture which might create incentives for political communication. El Salvador's economic foundation is deteriorating at an incredible rate. There is precious little time to end the war. But there should be no illusion that a peace process can move forward in El Salvador without a climate free of terror.

While we cling to the assumption that a U.S. military presence will moderate the methods of the security forces, indiscriminate killing continues at a horrifying rate. The Salvadoran military has blocked initiatives for negotiation. The Department of Defense must express, in unequivocal terms, its intolerance for such behavior.

A relationship between our military and the Salvadoran military exists independent of the diplomatic realm. Steps must be taken to bring the Pentagon in line with the spirit of this newly established willingness to seek peace. Violence will terminate, not as a precondition to negotiation but only as the result of negotiation. I will be watching with great interest to see if our actions contribute to the kind of political climate necessary to achieve the desired result.

Mr. President, I ask unanimous consent to submit for the RECORD some items which I hope will contribute to greater public knowledge of the El Salvador situation. First, a letter which I wrote to Secretary Haig recently and his response concerning the U.S. position with respect to a "death list" issued by the Salvadoran military. This list of names included individuals who are likely to represent the opposition in any negotiation. I would also like to submit an article from Foreign Policy magazine entitled "El Salvador: The Current Danger." This article exposes myths generated across the political spectrum. Though I am not in total agreement with all of its arguments, it is a cogent and helpful overview of the political realities.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

COMMITTEE ON APPROPRIATIONS,
Washington, D.C., May 1, 1981.

Hon. ALEXANDER HAIG,
Secretary, Department of State,
Washington, D.C.

DEAR AL: The strong desire for a negotiated peace in El Salvador is shared by our allies, our neighbors in the Western Hemisphere and, if I may venture an estimate, a majority in the United States Senate. Observers of the conflict generally agree that powerful elements within the Salvadoran Armed Forces constitute a significant obstacle to this objective. A recent development leads me to seriously question the willingness of the Salvadoran Armed Forces to accept a negotiation posture and the Administration's intention to vigorously encourage them to do so.

Recently, the respected human rights organization, Amnesty International, brought to my attention an apparent "death list" issued by the Salvadoran Armed Forces. I instructed a member of my staff to make an enquiry regarding actions which the Administration had taken to protest or halt the existence of such a "hit list". The lack of concern conveyed by the Department of State in two telephone conversations is, at the very least, disconcerting.

My office was informed that, first, the Department of State was certain that "at least a majority" of those on the list were confirmed terrorists. I have no qualm with this statement as I assume that many are, in fact, members of the military arm of the opposition. This does not in any way legitimize the formulation of such a list. Furthermore, the inference that half of the individuals on the list are violent enemies of the state and that, therefore, the other half, though perhaps innocent, might be expendable in carrying forth this directive violates minimum standards of justice and decency.

The State Department then went on to explain that the Salvadoran Armed Forces had issued a directive some days later to the effect that "we are always willing to consider evidence that there are inaccuracies on the list." Such a policy is a prima facie case of presuming mass guilt before innocence is proven.

The list includes scholars, priests, and former officials who have demonstrated respect for democratic institutions and who have condemned continued violence as the solution to the conflict in El Salvador.

Below is a partial list.

Mayorga Roman Mayorga—Former Rector of the Catholic University of El Salvador and former member of the Junta. Mayorga is presently teaching at Colegio De Mexico—a prestigious university and research center in Mexico.

Fabian Amaya—Former Director of the Social Communications Office of the Archdiocese of San Salvador. He is a close friend of Bishop Rivere y Damas. He is a moderate figure in the Salvadoran Catholic Church.

Roberto Lara Velado—One of the founders of the Christian Democratic Party and a highly respected lawyer.

Leonel Gomez—Former Advisor to the President of the Institute of Agrarian Reform (ISTA). He has sharply denounced violence by both the Junta and the guerrillas.

Hector Dada—A former foreign minister and member of the Junta. He resigned from the Christian Democratic Party in March, 1980.

As for Dr. Ungo and other members of the Political-Diplomatic Commission of the Democratic Revolutionary Front who also appear on the "hit list," I would mention the following points. I harbor no illusions with respect to the Commission's complicity toward acts of violence by the left, or that these leftist democrats command real authority over the Front, much less the Salvadoran people. However, these individuals do represent-a-party to the conflict. Any legitimate political solution would, by necessity, include them.

Congress has been repeatedly assured by the Department of State that officially sanctioned acts of brutality and indiscriminate violence have undergone marked reductions in El Salvador. It is further claimed that American advisors serve to facilitate this process. I am certain that you can understand how the Administration's silence on this matter reduces the credibility of these assurances in the eyes of Congress.

The Department of State's casual attitude with respect to the inclusion of these individuals raises several critical questions concerning U.S. intentions in El Salvador. What does it say of the U.S.'s interest in a negotiable peace in El Salvador if the U.S. fails to protest a list which contains the names of probable negotiators? How does it reflect on the President's admirable anti-terrorist policy when the individuals slated for death reside both in Mexico, a friend and ally of the United States, and the U.S. itself?

I fear that this development can only lead one to conclude that the U.S. is not genuinely committed to pursuing a peaceful settlement to the crisis in El Salvador. Certainly, our allies and our neighbors in the Hemisphere would draw such a conclusion. If this is not the image or the intent which the Administration wishes to portray, it is vital that the U.S. strongly and publicly deplore this initiative and the attitude it represents.

I think I can safely speak for a significant number of Senators from both parties in stating that failure to take such actions will make it increasingly difficult for Congress to justify the approval of pending or future requests for military aid to El Salvador.

Thank you for your attention to this matter.

Warmest regards.

Sincerely,

MARK O. HATFIELD,
U.S. Senator.

DEPARTMENT OF STATE,
Washington, D.C., May 26, 1981.

Hon. MARK O. HATFIELD,
U.S. Senate

DEAR SENATOR HATFIELD: Thank you for your letter of May 1 to Secretary Haig con-

cerning the "list of traitors" published March 30 by the Salvadoran Armed Forces.

We regard the list as regrettable, especially as it includes the names of individuals who have not endorsed the armed terrorist insurgency. The Armed Forces have asked those named to publicly state that they do not support the FMLN–FDR. Some individuals have already done so, including members of the current government whose names appeared on the list. During his visit to Washington on May 8, the Salvadoran Foreign Minister told us that fortunately no one on the list has been threatened or killed.

Subsequently, the FMLN–FDR April 21 on the clandestine Radio Venceremos issued a list of "murderous military officers," including all members of the High Command and officers down to the lieutenant level. As far as we are aware, no one in FMLN–FDR leadership has deplored the publication of this list.

The leadership of the FMLN–FDR has consistently declined to disassociate itself from the worst of the terrorist violence in El Salvador, in sharp contrast to the efforts of the civilian and military leadership in the Duarte government which, with our support, is engaged in a difficult process to end indiscriminate violence and to achieve a political solution through free and open elections. The United States deplores actions by any group which would make a political solution more difficult to achieve. The alternatives would serve neither the best interests of the Salvadoran people nor the interests of peace and stability in the region.

This Administration has indicated many times that it supports the Salvadoran Government's efforts to reach a political solution through the holding of elections. The issuance of lists of the type mentioned above reflects the atmosphere of deep tension and acute polarization which must be overcome if the Salvadoran people are to be able to achieve a political solution.

We constantly communicate our concerns and points of view in private to the Salvadoran Government. We believe that quiet diplomacy will be ultimately more productive than public statements.

Sincerely,

RICHARD FAIRBANKS,
Assistant Secretary for Congressional Relations.

EL SALVADOR: THE CURRENT DANGER—AMERICAN MYTHS

(By Leonel Gomez and Bruce Cameron)

Myths pervade American understanding of the war in El Salvador. Liberal and conservative observers alike in the United States employ widely believed fictions and half-truths to explain Salvadoran events. But if the United States is ever going to handle effectively the crisis in El Salvador, it must first see through five popular misconceptions: Land reform has failed; the traditional oligarchs remain a major factor in Salvadoran society; civilians in the current government wield real power; the leftwing insurgents resemble the Sandinistas in Nicaragua; and the Salvadoran armed forces are open to genuine reform.

Instead of blindly believing these myths, the United States should accept the facts, which make a satisfactory military victory by either side impossible. In particular, the United States should recognize that for the first time the Salvadoran left may now be genuinely willing to enter a negotiating process in which it will make significant concessions. In expecting a triumph against international communism, the Reagan administration will miss an opportunity for a political solution that could save tens of thousands of Salvadoran lives, establish a democratic political process, and guarantee U.S. interests.

One common myth heard on the left claims that the Salvadoran land reform program has been a sham. This is untrue. Phase I of the program, which breaks up the country's largest estates, has worked. The oligarchs are off those properties. The traditionally impoverished *campesinos* (peasants) on those farms cultivated the fields last year and reaped good crop returns. Phase II of the program, designed to break up middle-sized farm holdings, is stalled. The third component of the reforms, the Land-to-Tiller plan, has only just begun. Supported by the peasants, it has the potential to improve dramatically the lives of those receiving the land where they had previously worked as sharecroppers. The nationalization of the banks and export-import activity have also reduced the power of the oligarchs and channeled more credit to those who need it.

A serious caution should be noted. Local military officials have been forcing newly formed cooperatives to pay protection money. The cooperative leaders have few channels to make effective complaints. True agrarian reform must involve more than just the transfer of land. It must reflect the spirit of change and a willingess to give power to the poor. That spirit existed at one point in El Salvador's land reform, but it is fading as the armed forces take increasing control. A new oligarchy—a military oligarchy—could replace the old.

All sides in the United States contend that the oligarchy still plays a major role in El Salvador. Opponents of U.S. policy claim that the army, after some initial interest in reform, has returned to supporting the economic interests of the wealthy. The State Department says that the majority of military officers support reform, but that their efforts are blocked by the alliance of the oligarchy and more right-wing officers.

Both views are wrong. Until the late 1970s, the military did share power with the oligarchy. The army protected the economic interests of the oligarchs; the oligarchs helped the military officers use government to line their own pockets. But the increased revolutionary ferment in Central America that led to the 1979 Sandinista victory in Nicaragua frightened the army. And the modernization of the Salvadoran economy, requiring technicians and the involvement of foreign private banks and international aid institutions, convinced the army officers that they could run the country without the old economic elite. As a result, the army decided it could discard the oligarchy and accept some reforms.

The myth of the civilian-military junta conceals the true nature of the Salvadoran government. The Christian Democrats in the government, including President José Napoleón Duarte, have not achieved anything substantial for the people of El Salvador. They have implemented reforms, but with some exceptions the army officers were also willing to implement the reforms. Meanwhile, the army has not hesitated to take harsh steps to protect its interests. The censorship regulations now in force were issued by the armed forces in March 1980. The armed forces recently released a list of 138 "traitors" who they claimed were responsible for "terrorist activities" and "ruining the country." Duarte later admitted he had neither seen no approved the list before it was reelased. And when he personally objected to the inclusion of several members of his own Christian Democratic party on the list, the military refused to withdraw the names.

John A. Bushnell, deputy assistant secretary of state for inter-American affairs, was claiming about this time that the Christian Democrats had begun to bring right-wing violence under control. He noted correctly that Christian Democratic mayors of Salvadoran towns were no longer being assassinated, but he did not state the reason this is true. It is not that the army has been curbed, but that the mayors have been intimidated. Whereas the mayors would once report complaints of military violence to local commanders, they now know better.

Many of the Christian Democrats deserve credit for their motives. Their participation will be necessary for a political solution to the civil war. But their continued presence in the current regime gives only a respectable facade to a military dictatorship.

The State Department has actively promoted as fact the myth that the Salvadoran guerrillas receive most of their weapons from Cuba and other communist countries. Although the tons of outside arms alleged in the administration's white paper on El Salvador sound massive, they actually constitute only a few days supplies. The guerrillas purchase most of their weapons on the black market with millions of dollars obtained in ransom.

The American left also has a number of illusions about the opposition in El Salvador. First, some liberals believe that the Democratic Revolutionary Front (FDR) has significant power in its alliance with the guerrillas forces of the Farabundo Marti National Liberation organization (FMLN). A year ago, the civilian leadership of the popular peasant, labor, student, and professional organizations did have a power base independent of the guerrilla groups. A year of government repression and the shift to military tactics in response to that repression have eroded the power of these civilians. The truth is that the FDR leaders, although their power may rebound, still have only somewhat more power in their alliance with the guerrillas than the Christian Democrats have in their alliance with the army.

Most important, contrary to claims of the American left, the combined FDR-FMLN does not have the majority support of the 4.7 million Salvadoran people. FDR popularity is hard to judge because it does not enjoy the freedom to organize. The guerrillas have about 5,000 troops and the active support of perhaps 100,000 people. Up to 500,000 people will occasionally give active support.

Although support for the FDR-FMLN is not great, the government enjoys even less popularity. However, it has more guns, more trained soldiers, and is willing to use both. The brutal killings by the army—victims sawed in half or placed alive in battery acid—have succeeded in traumatizing the Salvadoran people into fearful passivity.

Another myth holds that the Salvadoran guerrillas politically resemble Nicaragua's Sandinistas. The Sandinista movement, however, contains no extreme left as does the Salvadoran opposition. Many Salvadoran rebels disdain the Sandinistas for wanting to concentrate on rebuilding Nicaragua rather than aiding other revolutionaries. The Salvadoran guerrillas have also engaged in kidnapings and selective terrorism, tactics largely eschewed by the Sandinistas.

It would be equally wrong to assume that the Salvadoran left is a fixed, unchanging group. The armed leftists are now the stronger; but a year and a half ago, in a different political climate, the civilian component was stronger. It could be again. Similarly, a minority of extremists exercise significant power within the ranks of the armed leftists, but only because competition for power has become militarized.

A VAST NETWORK OF CORRUPTION

Understanding the nature of the Salvadoran military is the fundamental task facing U.S. policy makers. Opponents of U.S. policy denounce the armed forces as an instrument of the wealthy oligarchs. The State Department says that the military wants to do what it is best for the country and is open to change. Conservatives believe the military is a bastion of anti-communism and pro-Americanism. Although individual officers fit one or another of these descriptions, the Salvadoran army, in essence, is none of these things.

Young men enter the Salvadoran officer corps to acquire the power and money that military service provides. Five hundred officers in the military lead the Salvadoran army, national guard, national police, and treasury police; more than 90 per cent of them attended the El Salvador military school. Each officer belongs to a tanda (graduating class), and each tanda has a president. During their 30-year careers, the officers seek contacts and form alliances with other tandas, as they prepare for political power. In past elections in El Salvador, no matter which party had the most votes, the army candidate won. The outgoing president would choose his successor, and together they would assemble a coalition of officers from one major tanda and several allied tandas to enjoy the spoils for their five-year term. The tanda system remains in power today.

Rodolfo Viera, the first campesino president of the Salvadoran Institute of Agrarian Transformation (ISTA), attempted to expose one example of massive governmental corruption in mid-1980. He had discovered that the properties ISTA had purchased before October 1979 for establishing cooperative farms had been overpriced by at least $40 million; some properties had been sold to the government twice. A cut of the profits went to the original landowners; more came back as kickbacks to members of the leading tandas. Viera went on national television to expose the overpayments. He also initiated fraud charges against the colonel who had been in charge of ISTA before October 1979. In both cases, the government did nothing. In January 1981 Viera was assassinated along with two American technicians associated with the U.S. labor movement.

Viera's story destroys the myths of the right-wing and the State Department. The Salvadoran army is not held together by an ideology of anticommunism. It is held together by a vast network of corruption. That network now controls El Salvador's nationalized banks, 15 per cent of its best farmland, all export-import activities, and is looking forward to the arrival of new U.S. economic aid. Although the army supports reforms because it needs to enlarge its base of support, it refuses to share real power with any other group, especially the poor.

In the past year and a half, the armed forces have launched a war to exterminate all possible challenges to their power. Although people in the cities have been killed by death squads loyal to oligarchs living in Guatemala or Miami, these kinds of killings are relatively rare. The vast majority of killings occur in sweeps of the countryside by the armed forces or by death squads operating under the formal direction or informal sanction of regional military commanders. Through the chain of command and informal ties, each commander knows which forces are doing what and which soldiers belong to formal or informal death squads.

It should be noted that a majority, but not all, of the army officers now in charge are involved in the violence. There are some officers, especially younger ones, who are shocked and revolted by the indiscriminate violence; many more just perform their duties without judging the activities of their fellow officers.

Following the failure of the guerrillas' January 1981 offensive, the Reagan administration has begun to talk confidently of continued reforms, steady pacification of the opposition, and finally elections in 1982 and 1983 to give an international seal of approval to the present government. This plan will fail. As long as the military remains in power, the guerrillas are assured a steady flow of new recruits.

The administration should acknowledge that the present situation is a stalemate and try to facilitate a process of dialogue and negotiation. Independent Salvadorans with ties to the guerrillas indicate that the rebels recognize military victory is impossible in the short run. The insurgents see that the Reagan administration seems willing to go to war to defend the present government; moreover, the rebels expect that Cuban aid will not increase.

In this context the guerrillas are willing to give more power to the more moderate FDR. The guerrillas' military weakness has increased the power of the civilians. By how much, however, is uncertain. But FDR representatives have been empowered to talk and, at some point in the future, to negotiate.

The time is right for the Reagan administration to meet with the FDR. These talks should be informal, but substantive. The two sides must find an appropriate international forum in which formal talks between the FDR-FMLN and the government can be held. They must also discuss how to create and finance an international peacekeeping force. In addition, the structure and make-up of the armed forces and a constitutional framework must be discussed. These issues will prove troublesome in later negotiations; the United States and the FDR-FMLN should have some idea beforehand how far the other is willing to go.

Negotiations, if they occur, should have three major goals. First, an electoral commission should be established to register voters and supervise elections. Second, a 2,000-man international peace-keeping force should insure that the Salvadoran armed forces remain in their barracks and that the guerrillas stay in the areas assigned to them. Third, significant numbers of high-level military officers and guerrilla leaders must agree to exile and banishment from politics for at least five years. Without the removal of the highest ranking officers, neither the opposition nor the Salvadoran people will have any confidence that the army is prepared to end its brutality and corruption. Nor will the remaining officers, the Christian Democrats, or the United States have any confidence that the left will obey peace terms or election results unless its top guerrilla leaders are also removed from the political scene.

This third point is harsh and unprecedented in internationally negotiated solutions. However, if negotiations are to succeed, there is no alternative. Such a move would also have the benefit of strengthening the civilian sectors in the government and the opposition, making it more likely that the ballot can replace the gun as the way to achieve power in El Salvador.

Mr. BURDICK. Mr. President, I rise today to join my colleagues in expressing my opposition to further U.S. military assistance to the Government of El Salvador.

The roots of the conflict in El Salvador are centuries old and its people have long been in conflict with their governments. The problems of that nation are rooted in the troubled history of Latin America and not in the East-West conflict. El Salvador is not an arena for a showdown between East and West, and its problems are not those that will be resolved with increased military assistance from the United States or any other foreign power.

In opposing U.S. military assistance to the El Salvadoran regime, I am not condoning the violence by the left or the left's acceptance of arms supplied by foreign countries. I oppose further military assistance from the United States because I believe it will not halt the violence—it will only escalate the intensity of the conflict.

As the violence escalates, even more innocent, impoverished El Salvadorans will lose their lives. When Bishop Damas, the head of the Catholic Church in San Salvador was in the United States in March, he told us that, in the last year, the war has claimed the lives of over 10,000 people. To use the bishop's words:

> The poor have borne the burden of injustice for decades in El Salvador; they now are most exposed to the violence of the war.

As a cosponsor of legislation to halt military assistance to El Salvador, I believe that the United States should work for a political—not a military—solution to El Salvador's civil war. Our role should not be as an arms supplier to a particular faction, but as a mediator between factions in this conflict.

We should work with other countries in the region to help the leaders of El Salvador find a political solution to their crisis. It is only a political solution that will bring long-term stability to the country. Stability in El Salvador is in the best interests of the United States, and it will allow the El Salvadoran people to prosper in a land free of the fear of war.

● Mr. LEAHY. Mr. President, almost 2 years have passed since a coup d'etat in El Salvador brought to a close three centuries during which a privileged elite monopolized the nation's land, financial institutions, and foreign trade. In the United States and other Western nations, the change of government was hailed as evidence of a new era of justice, economic growth, and freedom for the 5 million citizens of this densely populated Central American country.

Unfortunately, the struggle to vindicate the promises of the October 1979 revolt has been marked by widespread indiscriminate killings, by polarization of opinion rather than reconciliation, by economic stagnation, and by a sharply escalating ideological confrontation which threatens to involve other nations. Guerrilla activists, leftists and rightists both, have attempted to subvert President Napoleon Duarte's regime. Government troops themselves have committed atrocities against innocent people. In the search for reform, equality, and prosperity, 12,000 civilians were killed in 1980 and another 8,000 during the first 5 months of 1981.

Of late, the United States has involved itself in this fratricidal conflict, and the best of intentions have led to the worst of results. Under the rubric that communism must be confronted so that the rest of Latin America can be saved for democracy, we have supplied $35 million in military aid already this year and have supplied 56 American advisers. U.S. helicopters, according to religious and secular relief workers who continue their heroic labors among El Salvador's impoverished peasantry, have contributed to the carnage, including the deaths of scores of innocent women, children, and elderly people trying to flee the war. The escalation of warfare has interrupted the laudable goal of making land available to the

farmers whose familes have tilled it for generations on behalf of wealthy landlords. The violence has reinforced the El Salvadoran Government's reluctance to proceed at an early date with national elections. By supplying enormous military and economic assistance without pressing vigorously for the immediate implementation of the reform program, the United States has unwittingly but inexorably been drawn deeper and deeper into the conflict.

Equally tragic for our own Nation, the war in El Salvador has resurrected shades of American involvement in Vietnam, prompted the administration to defend U.S. involvement with arguments far removed from the reality of El Salvador's distress, and raised danger signals of a protracted ideological struggle among the nations of Latin America.

Before us now is a security assistance authorization for fiscal year 1982 which contains $26 million in military assistance, coupled with a requirement that El Salvador is making meaningful progress in protecting human rights, disciplining its armed forces, implementing essential economic and political reforms, holding free elections, and negotiations with other elements pledged to a peaceful resolution of El Salvador's civil war.

I share with several of my distinguished colleagues a pervasive fear that the constraints imposed on the Government of El Salvador are not enough to reverse the tide of conflict in El Salvador and American involvement in it. Surely a case can be made that before proceeding further with its military assistance program, the United States should undertake a fundamental reassessment of its role in this potentially dangerous policy. Should we continue as of late in advertising El Salvador as a theater of conflict between communism and the west, especially in light of the heritage of deprivation and class-conflict which has so long dominated El Salvador's history? Should we supply generous amounts of military aid to a government implicated in gratuitous violence against El Salvadorans and even some innocent Americans? Should we impugn our credibility by misconstruing the nature of the involvement of other states?

Before we supply further resources for the intensification of the conflict in El Salvador, I ask that we address these questions carefully. In defending freedom, promoting democracy, and encouraging economic development we should be certain that those we assist are committed fully to the same objectives. If not, we face the danger of involvement in a conflict which may damage our own institutions, impede our ability to protect our vital interests, and in the long term undermine our role as guarantor of democracy, freedom, and justice.●

● Mr. CHAFEE. Mr. President, my principal concern has been to bring an end to the senseless violence in El Salvador while broadening the base of a moderate government in order to achieve political stability based upon representative government. I once had high hopes that the existing coalition government in El Salvador—given sufficient U.S. support—could achieve both these ends. It has been my view that the institution of needed agrarian, financial, and democratic reforms would help to undermine extremist factions and the resort to violence and provide the Duarte government with sufficient political strength to exert firm civilian control over El Salvadoran military and security forces.

But, those hopes are fading rapidly. I now have serious doubts as to whether the current coalition government in El Salvador is capable of stemming the violence either from the left or the right.

The mass slaying of 28 peasant civilians 2 weeks ago strongly suggests that the El Salvadoran military/security forces remain out of control. According to Archbishop Rivera y Damas, 100 other murders of El Salvadoran civilians also took place that week. Moreover, 8 months after the savage murders of four American missionary workers, those crimes remain unresolved. Now, new information hints at the complicity of the top of the El Salvadoran military in the killings of the American nuns.

During the last several days, there have been indications that El Salvadoran business opposition to the Duarte reforms is gaining strength with tacit encouragement from the administration. But, if these reforms are thrown off track, a severe blow would be dealt to the prospects for widening the political base of the Duarte government and even to its survivability.

Recent events convince me more than ever that a military solution is not the answer to the problems of El Salvador. I am concerned that more military assistance will only escalate the already intolerable level of violence and undermine an eventual political settlement. Thus, barring massive outside intervention, I will not support any further military assistance to the Government of El Salvador. In fact, current levels of U.S. military assistance seem unnecessarily high.

If, however, we terminated all U.S. assistance and abandoned the fragile Duarte government at this juncture, it seems clear that the extreme right, which has been responsible for much of the recent violence, would quickly return to power. What would follow would be a clash of extremist rightwing and leftwing forces resulting in violence far bloodier than anything which has occurred to date. Hence, I favor continued economic support provided the El Salvadoran coalition remains centrist in nature.

The threat of ever-growing violence is why a comprehensive political settlement is so important. It is time for the United States to take an active lead in searching for such an accommodation, involving all parties to the conflict. Remarks by Assistant Secretary of State Tom Enders, last week, favoring a "political solution" are to be welcomed as a step in the right direction.

However, urgency is upon us. Concrete steps must be taken now to effect an overall settlement which will embrace all major factions and end the violence in that strife-torn country.●

Mr. WEICKER. Mr. President, in El Salvador, we watch a tragedy in its final scenes. Nearly 9,000 civilians have died there in the first half of this year alone. Enter the Americans, well into the last act, with men and materiel and talk of making the country safe for democratic elections. But, if anything, the killing of innocent people has escalated, and much of it is reportedly the work of security forces and the very military we are backing.

In a recent address to the World Affairs Council, Thomas Enders, Assistant Secretary of State for Inter-American Affairs, paraphrased the good neighbor policy to mean that "we cannot be indifferent to outside threats to the security of any friendly country so close to our shores." But the greatest threats to El Salvador's security are coming from within. As a Roman Catholic bishop in San Salvador recently declared, "The pity is that the United States supports this government because it is friendly to the United States. It is not friendly with its own people."

Assistant Secretary of State Enders went on to say that:

> When trained guerrillas with outside backing take up machineguns, mortars and recoilless rifles, no amount of fertilizers, schools or clinics can prevent them from sowing terror or attempting to seize power by force.

This is most certainly true. But neither can we expect to rush in just before the final curtain with guns and helicopters and anti-Communist rhetoric, prop up a government at war with its people and wrest a democratic solution.

The mort important question for us to ponder may well be this: Where were we, the United States, in act I, when the forces that fuel this conflict began to brew? In 1973, according to the United Nations, the top 10 percent of the Salvadoran population owned more than three-fourths of the land, while the poorest 10th of the people held less than half of 1 percent. As a result, while the overall per capita GNP in 1977 was $550, an estimated 2.6 million of the country's 4.5 million people had annual per capita incomes below $250.

Recent attempts at land reform are beginning, ever so slowly, to right this imbalance. But with one of the highest birth rates in the world, El Salvador's scarcity of land is sure to be aggregated, and the already widespread hunger and illiteracy can only become worse. Housing and health services are also shamefully inadequate.

What was needed in El Salvador before death squads became a fact of life—and what is needed throughout Central America—is not American arms and not just American money either for the latter is likely to line the pockets of the oppressors. What was and is needed are American doctors, American teachers, American engineers, and above all American concern for the abject poverty that, long ignored, breeds Communist opportunism.

El Salvador and her neighbors in Central America today manifest the failure of U.S. policy over the last two decades. The paternalism, neglect, and anachronism of that policy have succeeded only in alienating our natural allies in this hemisphere and opened the door to

the Soviets. We cannot simply then adopt a bunker mentality toward the forces which have been unleashed in that region of the world. If we do, we add fuel to the fires which are burning now in El Salvador, Guatemala, and Honduras, the heat of which will be painfully felt by the United States in the near future.

Out of the ruins of this policy we must build a new relationship to the existing emerging states of Latin America. Such a policy will require the fullest measure of American idealism, leadership and strength. It will require the education and support of the American people. It will require boldness and courage.

That policy must be built, first and foremost, on respect for the sovereignty and self-determination of Latin American peoples. Our relations to those states must communicate our regard for their right to exist and act, not only as a piece on a global game board, but in their own right.

That policy should address itself to meeting the basic human needs of the millions who have suffered from abject poverty and economic oppression. We must be actively involved through economic assistance in developing the human and physical resources, which can produce indigenous economic development and elevate the dignity and quality of life of the least fortunate of the region.

That policy should proceed conceptually on the basis of present day realities rather than the dictates of ideology or diplomatic momentum. Teddy Roosevelt, Harry Truman, and John Kennedy do not provide answers for today's problems, only echoes of bygone eras we had best put behind us.

Finally that policy must be founded on the cherished values of democratic rule and human rights. Ultimately, security and stability in human society is achieved only through respect for fundamental rights and freedoms. For the United States to proceed on any other basis would compromise our integrity and deny our greatest strength.

I would encourage my colleagues to reflect on where we have been, where we are and the choices we must make if we are to preserve and enhance our influence in this vital region. For the sake of the victims of poverty and conflict, our present day national interests and the next generation of Americans, North, Central, and South, who must inherit this world, let us hope that the choices we make are the right ones.

Mr. KENNEDY. Mr. President, I yield the floor.

ROUTINE MORNING BUSINESS

The PRESIDING OFFICER. There will now be a period for the transaction of routine morning business.

Mr. ROBERT C. BYRD. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The bill clerk proceeded to call the roll.

Mr. BAKER. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

EFFECTS OF HIGH INTEREST RATES

Mr. BOREN. Mr. President, in my continuing series of speeches on the effects of high interest rates I had said before that one only has to pick up the daily newspapers to find ample evidence of the seriousness of the problem.

Today's papers continue to be filled with complaints from the allies at the Economic Summit Conference in Ottawa about the detrimental effects on their own economies, of the high interest rates policies of the Reagan administration.

In addition, today's business and finance page of the Washington Post is topped by a headline saying "Stock Prices Plunge on Interest Waves."

The story details the fall of stock prices yesterday. The Dow Jones industrial average fell over 18 points—the biggest 1-day decline since January 20 of this year.

Why? According to the Post story, Mr. President, the stock price fall was triggered by a Federal Reserve Board announcement that the Nation's money supply jumped $6.9 billion last week. It was the opinion of Wall Street that the Federal Reserve Board would respond by further tightening its monetary policy, resisting by more upward pressure on interest rates. Thus, instead of a reduction in the current 20½-percent prime rate, it is anticipated that the prime will remain where it is, or even worse, increase again from it near record level.

Mr. President, when is this economic madness going to stop? How many small businessmen are going to be driven into bankruptcy? How many farms must fail? How many individuals must suffer before those behind this game of economic brinksmanship recognize the imminent threat of collapse which these policies are fostering?

The chorus of concern is rising, Mr. President, and it must be heeded soon.

I ask unanimous consent that the article referred to be printed at this point in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

STOCK PRICES PLUNGE ON INTEREST WAVE

(By James L. Rowe, Jr.)

NEW YORK, July 20.—Stock prices plummeted today as a new wave of interest rate worries swept Wall Street.

The Dow Jones Industrial Average of 30 stocks fell 18.36 points to 940.54. That was the biggest one-day decline for the most closely watched barometer of stock prices since Jan. 20, when it declined 20.31 points. Today's closing Dow Jones level was the lowest since Feb. 20, when it hit 936.09.

The new wave of concern about interest rates was touched off by last Friday's report from the Federal Reserve Board, the nation's central bank, that the money supply—essentially cash in circulation and checking accounts—jumped $6.9 billion in the week.

The increase was sharply higher than most analysts expected and convinced investors and Wall Street traders that the Federal Reserve is likely to tighten its monetary policy in an attempt to restrain money supply growth. A money supply that grows too quickly is thought by most economists to contribute to inflation. A tight money policy generally leads to higher interest rates.

Since most investors had hoped for a decline in rates soon, merely continued high rates are enough to send prices plunging. The prime rate at most major banks is 20½ percent, which is nearly a record.

The federal funds rate, the interest banks charge each other for overnight loans of excess reserves, rose from just below 18 percent on Friday to about 19 percent today. Although Wall Street traders focus on the federal funds rate, Federal Reserve officials have cautioned for the last two years that the central bank concentrates on the growth of the money supply and that day-to-day fluctuations in interest rates are not a good guide to Fed policy.

Stock prices usually move in the opposite direction from interest rates, in part because high interest rates lure investors away from stocks into securities such as certificates of deposit or into money market mutual funds, and in part because high rates make it difficult for investors who have bought stocks on credit (or margin, as it is called).

Bond prices also more in the opposite direction from interest rates, and the money supply report triggered a steep decline in the bond market, too.

Marvin Katz, the assistant head of trading at the brokerage firm of Sanford Bernstein & Co., said the Friday Federal Reserve report, which came out after the New York Stock Exchange had closed, "broke the back of the market. People bailed out [of stocks] in an orderly fashion. We'll see more of the same on Tuesday."

Investors' worries about higher interest rates may be misplaced. The money supply had been growing far more slowly than the Federal Reserve target, and the sharp jump reported last Friday may be as much due to technical factors, such as the early payment of Social Security checks, as anything else.

Misplaced or not, the decline in the stock market was broad-based.

The most active stock on the New York exchange again was Conoco Inc., which is being pursued in merger bids by three big companies: E. I. duPont de Nemours & Co., Mobil Oil Co., and Seagram Co. Conoco fell $2.50 a share to $85.25.

On the American Stock Exchange, where declining stocks outnumbered advancing ones 473 to 130, the index fell 6.37 points to 363.65.

CONCLUSION OF MORNING BUSINESS

The PRESIDING OFFICER. Is there further morning business? If not, morning business is closed.

ECONOMIC RECOVERY ACT OF 1981

The PRESIDING OFFICER. The clerk will state the pending business.

The assistant legislative clerk read as follows:

A joint resolution (H.J. Res. 266) to provide for a temporary increase in the public debt limit.

The Senate resumed consideration of the joint resolution.

AMENDMENT NO. 504

The PRESIDING OFFICER. The pending question is amendment No. 504 by the Senator from Michigan (Mr. RIEGLE), on which there shall be 40 minutes debate, equally divided and controlled.

The Senator from Michigan is recognized under the order.

Mr. RIEGLE. Mr. President, the amendment before the Senate would maintain the minimum social security benefit for those people who presently receive it and for those who would be entitled to receive it through the end of this calendar year. It does not provide that new persons who would become eligible in 1982 and beyond will receive the minimum benefit on social security. It is very important that that be understood, Mr. President, because what we are trying to do is maintain the income of those people who presently receive the minimum benefit, who depend upon it, who need it, and also for those persons who are about to receive that benefit and who have been counting on receiving it. The amendment will guarantee that this will not be taken from them just at the time when they are about to receive it.

Further, we should review the situation as to where we stand. Both the Senate and the House have taken earlier actions to eliminate the minimum benefits under social security. I offered the amendment on several occasions in the Senate to maintain that benefit, and by narrow margins we were defeated.

In the Senate version, we would discontinue the minimum benefit on social security roughly 10 days from today, on August 1 of this year.

It turns out that this is an absolutely impossible and irresponsible cutoff date for the Senate to have adopted. The Social Security Administration is not in a position to change their system that quickly and, as a matter of fact, they estimate that it is going to take 10,000 hours of work to go through the social security rolls to discontinue the minimum benefit for those people who receive it and the administrative cost of this change would be $250,000.

As it happens, Mr. President, the checks would go out on August 1 to these recipients across the country who need them and depend upon them. They will get the money, spend the money, and sometime later, the Government will come back and say, "Oh, by the way, we made a mistake; the money we sent you in the late summer of 1981, we want it back." If you do not have it or cannot get it—well, I am not sure what the old folks will do in that situation.

There are roughly 3 million people who receive the minimum benefit on social security. To many of these people, the minimum benefit is so crucial to just maintain life and limb. It is an absolutely critical amount of money to those people living in poverty and trying to scrape by, most of whom are very elderly.

If you look at the age distribution of people who receive the minimum benefit on social security, it turns out that there are over 80,000 of them who are above the age of 90. Of the entire 3 million people who receive the minimum benefit, 75 percent are women—elderly women, in most instances, living alone very late in life. The idea of withdrawing this minimum benefit of social security from some poor old soul who is 98 years old and who is just barely scraping by and put in place of that—as my colleagues on the other side of the aisle have suggested—the idea of letting that person go on welfare, allowing her to go on public assistance. This is really a heartless answer. It is an irresponsible answer.

As a matter of fact, Mr. President, this became such a sensitive issue in 1980 that candidate Ronald Reagan went across this country and made a solemn promise that he would not cut the social security system, that he would not start dumping the old people overboard and take away their benefits if he became President. He was compelled to do that—for two reasons: First, this country strongly supports the social security system, as my colleagues on the other side of the aisle are beginning to find out. Second, there was great skepticism about Ronald Reagan because, over the years, he had made so many comments about the fact that he did not like social security. He left the clear impression that perhaps he would take steps to undo or dismantle the system. There was so much concern across the country that he had to make some solemn promises. Let me quote two of them.

This is one he made in the television debate with President Carter on October 21, 1980. On that day, Ronald Reagan said:

> No one presently dependent on social security is going to have the rug pulled out from them and not get their check.

That is what he said. As a matter of fact, in his February message to Congress after becoming President, he said this:

> I know that exaggerated and inaccurate stories about these cuts—

Referring to social security—

> have disturbed many people, particularly those dependent upon grant and benefit programs for their basic needs. Some of you have heard from constituents, I know, afraid that their social security checks were going to be taken from them. I regret the fear that these unfounded stories have caused and I welcome this opportunity to set them straight. The full retirement benefits of the 31 million social security recipients will be continued along with an annual cost of living increase.

That was a promise made after the election, but that promise has not been kept. I think it ought to be kept. And I think the Senate ought to see that he does.

The way to do that is by adopting the amendment I am offering today. That will continue the minimum benefit under social security to those old people who rely on it at the present time. That is what the President said he would do, and I think he is obligated to follow through with that commitment.

Mr. President, I reserve the remainder of my time at this point.

The PRESIDING OFFICER (Mr. ANDREWS). The Senator from Kansas.

Mr. DOLE. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. RIEGLE. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. DOLE. I say to the Senator from Michigan that it is charged against my time.

Mr. RIEGLE. Thank you. I just want to put something in the RECORD.

Mr. President, I ask unanimous consent that Senator RANDOLPH and Senator KENNEDY be added as cosponsors of this amendment.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. RIEGLE. Mr. President, I wish to read at this time a letter from a constituent of mine, who wrote me on July 7. This is the text of his letter:

> DEAR SENATOR RIEGLE: This is the first time in my life that I have asked for assistance in a matter from the Government. What I am writing about is of vital interest to millions of citizens in our country.
>
> My mother is 80 years old and has been on Social Security since 1955 when my father passed away. Now the Government wants to eliminate the minimum benefits for three million citizens. Other than dying, what would the Government suggest the senior citizens do—apply for a job?
>
> My mother-in-law is on SSI, and that has been cut—forcing further hardships on her.
>
> What is this country coming to? I appreciate the efforts to get the bums and loafers off of assistance; however, it is certainly not fair to take our problems out on a section of citizens that have no chance of taking care of themselves.
>
> My wife and myself voted for President Reagan because President Carter was doing such a poor job. However, Mr. Reagan is proving to be a worse choice.
>
> If the Democrats hope to succeed in the future, I think this should be the point they focus on since it concerns so many people—directly and indirectly.
>
> Your assistance in this matter will be appreciated.

I have had hundreds of letters such as this from senior citizens who cannot understand what is happening today. The fear and the concern have not been created by this side of the aisle, because it is this side of the aisle that is trying to protect and maintain the system and protect and maintain the benefits under that system. No, the atacks have come from that side of the aisle. That is why the amendment is before the Senate today, so that we can keep the promise and keep faith with the people who receive this minimum benefit.

Mr. President, I reserve the remainder of my time.

Mr. DOLE. Mr. President, I certainly have no quarrel with the distinguished Senator from Michigan raising this matter again. We voted on it on June 23. We may be on this tax measure long enough to vote on it at least one more time before we have final passage.

I understand what moves or propels Members to offer amendments, particularly if it could be perceived to be embarrassing to the President of the United States or to the opposition party, whatever party that may be. But I suggest that what we have before us—and at the appropriate time, the Senator from Kansas will move to table the first-degree amendment—is another rerun.

There have been a lot of rumors in the papers, and perhaps that is how things happen: Somebody plants a ru-

mor, somebody else repeats it, and pretty soon it is floating around the Capitol as a fact.

There have been all kinds of rumors—the President has been backing away from his original position on the minimum benefit, or the Secretary of the Treasury has been backing away, or the Secretary of HHS has been backing away. That is not an accurate reflection of their attitude, and I hope this amendment will be defeated and that we can move again to the tax measure.

I also indicate in that regard that tomorrow we will have been on this tax measure for a week. I know that tax bills normally take a great deal of time. This is a very large, substantial tax reduction proposed by President Reagan. It is a 3-year tax proposal: A 5-percent cut effective October 1, a 10-percent cut effective next July, and a 10-percent cut the year after. It has some substantial business cuts and incentives for capital formation and all these things we have been talking about for a long time.

Perhaps some diversion on social security will be beneficial. On the first day we considered the tax measure, we had a social security amendment. I believe that the second or third day we had a resolution on interest rates. Now we are back on social security.

I say to my friend from Michigan that if there is a problem on the effective date, we can take care of that in conference. We have not even gotten to conference on this measure, and the Senator from Michigan is trying to undo what we have not done yet. I hope we will have an opportunity to go to conference and work out some of the differences on the minimum benefit.

Let me indicate some facts about this particular amendment. We have letters with which we could respond. We have a lot of letters from Americans who are concerned about Federal spending, concerned about interest rates, concerned about overregulation; and perhaps those letters should be placed in the RECORD for balance.

It is not that we are trying to take away anything from anyone. It is the larger question of whether or not we are going to be able to turn this economy around and whether Congress is going to lose its nerve and start backing away from some of the spending cuts for which a large majority in both parties have voted.

One way to unravel the process is to piecemeal it and use the amendment of the Senator from Michigan to begin picking the program apart. We have been through this before. We have had debate and a vote during the reconciliation measure, and once again after the proposal to eliminate the minimum benefit had been changed by the Finance Committee to provide additional protection for the elderly poor. The last time the issue was raised, the vote was 45 to 53, on an up-and-down vote, against the proposal.

There is widespread agreement that the minimum benefit should be eliminated. Some would do it prospectively and some immediately, and that is where the big disagreement is.

We can have our differing views. We can vote for increased Federal spending, or we can try to take the responsible course charted by the President.

I must say that there has been a lot of politics and not much factual discussion when it comes to social security benefits. There has been an effort by some to indicate that President Reagan wants to take away something, that he wants to destroy the social security system. There has been no recognition by some of the fact that come next September, unless we make changes in social security, the system is going to be in big difficulty.

Instead, those who have been in control of this body for 26 years stand up, 6 months after we have a Republican majority in the Senate, and point the finger at this side. It is my hope that we can have a bipartisan approach to social security reform that would make certain we preserve the program's integrity from now on.

In 1977—I am not certain how the Senator from Michigan voted—we passed a bill in our committee which tried to address some of the problems of the social security system. One way we did that was to add six additional tax increases. Two of those tax increases have taken place, and there will be four more by 1990. That may have been the responsible way to approach it at the time, but it did not work.

At that time all of us were told by the administration that we were taking care of all the problems until the year 2030. Yet less than 4 years later, we are back indicating, very properly and without much argument, that we must do something if we are going to preserve the integrity of the social security system. That is the larger question.

We can debate this specific issue or debate whether we should borrow from one fund or another to patch up the system for 2 or 3 years, and get some of us through another election. However, that does not respond to the real question.

I say to the President's credit that he has responded to the real question, although I may not think appropriately in every respect, but that is a right we have—to disagree from time to time.

But we do believe that in our subcommittee, chaired by the distinguished Senator from Colorado (Mr. ARMSTRONG) and the ranking Democrat, Senator MOYNIHAN, we can hopefully devise a bipartisan program that will address the short- and the long-term problems with social security.

If, at that time, there are some problems with this specific aspect of the program or some other specific aspect, those can be addressed, in the committee and on the floor.

Mr. RIEGLE. Mr. President, will the Senator yield at this point?

Mr. DOLE. I am happy to yield.

Mr. RIEGLE. I thank him for yielding.

The President himself said, and the Senator heard, I think, my quote earlier, in his debate with President Carter. He said:

> No one presently dependent on social security is going to have the rug pulled out from under them and not get their checks.

He said that, and the Senator knows and I know that if the minimum benefit is taken away that promise is going to be broken.

How does the Senator reconcile those two things?

Mr. DOLE. The President is talking about earned versus unearned benefits.

Mr. RIEGLE. Where does it say earned versus unearned in that sentence? I do not see that. It says:

> No one presently dependent on social security is going to have the rug pulled out from under them and not get their checks.

He did not say anything about earned or unearned. That was a blanket statement he made, to convince people that they did not have to worry, that those old folks getting the minimum benefit would continue to get it.

I do not have any quarrel with the Senator from Kansas personally, as the Senator knows, but I do not understand how he or anyone can reconcile that promise with the fact that it is now being broken.

Mr. DOLE. I appreciate that, and I have answered the best I can. I guess the best answer would have to come from the President. He is out of town today.

LET'S NOT OBSCURE THE FACTS ABOUT THE MINIMUM BENEFIT

It is unearned. It consists of a welfare support add-on to the monthly social security payment a recipient is entitled to from his or her payroll tax contributions.

At the time the minimum was initiated there was not an adequate social safety net to protect low-income elderly with small earned benefits. Today, the Federal safety net of supplemental security income, food stamps and medicaid can provide a combined benefit of $10,600 per couple for low-income elderly—an amount three times greater than the average social security minimum benefit. Since this safety net would replace minimum benefits dollar for dollar, the latter has now become a pure "windfall" for recipients whose pensions and other income exceeds the safety net floor.

The average individual receiving a minimum benefit would receive $2,122 in 1982 from the social security trust funds. He or she would have contributed, based on typical total lifetime earnings for such beneficiaries, less than $355 in social security payroll taxes.

In certain cases, minimum beneficiaries could get $3,183—per couple—each year by paying as little as $3 in their entire working lifetime.

Many beneficiaries who will be eligible for minimum benefits in 1982 at age 65 could have paid less than $68 in lifetime social security taxes—an amount they will recoup in only 12 days.

On average, a husband and wife getting an initial minimum benefit in 1982 would be paid more than $100,000 during their retirement lifetimes from the social security trust funds. For the average couple, this would be about 300 times what they had paid in, and it would not have been earned.

An estimated 35,000 social security

minimum beneficiaries live outside the United States.

Not eliminating this unearned windfall would add $7 billion to the social security trust fund deficit over the next 5 years, making the social security financing crisis that much more acute and jeopardizing benefits of those who earned them.

There is a lot of evidence that also should not be ignored on the other sources of income available to minimum beneficiaries.

Based on General Accounting Office (GAO) data, it is estimated that 450,000 minimum recipients receive Federal pensions. These retired Federal double-dippers now are estimated to average $16,000 annually from the Federal civil service retirement system on top of the minimum social security benefit for a total Federal retirement income of $18,120.

A total of 50,000 minimum social security recipients have retired spouses who are estimated to receive $18,500 in Federal pension payments. The average family Federal retirement income of these minimum benefit couples is $21,680 annually.

Another 300,000 minimum recipients have working spouses, according to GAO data. These working spouses have earnings estimated to average $21,100 annually, for an average family income of at least $23,220 annually, including the social security minimum benefit.

Overall, these social security and GAO data suggest that up to 800,000 minimum beneficiaries have comfortable total incomes which exceed an average of $20,000. This raises considerable doubt about how this is going to harm 3 million people.

It is important to note that 1.2 million are only technical minimum beneficiaries, according to the Office of Management and Budget.

Fully 1 million of the 3 million minimum benefit recipients are dual beneficiaries. They are classed as minimum only because of an accounting technicality. They receive more than the minimum today and their benefit would be unaffected by elimination of the minimum. This occurs because the total benefit payment to these persons is based not on their own low earnings but on earnings and social security taxes of their husbands or wives.

The typical example would be a wife whose own sporadic and low earnings entitled her only to the minimum but she in fact is also entitled to and receives one half her husband's benefit. Part of her check counts as minimum and part as supplement. The end of the minimum would alter these proportions but leave the size of the check unchanged. Thus one-third of those now classed as minimum are not actually receiving the minimum benefit but substantially more, and their social security incomes will not be reduced by eliminating the minimum benefit.

About 200,000 recipients of the minimum have earned benefits that just equal the minimum benefit. Since earned benefits are unchanged, eliminating the minimum would not affect these people. So that is another 200,000.

Additionally, about 500,000 recipients of the social security minimum benefit who have low total incomes are currently receiving supplemental security income (SSI). Since the SSI benefit is adjusted for other income, a drop in the social security monthly check from elimination of the minimum would be automatically offset, dollar for dollar, by an increase in the monthly SSI benefit.

So there is no change as far as that is concerned.

So you have all these beneficiaries. If you add it up there are not really many remaining who are going to be affected.

As indicated above, up to 800,000 minimum beneficiaries clearly have ample incomes and do not need nor deserve this unearned benefit. Another 1.7 million are dual or equal beneficiaries or are currently in SSI payment status and would experience no reduction in total payments. Yet another 200,000 minimum recipients are college students, or minor children of those who are already receiving the benefit.

While the precise income and need status of the remaining 300,000 beneficiaries—3 million total—is not known, there is one certainty: None could fall below an ample social safety net consisting of supplemental security income, food stamps and medicaid—for which most SSI recipients are categorically eligible.

The core of the system is the Federal supplemental security income system. For minimum recipients in 1982 it will provide $5,192 per couple plus State supplementation. On a weighed average basis, Federal plus State supplement cash benefits will average $6,100 per couple in fiscal year 1982 as of July 1, 1982, after minimum benefit elimination in the House bill. While SSI contains an asset test, the recipients home, car, personal possessions of reasonable value and certain amounts of stocks, bonds, life insurance savings and other liquid assets are excluded.

With the exception of three States which cashout and thereby include food stamp cash value in the State SSI supplement, most SSI recipients are also eligible for food stamps. In a typical case the food stamp value would be an additional $675 per couple per year.

Finally, most SSI recipients are categorically eligible for medicaid, which covers most expenses for drugs, deductibles, and post-hospital care not covered by medicare. On a national average basis, the medicaid cash value is estimated to average $3,660 per elderly couple.

The table which follows shows this combined social safety net for selected States. Any needy beneficiary losing minimum benefits would not drop below these floors.

On a national average basis, a single social security minimum beneficiary will lose $772 per year in trust fund financed benefits, but those who have need are protected by a $6,980 floor. Similarly, couples receiving the social security minimum will lose on average $1,159 in trust fund financed benefits, but those in need are protected by a $10,600 floor. The existence of this safety net makes the risk of eliminating the minimum benefit negligible and will stop the flow of undeserved windfall benefits out of the trust funds.

So I just suggest that there is a lot of rhetoric. When we get down to the facts, the facts stand behind the action recommended by the President.

I ask unanimous consent to have printed in the RECORD social safety net figures, by State. These consist of potential payments and benefits under SSI, State supplements, food stamps, and medicare for couples receiving minimum benefits. For Michigan, the figure is $10,016.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

[In dollars]

State	Social safety net [1]
Alaska	12,429
California	13,860
Colorado	11,712
Hawaii	10,523
Idaho	10,219
Maine	9,814
Massachusetts	10,980
Michigan	10,016
Minnesota	10,085
Nebraska	10,589
Nevada	10,472
New Hampshire	9,900
New Jersey	9,816
New York	10,377
Oklahoma	11,042
Oregon	9,799
Pennsylvania	10,128
Rhode Island	10,454
Utah	9,883
Vermont	10,406
Washington	10,017
Wisconsin	10,296
Wyoming	10,041
Washington, D.C.	9,967
All other States	9,667
National average	10,600

[1] Consists of potential payments and benefits under Federal SSI, state SSI supplements, Food Stamps and Medicaid for couples receiving minimum benefits.

Mr. DOLE. Mr. President, I reserve the remainder of my time.

Mr. RIEGLE. Mr. President, I ask unanimous consent to add Senators SASSER, LEVIN, SARBANES, METZENBAUM and BUMPERS as cosponsors.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. LONG. Mr. President, will the Senator yield for a question?

Mr. RIEGLE. I yield to the Senator from Louisiana for a question.

Mr. LONG. Mr. President, I would just like to ask the Senator if there are not a lot of dear old people drawing their social security benefits who are really too proud to go out and apply for public welfare? Is it not true that generally speaking among the aged population, they feel that their social security benefit is something to which they made a contribution and something that they have earned as a right as distinguished from being an object for charity by applying for public assistance?

Does the Senator have a number of aging people in the State of Michigan, as we do in Louisiana, who are just too proud to come in and ask for food stamps and ask for welfare?

Mr. RIEGLE. The Senator is exactly right. The answer the other side is offering here, they are saying you can take away the minimum benefit and dump these folks on welfare. To somebody who is maybe 96 years old and has lived his entire life, and never had to be on public welfare; to say to that person: "We are taking away your minimum benefit and we want you to go on welfare," I think is about as heartless a thing as you can do. Plus how is it going to save any money? I do not see how that is going to save any money. It is going to take and basically intrude into the lives of those persons and cause great heartache and great upset.

Mr. LONG. Is the Senator familiar with the problem that exists with regard to those nuns who have taken a vow of poverty? They are being told that when their social security check is cut, they can go down and apply for welfare. Well, every one of those dedicated women would have to say, "I am sorry, we made a contract with God Almighty. We took a vow of poverty and we are not going to ask the Government to support us. We took a vow of poverty in the first instance and we would rather starve."

Mr. RIEGLE. It is interesting because what we are talking about is the minimum benefit. We are talking about $122 a month. We are talking about the person on the lowest run of the ladder, whether he be citizen or nun or whatever, and here we are today with the tax bill where we are carving up enormous benefits. We are giving help to people in every conceivable situation. Yet we want to take these folks on the very bottom run of the social security ladder and we want to just cut them right off. It really is a contradiction, it seems to me, of all the other things we are doing here.

Mr. LONG. Mr. President, if the Senator will yield, may I say I was one who led the charge—so far as I know I was the first one—to go out here and say we ought to cut the top tax rate from 70 percent down to 50 percent, and that will be great, good news to the wealthy people of this country.

Incidentally, the Senator from Kansas made reference to an unearned benefit. That cut of 70 percent down to 50 percent is on what is called unearned income. That means income that comes by virtue of dividends and interest and things like that.

If we can cut the top unearned income tax rate from 70 percent down to 50—and I am for doing it—does it not tend to point up an inconsistency in treatment, when that cut in the top tax rate was something that was not promised, and the minimum social security benefit is something that was promised?

These dear older people, including the nuns, are getting their little bit of social security and are told that it is unearned income. They are going to be cut from $122 down to $70 or some such amount, while at the same time the Government can afford to cut the tax on unearned income from 70 percent down to 50 percent so far as the wealthier people of America are concerned.

Mr. RIEGLE. The Senator makes a good point. The Senator knows as well as I do that if the old folks showed up today they would not even be able to get in the door because the place is packed to the rafters with all the representatives of the wealthy who are here because of the tax bill.

Listen to the ages here. There are 13,600 who are 95 years old or over; there are 66,000 in the age group from 90 to 94, and it goes right on down. In the group from 80 to 84 there are 284,000 people there. We are not seeing them. They are not coming down here. They do not have the money to come. Most of them are not physically able to come, so they cannot lobby for themselves. That is why they were put on the hit list first. They were the first ones targeted by this administration, despite the promises made in the campaign to protect these very people. That is what is so outrageous about it.

Mr. LONG. Might I ask the Senator what kind of sense it makes for anybody, including spokesmen for the administration, to pretend that we cannot keep it up? They say "we just cannot keep it up, we have gone as far as we can go. We just cannot keep this thing up," by sending these little checks to these dear old people. "We have got to stop them, we have got to find a whole new way of doing business," while, at the very same time, we are voting the biggest tax cut in history where the very wealthy do very, very well indeed, a tax cut that in the year 1986 will exceed $200 billion?

What kind of sense does it make to say that we cannot afford to take care of our aged, those who took care of us when they could, and that we cannot afford to take care of them because there is just not enough to go around? Yet we can afford this big tax cut for all those who are doing very well indeed in the country?

Mind you, I am not against the tax cut. I am just asking what kind of sense does it make to come in with all of these rosy economic assumptions that we can afford all the tax cuts and then look at someone like that little nun who would rather starve than go on charity and ask for public welfare, and say, "I'm sorry, we cannot afford to take care of you. We have to just economize. We cannot afford your benefit any more."

Mr. RIEGLE. I think the Senator points up the contradiction, and I thank him for that.

Mr. LONG. I had only one doubt about the Senator's amendment. To me it is incredible that our friends on the other side of the aisle are really going to permit this thing to happen. I can understand them talking about it, I can understand them voting for something to indicate it will happen, but for the life of me, I cannot believe they are really going to permit it to happen. That is why I approve of the Senator's amendment. It seems to me in due course they will come around.

Mr. RIEGLE. Of course, today would be a good time because it will give them a chance to come around.

I yield 2 minutes to the Senator from Tennessee.

The PRESIDING OFFICER. The Senator from Tennessee is recognized.

Mr. SASSER. Mr. President, I rise today to support the amendment by my distinguished colleague from Michigan, Senator RIEGLE. He is to be commended for his steadfast insistence that we not indiscriminately cut social security benefits for the sake of having an artificially balanced budget in 1984.

I support and cosponsor this amendment because I believe that it is wrong to make these very poorest of social security recipients a sacrifice to the administration's attempts to cut the budget.

We are told that all those receiving this benefit will not really be hurt. But we keep hearing accounts of elderly individuals—farmers, clerics, as the distinguished Senator from Louisiana points out, nuns, widows whose husbands have very low wage histories, and others in very modest circumstances—who will lose their minimum benefit if this reduction goes through.

We are told that elderly individuals can simply receive alternative benefits from the supplemental security income—SSI—program once the minimum benefit is adopted. Actually this is an assumption and depends on individual circumstances and individual cases. Many of these individuals are very old, many above the age of 80, living alone, and would be intimidated, stigmatized, and traumatized by losing their social security payments.

We are told that these cuts are necessary to get the social security system back on the road to solvency. But this is small justification for the human tragedy and loss that will occur if these social security recipients are all chopped off the rolls. As I said earlier, most of them are elderly women with little other means of support and they will be shocked and shaken when they are told that they are no longer entitled to their minimum benefit of $122 per month or some $1,400 per year.

We are told that we can just put this minimum benefit reduction into effect and immediately save about $1 billion per year. But we are not apprised of the fact that it will take the Social Security Administration nearly 10,000 man-hours and some $250 million to make all the adjustments to recompute the minimum benefit.

If the administration wanted to solve the problem, it can agree to interfund borrowing to solve the immediate cash flow problems of the social security system. It could have supported the Moynihan amendment to the tax bill. And then we could resolve the long-term problems of the social security system which are some years away.

We can send a message to the American people that we are not going to play politics with the social security system if we approve the Riegle amendment. We can adopt a sensible program of meeting the cash flow problems of social security. And then, and only then, we can structure a long-term program to keep the social security system solvent for the 21st century.

I support adoption of the Riegle amendment.

Mr. RIEGLE. I thank the Senator for his statement.

I address the Senator from Kansas. I wonder if he would agree to extend the time 5 minutes on each side?

Mr. DOLE. Five minutes.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. RIEGLE. I yield to the Senator from Massachusetts.

Mr. KENNEDY. Mr. President, I again rise to support the amendment of the Senator from Michigan which I am pleased to cosponsor.

We should take the opportunity right here, right now to correct the error we made when we eliminated the minimum benefit in the reconciliation bill.

I want to set the record straight about why we have to do it.

Not once but twice in the last year the President of the United States told social security recipients that they would not have their benefits reduced.

Elimination of the minimum benefit breaks that promise not just for the 3 million minimum benefit recipients but with every one of the 36 million social security beneficiaries who retired under a given set of rules.

It tells all recipients they have no assurances about future benefits.

That is the basic issue.

From the beginning of the debate on this issue we have been told that nobody would really be hurt. The fact is that many will be hurt and no one in this Chamber or anywhere else knows how many.

No amount of discussion over unearned benefits or replacement income or how many of the 3 million minimum benefit recipients will become eligible for SSI can overcome that simple fact; 500,000 minimum benefit recipients are over 80; 80,000 are over 90.

No one knows how many people in their eighties and nineties are going to go down to apply for welfare when the check stops.

No one knows how many between ages 60 to 64 will qualify for SSI under the amendment we adopted earlier.

No one knows how many recipients will have their checks delayed or lost after their benefits are recalculated.

The Riegle amendment takes care of all these unknowns. It assures that everyone whose benefits would actually be reduced under the amendment we passed previously will not suffer a loss of income.

The letter sent to us yesterday by the President of the United States refers to our efforts to restore the minimum benefit and he implies that "such a result would jeopardize our economic recovery program so vital to the well-being of the Nation." I, for one, do not believe that economic recovery depends on denying a $122 benefit to three million elderly Americans.

Mr. President, as has been pointed out earlier during this debate, the bill before us calls for the largest tax reduction in the history of this country—the history of this country. Individuals who are making $500,000 a year, get an $80,000 a year tax reduction. Yet we are eliminating a benefit of $122 for 3 million Americans.

Mr. President, equity demands this amendment be accepted. The commitment of the United States to its citizens demands that this amendment be accepted. I hope that the Senate will join in agreeing to this amendment, which will mean the difference between living in dignity and some degree of security or living in dispair and loss of hope for many of our elderly citizens in their remaining years.

I thank the Senator from Michigan.

Mr. RIEGLE. I thank the Senator for his contribution and I reserve the remainder of my time.

The PRESIDING OFFICER. The Senator from Kansas.

Mr. DOLE. Mr. President, how much time remains?

The PRESIDING OFFICER. Seven minutes for the Senator from Kansas and 2 minutes and 6 seconds for the Senator from Michigan.

Mr. DOLE. Mr. President, I want to say, first, as to the letter put in the RECORD from a constituent, I do not think that lady is going to have any problem if she is receiving SSI. It is my understanding the difference would be made up dollar for dollar if her social security benefit was reduced. So that is part of the misunderstanding, I think.

Mr. RIEGLE. Let me clarify it. The writer refers to his mother who is the one who is going to lose the minimum benefits. His mother-in-law gets the SSI. So there are two different individuals.

Mr. DOLE. Mr. President, I thank the Senator for the clarification.

I might point out that in the social security amendments of 1977, even a Democratic Congress and a Democratic President recognized the need to phase out the minimum benefits and froze the benefits at $122. That fact has apparently been forgotten by everybody on the other side.

This is not something that has just sprung up since January 20. There has been a lot of consideration of how to phase out and reduce the cost of this benefit.

All this talk about the stigma of welfare does not make sense. There are about a half a million people who receive the minimum benefit who are already on welfare. Another half million or more are eligible and I think they should be encouraged to participate.

I suggest that one reason for all of this misunderstanding is the political terrorism we see coming from the other side of the aisle. One day I hope we can finally discuss the social security system and the way to preserve its integrity. There is no doubt about it, there are a lot of senior citizens, a lot of young Americans, who are frightened about the prospects for the future as they hear all the rhetoric emanating from this Chamber and other places around Washington. Our obligation is to preserve the system.

Somebody mentioned the nuns. I might just suggest for the record that it was the Senator from Kansas who had them appear before our committee. I have assured them that we are aware of the problem and will do something about it. Perhaps we will take care of that in conference. So that is not an issue here, as I see it.

I might say, to the credit of Senator HEINZ, who is not in the Chamber, we made an alteration in the Senate Finance Committee that would qualify another 80,000 minimum beneficiaries between the ages of 60 and 64 for SSI special payments. That is contained in the Finance Committee proposal.

I think there are some facts worth emphasizing. Where is my fact sheet?

Mr. RIEGLE. The Senator is welcome to mine if he cannot find his.

Mr. DOLE. I just wanted to add some more facts to the record because now and then a fact is not improper to add to the debate.

Let us just take the average individual on the minimum benefit who would receive $2,122 in 1982 from the social security trust fund. He or she would have contributed, based on a typical total lifetime earnings for such beneficiaries less than $355 in social security payroll taxes. In certain cases, minimum beneficiaries could get $3,183 per couple each year by paying as little as $3 in their entire working lifetime.

Many beneficiaries who will be eligible for the minimum benefit in 1982 at age 65 could have paid less than $68 in lifetime social security taxes—an amount they will recoup in only 12 days.

On average, a husband and wife receiving an initial minimum benefit in 1982 would be paid more than $100,000 during their retirement from the social security trust funds. For the average couple, this would be about 300 times what they have paid in, and thus could not be considered earned.

So the point the Senator from Kansas wishes to make is that if you want to discuss the minimum benefit, let us discuss the minimum benefit. If you want to discuss the politics of social security, we could have another debate on the politics of social security.

I agree, and I think the Senator from Kansas has a fair record as far as low-income Americans and those in need of assistance. But let us not stand up and say, "Oh, we are going to put people on welfare." This is not an earned benefit in most cases. If it is earned, they do not lose anything.

As I recited, when you end up with all the facts, add up all the people who are receiving double pensions, all those who have retirement incomes of $20,000 or more, the case is not nearly as bad as some in the press and some on this floor would make it out. If we present the facts to the American people, they will understand.

The President is going on nationwide television, I understand, sometime soon to tell the American people the facts about the social security system, to stop some of the political terrorism being spread around this country by some who are looking at the politics of this system rather than the soundness of this system.

Now, we have a choice. We can follow the advice of the President of the United States—and I believe the President of

the United States when he indicates there is a social safety net and he is going to protect those in that category. I am going to stick with the President. I hope that we will have a lot of Democrats do the same today.

Mr. President, I reserve the remainder of my time.

The PRESIDING OFFICER. The Senator from Michigan.

Mr. RIEGLE. Mr. President, how much time remains on this side?

The PRESIDING OFFICER. The Senator from Michigan has 2 minutes and 6 seconds remaining. The Senator from Kansas has 46 seconds remaining.

Mr. RIEGLE. Mr. President, I ask unanimous consent to add the following cosponsors to my amendment: Senators ROBERT C. BYRD, DODD, PRYOR, EAGLETON, DIXON, WILLIAMS, JOHNSTON, TSONGAS, ZORINSKY, PELL, DECONCINI, MELCHER, MOYNIHAN, MITCHELL, BURDICK, and CRANSTON.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. RIEGLE. Mr. President, first of all, let me say, as I have said in previous debates on this, I do not accept the data that I just heard presented, ginned up, by OMB to try to put the happiest possible face on what is really a miserable set of facts.

We have 3 million people who are going to be hurt and affected by this loss of the minimum benefit on social security. Now, this tax bill through the year 1986 provides $687 billion worth of tax benefits—$687 billion worth. And yet we cannot continue the minimum benefit of $122 a month for these 3 million old people, half of them with incomes under $3,000 a year and 75 percent of them women.

We are talking about, in terms of total dollars, a billion dollars a year in the outyears, and they say we cannot afford that. And yet we can afford $687 billion in this tax cut. That is just outrageous, and the people on that side of the aisle know it. As I stated there is a reason that Reagan made this promise during the campaign—because people knew and they were concerned that if he were elected he might come in and start dismantling social security.

On the two occasions that I cited, one before the election and one since, he promised solemnly that he would not take these benefits away.

That promise has been broken and it is this side of the aisle that is trying to see that that promise is kept.

We have an opportunity to do it right now.

It is not sufficient for a Senator to say, "Look, maybe I can doctor this up in conference. Maybe we can find some way."

The Senate is on record for eliminating this benefit on the 1st of August, which is roughly 10 days away. Social security is not even in a position to do it administratively. It is going to take 10,000 hours of work and $250 million just to do the change in the accounting system in order to be able to carry this out. But that is the position of the Senate, that is how the Senate voted, and that is where we stand today.

We have a chance to undo that. That is what the amendment at the desk would do. It would continue this minimum benefit for those people who now receive it.

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. DOLE. Mr. President, that can be worked out in conference. The House agreed to different dates. That is not a problem.

With reference to the tax bill, yesterday the Senator from Kansas tried to cut the revenue loss by a couple of billion dollars and the Senator from Michigan voted no. If he wants to cut the size of the tax cuts, he had a chance to vote that way last night. Let us not stand up and talk about the big tax cut. This Senator tried to reduce it by a couple of billion dollars but received no help from the Senator from Michigan.

When all the rhetoric is over, hopefully soon, we will work this out, and I hope we can do so with the assistance of the Senator from Michigan. I do not have any quarrel with the Senator from Michigan. On many issues we agree. I do not think we disagree really on this issue. But let us in the Finance Committee, where we have the primary responsibility, try to work out some of the problems where there are problems that need to be addressed.

The PRESIDING OFFICER. The time of the Senator from Kansas has expired.

SOCIAL SECURITY MINIMUM BENEFIT

Mr. ROBERT C. BYRD. Mr. President, the issue before the Senate is not a new one. We have considered it before. We all know the question: Are we going to take social security retirement income away from retired Americans, through the budget process?

I remember, 5 months ago, when the President came before Congress to argue the merits of his budget plan. He said that budget savings would not be made by cutting the social security retirement program. He said that:

> (T)he full retirement benefits of the more than 31 million social security recipients will be continued along with an annual cost-of-living increase.

He said that retirement benefits would be preserved in the Federal budget as part of the Nation's safety net.

The amendment before the Senate offered by the distinguished Senator from Michigan, Mr. RIEGLE, is another opportunity to vote for the President's budget pledge to hold true. The amendment would not extend the minimum benefit to future social security recipients, but it would preserve the retirement income for current retirees.

Three million Americans are currently eligible for minimum benefit payments. More than 500,000 Americans, age 80 or older, have been receiving the minimum payment for 15 years or longer. The minimum benefit was designed to be a safety net under social security—to prevent the neediest retirees from living their retirement years in poverty. It is clearly irresponsible to suddenly rip that safety net away from 3 million retirees and assume that they will survive financially.

The question before the Senate today is whether we are going to act to close one of the holes in the President's safety net. This may be our last opportunity to do so.

Failure to adopt the amendment being offered by the Senator from Michigan will send a chilling message to Americans. We will be telling people that they are no longer entitled to the benefits promised to them by the social security system when they made their retirement plans. We will be telling them that if they need assistance, they should apply for welfare.

We are talking about the integrity and purpose of the social security system—a system which is vital to the well-being of the Nation's elderly. I reject the notion that has been proferred by the administration that the neediest social security retirees should be asked to abandon the system and turn to the welfare system. I support a balanced Federal budget. But, that budget cannot be balanced on the backs of the Nation's elderly.

● Mr. MOYNIHAN. Mr. President, I rise in support of the amendment offered by the Senator from Michigan, which I have cosponsored.

Few of the cuts made through the reconciliation process are as unnecessary and unfair as elimination of the minimum benefit. This payment of $122 per month is made to 3.1 million workers who have very low incomes or who have worked in jobs covered by the social security system only for a short time.

The administration paints the typical minimum benefit recipient as a Federal employee who, after 20 or 30 years in a Federal job, retires from Federal employment and works in a job covered by social security just long enough to qualify for the minimum social security benefit. But data released on July 20 by the Office of Management and Budget show that minimum benefit recipients are typically not retired Federal employees. Only 800,000 of the 3.1 million recipients receive any pension or have a spouse who works or receives a pension.

Indeed, these data show all too clearly that minimum benefit recipients are the least fortunate among us. Fifty percent have total yearly incomes—from pensions, food stamps, supplemental social security—under $10,000 per year. 1.5 million—47 percent—are over age 70, and nearly 100,000 are more than 90 years old. According to an editorial that appeared in today's Washington Post, "two million stand to lose an average of 40 percent of their current benefits." According to the Congressional Research Service, 800,000 are potentially without other sources of income. I ask that the Post editorial and these articles from the New York Times of July 20, 1981 and the Washington Post of July 20 and 21 be inserted in the RECORD.

According to the Congressional Budget Office's most recent economic estimates, restoring the minimum benefit to those now receiving it will cost $7.2 billion between fiscal year 1981 and 1986. No one is more sensitive than I to the financial problems faced by the social security system and the need to insure the system's financial stability. But CBO data show that we can afford to pay the minimum to those who receive it today.

The social security cuts in the Senate reconciliation bill total approximately

$26 billion through fiscal year 1986, and according to Robert Ball, former commission of social security, the additional interest income to be paid on that savings totals nearly $11 billion. CBO estimates that, without taking the reconciliation cuts into account, the combined social security trust funds need $12.9 billion to cover the projected shortfall between 1982 and 1986 (thereafter the funds will not face a deficit until the next century). The $37 billion saved through reconciliation more than covers that deficit, and still provides more than necessary savings if the $7 billion savings from the minimum benefit is eliminated.

We are in the process of providing relief to taxpayers. Necessary relief. But in the process we must not forget that those who depend on their Government for subsistence need reassurance and relief from their fear that their small incomes are to be made even smaller. I urge my colleagues to vote for Senator RIEGLE'S amendment to restore the minimum benefit.

The articles follow:

[From the New York Times, July 21, 1981]

REAGAN ATTACKS EFFORT TO KEEP MINIMUM PENSION

(By Warren Weaver, Jr.)

WASHINGTON, JULY 20.—President Reagan today accused House Democrats who are trying to preserve the minimum benefit guaranteed by the Social Security system of "opportunistic political maneuvering, cynically designed to play on the fears of many Americans."

At midday tomorrow, the House is to vote on a nonbinding resolution, sponsored by Representative Jim Wright of Texas, the Democratic floor leader, that urges keeping intact the Social Security benefit floor that both houses of Congress had eliminated in their budgets at the behest of the President.

Ordinarily, conference committees do not have authority to reverse provisions in legislation when both the Senate and House have taken substantially the same action in their respective versions of the bill. As a result, if the Wright resolution is approved and similar sentiment develops in the Senate, it might later be necessary to approve separate legislation reinstating the minimum benefit to reverse the budget action.

"THE MOST POLITICALLY DEFENSELESS"

Representative Wright said yesterday that those affected by the elimination of the minimum pension benefit would be "among the poorest and the oldest and the most politically defenseless in our society," adding, "Most of them are in their 70's and most of them are women."

But Mr. Reagan said in a letter to Congressional leaders released today that approval of the resolution would "have the unfortunate effect of disrupting the budget conference and reversing the actions of a majority of both houses of the Congress" and "would jeopardize our economic recovery program," which he says must be adopted intact.

In the letter, President Reagan said that efforts to approve the Wright resolution "appear designed to exploit an issue rather than find a solution to the urgent Social Security problem." He said that he would go on national television "as soon as possible" to present the Administration's case to the public.

Responding to the Reagan letter a few hours later, Thomas P. O'Neill, Jr., the Speaker of the House, charged that the President "distorts the issue" and that the Administration's actions "cast doubt on your support for a healthy Social Security system." He said that it was unconscionable to "exploit fears" about the condition of the system "so as to make deep cuts in benefit levels."

HOW MINIMUM BENEFIT WORKS

What is at issue is a provision that Congress wrote into the original Social Security Act in 1935, largely in the interests of administrative efficiency. It was decided then that no one eligible to draw retirement benefits would receive less than $10 a month.

Over the years since then, the generosity of Congress and the pressures of inflation have increased that minimum figure to $122. Under current law, anyone who works 40 quarters in employment covered by Social Security can draw that benefit on retirement, no matter how low his wages or his past contributions to the fund.

The White House calls this minimum figure "an unearned benefit" and "a welfare support add-on" because it is not strictly based on the wages and the working history of the beneficiary, as all other benefits are.

In his budget, President Reagan proposed giving all these smaller contributors to the Social Security fund whatever amount less than $122 a month that the formula produced in each case. The White House figures that cutting these benefit checks will save about $7 billion over the next five years.

Social Security experts agree that the system will run short of money in the 1982–86 period by anywhere from $10 billion to $110 billion, depending on economic predictions. Eliminating the minimum benefit was one of President Reagan's recommendations for meeting that shortage.

In their budget legislation, both the Senate and House agreed that the minimum benefit should be abolished for those retiring in the future. For those currently receiving the minimum benefit, the Senate voted to remove the floor immediately, the House in April of 1982.

PRESSURE ON CONGRESS

Those proposals are now before a conference of 72 Senators and 183 Representatives assigned to produce a single compromise budget bill. The Wright resolution represents a major effort by House Democrats to put the minimum benefit back into that compromise bill.

However, ever since May, when President Reagan proposed a group of benefit reductions for Social Security going far beyond his budget cuts, Congress has become increasingly sensitive on the issue, conscious of widespread protests from contributors to the system who are already receiving benefits or who are about to retire.

The Senate unanimously approved a resolution condemning the President's plan to reduce benefits for those who choose early retirement and refusing to endorse economies that would save more money than is needed to meet the immediate financial shortage expected in 1982–86 and the long-range problem expected around 2010.

While the House is voting tomorrow, the Nation Council of Senior Citizens will hold a rally outside the West Front of the Capitol to protest the Social Security benefit reduction proposed by President Reagan.

OTHER SOCIAL SECURITY BILLS

At the same time, Representative Charles E. Bennett of Florida said he would introduce legislation to maintain the minimum benefit, using general fund revenues to supplement the Social Security fund. The third-ranking Democrat in the House, Mr. Bennett has twice voted with Republicans in support of the Reagan budget. Action is also scheduled for the Senate tomorrow.

Senator Donald W. Riegle Jr., Democrat of Michigan, has sponsored an amendment to the pending tax cut bill that would preserve the minimum benefit, and it is scheduled for a floor vote tomorrow morning.

In an analysis made public this weekend, the Office of Management and Budget maintained that only about 300,000 of the 3 million now officially receiving the minimum benefit would be seriously affected by its elimination and that these people were already guaranteed the equivalent of about $10,000 a year per couple from other Federal programs: Supplemental Security Income, food stamps and Medicaid.

The White House budget agency report said that 1.2 million minimum beneficiaries would continue to get the same size checks, in cases involving couples with two eligible members; that 500,000 could make up the loss through Supplemental Security Income; that 200,000 were students or child dependents, and that 800,000 enjoyed "comfortable" outside incomes from other pensions or working spouses.

One protest against dropping the minimum benefit that received considerable attention came from nuns and other members of religious orders that call for vows of poverty. Some 75,000 of them are now members of the Social Security system, made eligible by special legislation in 1972, but their "income" in food, clothing and shelter is so low that those who retire would not receive any Social Security benefit if it were not for the minimum payment.

[From the Washington Post, July 21, 1981]

REAGAN ATTACKS DEMOCRATS ON SOCIAL SECURITY

(By Helen Dewar)

President Reagan yesterday reclaimed the offensive on Social Security, accusing the Democrats of "opportunistic political maneuvering" on the issue and saying he will ask for time on nationwide television to rally support for a "bipartisan" solution to the system's financial problems.

Reagan made only oblique reference to the Democrats' latest jab at his proposed Social Security cutbacks: a resolution calling for retention of the $122-a-month minimum Social Security benefit for current recipients. Both houses, at Reagan's request, earlier voted to eliminate the benefit as part of the omnibus package of spending cuts.

The resolution is scheduled for a House vote today, just as the National Council of Senior Citizens stages a mass rally on the steps of the Capitol to protest Reagan's Social Security proposals.

Republicans in both houses have acknowledged that the political fallout from proposed Social Security cuts is mounting, and House Republicans late yesterday were working on a strategy to head off or neutralize the Democrats' resolution, including the possibility of a counter-proposal to protect the neediest of the 3 million recipients of minimum benefits.

In his letters to Republican and Democratic leaders of both houses, Reagan also sought to neutralize the issue by serving notice that he will go before the country "as soon as posible" to call on the Congress to lay aside partisan politics and join me in a constructive effort to put Social Security on a permanently sound financial basis."

But Reagan got in some partisan licks, too, saying he deplored "the opportunistic political maneuvering, cynically designed to play on the fears of many Americans, that some in the Congress are initiating at this time."

"These efforts appear designed to exploit an issue rather than find a solution to the urgent Social Security problem," Reagan said. "They would also have the unfortunate effects of disrupting the budget conference and reversing the actions of a majority of both houses of the Congress. Such a result would jeopardize our economic recovery program so vital to the well-being of the nation."

Reagan's reference to the budget conference stemmed from a proposal by House Majority Leader James C. Wright (D-Tex.),

author of the Democratic resolution, that House conferees on the spending cuts legislation be instructed to keep the minimum benefit, even though both houses have voted to eliminate it. However, the resolution makes no reference to the conference, and Democratic budget leaders have said they favor separate legislation to reinstate the benefit.

Far from silencing his Democratic critics, Reagan prompted an in-kind response from House Speaker Thomas P. (Tip) O'Neill, Jr. (D-Mass.), who attacked both elimination of the minimum benefit and Reagan's more far-reaching proposals to cut future benefits.

"The old age and disability benefit cuts proposed by your administration are twice as deep as necessary to keep the system solvent," O'Neill said. "They are ill-advised and unacceptable. It is unconscionable to create and exploit fears about the fate of the Social Security system so as to make deep cuts in benefit levels."

The Democratic National Committee also made clear it didn't think the president was rising above politics. The committee called major television networks to say the Democrats want time to respond if Reagan gets time for an address on Social Security. White House officials said a specific time will not be requested until after Reagan returns from talks in Ottawa.

Meanwhile, Sen. Donald W. Riegle, Jr. (D-Mich.) yesterday introduced an amendment to the tax cut bill to retain the minimum benefit for those who receive or qualify for it this year. It will be voted on today. A previous Riegle effort to retain the benefit failed earlier this month, 53 to 45.

In conferences to resolve differences in the nearly $40 billion worth of spending cuts approved earlier by both houses, banking committee conferees agreed to retain Urban Development Action Grants as a separate program, against Reagan's wishes. They also approved tighter restrictions than House Republicans wanted on small cities' block grants. Reagan's proposed block grants for health services emerged as a stumbling block in another conference.

Education committee conferees agreed to $475 million for impact aid for school districts with large numbers of federal employees; the Senate had proposed $500 million, the House about $400 million. The program now costs about $800 million. The conferees also agreed to split the difference on scaled-back funds to educate poor children.

[From the Washington Post, July 21, 1981]

THE NUNS' STORY

Most of the people now receiving the Social Security minimum benefit are not the sort who can launch massive letter-writing campaigns or work the halls of Congress. Perhaps as a result, an administration proposal eliminating the minimum benefit for people with low earnings records moved with little notice into both the budget bills being reconciled in a Senate-House conference.

Now one group among the 3 million people potentially affected has been heard from—about 14,500 nuns and male clerics belonging to religious orders. Last week, spokesmen for the nuns caused a good deal of squirming among members of Congress on both sides of the aisle, lending strength to efforts by House Majority Leader James Wright and others who are sponsoring a resolution—scheduled for a House vote today—calling for retention of the minimum.

The appearance of the nuns and male clerics came as a surprise to almost everyone. Under the normal conventions of Social Security and other social insurance programs, members of cloistered religious orders wouldn't be eligible. Since they have taken a vow of poverty, they receive no wages and pay no payroll taxes, relying instead on the orders they have joined to provide them with room, board and other necessities. Amendments to the Social Security law in 1972, however, allowed the orders to make contributions on behalf of their members on the assumption that the benefits they receive have an income value of about $100 a month. The Social Security benefit formula is weighted to give a very high rate of return on low earnings, but in this case the taxes paid are so low that the nuns' benefits would be very small without the minimum floor. They would, however, retain full eligibility for Medicare.

Spokesmen for the religious orders pressed for a special exemption from the minimum-benefit termination. They argue that their members do not have available the welfare alternative suggested by David Stockman as the proper recourse for the needy, since they have taken a vow of poverty. Since welfare and Social Security are, as far as we know, paid in the same currency—and since welfare benefits are typically set so as to make sure that recipients stay in poverty whether they want to or not—this seems a curious argument. Moreover, since other minimum beneficiaries actually *sacrificed income* to gain coverage while the nuns and clerics did not, special treatment is hard to justify.

Putting a spotlight on the religious orders has, however, drawn useful attention to the plight of all the elderly for whom adjustment to a sudden reduction in circumstances will be even more difficult. While ending the Social Security minimum for future beneficiaries can be justified—under current law, the benefit is already scheduled for a gradual phase-out—abruptly changing the rules for people already relying on the benefit does not. Of the group at risk, 1.5 million are over the age of 70, close to 100,000 are over 90. Two million stand to lose an average of 40 percent of their current benefits and, according to the Congressional Research Service, 800,000 are potentially without alternative sources of income. Gradual disclosure of one sad case after another caused by an almost unexamined budget decision is not a happy prospect for Congress or this country.

OMB MOVES AGAINST EFFORTS BY DEMOCRATS TO RESTORE MINIMUM SOCIAL SECURITY BENEFIT

(By Nicholas D. Kristof)

The Office of Management and Budget yesterday moved to derail efforts planned by congressional Democrats this week to restore the $122-a-month Social Security minimum now received by 3 million beneficiaries.

A statement issued by OMB said the minimum, which is slated to be dropped under the House and Senate spending cut bills, is a "pure 'windfall' for recipients" that would cost $7 billion over the next five years. The additional cost would make "the Social Security financing crisis that much more acute and jeopardize benefits of those who earned them."

At issue is only whether the minimum should be preserved for those who now receive it. Even House Democrats have proposed eliminating it for future recipients.

Because the minimum is received by those who would earn less by the conventional formula, OMB termed it "an unearned benefit." Among those who receive the minimum OMB said, 300,000 would feel the effect of the cutback. Even those could not fall below a "safety net" of supplementary security income, food stamps and medicaid that stands at about $10,600 per couple per year, OMB said.

Of the other 2.7 million recipients of the Social Security minimum, OMB said:

1.7 million would be unaffected because they receive more than the minimum through an accounting technicality, because they earn an amount nearly equal to the minimum by the standard formula, or because they receive supplementary security income benefits that will make up the money lost from Social Security.

800,000 receive pensions or have spouses who work or receive pensions. The OMB said the average of these people's total incomes is above $20,000.

200,000 are college students or children below the age of 18 whose families have outside incomes.

House Majority Leader James C. Wright (D-Tex.), who led the move Thursday to reinstate the Social Security minimum in pending legislation, responded, "The mathematical gyrations of the OMB never cease to amaze me. The fact remains that most of the people adversely affected are among the poorest and the oldest and the most politically defenseless in our society."

Wright said that if so many people would be unaffected, the resulting savings would not be large. "You can't have it both ways," he said. "If the government saves money at the expense of these elderly Americans, then the elderly Americans obviously must lose the money that is saved."●

● Mr. MITCHELL. Mr. President, last month the Senate rejected, on a 53-to-45 vote, an effort to make savings in the minimum benefit of the social security system by eliminating it prospectively, beginning on August 1, 1981. Instead, the majority of 53 voted to eliminate the minimum benefit retroactively, to take it away from people now receiving it, to take it away from a group which has been receiving it in many cases for over 10 years, 15 years, and 20 years.

This cut in an existing benefit has been defended on the grounds that we must save money, that the minimum benefit is not sufficiently closely tied to earnings and contributions to the system, that those who suffer an income loss will be able to make it good through welfare, that a GAO study of 1977 entrants into the system showed that most were sufficiently well off not to rely on the minimum benefit as their prime source of income. The cut has been defended on the grounds that this is one of those welfare-like provisions which has crept into the system over the decades, and which must be rooted out if we are to retain its fiscal stability and to reorient it toward its appropriate goals.

The minimum benefit has been an integral part of the system since its creation. It was particularly necessary in the earlier years, when short periods of coverage and very low incomes would have left some beneficiaries with truly insignificant benefit checks. And as we added new categories of workers to the system—farmers, domestic workers, members of religious orders, as late as 1972—the minimum benefit gave these people a small income to make up for the fact that the system had excluded them from full coverage. So those who claim to want to rid the system of recently acquired welfare characteristics should look elsewhere than at the minimum benefit.

The 1977 GAO study that is touted so often was precisely that: a study of people entering the system in 1977. It made no claim to being a study of those already in it. Congress responded to that report by freezing the 1977 minimum benefit and preventing it rising above $122 a month. GAO estimated that 15

percent of current minimum benefit recipients correspond to the popular notion of the well-off retired bureaucrat with a Government pension and a social security benefit gained through minimal work in the private sector. So we are seeking to rectify a loophole used by 15 percent by penalizing the other 85 percent.

Those arguments to eliminate the minimum benefit were not compelling last month and have gained no credence since. The administration has been unable to produce any more information than that which was available last month about the beneficiaries under the system or their prospects in life if this benefit is ended than was available then. The only added information consists of Mr. Stockman's contention that the minimum benefit represents a $7 billion "windfall" to undeserving people who do not really need the money.

The facts of the situation ought to dispell that vicious canard: Three million Americans today receive the minimum benefit. Three-quarters of them are elderly women—elderly women who spent their earlier lives in a society where women worked less often and had fewer professional opportunities to earn an adequate wage.

Half these people, men and women, are over 70 years of age. They are people who retired years ago and who based their retirement decisions, at least in part, on the calculation that the minimum benefit of $122 per month—just $30 per week—would be a source of income to them.

Nine hundred and fifty thousand of these people are over 75 years old. They retired at least 10 years ago. Half a million of them are over 80—they retired more than 15 years ago. In 1966.

Eighty thousand of these people are over 90 years of age: People who left the work force before 1961—not healthy, relatively young people with recent work experience who can find some other source of income.

Of the 3 million who receive the benefit, 1.2 million fall below the poverty line. These are not middle-class Government workers who have worked a few short years just to top off a nice pension with the minimum social security benefit. Almost half these people now live on incomes that the Federal Government itself concedes place them in dire poverty. Yet, the argument has been made that this is a windfall benefit, unearned, undeserved, and unfair to working people.

It is claimed that these beneficiaries will make up the income loss. Well, the Social Security Administration has some information on that; 1.2 million may be able to make up the income loss and will not suffer, because their spouses' benefits will rise, or because their earned benefits are equivalent to the minimum. One million people may be able to turn to the supplemental security income program: Some 80,000 will become newly eligible when we eliminate their current income. Some half-million not now in the program will be able to enter.

But the best calculations of both OMB and the Social Security Administration still leave unanswered the fate of 800,000 of these people. We will impoverish 80,000 people sufficiently to make them eligible for welfare. We will force another half million who have been too proud to take welfare or too old to understand their eligibility, to go down to their local welfare offices and put themselves on public assistance for the remainder of their lives.

But for 800,000 human beings. We are legislating in a vacuum. We simply do not know if these are wealthy people taking advantage of the system, or the very, very elderly who began receiving benefits many years ago and have not been in touch with the system since then. We simply do not know.

The ease with which people are going to make up the lost income is something on which we have little information. Current law requires that no SSI benefit go to any person with liquid assets of $1,500 or more. Simply stated, that means the elderly person who has managed to set aside $2,000 or $1,700 for a decent funeral will be forced to spend some of that money before the SSI program will recognize a need. Simply put, we are willing to ask a million old people who have worked, paid into the system, most at very low wages, and many in jobs for which social security coverage came late, to live out their lives on welfare, to spend their small nest egg if they have one, to give up their right to self-respect, to stop being able to proudly write—as so many Maine people have written me—"I never took a nickel from the Government"—we are asking them to do this because we are simply unable budget or in the social security system itself.

That is not believeable. As a Member of the Senate who has voted for spending cuts that this administration did not want—for cuts in such questionable priorities as the Clinch River Breeder Reactor, the tobacco subsidy program, the incredibly bloated self-promotion budgets of every Cabinet department and agency—I reject the contention that our economic plight is so desperate—that our budget has been so closely pared—that no other course remains open but to sacrifice the dignity and the self-respect of 3 million retired Americans.●

Mr. SARBANES. Mr. President, I rise in strong support of the pending amendment that would restore and maintain the minimum social security benefit for those persons who currently receive it and those who will be eligible to receive it through the end of this year. The administration's proposal actually takes away social security benefits from people who are already receiving them, thereby abruptly terminating this benefit for people who were relying on it as part of their retirement income. It will establish a dangerous and unfortunate precedent, namely that social security benefits can be cut back and taken away.

The termination of the minimum benefit and the other recently proposed wide-ranging cuts that the administration has put forward regarding our social security system have caused deep concern, anxiety, and fear among the American people. Such action by the administration repudiates the commitments made by the Government to our citizens and places those citizens who have relied upon promises with respect to their retirement years in a very difficult and unfair situation.

This particular proposal of the administration to terminate the minimum benefit strikes many of those least able to afford any reduction in their already low income. The minimum benefit, currently $122 a month, was specifically established to assist citizens with very low earnings to obtain a basic minimum retirement income from social security in order to improve the possibility of their economic independence. Should the administration's recommendation be enacted into law, 3 million elderly persons, half of them already below the poverty line, will find their monthly benefits drastically reduced or completely eliminated. Fifty percent of these recipients are over 70 years of age and 80,000 are above the age of 90. Many are receiving the minimum benefit as their sole source of income and would be forced to turn to welfare if this benefit is terminated.

It is of great importance to our society that every individual have dignity, self-sufficiency, and self-respect. A major ingredient for self-sufficiency and therefore dignity, is economic independence. Social security benefits are provided to more than 90 percent of our older citizens and are usually their most important single source of income. It has been estimated that the social security program has cut the incidence of poverty among the aged by two-thirds. Yet, even with these benefits, the incidence of poverty among the elderly is increasing. A recent report shows that the percentage of the elderly below the poverty line climbed from 14 percent in 1978 to 15 percent in 1979, after having decreased for a number of years.

We must recognize the importance of the stability and reliability of the social security system and oppose the proposed reductions in benefits. Social security rests on a pledge between our citizens and our Government, a pledge which has been honored since the inception of the system. Retired people and those about to retire in the near future should not be treated in an arbitrary and cavalier manner. They deserve better for a lifetime spent working to build our country.

MOTION TO TABLE AMENDMENT NO. 503

Mr. DOLE. Mr. President, I move to table the amendment in the first degree. I refer to the amendment in the first degree.

The PRESIDING OFFICER. The yeas and nays have been ordered.

Mr. BAKER. Mr. President, this is a tabling motion. Have the yeas and nays been ordered on the tabling motion?

The PRESIDING OFFICER. The vote occurs on the tabling motion. The yeas and nays were ordered on the tabling motion last night.

Mr. DOLE. That is the tabling motion on the amendment in the first degree.

The PRESIDING OFFICER. That is the tabling motion on the amendment in the first degree.

The clerk will call the roll.

(The VICE PRESIDENT assumed the chair.)

The legislative clerk called the roll.

Mr. STEVENS. I announce that the Senator from Arizona (Mr. GOLDWATER) is necessarily absent.

Mr. CRANSTON. I announce that the Senator from Hawaii (Mr. MATSUNAGA) is necessarily absent.

The PRESIDING OFFICER (Mr. DENTON). Are there any other Senators in the Chamber who desire to vote?

The result was announced—yeas 52, nays 46, as follows:

[Rollcall Vote No. 207 Leg.]

YEAS—52

Abdnor	Gorton	Nunn
Andrews	Grassley	Packwood
Armstrong	Hatch	Percy
Baker	Hatfield	Proxmire
Boschwitz	Hayakawa	Quayle
Byrd, Harry F., Jr.	Heinz	Roth
Chafee	Helms	Rudman
Cochran	Humphrey	Schmitt
Cohen	Jepsen	Simpson
D'Amato	Kassebaum	Stafford
Danforth	Kasten	Stennis
Denton	Laxalt	Stevens
Dole	Lugar	Symms
Domenici	Mathias	Thurmond
Durenberger	Mattingly	Tower
East	McClure	Wallop
Garn	Murkowski	Warner
	Nickles	

NAYS—46

Baucus	Ford	Mitchell
Bentsen	Glenn	Moynihan
Biden	Hart	Pell
Boren	Hawkins	Pressler
Bradley	Heflin	Pryor
Bumpers	Hollings	Randolph
Burdick	Huddleston	Riegle
Byrd, Robert C.	Inouye	Sarbanes
Cannon	Jackson	Sasser
Chiles	Johnston	Specter
Cranston	Kennedy	Tsongas
DeConcini	Leahy	Weicker
Dixon	Levin	Williams
Dodd	Long	Zorinsky
Eagleton	Melcher	
Exon	Metzenbaum	

NOT VOTING—2

Goldwater	Matsunaga

So the motion to lay on the table Mr. RIEGLE'S amendment (No. 503) was agreed to.

Mr. DOLE. Mr. President, I move to reconsider the vote by which the motion was agreed to.

Mr. BAKER. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Several Senators addressed the Chair.

The PRESIDING OFFICER (Mrs. HAWKINS). The Senator from Kansas.

Mr. DOLE. Madam President, I hope now that we can go to work on the tax joint resolution again. I know that there are a number of Senators who have amendments.

Madam President, I yield to the distinguished Senator from Georgia without losing my right to the floor.

Mr. MATTINGLY. I thank the Senator from Kansas.

FELDSTEINS CONFIRM ECONOMIC RECOVERY PROGRAM

Madam President, at a time when we are debating and voting for fundamental reform of our tax system in an effort to make the new beginning possible for all Americans, the article which appeared in the Washington Post, July 21, 1981, further reinstates and supports such efforts.

I ask unanimous consent to have printed in the RECORD an article by Martin and Kathleen Feldstein, entitled "Tight Money and Tax Cuts: A Mix That Works," which confirms the economic recovery program.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Post, July 21, 1981]

TIGHT MONEY AND TAX CUTS: A MIX THAT WORKS

(By Martin and Kathleen Feldstein)

Two primary goals for economic policy in the 1980s are to reduce inflation and to increase investment in business plant and equipment. The monetary authorities have been focusing on fighting inflation by slowing the growth of the money supply. This tight money policy has, in turn, pushed interest rates to extraordinary highs. The prime rate charged by banks to their best customers is now over 20 percent, and new long-term corporate bonds are yielding more than 15 percent. These rates are not only high by comparison with interest levels in recent years but also imply an especially high "real" rate of interest—the difference between the interest rate and the rate of inflation.

Some critics of tight money argue that these high real interest rates will make it impossible to achieve the widely held companion goal of increasing investment and, ultimately, productivity. We disagree. While high real interest rates undoubtedly do in themselves tend to discourage investments by making it more costly and therefore less profitable to invest, the combination of fiscal and monetary policies that is currently being put into place will, on balance, have the effect of encouraging investment in plant and equipment.

The opponents of the tight money policy ignore the fact that this administration is pursuing a new economic strategy in its fight against the twin-headed monster of inflation and slow growth. It is combining monetary and fiscal policy in a way that is quite different from the combination used over the past dozen years. In particular, the critics of the monetary strategy overlook the fact that powerful tax changes that will encourage investment are now strongly supported by both the administration and Congress.

For the past two decades, monetary policy aimed at keeping interest rates low in order to stimulate investment. The old strategy called for combining this policy of easy money with a tight fiscal policy of government surpluses that would thereby reduce inflationary pressure.

That easy money strategy didn't work as its advocates had hoped. The effort to keep interest rates low led to a rapid growth of the money supply and that in turn led to rising inflation.

As inflation rose, interest rates rose about point for point with inflation, leaving the "real" interest rate unchanged. Thus although the higher interest rates meant that more had to be repaid for every dollar that a business borrowed, that repayment could be made with cheaper inflated dollars.

More important, because interest payments are deducted in calculating taxable income, the relevant cost of borrowing is the real after-tax rate of interest—that is, the cost of funds after both the tax deduction and inflation. When correctly measured in this way, the rise in interest rates caused by inflation actually reduced the true cost of borrowing.

To see how this can happen, consider an individual in the 40 percent bracket. If there were no inflation, he might be able to get a mortgage with a four percent interest rate. Since every dollar of interest expense reduces his tax by 40 cents, the after-tax interest rate is 60 percent of 4 percent, or 2.4 percent.

Now add an inflation rate of 8 percent into the calculation to get a nominal interest rate of about 12 percent. After deducting the full 12 percent interest payment, his net interest cost is 60 percent of 12 percent, or 7.2 percent. But since he repays the debt with dollars that are cheaper by 8 percent a year than when he borrowed the money, his true interest "cost" is actually a negative 0.8 percent. It is not surprising that individual mortgage borrowing skyrocketed in the past decade.

For business investors, the effect of inflation is more complex. In addition to lowering the cost of borrowing, the interaction of inflation and tax laws has a separate depressing effect on business investment. When there is inflation, the existing accounting method used for tax purposes understates the true cost of replacing equipment because depreciation allowances are based on the original purchase price of the equipment and are spread over a substantial number of years while prices are rising. This understatement of replacement costs has created artificial accounting profits and thus higher tax liabilities. This has the effect of lowering the profitability of prospective investments in plant and equipment.

Over the past decade and especially in the last six to seven years, this reduction in after-tax profitability has exceeded the decline in the cost of funds. The resulting fall in the incentive to invest has, in turn, caused a sharp fall in plant and equipment investment.

In contrast, the housing industry has been affected very differently by the interaction of inflation and tax laws. Investment in owner-occupied housing has benefited fully from the lower cost of funds without the problem of inadequate tax depreciation. And as a result, investment in housing has risen sharply relative to investment in plant and equipment.

The new strategy of tight money and high real interest rates will, as such, discourage investment both in housing and in plant and equipment. But the business tax cuts that are about to be enacted will provide more than enough additional stimulus to business to raise the level of investment in plant and equipment. This is true both of the administration's plan to shorten depreciation lives (to five years for most equipment and 15 years for most business structures) and of the congressional Democrats' plan to phase in immediate 100 percent write-offs for equipment and to lower the corporate tax rate gradually while eliminating the investment tax credit. In either case, the profitability of investment will rise enough to outweigh the higher cost of funds.

The proposed tax changes will do nothing to encourage more spending on owner-occupied housing. Indeed, the reduction in the high-bracket marginal individual tax rates will raise the net-of-tax cost of borrowing and therefore will reduce further spending on owner-occupied housing.

The new economic strategy thus represents a twist in the mix of economic policy: a high cost of funds to discourage housing and consumer durable spending combined with fiscal incentives for investment in plant and equipment that will outweigh the high cost of funds. We think the new strategy has a good chance of achieving the double goal of lowering inflation and increasing investment.

Mr. BENTSEN addressed the Chair.

Mr. DOLE. Madam President, I wonder if I might inquire of the Senator from Texas. I am not trying to pre-empt the Senator from Texas. But is it with reference to an amendment?

Mr. BENTSEN. Yes; it is with reference to an amendment.

Mr. DOLE. One that comes in barrels?

Mr. BENTSEN. The amendment I am to offer now does not.

Mr. DOLE. Pardon?

Mr. BENTSEN. It does not. The amendment I am about to offer does not.

Mr. DOLE. Madam President, maybe I ought to talk about this joint resolution for a while. I do not want to be surprised if I can help it.

Maybe the Senator from Texas will be kind enough to indicate what he has in mind. He does not have to, but it would be very helpful if he would. Could I inquire of the distinguished Senator from Texas?

Mr. BENTSEN. Will the Senator from Kansas give some indication to the Senator from Texas if he is going to be allowed to bring up the 1,000-barrel-a-day amendment?

Mr. DOLE. I can assure the Senator from Texas he is going to have an opportunity to do that. I understand from some we may be here all this week, all next week, and into August.

Mr. BENTSEN. The Senator from Texas is prepared to do just that because the Senator from Texas thinks he has a right to let the Senate vote on this important issue as the Senate has in years past.

Mr. DOLE. If it will reassure the Senator from Texas, the Senator from Kansas can state to the Senator from Texas that he is going to have the right to vote on his amendment.

Mr. BENTSEN. Today?

Mr. DOLE. I am not certain about today. But is there some reason he wants to do it today?

Mr. BENTSEN. The same reason I wanted to do it yesterday.

Mr. DOLE. Well, there may be even a better reason to want to do it tomorrow, but it was my hope we might work out some accommodation with the distinguished Senator from Texas.

As I understand it the Senator from Texas wishes to have a clear vote, either a tabling motion or an up-and-down vote on his amendment; is that right?

Mr. BENTSEN. The Senator from Texas certainly prefers and up-and-down vote on the amendment if that could be accomplished.

The Senator from Texas is willing to discuss, as he did yesterday, with the Senator from Kansas, the procedure by which that is done.

Mr. DOLE. I do not really think there is any difference of opinion as to what we may finally do, but I think there may be a difference on how we proceed on the matter. I wonder if the Senator from Texas might not call up the amendment at this time and perhaps we can discuss it with the assurance that the rights of the Senator from Texas will be preserved. The Senator from Kansas is not going to permit anything to happen to prevent either an up-or-down vote or a motion to table on the 1,000-barrel amendment. It will be a clear-cut vote on that issue. There is some talk about a substitute. The Senator from Kansas is willing to indicate that we can work out some agreement on the Senator's amendment and some agreement on the time, and I will not offer a substitute.

Mr. BENTSEN. I would be happy to further explore it with the Senator from Kansas, as I did yesterday. Obviously, both of us are preserving our rights. But for the moment, I am willing to stand aside to discuss it with the Senator from Kansas, but I am certainly urging very strongly that we try to bring this to a vote today.

Mr. DOLE. I hope he might also urge the distinguished minority leader to bring the whole joint resolution to a vote today. Maybe we could work out a package arrangement. The Senator from Kansas, as well as other Senators, is also involved in the $11 billion conference on reconciliation.

Mr. BENTSEN. The Senator from Texas is not one who overuses this Chamber and has not been dilatory in his actions in the past. As long as I have an up-and-down vote on this I will proceed reasonably expeditiously as I have been for some time. I will be glad to try to work it out with the Senator from Kansas for whom I have the highest regard.

Mr. DOLE. Do I understand that is an up-and-down or a tabling motion?

Mr. BENTSEN. That depends on the other provisions at that time.

Mr. DOLE. I thank the distinguished Senator from Texas and again I assure the Senator from Texas, and I think my word is good, that we will not preclude the Senator from offering his amendment, and we will not preclude either an up-or-down vote or a tabling motion vote. In other words, there is no intent to offer a substitute.

Mr. BENTSEN. Let me say to the Senator from Kansas that once I get the Senator from Kansas to say what he will do, then I have no question about his word.

Mr. DOLE. I thank the Senator from Texas.

Mr. BENTSEN. Sometimes it takes a while to get him to tell me.

Mr. DOLE. The Senator from Texas understands why I am doing this, and I have to go back and read all the other records and see how Senator LONG used to do it. I am back in the late 1940's now and working up to the 1950's, 1960's, and 1970's. So I will understand all those things maybe in another week.

I am happy to yield to the Senator from West Virginia.

Mr. ROBERT C. BYRD. I thank the Senator.

The Senator mentioned the minority leader. I hope the Senator does not mean to imply that the minority leader is holding up action on this measure.

Mr. DOLE. No; I just hope that he might help me speed up. The Senator from West Virginia recalls in the past I have been able to speed up the process. Hopefully the distinguished minority leader can maybe help to accommodate that effort.

Mr. ROBERT C. BYRD. The Senator from Kansas has been very helpful in the past. The Senator from Kansas I am sure recognizes the fact that the minority leader helped to expedite the taking up of this measure. There could have been some argument about whether or not this measure from a constitutional standpoint should be brought up. There could have been other arguments, but there were none. The minority leader assisted in that regard. The minority leader has assisted in every way possible to expedite action on the reconciliation measure and the first concurrent budget resolution before that.

I hope that the record is clear that the minority leader is not holding up action on this joint resolution. As a matter of fact, I assured the majority leader even before he asked me today. I stated to him yesterday that I had my staff working on amendments, contacting sponsors of amendments, to see if they would be willing to enter into time agreements and I assured him today we were going to continue that effort.

I brought it up in my conference yesterday with other Democrats. So every effort is being made on this side of the aisle to reasonably expedite action on this joint resolution. It is a big joint resolution, and it is an important joint resolution. It is a complex joint resolution. And there are several amendments still outstanding.

But the minority leader is doing everything that is reasonable in an effort to expedite action. But at the same time I hope that the distinguished Senator from Texas (Mr. BENTSEN) will have an opportunity to call up his amendment, will have an up-or-down vote on the amendment, and if not, of course, it is within the rights of any Senator to move to table. But he is always as he is today reasonable in his approach. He has demonstrated a willingness to discuss the matter with the Senator from Kansas. I hope that out of those discussions the Senator from Texas will have an opportunity to call up his amendment, and I hope that the discussions will pave the way for his calling up the amendment and getting an up-or-down vote on his amendment.

Mr. BAKER. Madam President, will the Senator yield to me for a brief observation?

Mr. ROBERT C. BYRD. I do not have the floor.

Mr. DOLE. I yield to the distinguished majority leader.

Mr. BAKER. I thank the Senator from Kansas.

Madam President, I can assure the minority leader and the Senator from Texas that I intend to see, as I am sure the Senator from Kansas is prepared to see, that this issue is addressed.

I hope the Senator from Kansas and the Senator from Texas can sit down and consider agreeing to a schedule as to when this amendment will come up and a time limitation on it.

As the Senator from Texas is well aware—he and I discussed this yesterday—it did not quite work out. Maybe we can do that today. Shortly Senators, a significant number of Senators, are going to have to attend conferences. Prior to that time I hope the Senator from Kansas and the Senator from Texas can sit down and see if we can agree on a time to present this amendment and for its consideration on a limited basis.

Mr. BENTSEN. Madam President, will the Senator yield for a comment without losing his right to the floor?

Mr. BAKER. Yes.

Mr. BENTSEN. I appreciate the comments of the distinguished minority leader. I thought we had the thing settled, but there are other forces at work. I am trying to accommodate the will of the Senate in an expeditious manner, as long as they have a full, clear shot at voting on my amendment.

Mr. BAKER. Madam President, if the Senator will yield further to me on the same basis for one more remark, I must say that both the Senator from Kansas and the distinguished ranking minority member, the former chairman of the committee, have done such an extremely good job that I yielded to them as to what sequence and what time we consider these amendments. So yesterday I spoke in advance of what I should have because I had not at that point consulted with the distinguished chairman of the committee. But I remain convinced we can find a time to take this up and to do so promptly and to do so on a basis that is favorable to the wishes of both Senators, and I urge that we explore that possibility at the earliest possible moment.

Mr. DOLE. Madam President, the last vote we took last night does not indicate a problem but merely a simple fact that should be mentioned. By reducing the real estate recovery method from 200 percent to 150 percent on a declining balance basis, and the basis adjustment on the rehabilitation credit, we are able to save a substantial amount of money.

For the record and for those Senators who may be present, I will give you a brief rundown: In fiscal year 1981 the administration's tax cut bill would cost $1.5 billion; we are right now at $1.365 billion. In fiscal year 1982 the administration's number is $38.3 billion, we are at $36.6 billion. In fiscal year 1983 the administration number is $91.8 billion, we are now at $92.1 billion, so we have a deficit or a difference of about $300 million. In fiscal 1984, the year the President hopes to balance the budget, the revenue loss in the administration's figures is $150 billion. Right now our bill will cost $149.3 billion, so there is about a $700 million plus factor in fiscal year 1984.

Madam President, as I indicated, I will speak with the distinguished Senator from Texas in just a few moments, and perhaps we can work out some schedule.

I would indicate also, and I would like to include in the RECORD at this point, a letter from Alan Greenspan who is, I think, recognized as one of the tax experts in this country, and who has a long and distinguished record, in which he indicates his support of the proposal to index the individual tax system following the 3-year scheduled cut in tax rates. I think it is an excellent letter and I ask unanimous consent that it be made a part of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

ALAN GREENSPAN,
New York, N.Y., July 13, 1981.

Hon. ROBERT J. DOLE,
U.S. Senate,
Washington, D.C.

DEAR SENATOR: I want to add my support to the proposal to index the individual tax system following the three year scheduled cut in tax rates. We have argued in favor of a three year phased 30 percent cut in rates to offset bracket creep. However, unless offset, bracket creep will again take hold in 1984 and beyond, and will again inordinately raise the burden on the average American taxpayer. Indexing, of course, will prevent that.

I am aware that there are many who, while strongly in favor of further tax cuts, remain concerned over the size of the budget deficit in the out years. I share such concern and in fact that is one of the reasons why I favor indexing. It's becoming increasingly clear that the level of expenditures is currently being suppressed mainly by fears of budget deficits. If we allow tax receipts to rise as a consequence of bracket creep in the out years, the continued pressure on federal outlay growth will be undercut. What we are likely to get as a consequence is both increased taxes and increased expenditures with the budget deficit, perhaps, only modestly reduced from what it otherwise would be.

The deficit must be eliminated, but it has to be done by undercutting the long-term growth momentum of federal spending. Allowing the tax burden to rise will not close the deficit; it will merely suppress the economy.

Best regards,
Cordially,

ALAN GREENSPAN.

Mr. MELCHER. Madam President, will the Senator yield?

Mr. DOLE. I would be happy to yield.

MELCHER AMENDMENT RELATING TO INTEREST RATES

Mr. MELCHER. I thank the Senator for yielding.

The reason I asked the distinguished Senator from Kansas to yield is to acquaint the chairman and you, Madam President, and my colleagues who are present on the floor that at an appropriate time I hope to call up an amendment that deals with imputed interest rates, that deals with the question of whether or not the Internal Revenue Service, through their own regulations, is going to be able to tell individuals and members of their family whether or not they can sell a piece of real estate, whether it is a house or a family farm or the family ranch, at less than 10-percent interest.

It seems kind of odd that we have to have legislation on this tax bill to prevent the Internal Revenue Service from exercising their snoopiness, exercising their prerogatives or their adeptness for getting into everybody's business, but we do because as of July 1 the Internal Revenue Service has adopted regulations requiring that all interest rates on a contract for deed for real property will be 10 percent, and if it is not, they are going to impute it.

We are talking about a deal between two individuals, a deal between a father and a son or a grandma and a granddaughter, an uncle and an aunt, and we are not talking about corporations or conglomerates. We are only talking about individuals, including family members.

Whether or not the right interest rate should be 10 percent on a contract for deed I do not believe is the Internal Revenue Service's business. I think it is a matter for private consideration, and particularly in a family since it is a matter for the family to decide. If for some reason they select a lower interest than 10 percent, I would hope the Internal Revenue Service would stay out of it.

My amendment will simply say that the IRS regulations put into effect on July 1 will be repealed, and that the existing rate prior to that time would be imputed, which is 6 and 7 percent.

Those are not realistic interest rates in today's market, I understand that. But what business is it of the Internal Revenue Service to say what it should be? They do not have any business setting by their regulations what the interest rate should be between father and son and father and daughter. Why should they set it? This simply will roll it back to where it was and say to the IRS, "Don't exercise any more authority than you had before July 1. That is good enough."

There are a lot of people interested in this amendment, Madam President: The National Association of Realtors, the National Homebuilders, the National Farmers Union, the National Cattlemen's Association, The Grange, the National Farmers Organization, the American Farm Bureau Federation, the National Milk Producers, all these are among those who have endorsed the amendment, and who say, "Let us keep the IRS out of this thicket. Let us have them keep their nose out of this particular matter. They are into it far enough with their regulations prior to July 1. Let us not have them intruding any further than they are."

I thank the distinguished chairman for yielding to me. I only take this time to acquaint the Senate with the amendment that is coming up. I hope to offer it at an appropriate time.

By the way, there is no cost involved according to the Treasury. The Treasury Department correctly assesses it saying the regulation will not raise any revenue.

CBO says that possibly it could raise some revenue, but they do not know exactly what. They think it is something that has to be something less than $10 million in revenue.

I told the CBO, "Well, maybe it could raise somewhere between zero and $10 million," but I will guarantee you if we allow IRS to have the new regulations go into effect, they are going to spend several million dollars putting out the paper acquainting the accountants and tax attorneys, acquainting all the people in all their offices, about what to do about imputed interest rates and how to stick their noses into a private deal between family members and not businesses dealing on a contract.

I thank the distinguished chairman.

Mr. DOLE. I will just say to the distinguished Senator from Montana that we have a copy of his amendment and I have asked the Treasury to look at it, as well as our staff and the Joint Committee staff. I am not certain what I can tell the Senator other than that, but it is being reviewed.

UP AMENDMENT NO. 252

(Purpose: Requiring a study of various savings incentives for retirement)

Mr. HEINZ. Madam President, I send an amendment to the desk and ask for its immediate consideration.

The PRESIDING OFFICER. The clerk will report.

The legislative clerk read as follows:

The Senator from Pennsylvania (Mr. HEINZ) proposes an unprinted amendment numbered 252.

Mr. HEINZ. Madam President, I ask unanimous consent that further reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment is as follows:

On page 177, after line 8, (at the end of subtitle A of title 3) insert the following:

SEC. —. STUDY OF SAVINGS INCENTIVES.

(a) IN GENERAL.—The Secretary of the Treasury or his delegate shall conduct a comparative study of methods for stimulating and encouraging individual savings for retirement, including, but not limited to—

(1) increasing the exclusion from gross income of interest on savings held in depository accounts or from instruments issued by depository institutions;

(2) increasing the exclusion from gross income of dividends;

(3) increasing the deduction limits for contributions to individual retirement plans and qualified retirement plans covering individuals described in section 401(c) of the Internal Revenue Code of 1954; and

(4) permitting a deduction for voluntary contributions to a special tax-exempt retirement savings account where such contributions are used to reduce future old-age survivor's insurance benefits under the Social Security Act.

(b) EVALUATION AND COMPARISON.—In conducting the study under subsection (a), the Secretary of the Treasury or his delegate shall evaluate and compare each of the methods described in subparagraph (A) by estimating and projecting their effect over the next forty years on—

(1) aggregate capital formation and new net capital formation;

(2) the private retirement systems;

(3) the social security trust funds;

(4) government tax revenues;

(5) the various financial markets; and

(6) the overall costs and benefits to the Federal Government and the Treasury of the United States.

(c) REPORT.—The Secretary shall report the results of the study conducted under this section to the Congress no later than June 30, 1982.

Mr. HEINZ. Madam President, the amendment I propose today would direct the Secretary of the Treasury to conduct a comparative study of methods which are being considered to stimulate savings and capital formation and to encourage individual savings for retirement. We face now and in the future a problem in providing adequate income in retirement. Today's workers look forward to their retirement with great uncertainty. Social security, the foundation of retirement income, faces a long-term deficit due to population changes and a continuing trend in early retirement. The rate of personal savings has always been low in this country, and in recent years has been declining. Persistent inflation has made it increasingly difficult for Americans to save adequately for retirement, and has reduced the real value of pension benefits. There is ever-increasing pressure on the social security system to serve as the primary source of retirement income. It is important that methods be found which can encourage personal savings for retirement and increase the amount of capital available for investment.

During this session of the Congress, we have considered several proposals to stimulate savings and capital formation and have heard some innovative new ideas. We have not seen, however, a thorough comparative analysis of these different methods and approaches.

The purpose of the study proposed in this amendment would be to identify and evaluate methods which would provide incentives for retirement savings. Traditional approaches should be considered. Such approaches as increasing the deduction limits for contributions to existing vehicles for retirement savings (IRAs and Keoughs) and increasing the income exclusions for interest and dividends certainly do bear further study and consideration. However, a particular effort should be made to identify and evaluate new and innovative approaches. One such approach would be the so-called social security option accounts, which would permit individuals to make voluntary tax-deductible contributions to special retirement savings accounts in exchange for a reduction in their social security retirement benefits. This concept and others must be carefully and fully evaluated.

The solutions to the problems of retirement income are, of course, long-term solutions. This study of the effects of savings incentives proposals would provide a solid base for the search for solutions. Without this information we cannot anticipate the effects of the ideas which have been offered on tax revenues, social security trust funds, and retirement security. I believe the information proposed to be sought in the study will help us begin in earnest the search for ways to improve the retirement incomes of future generations of retirees.

Mr. DOLE addressed the Chair.

The PRESIDING OFFICER. The Senator from Kansas.

Mr. DOLE. Madam President, there is no provision in the Senate Finance Committee bill that would do what the distinguished Senator from Pennsylvania suggests. It would seem to me that, as much difficulty as we had to try and figure out the best savings proposal—and this Senator is not certain we have yet done that—that this amendment requiring the Treasury to submit to the Congress a report before June 30, 1982, concerning ways to stimulate savings for retirement makes a great deal of sense.

As far as this Senator is concerned, I have no objection to the amendment asking for a study. I just hope the Treasury will consider it as seriously as this committee considered it and Senator HEINZ considered it. I am prepared to accept the amendment.

Mr. HEINZ. I thank my colleague from Kansas.

Mr. LONG. Madam President, if the distinguished chairman of the committee proposes to accept the amendment, I do not object.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from Pennsylvania (Mr. HEINZ).

The amendment (UP No. 252) was agreed to.

Mr. DOLE. Madam President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The bill clerk proceeded to call the roll.

Mr. BENTSEN. Madam President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

UP AMENDMENT NO. 253

(Purpose: To postpone the special rules for leases under the accelerated cost recovery system until 1992 and to limit the royalty owner credit against the windfall profit tax to one year)

Mr. BENTSEN. Madam President, I have an amendment at the desk, and I ask for its immediate consideration. It is listed as my amendment No. 1.

The PRESIDING OFFICER. The clerk will report.

The legislative clerk read as follows:

The Senator from Texas (Mr. BENTSEN) proposes an unprinted amendment numbered 253.

Mr. BENTSEN. Madam President, I ask unanimous consent that further reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment is as follows:

On page 155, beginning on line 3, strike out all that follows through page 161, line 3, and insert in lieu thereof the following:

(b) EFFECTIVE DATE.—The amendments made by this section shall apply to calendar year 1981.

SEC. 242. EFFECTIVE DATE FOR LEASING PROVISIONS OF THE ACCELERATED COST RECOVERY SYSTEM.

Notwithstanding section 209, section 168 (f) (8) of the Internal Revenue Code of 1954, as added by the amendments made by section 201, shall not apply to any lease (or agreement characterized as a lease by the parties to such agreement) which is entered into prior to January 1, 1992.

Mr. BENTSEN. Madam President, I ask for the yeas and nays on the amendment.

The PRESIDING OFFICER. Is there a sufficient second? There is a sufficient second.

The yeas and nays were ordered.

UP AMENDMENT NO. 254

(Purpose: To exempt independent producers and certain royalty owners from the windfall profit tax on the first 1,000 barrels of daily production, and for other purposes)

Mr. BENTSEN. Madam President, I have a second amendment at the desk, an amendment to my amendment labeled number 2, and I ask for its immediate consideration.

The PRESIDING OFFICER. The clerk will report.

The legislative clerk read as follows:

The Senator from Texas (Mr. BENTSEN), for himself, Mr. BOREN, Mr. JOHNSTON, Mr. TOWER, Mr. BURDICK, Mr. MELCHER, Mr. CRANSTON, Mr. ANDREWS, Mr. NICKLES, Mr. STENNIS, Mr. SIMPSON, Mr. DIXON, Mr. HUDDLESTON, Mr. INOUYE, Mr. DECONCINI, and Mr. CANNON proposes an unprinted amend-

ment numbered 254 to unprinted amendment numbered 253.

Mr. BENTSEN. Madam President, I ask unanimous consent that further reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment is as follows:

At the end of the amendment, insert the following:

SEC. 243. REDUCTION IN TAX IMPOSED ON NEWLY DISCOVERED OIL.

(a) IN GENERAL.—Paragraph (3) of section 4987 (b) (relating to applicable percentage) is amended to read as follows:

"(3) TIER 3 OIL—

"(A) IN GENERAL.—The applicable percentage for tier 3 oil which is not newly discovered oil is 30 percent.

"(B) NEWLY DISCOVERED OIL.—The applicable percentage for newly discovered oil shall be determined in accordance with the following table:

"For taxable periods beginning in:	The applicable percentage is:
1982	30
1983	25
1984	25
1985	20
1986 and thereafter	15.".

(b) EFFECTIVE DATE.—The amendment made by this section shall apply to taxable periods beginning after December 31, 1981.

SEC. 244. INDEPENDENT PRODUCER AND ROYALTY OWNERS' EXEMPTION.

(a) IN GENERAL.—Section 4991(b) (defining exempt oil) is amended—

(1) by striking out "and" in paragraph (3),

(2) by striking out the period in paragraph (4) and inserting in lieu thereof a comma, and

(3) by adding at the end thereof the following new paragraphs:

"(5) any independent producer oil, and

"(6) any exempt royalty owner oil.".

(b) EXEMPT ROYALTY OWNER OIL DEFINED.—Section 4994 (relating to definitions and special rules relating to exemptions) is amended by adding at the end thereof the following new subsections:

"(f) EXEMPT ROYALTY OWNER OIL.—For purposes of section 4991(b), the term 'exempt royalty owner oil' has the same meaning given the term 'independent producer oil' in section 4992 except that section 4992 shall be applied—

"(1) by substituting '10' for '1,000' each place it appears therein, and

"(2) by substituting for the language of subsection (d)(1)(D) the following:

"'(D) which is attributable to an economic interest other than an operating mineral interest (within the meaning of section 614(d)) of the independent producer in a property.'.

"(g) INDEPENDENT PRODUCER OIL.—

"For definition of independent producer oil, see section 4992.".

(c) QUALIFIED PRODUCTION OF OIL.—Section 4992(d) (defining qualified production of oil) is amended—

(1) by striking out "working interest" in subparagraph (D) of paragraph (1) and inserting in lieu thereof "operating mineral interest (within the meaning of section 614(d))",

(2) by striking out paragraph (2), and

(3) by redesignating paragraph (3) as paragraph (2).

(d) Conforming Amendment.—Subsection (b) of section 4987 (relating to the amount of the windfall profit tax), as amended by section 243, is amended—

(1) by striking out "which is not independent producer oil" in paragraph (1),

(2) by striking out paragraph (2), and

(3) by redesignating paragraph (3) as paragraph (23.

(e) EFFECTIVE DATE AND SPECIAL RULE.—

(1) Except as provided in paragraph (2), the amendments made by this section shall apply with respect to taxable periods beginning after January 1, 1982.

(2) The amendments made by this section shall not apply to crude oil with respect to which a member of the 97th Congress is the producer (within the meaning of section 4996(a)(1) of the Internal Revenue Code of 1954).

Mr. BENTSEN, Madam President, this is my amendment for a thousand barrels. I have agreed with the manager of the bill to lay this aside and the vote to come shortly after 2 o'clock, depending on other rollcall votes.

Mr. DOLE. That is correct. In the event there are any rollcalls demanded between the 12 o'clock and 2 o'clock period, we will have those votes first. If not, we will proceed at 2 o'clock right on the amendment.

Mr. BENTSEN. With that understanding, I ask unanimous consent that that be the agreement.

Mr. DOLE. That would preserve my rights if I wanted to move to table the amendment.

Mr. BENTSEN. I understand.

The PRESIDING OFFICER. Without objection, it is so ordered.

UP AMENDMENT NO. 255

(Purpose: Stock options—repeal retroactivity)

Mr. DOLE. Madam President, I send an amendment to the desk and ask for its immediate consideration.

The PRESIDING OFFICER. The amendment will be stated.

The legislative clerk read as follows:

The Senator from Kansas (Mr. DOLE) proposes an unprinted amendment numbered 255:

On page 168, beginning with line 11, strike all through line 8 on page 169.

Mr. DOLE. Madam President, it has come to my attention through Treasury, the Joint Committee, and other sources, that there is one inequity which should be corrected in the stock option area.

Under the committee bill, any option granted prior to 1981 which was outstanding on December 31, 1980, would generally become an incentive stock option if it was conformed to meet the requirements to qualify as such an option. Thus, under the committee bill, unqualified options could be modified to qualify and get capital gain treatment. That is what we reported.

The committee bill would result in converting any gain which had accrued on the stock into long-term capital gain. In addition, the employer would be denied a corresponding deduction. Thus, the effect of the retroactive provision would be to provide additional compensation to the employee through reduction in the employee's tax and a corresponding increase in the employer's tax. This, in the opinion of this Senator, would be an unfortunate use of the tax laws to provide additional compensation to the employee from the employer without the compensation appearing on the financial books of the corporation as additional compensation and without clear disclosure to the shareholders of the loss of the tax deduction to the corporation.

My amendment would remove this retroactivity for nonqualified options. The amendment would limit the applicability of the new incentive stock option provision to options granted after December 31, 1980, and to qualified options exercised after December 31, 1980 (but granted prior to January 1, 1981).

We should not legislate with our eyes closed. Stock options are a major portion of compensation for the most highly paid executives in our country.

The June 8th edition of Forbes magazine is very instructive in this regard. That issue contains an article which discusses the amount of compensation paid to the highest paid executives in the United States.

The article notes that 8 of 1979's 10 highest paid executives were not in the top 10 for 1980. However, rather than attributing this to corporate "stinginess," Forbes maintained that the eight executives merely were given additional compensation in the form of stock options which were exercised in 1979. The article goes on to say that 9 of the top 10 executives for 1980 reached that high level of compensation because of the exercise of stock options or stock appreciation rights.

Of those top 10 executives, all but one received more in stock gains than they did in salary and bonuses. In fact, the article points out that one top executive received $416,000 in salary and realized $7.2 million from the exercise of stock options. Another, for example, was reported to receive $569,000 in salary and also realize about $4.5 million in stock options.

The incentive stock option provision contained in the committee bill allows employees who receive stock options to defer the tax on this compensation and ultimately to pay tax at capital gains rates.

Madam President, there is no justification for providing this favorable treatment retroactively. The purpose for changing the tax law in this area is to encourage employees to acquire a proprietary interest in their companies and work harder and more productively in the future. Presumably, this impact has already occurred with respect to existing options. There is no need to change the tax treatment for these options.

Madam President, I have a copy of the Forbes' "How Much Does The Boss Make?" article which appeared in the June 8, 1981, edition of Forbes magazine.

Without naming the people involved, I would just emphasize again that in one instance the total compensation to the executive was $7,865,831. The stock gain was $7.2 million of that total.

In another example, the stock gain, out of a total compensation, which is salary, bonus, benefits, contingent stock gains, is a total of $5.1 million in round numbers. The stock gains were $4.4 million.

Another executive had total salary, bonus, benefits, and contingent stock gains of $4.7 million and his stock gains were $1.3 million of that amount.

Let us take a fourth example. It shows $538,000 in salary, which is not bad by Senate standards. Other benefits are about $30,000. Contingency payments are about $8,000. Then the stock gain on top of that was $3.7 million. It is a total of $4.3 million in round numbers.

A fifth example pointed out in the Forbes article was a salary and bonus of $1 million plus, which is not too bad an annual salary. Benefits were $60,000, and contingency benefits were $227,000. Add to that a stock gain of $2 million. That is about $2.3 million.

Those are just some of the examples that I would suggest. I do not think we need more incentives for stock options, particularly not retroactive incentives.

Madam President, we recognize the need for prospective incentives, as I have indicated. We changed the tax law in this area to encourage employees to acquire proprietary interest in their companies and work harder, with increased productivity. But I would suggest that there may not be any need for retroactive incentives.

Madam President, I ask unanimous consent that a portion of this article be printed in the RECORD. It lists a number of highly paid executives, their salary and bonus, their benefits, their contingency payments, and stock gains. In a number of instances, the examples I read were probably demonstrating most clearly the need for the change. I would hope we might approve this amendment.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HOW MUCH DOES THE BOSS MAKE?

The most striking thing about this year's list of the highest-paid executives running the nation's largest corporations is the number of familiar names that aren't there. Missing from this year's top ten, for example, is Steven J. Ross of Warner Communications, who ranked number two a year ago. Ross did all right in 1980, mind you, earning a total of $2,273,688. But handsome as it was, that sum was only enough to rank him 18th.

Missing too, among others, from last year's top ten are John Swearingen of Standard Oil (Indiana) and Rawleigh Warner Jr. of Mobil, who had ranked 4th and 5th, respectively, and who this year ranked 11th and 34th.

All told, eight of last year's top ten are off the list this year. One of them, Howard Keck of Superior Oil, retired. The other, Frank Rosenfelt of Metro-Goldwyn-Mayer, had his company spun off under him, resulting in pieces too small to make our lists.

The absence of the others bespeaks no sudden stinginess of the part of compensation committees. Rather, it results largely from the absence of big stock gains reported last year (see definitions). Nine of this year's top ten CEOs reached that level because of the exercise of stock options or stock appreciation rights. Warner of Mobil, having exercised no options in 1980, did not make it into the top ten this year. Last year's top ten averaged $2.8 million in total remuneration vs. $4.1 million this year.

When it comes to money, no reporting philosophy can be problem-free. Compensation earned by past performance but paid in 1980 is included. And, as in past years, our tables also continue to show accruals made on company books for long-term performance plans and under employment agreements that call for payments if and when certain conditions are met. Even though they have been reported, chief executives may not get these contingent amounts if, say, company earnings do not meet standards or the boss quits to join a competitor.

A rough kind of justice continues to be evident in these tables. Ranked are the chief executives of 818 companies—those companies that made one or more of the Forbes lists of the 500 largest companies ranked by sales, profits, assets and stock market value. The median salary and bonus paid to the boss of a company with sales between $500 million and $1 billion was $300,000, 10 percent higher than last year's median; between $1 billion and $5 billion it was $402,000, 6 percent higher than last year; over $5 billion it was $589,000, 9 percent higher. The median salary and bonus for all companies is $351,945.

As for the preferred route to the top dollar, there was a clear advantage among these 818 chief executive officers to those who came up through finance (134) and banking (101). Far behind were those who came up through marketing (57) and, even further behind, sales (28).

DEFINITIONS

The Securities & Exchange Commission's latest requirements for proxy statements are the basis for the numbers in the tables that follow.

Salary and bonus

Includes—in addition to salary and cash bonuses—directors' fees, commissions and payments made on long-term incentive plans.

Benefits

Includes cash-equivalent forms of compensation such as company-paid life insurance premiums or club dues, use of company car or plane and other fringe benefits; also stock bonus awards, thrift plan contributions and restricted stock awards vested or released from restrictions in 1980.

Contingent remuneration

Includes the amounts expensed for deferred compensation agreements and accruals (or credits) under performance-related long-term incentive plans.

Stock gains

Includes net value realized in shares or cash from the exercise of stock options and/or stock appreciation rights (SARs) granted in prior years. (In contrast to previous years, this survey does not reflect the accruals for stock appreciation rights unexercised.)

Mr. DOLE. Madam President, as I understand, in the House the last vote on this in the Ways and Means Committee did not address this particular issue.

Mr. LONG. Madam President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The bill clerk proceeded to call the roll.

Mr. DOLE. Madam President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER (Mr. GORTON). Without objection, it is so ordered.

Mr. DOLE. Mr. President, I know there may be some who want to speak with reference to this amendment, but I hope we can dispose of this amendment fairly quickly. I believe that once it is fully understood, there should not be any problem with the amendment, unless there are those who believe that $7 million is not adequate compensation.

Once again, this is just an effort to make certain that some of the most highly paid executives do not get retroactive treatment. If they qualify for stock options in the future, they are going to get the same tax advantage as provided to other employees if the incentive stock option rules are met. It is our view that we should not make it retroactive as in the committee bill.

The Treasury very strongly favors this amendment.

Under the incentive stock option rules, an employee is not taxed at the time an incentive option is exercised (that is, when the employee buys the stock). Upon subsequent sale (before death), the entire gain over the employee's option price would be taxed as a long-term capital gain (that is, maximum rate of 28 percent, declining to 20 percent by 1984).

In order to obtain these benefits the incentive option must meet a number of requirements, including:

First, the option must be exercised within 20 years of the date it is granted, and

Second, options must be exercised in sequence (that is, if option A is granted before option B, option B cannot be exercised while option A is outstanding).

Special transitional rules allow previously nonqualified options (and qualified options that were not exercised before May 21, 1981) to be conformed to the new rules.

The effect of that rule is to provide retroactive special tax treatment for certain options.

As I understand, the purpose of options is to create incentives for employees to get in there and work and take an active part in the company, and the incentives flowing from previously issued options have already been realized. In effect, what we have done is to provide a windfall for some highly paid executives in the event we do not make this, what I consider a minor change in the overall thrust of this bill.

But if nonqualified options are outstanding at the date of enactment of the tax bill, the nonqualified options can become qualified if action is taken to conform the options to the requirement contained in the bill.

If that happens, instead of ordinary income upon the date of exercise of a nonqualified option, the tax can be converted to a capital gain or no tax at all if held until death.

I would again just refer briefly to Forbes, the article in the June issue, where I did point out that the top 10 earners in 1980, without repeating every one and without naming the names—I am certain it is public information so there is no reason not to name the names—but in one instance, if you count this chief executive officer's salary, bonus, and other benefits and contingency and remuneration and stock gains he has an income of $7,865,000 in 1980. Of that amount the stock gains amount to $7,235,000.

What we are doing, if we do not take out this retroactive provision, is making it possible for a lot of these chief executives to go back retroactively and exercise these existing options and obtain a new tax benefit which I do not think was ever the intent.

Another highly paid executive had a total salary in 1980, counting bonuses, benefits, contingencies, stock gains of $5.1 million. The stock gain was $4.4 million.

We are not saying if you acquire stock options in the future you are not going to get that special tax treatment. Let us not make that retroactive. That, in essence, is the argument made by the Treasury, our staff, and the Joint Committee. I happen to share that view, and I hope we can dispose of the amendment. This will be known as the antifat cat amendment, I guess.

Mr. BRADLEY addressed the Chair.

The PRESIDING OFFICER. The Senator from New Jersey.

Mr. BRADLEY. Mr. President, I know that the distinguished ranking minority member of the committee, Senator LONG, wanted to make a check so, at this time, I suggest the absence of a quorum.

The PRESIDING OFFICER (Mr. DENTON). The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. KENNEDY. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. KENNEDY. Mr. President, is there an amendment pending before the Senate?

Mr. DOLE. Mr. President, I ask unanimous consent that the pending amendment, which is my amendment, be temporarily laid aside.

The PRESIDING OFFICER. Without objection, it is so ordered.

UP AMENDMENT NO. 256

(Purpose: To increase amounts allowable as credits for investments in qualified industrial and residential facilities)

Mr. KENNEDY. Mr. President, I send an amendment to the desk and ask for its immediate consideration.

The PRESIDING OFFICER. The amendment will be stated.

The assistant legislative clerk read as follows:

The Senator from Massachusetts (Mr. KENNEDY) proposes an unprinted amendment numbered 256.

Mr. KENNEDY. Mr. President, I ask unanimous consent that further reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment is as follows:

After title V, add the following new title:

TITLE VI—ENERGY EFFICIENCY PROVISIONS

SEC. 601. INCREASE IN ENERGY PERCENTAGE FOR CERTAIN ENERGY PROPERTY AND SPECIFICATION OF ENERGY PERCENTAGE FOR QUALIFIED INDUSTRIAL ENERGY EFFICIENCY PROPERTY.

(a) IN GENERAL.—The table contained in clause (i) of section 46(a)(2)(C) is amended by adding at the end thereof the following new subclauses:

"VII. Certain alternative energy property, specially defined energy property, recycling equipment, and cogeneration equipment.—Property described in section 48(l)(3) (other than clause (viii) or (ix) of subparagraph (A) thereof), section 48(l)(5), section 48(l)(6), or section 48(l)(14)	15 percent	Jan. 1, 1981	Dec. 31, 1986".
"VIII. Qualified industrial energy efficiency property.—Property described in section 48(g)	15 percent	Jan. 1, 1981	Dec. 31, 1986."

(b) AFFIRMATIVE COMMITMENTS.—Section 46(a)(2)(C) is amended by adding at the end thereof the following new clause:

"(v) LONGER PERIOD FOR CERTAIN ENERGY PROPERTY.—Clause (iii) shall apply to energy property described in subclauses VII or VIII of clause (i). However, in applying clause (iii) to such property, 'December 31, 1986' shall be substituted for 'December 31, 1982', 'December 31, 1994' shall be substituted for 'December 31, 1990', 'January 1, 1987' shall be substituted for 'January 1, 1983', and 'January 1, 1990' shall be substituted for 'January 1, 1986'.".

SEC. 602. QUALIFIED INDUSTRIAL ENERGY EFFICIENCY PROPERTY TREATED AS ENERGY PROPERTY

(a) QUALIFIED INDUSTRIAL ENERGY EFFICIENCY PROPERTY DEFINED.—Section 48 (relating to definitions; special rules) is amended by redesignating subsection (q) as subsection (r) and by inserting after subsection (p) the following new subsection:

"(q) QUALIFIED INDUSTRIAL ENERGY EFFICIENCY PROPERTY.—

"(1) IN GENERAL.—For purposes of this subpart, the term 'qualified industrial energy efficiency property' means property used as a part of a modification to an existing industrial or commercial facility (including the modification or replacement of one or more processes carried on at such facility on January 1, 1981), but only if such modification—

"(A) results in the utilization by such facility, process or processes of less energy per unit of output,

"(B) results in an aggregate annual decrease in energy consumed by such facility, process or processes, based upon levels of output in effect before such modification, of not less than 1,000 barrels of oil equivalent, and

"(C) does not increase the total amount of oil and natural gas (or products thereof other than petroleum coke, petroleum pitch and waste gases) consumed by such facility, process or processes per unit of output.

"(2) LIMITATION.—Property shall be considered as qualified industrial energy efficiency property only if it is—

"(A) property—

"(i) the construction, reconstruction or erection of which is completed by the taxpayer after January 1, 1981, or

"(ii) which is acquired after January 1, 1981 if the original use of such property commences with the taxpayer and commences after such date,

"(B) property with respect to which depreciation (or amortization in lieu of depreciation) is allowable, and which has a useful life (determined as of the time such property is placed in service) of 3 years, or more, and

"(C) property—

"(i) Which results in the utilization described in paragraph (1)(A), or

"(ii) the installation and operation of which is reasonably necessary to the achievement of such utilization.

"(3) Application to property which is energy property without regard to being qualified industrial energy efficiency property.—No property shall be treated as qualified industrial energy efficiency property if the taxpayer claims the energy percentage provided by section 46(a)(2)(C)(i) (other than by subclause VIII thereof) with respect to that property.

"(4) COMPUTATIONS PER UNIT OF OUTPUT.—The determinations required by paragraph (1) shall be made by comparing the BTU content of the energy (or of the oil and natural gas in the case of the determination required by subparagraph (1)(C)) used by the facility, process or processes per unit of output prior to the modification with the BTU content of the energy (or of the oil and natural gas in the case of the determination required by subparagraph (1)(C)) used by such facility, process or processes per unit of output upon completion of the modification. Computations under this subparagraph shall be made in accordance with subparagraph (6).

"(5) REDUCTION OF CREDIT WHERE COST OF ENERGY SAVINGS IS EXCESSIVE OR WHERE ENERGY SAVINGS WARRANT INVESTMENT WITHOUT REGARD TO CREDIT.—Notwithstanding subclause (VIII) of section 46(a)(2)(C)(i), the energy investment credit allowable by section 38 for qualified industrial energy property shall be determined in accordance with the following table:

'If the adjusted BOE cost of the property is—	The energy investment credit is—
Less than $10	The reduced credit amount.
At least $10 but not more than $60.	The section 46(a)(2)(C) amount.
Over $60	The alternative credit amount.

"(6) DEFINITIONS.—For purposes of paragraph (5)—

"(A) ADJUSTED BOE COST.—The term 'Adjusted BOE cost' means, with respect to any qualified industrial energy efficiency property—

"(i) the section 46(a)(2)(C) amount with respect to such property, divided by

"(ii) the annual number of BOE's saved by the modification of which such property is a part.

"(B) ANNUAL BOE'S SAVED BY PROPERTY.—The term 'annual number of BOE's saved' means, with respect to any property, an amount equal to—

"(i) the excess of the average number of BOE's utilized by the facility, process or processes per unit of output during a representative 1-year period before the use of the property commences over the number of BOE's utilized by the facility, process or processes per unit of output during any representative 12-month period occurring within the recomputation period, multiplied by

"(ii) the units of output during such 1-year period prior to the modification.

"(C) REDUCED CREDIT AMOUNT.—The term 'reduced credit amount' means the energy investment credit determined as if the energy percentage equaled the percentage which bears the same ratio to 20 percent as the BOE cost of the property bears to $10.

"(D) SECTION 46(a)(2)(C) AMOUNT.—The term 'section 46(a)(2)(C) amount' means the energy investment credit determined without regard to paragraph (5).

"(E) ALTERNATIVE CREDIT AMOUNT.—The term 'alternative credit amount' means, with

respect to any qualified industrial energy efficiency property, an amount equal to—

"(i) $60, multiplied by

"(ii) the annual number of BOE's saved by the modification of which such property is a part.

"(F) BOE.—

"(i) IN GENERAL.—One BOE shall be equal to 5.8 million Btu's.

"(ii) BOE FOR ELECTRICAL ENERGY.—In the case of electrical energy, BOE's shall be calculated by using a heat rate of 10,000 Btu's per kilowatt hour.

"(7) Special rules.—

"(A) SPECIAL RULE FOR PROPERTY PLACED IN SERVICE WITHIN 2 YEARS AFTER DATE OF ENACTMENT.—In the case of qualified industrial energy efficiency property which is placed in service during the 2-year period beginning on the date of the enactment of this subsection, the table contained in paragraph (5) shall be applied by substituting '$5' for '$10' each place it appears.

"(B) CERTAIN ENERGY SAVINGS DISREGARDED.—For purposes of this subsection, energy savings shall be disregarded which result from—

"(i) the installation of property other than qualified industrial energy efficiency property, or

"(ii) substantial changes in the character of either the output or input of the facility.

"(8) REDUCTION OF CREDIT WHERE CAPACITY INCREASES.—

"(A) IN GENERAL.—In the case of qualified industrial energy efficiency property which directly results in more than a 10-percent increase in the capacity of the facility, process or processes, the energy investment credit attributable to such property shall be an amount which bears the same ratio to such credit (determined without regard to this paragraph) as the capacity of the facility, process or processes prior to the modification bears to the capacity of the facility, process or processes upon completion of the modification.

"(B) CERTAIN CAPACITY INCREASES DISREGARDED.—For purposes of subparagraph (A), reductions in intermediate or finished product waste or reprocessing shall not be considered an increase in capacity.

"(9) TIME OF APPLICATION OF LIMITATIONS ON AMOUNT OF CREDIT.—

"(A) IN GENERAL.—The provisions of paragraphs (5) and (8) shall be applied as of the close of the recomputation period.

"(B) RECOMPUTATION PERIOD DEFINED.—For purposes of this paragraph, the term 'recomputation period' means, with respect to any modification, the period beginning on the date on which the qualified industrial energy efficiency property which is a part or such modification is placed in service and ending on the last day of the first taxable year beginning more than 180 days after such date.

"(C) RECAPTURE OF EXCESS CREDIT.—If the amount of the credit allowed under this subsection (determined without regard to paragraphs (5) and (8)) with respect to qualified industrial energy efficiency property exceeds the credit allowable under paragraphs (5) and (8), the tax imposed by this chapter for the recomputation year shall be increased under section 47 by the amount of such excess.

"(10) EXISTING DEFINED.—For purposes of this subsection, a facility shall be considered an 'existing facility' if industrial or commercial operations were conducted at that geographic location as of January 1, 1981.

"(11) PROCESS CARRIED ON IN A FACILITY ON JANUARY 1, 1981.—A process which was carried on in an existing facility on January 1, 1981, shall not thereafter cease to be treated as such solely because capitalizable expenditures are paid or incurred with respect to such process after January 1, 1981, or the chemical, physical or mechanical action by which the desired result is accomplished is modified.

"(12) REPLACEMENT OF PROCESS.—In the case of a replacement of a process or processes carried on in an existing facility on January 1, 1981, no property shall be treated as qualified industrial energy efficiency property if—

"(A) the replaced property is not retired from service, except for property maintained as standby or temporary replacement property for the qualified industrial energy efficiency property during periods for which such qualified property is inoperable due to an emergency or on account of repairs or maintenance, or

"(B) the replacement property is placed in service on a site other than the site of the replaced property or reasonably adjacent to that site.

"(13) QUALIFIED INVESTMENT.—In determining the amount of the taxpayer's qualified investment in qualified industrial energy efficiency property, for purposes of section 46(c)(1), the applicable percentage shall be 100 percent for items of such property without regard to the useful life of any particular item of such property.".

(b) CONFORMING AMENDMENTS.—

(1) TREATMENT AS ENERGY PROPERTY.—Subparagraph (A) of section 48(1)(2) (defining energy property) is amended—

(A) by striking out "or" at the end of clause (viii),

(B) by inserting "or" at the end of clause (ix), and

(C) by inserting after clause (ix) the following new clause:

"(x) qualified industrial energy efficiency property.".

(2) QUALIFIED INDUSTRIAL ENERGY EFFICIENCY PROPERTY DOES NOT INCLUDE PUBLIC UTILITY PROPERTY.—Paragraph (17) of section 48(1) is amended by striking out "and 'cogeneration property' " and inserting in lieu thereof " 'cogeneration property', and 'qualified industrial energy efficiency property' ".

(c) EFFECTIVE DATE.—The amendments made by this section shall apply to periods beginning after December 31, 1980.

SEC. 603. AMENDMENTS RELATING TO ENERGY PROPERTY.

(a) AMENDMENTS RELATING TO ALTERNATIVE ENERGY PROPERTY.—

(1) EQUIPMENT FOR CONVERTING ALTERNATE SUBSTANCES INTO ELECTRICITY ELIGIBLE FOR CREDIT.—Clause (iii) of section 48(1)(3)(A) (defining alternative energy property) is amended by striking out "solid fuel" and inserting in lieu thereof "solid fuel, or into electricity (but only, in the case of electricity, up to (but not including) the electrical transmission stage)".

(2) DEFINITION OF BOILER.—Paragraph (3) of section 48(1) (defining alternative energy property) is amended by adding at the end thereof the following new subparagraph:

"(D) BOILER.—For purposes of subparagraph (A), the term 'boiler' means a system for producing a vapor of high pressure liquid stream from water or some other working fluid. Heat is produced by combustion or otherwise, and is transferred through metal or ceramic tube walls to generate a vapor or high pressure liquid stream at a positive pressure within the boiler vessel.".

(3) HEAT TREATING FURNACES, MELT FURNACES AND MODIFICATIONS.—

(A) IN GENERAL.—Subparagraphs (A) of section 48(1)(3) (defining alternative energy property) is amended—

(i) by striking out "and" at the end of clause (viii),

(ii) by striking out the period at the end of clause (ix) and inserting in lieu thereof a comma, and

(iii) by inserting after clause (ix) the following new clauses:

"(x) heat treating furnaces, the primary fuel for which will be an alternate substance,

"(xi) melt furnaces, if such furnaces use no fuel, or if the primary fuel for which will be an alternate substance, and

"(xii) equipment designed to modify existing equipment in a facility which was using an alternate substance as a primary fuel on October 1, 1978, provided such modification reduces the use of fuels other than alternate substances at the existing facility.".

(B) CONFORMING AMENDMENTS.—

(i) Paragraph (3) of section 48(1), as amended by paragraph (2), is amended by adding at the end thereof the following new subparagraphs:

"(E) MELT FURNACE.—The term 'melt furnace' includes any device, apparatus, or configuration which directly or indirectly converts solids into liquids or gases through the use of heat.

"(F) HEAT TREATING FURNACE.—For purposes of subparagraph (A), the term 'heat treating furnace' means any device, apparatus, or configuration which heats materials (such as metals) for the purpose of obtaining improved properties (such as through normalizing or annealing).".

(ii) Subparagraph (A) of section 48(1)(3) is amended—

(I) by striking out "or (v)" in clause (vi) and inserting in lieu thereof "(v), (x), or (xi)", and

(II) by striking out "or (vi)" in clause (vii) and inserting lieu thereof "(vi), (x), or (xi).".

(4) CERTAIN SUBSTANCES TREATED AS ALTERNATE SUBSTANCES.—Subparagraph (B) of section 48(1)(3) (defining alternative energy property) is amended by adding at the end thereof the following new sentence: "The term 'alternate substance' includes petroleum coke; petroleum pitch; synthetic fuels; and any other product produced from any alternate substance, whether or not such product has undergone a chemical change in the process of its production.".

(5) PRIMARY FUEL DEFINED.—Paragraph (3) of section 48(1), as amended by paragraphs (2) and (3)(B)(i), is amended by adding at the end thereof the following new subparagraph:

"(G) PRIMARY FUEL.—For purposes of this paragraph—

"(i) IN GENERAL.—An alternate substance shall be considered the 'primary fuel' if any alternate substance or combination of alternate substances accounts for more than 50 percent of the Btu's used by any item of alternative energy property.

"(ii) 50-PERCENT RULE NOT REQUIRED IN CERTAIN CASES.—Notwithstanding clauses (i), (ii), (x), (xi), and (xii) of subparagraph (A), the taxpayer shall not be required to comply with a primary fuel requirement for any taxable year—

"(I) if the taxpayer is unable to obtain the alternate substance for reasons (other than cost thereof) beyond his control, or

"(II) in the case of the 12-month period beginning on the date the boiler, burner, or furnace is placed in service, to the extent a fuel other than an alternate substance is used by reason of startup conditions, requirements or timing.

"(iii) ELECTRICITY TO SATISFY PRIMARY FUEL REQUIREMENT IN CERTAIN CASES.—Electricity shall be treated as an alternate substance for purposes of the primary fuel requirement in clauses (i), (ii), (x), (xi), and (xii) of subparagraph (A) if—

"(I) the electricity is generated by the taxpayer primarily from an alternate substance, or

"(II) the electricity is purchased by the taxpayer and the taxpayer establishes to the satisfaction of the Secretary that the electricity reduces the need for onsite use of oil or gas and that more than 50 percent of the electricity purchased by the taxpayer

for that use is generated from an alternate substance.".

(b) AMENDMENTS RELATING TO SPECIALLY DEFINED ENERGY PROPERTY.—Paragraph (5) of of section 48(1) (defining specially defined energy property) is amended to read as follows:

"(5) SPECIALLY DEFINED ENERGY PROPERTY.—

"(A) IN GENERAL.—The term 'specially defined energy property' means—

"(i) a heat wheel,

"(ii) a heat exchanger,

"(iii) a waste heat boiler,

"(iv) a heat pipe,

"(v) an automatic energy control system,

"(vi) a turbulator,

"(vii) a combustible gas recovery system,

"(viii) an economizer,

"(ix) modifications to alumina electrolytic cells,

"(x) industrial insulation,

"(xi) an industrial heat pump,

"(xii) modifications to burners, combustion systems, or process furnaces,

"(xiii) batch operations conversion equipment,

"(xiv) product separation and dewatering equipment,

"(xv) fluid bed dryers and calciners,

"(xvi) insulating material or coating installed in connection with a building, pipe, duct, container, or window,

"(xvii) a storm or thermal window or door for the exterior of a building, a second entry door, or a revolving door,

"(xviii) caulking or weatherstripping of an exterior door or window,

"(xix) a furnace replacement burner designed to achieve a reduction in the amount of fuel consumed as a result of increased combustion efficiency,

"(xx) a device for modifying flue openings designed to increase the efficiency of operation of the heating system,

"(xxi) an electrical or mechanical furnace ignition system which replaces a gas pilot light,

"(xxii) an electrostatic precipitator, a charcoal filter, or any other air cleaner,

"(xxiii) an automatic energy saving setback thermostat,

"(xxiv) replacement or modification of heating distribution, cooling, ventilating, or lighting systems which increase their energy efficiency,

"(xxv) a recuperator,

"(xxvi) a regenerator,

"(xxvii) a preheater, or

"(xxviii) any other property of a kind specified by the Secretary by regulations, the installation of which is for the principal purpose of reducing the amount of energy consumed in any existing industrial or commercial process, processes or activities and which is installed in connection with an existing industrial or commercial facility. The Secretary shall not specify any property under clause (xxviii) unless he determines that such specifications meet the requirements of subparagraph (C) of this paragraph. Any property specified by the Secretary under clause (xxviii) shall be deemed qualified specially defined energy property as of October 1, 1978. In the case of any property installed in connection with any commercial facility (including a hotel, office building, educational facility, health care facility, or retail or wholesale trade facility), any reduction of the amount of energy consumed in connection with such facility shall be treated as a reduction of energy consumed in a commercial process.

"(B) DEFINITIONS RELATED TO SUBPARAGRAPH (A).—

"(i) HEAT EXCHANGER.—The term 'heat exchanger'—

"(I) means a configuration of equipment used to transfer energy to incoming combustion air, or lower temperature fluids, gases, or solids with or without the interposition of heat transfer surfaces, and

"(II) includes but is not limited to devices commonly referred to as recuperators, regenerators, and preheaters.

"(ii) WASTE HEAT BOILERS.—The term 'waste heat boiler' means any boiler (within the meaning of paragraph (3)(D)) which uses waste heat from whatever source derived.

"(iii) AUTOMATIC ENERGY CONTROL SYSTEM.—The term 'automatic energy control system'—

"(I) means equipment comprising a system which by automatic controls reduces the energy consumed in environmental space conditioning or in other industrial or commercial processes or activities, and

"(II) includes, but is not limited to, systems which automatically control fuel or electric power inputs to a combustion system or process or the utilization or transfer of energy within a process, or which automatically control process veriables (other than energy) in order to minimize energy consumption.

"(iv) COMBUSTIBLE GAS RECOVERY SYSTEM.—The term 'combustible gas recovery system' means equipment comprising a system to recover, and condition for use, unburned fuel or other combustible material from combustion exhaust gases or process streams.

"(v) INDUSTRIAL INSULATION.—The term 'industrial insulation' means any material which—

"(I) is designed to possess a material resistance to the flow of heat, and

"(II) is to be used primarily to retard loss or gain of such heat with respect to pipes, tanks, vessels, equipment, or processes, but not with respect to buildings or structural components thereof.

"(vi) INDUSTRIAL HEAT PUMP.—The term 'industrial heat pump' means equipment which—

"(I) uses the compression and expansion of a contained fluid to extract heat from a gas or liquid and transfer it to another gas or liquid at another temperature, or

"(II) uses nonmechanical means to achieve an equivalent result.

"(vii) BATCH OPERATIONS CONVERSION EQUIPMENT.—

"(I) IN GENERAL.—The term 'batch operations conversion equipment' means equipment to permit conversions from batch operations to one or more continuous processes.

"(II) BATCH OPERATIONS.—The term 'batch operations' means operations where temporary storage of materials in process results in heat transfer to the surrounding environment, or where such handling or temporary storage is accompanied by the waste or reprocessing of more than 5 percent of the material in process.

"(III) CONTINUOUS PROCESS.—The term 'continuous process' means a process which minimizes the handling or temporary storage of the material in process so as to reduce either the amount of heat transfer to the surrounding environment or the amount of waste or reprocessed material.

"(viii) PRODUCT SEPARATION AND DEWATERING EQUIPMENT.—The term 'product separation and dewatering equipment' means equipment designed to separate water or other liquids or volatiles from process materials.

"(ix) FLUID BED DRYERS AND CALCINERS.—The term 'fluid bed dryers and calciners' means equipment in which solid particles are chemically processed by direct heat exchange with a gas or liquid. The gas or liquid passes through a bed of solid particles at sufficient velocity to physically suspend the particles in the gas or liquid stream.

"(C) SPECIFICATION OF ADDITIONAL ITEMS BY SECRETARY.—The Secretary shall specify property under subparagraph (A)(xxviii) at his discretion, or if—

"(i) such property is recommended for specification to the Secretary by the Secretary of Energy, and

"(ii) there are no generally available and substantial Fedreal subsidies for such property. The Secretary shall act on a recommendation of the Secretary of Energy within 6 months of its receipt.".

(C) AMENDMENTS RELATED TO RECYCLING EQUIPMENT.

(1) IN GENERAL.—Subparagraph (A) of section 48(1)(6), (defining recycling equipment) is amended to read as follows:

(A) IN GENERAL.—The term "recycling equipment" means any property which is used exclusively—

(i) for the unloading, transfer, storage, reclaiming from such storage, sorting, and preparation (including, but not limited to, washing, crushing, drying and weighing) of solid waste, or

(ii) in the recycling of solid waste.

(2) INCLUSION OF CERTAIN EQUIPMENT.—

(A) IN GENERAL.—Subparagraph (D) of section 48(1)(6) relating to inclusion of certain equipment is amended to read as follows:

"(D) CERTAIN EQUIPMENT INCLUDED.—The term 'recycling equipment' includes any new or replacement property which is used in the conversion or processing of solid waste into a fuel or into useful energy such as steam, electricity, or hot water and any property which is used in the processing of solid waste to recover and store other reusable resources and materials, including but not limited to paper, ferrous metals, nonferrous metals, and glass.".

(B) APPLICATION WITH SUBPARAGRAPH (B)(I).—Subparagraph (B)(i) of section 48(1)(6) (relating to equipment not included) is amended by striking out "any" and inserting in lieu thereof "except as provided in subparagraph (D), any".

(3) SOLID WASTE DEFINED.—Section 48(1)(6) is amended by adding at the end thereof the following new subparagraph:

"(E) 'SOLID WASTE' DEFINED.—For purposes of this section, the term 'solid waste' means garbage, refuse, and other discarded solid, semi-solid and liquid materials, including materials resulting from industrial, commercial, agricultural and community activities.".

(d) AMENDMENTS RELATED TO COGENERATION EQUIPMENT.—Paragraph (14) of section 48(1) (defining cogeneration equipment) is amended to read as follows:

"(14) COGENERATION EQUIPMENT.—

"(A) IN GENERAL.—The term 'cogeneration equipment' means property comprising a system for using the same fuel for the sequential generation of electric power and/or mechanical shaft power in combination with qualified energy at a facility at which, as of January 1, 1980, electricity, mechanical shaft power, or qualified energy was produced.

"(B) QUALIFIED ENERGY.—The term 'qualified energy' means steam, heat, or other forms of useful energy (other than electric power and/or mechanical shaft power) to be used for industrial, commercial, or space-heating purposes (other than in the production of electric power and/or mechanical shaft power).".

(e) BIOMASS PROPERTY.—Subparagraph (B) of section 48(1)(15) (relating to biomass property) is amended—

(1) by striking out "and" in clause (i) after the word "substance" and inserting in lieu thereof a comma, and

(2) by inserting after the phrase "such coal" the following: "and does not include source separated, separately collected, recyclable waste paper".

(f) AMENDMENTS TO DEFINITION OF EXISTING.—Paragraph (10) of section 48(1) (defining existing) is amended to read as follows:

"(10) EXISTING DEFINED.—For purposes of this subsection,

"(A) EXISTING FACILITY.—When used in

connection with a facility, a facility shall be considered an 'existing facility' if industrial or commercial operations were conducted at that geographic location as of October 1, 1978.

"(B) EXISTING PROCESS.—When used in connection with a process, a process shall be considered an 'existing process' if such process was carried on at that facility on October 1, 1978.

"(C) EXISTING EQUIPMENT.—When used in connection with an item of equipment, an item of equipment shall be considered 'existing equipment' if it was placed in service prior to October 1, 1978.

"(D) PROCESS CARRIED ON IN A FACILITY ON OCTOBER 1, 1978.—A process which was carried on in an existing facility on October 1, 1978 shall not cease to be treated as such solely because capitalizable expenditures are paid or incurred with respect to such process after October 1, 1978, or the chemical, physical or mechanical action by which the desired result is accomplished is modified.".

(g) REPLACEMENT OF EQUIPMENT OR PROCESS.—Section 48(1) (relating to energy property) is amended by adding the following new section at the end thereof:

"(18) REPLACEMENT OF EQUIPMENT OR PROCESS.—In the case of a replacement of an item of equipment or one or more processes in service or carried on in an existing facility on October 1, 1978, no property shall be treated as energy property if—

"(A) the replaced property is not retired from service, except for property maintained as standby or temporary replacement property for the energy property during periods for which such property is inoperable due to an emergency or on account of repairs or maintenance, or

"(B) the deplacement property is placed in service on a site other than the site of the replaced property or reasonably adjacent to that site.".

(h) INCREMENTAL COST RULE.—Section 48(1) (relating to energy property) is amended by adding the following new section at the end thereof:

"(19) INCREMENTAL COST RULE.—Property, other than alternative energy property, recycling equipment, qualified hydroelectric generating property, or cogeneration equipment, which otherwise qualifies as energy property under this section but which also substantially increases the operating capacity of the existing process, processes or facility, shall only qualify to the extent of the 'energy component' of the property.

"(A) For purposes of this subparagraph, a substantial increase in capacity is defined as an increase as a result of the installation of the otherwise qualified energy property of more than 10 percent over the capacity of the process, processes or facility prior to the installation of the otherwise qualified property.

"(B) CERTAIN CAPACITY INCREASES DISREGARDED.—For purposes of subparagraph (A) reductions in intermediate or finished product waste or reprocessing shall not be considered an increase in capacity.

"(C) The term 'energy component' means a pro rata allocation of the total cost of the installation of the otherwise qualified industrial energy property, determined by multiplying the total cost by a fraction, the numerator of which is the energy related cost of the equipment and the denominator of which is the total cost.

"(D) In the case of property which qualifies under section 48(1)(3) (alternative energy property) 48(1)(6) (recycling equipment), 48(1)(13) (qualified hydroelectric generating property) and 48(1)(14) (cogeneration equipment), no reductions in the credit otherwise allowable under this section shall be required.".

(i) EFFECTIVE DATE.—The amendments made by this section shall apply to periods beginning after December 31, 1980, under rules similar to the rules of section 48(m) of the Internal Revenue Code of 1954.

SEC. 604. ASSOCIATED PROPERTY.

(a) IN GENERAL.—Subsection (1) of section 48 (defining energy property) is amended by adding at the end thereof the following new subparagraph:

"(20) ASSOCIATED PROPERTY.—

"(A) GENERAL RULE.—Any property associated with alternative energy property, specially defined energy property, recycling equipment, or cogeneration equipment shall be treated as qualified industrial energy efficiency property.

"(B) WHEN PROPERTY ASSOCIATED.—For the purposes of subparagraph (A), property shall be considered associated if:

"(i) in the case of property associated with alternative energy property, the installation and operation of such property is reasonably necessary to enable the utilization of an alternate substance, or

"(ii) in the case of property associated with specially defined energy property, the installation and operation of such property is reasonably necessary for realization of the reduction of the amount of energy consumed or heat wasted by the process, processes or activity, or

"(iii) in the case of property associated with recycling equipment, the installation and operation of such property is reasonably necessary to achieve the sorting, preparation or recycling, or

"(iv) in the case of property associated with cogeneration equipment, the installation and operation of such property is reasonably necessary to achieve the energy savings intended by the installation of the cogeneration equipment, or

"(v) in the case of property associated with qualified industrial energy efficiency property, the installation and operation of such property is reasonably necessary for the utilization of less energy per unit of output.".

(b) CONFORMING AMENDMENTS.—

(1) ENERGY PERCENTAGE.—Subparagraph (C) of section 46(a)(2) (defining energy percentage) is amended by adding at the end thereof the following new clause:

"(vi) ASSOCIATED PROPERTY.—In the case of property described in section 48(1)(20), the energy percentage shall be the same as the energy percentage determined under clause (i) for the energy property it was installed in connection with.".

(2) ENERGY PROPERTY.—Subparagraph (A) of section 48(1)(2) (defining energy property), as amended by this Act, is amended—

(A) by striking out "or" at the end of clause (ix),

(B) by inserting "or" at the end of clause (x), and

(C) by inserting after clause (x) the following new clause:

"(xi) associated property,".

(c) EFFECTIVE DATE.—The amendments made by this section shall apply to periods beginning after December 31, 1980.

SEC. 6605. PERIOD TO WHICH ENERGY INVESTMENT CREDIT APPLIES.

(a) IN GENERAL.—Subclause (I) of section 46(a)(2)(C)(i) relating to energy percentage) is amended by striking out "1982" and inserting in lieu thereof "1985".

(b) EFFECTIVE DATE.—The amendment made by this section shall take effect on the date of enactment of this Act.

SEC. 606. EXTENSION OF RESIDENTIAL ENERGY CREDIT TO LESSORS.

(a) IN GENERAL.—Section 44C(d) (relating to special rules) is amended by redesignating paragraph (5) as paragraph (6) and by inserting after paragraph (4) the following new paragraphs:

"(5) EXPENDITURES BY LESSORS.—

"(A) LESSORS.—Nothwithstanding any provision of this section requiring the taxpayer to use a dwelling unit as a residence, if any taxpayer who is the lessor of a dwelling unit makes expenditures which, but for such provision, constitute energy conservation or renewable energy source expenditures, then, for purposes of this section, the lessor shall be treated as having made energy conservation or renewable energy source expenditures in connection with such dwelling unit.

"(B) AMOUNT OF CREDIT.—The amount of the credit allowed under subsection (a) in the case of a lessor shall be the amount otherwise determined under this section, except that in any case in which a deduction under section 167, 168, or 179 (or amortization in lieu of depreciation) is allowed with respect to the dwelling unit, subsection (b) shall be applied—

"(i) by substituting '10 percent' for '15 percent' in paragraph (1), and

"(ii) by substituting '30 percent' for '40 percent' in paragraph (2).

"(C) WHEN EXPENDITURE MADE.—An expenditure with respect to an item shall be treated as made when the original installation of such item is completed.

"(D) COORDINATION WITH OTHER PROVISIONS.—No credit or deduction shall be allowed under any other provision of this chapter with respect to any amount for which a credit has been allowed under subsection (a).".

(b) CONFORMING AMENDMENT.—Subsection (a) of section 44C (relating to general rule) is amended by striking out "In the case of an individual, there" and inserting in lieu thereof "There".

(c) EFFECTIVE DATE.—The amendments made by this section shall apply to expenditures made after December 31, 1981, in taxable years ending after such date.

SEC. 860. AMOUNT OF RESIDENTIAL ENERGY CREDIT.

(a) IN GENERAL.—Subsection (b) of section 44C (defining qualifying expenditures) is amended—

(1) by striking out "$2,000" in paragraph (1) and inserting in lieu thereof "$3,000", and

(2) by striking out "$10,000" in paragraph (2) and inserting in lieu thereof "$15,000".

(b) EFFECTIVE DATE.—The amendment made by subsection (a) shall apply to taxable years beginning after December 31, 1981.

Mr. KENNEDY. Mr. President, I am rising to offer an amendment to increase the incentives for energy conservation by business and individuals. The amendment that I am offering will increase by 5 percent the existing energy conservation tax credit for commercial and industrial energy users.

For many years, I have been seriously concerned about the imbalance of energy incentives provided by the Federal Government. According to the Treasury Department, the incentives for energy production in 1980 were nine times greater than those for energy conservation. In 1980 the Federal Government gave subsidies of $12.3 billion to energy producers in this country—but only $1.3 billion to energy conservation.

This very serious imbalance in our energy incentives will further skew energy investments away from the most cost effective to the least cost-effective investment. In the 1960's, energy supply absorbed only 24 percent of new plant and equipment expenditures. By 1977, it had jumped to 43 percent. This dramatic shift in capital resources in our society is having a major impact on our economy.

The Harvard Business School Energy Project studied industrial energy conservation. It concluded that incentives as large as a 40-percent tax credit were justified. I quote:

American industry, as well as other sectors, is subject to a continuing "consumption bias."

This bias has very serious implications for both the individual company and the Nation. It means that conservation is not being achieved at anything like an economic rate. In effect, the industrial sector is seriously underinvesting in energy efficiency.

The 1978 National Energy Act provided a limited 10-percent credit for conservation investments. But, given the financial hurdle, this credit seems much too low. Significantly greater tax credits, up to 40 percent, plus accelerated depreciation or direct financial payments, are required. In addition, energy conservation loans and grants for small businesses, which are often cash-strapped, are needed. . .

Since this legislation is proposing major changes in incentives for oil production. I believe it is essential that new incentives for energy conservation should also be adopted in order to prevent Federal energy policy from being further prejudiced against energy conservation. The amendment that I am offering will make several changes. I would like to summarize them:

First, it will expand the list of equipment eligible for the industrial energy conservation tax credit. The IRS has interpreted the existing legislation in an overly narrow fashion.

Second, the legislation will make eligible for the increased energy conservation tax credit commercial energy savings equipment which the IRS excluded through its narrow interpretation of the existing law.

Third, the legislation will establish an innovative energy conservation capital investment tax credit which will reward energy saving capital projects that are developed by business even though the equipment is not included on the legislated list of equipment.

Finally, the legislation will increase the limits on the homeowner energy conservation tax credit to account for inflation. The amendment will also make the rental buildings eligible for the tax credit.

In my discussion of this amendment with other Members, several issues have been raised:

The first is whether this is the right time to offer such an amendment;

Second. is whether this amendment is too expensive; and

Third. is whether conservation incentives are needed at all.

First, some of my colleagues have argued that this is not the time to offer this amendment because hearings have not been held in the Finance Committee on this matter. I would like to point out that in the last several years scores of hearings on energy conservation have been held. Hearings have been held in the Senate Finance Committee during the last session on a bill very similar to the amendments that I am proposing at the present time. There have been so many hearings on energy conservation in recent years in Congress that a computer printout of them runs nine pages long. I think we have had more than enough hearings on this subject. I think it is time to move forward and approve new incentives for energy conservation.

Second, some have argued that this amendment is too expensive. They refer to estimates of revenue loss in the range of $2 to $3 billion. I do not believe this is a sound estimate of the costs of this amendment. The Joint Committee on Taxation originally estimated the cost of the business energy conservation tax credit. Their estimate was 58 percent higher than the actual tax expenditures. Thus, the cost of this amendment will be between $1 and $1.5 billion rather than the $2 to $3 billion that has been referred to by some of my colleagues.

When the windfall profit tax was enacted, 15 percent of those revenues—or $34 billion—was set aside for energy programs. Thus, the revenues for this amendment are clearly available from the windfall tax.

Mr. President, I think that is important to note that at the time of the acceptance of the windfall profit tax, there were very clear findings by the Senate and by the House of Representatives. One of the important findings was the continuing need for a program to help and assist the neediest people in our society, with a home heating oil program.

The Finance Committee, in its conference with the House of Representatives, earmarked one-quarter of the windfall profit tax to be used for the elderly people and the needy people in our society because, as a result of the decontrol and the explosion of home-heating oil prices, it was going to adversely affect, in a very dramatic way, the energy situation for millions of elderly people.

The Congress has really failed to meet that particular requirement. The conference on the windfall tax also allocates 15 percent of the total windfall revenues, or $34 billion, for energy conservation.

What I am doing here today is taking the $1.5 billion of that $34 billion, which has been earmarked for energy conservation, and proposing that it be used to save oil in American industry and in the commercial sector of our economy.

That, I believe, is in our national security interest in backing off the importation of oil and is necessary to redress what I consider to be the unjust and unfair balance in the incentives between the production of new energy and conservation of energy.

I point out to my colleagues that there is a basic difference between incentive and capability. We all have the incentive to do many things that we simply do not have the capability to do. That is especially the case with regard to energy conservation with investment expenditures.

The fact of the matter is, Mr. President, as I have seen in my conversation with many members of the business community, they want to move ahead in the areas of energy conservation and energy efficiency. But with the high cost of capital and other requirements within the industrial sector of our economy, energy is one of the important considerations, but usually only a second-, or third-level consideration, not the No. 1 priority. We believe that with a 5-percent increase in the investment credit, it will move to the No. 1 and what we will see is significant and dramatic increases in the conservation of energy and the backing off of imported oil.

It is not only my belief, Mr. President, but the conclusion of various studies that I have referred to in the other parts of my statement.

As I said earlier, many of the companies that need to do the most to increase their energy efficiency have the least capital available because their energy prices have risen dramatically. This is true with regard to many of the older companies in my part of the country. The margin of profit in many of the textile plants, the ones that still remain in Massachusetts or New England, may be, 1, 2, maybe 3 percent. That is true, as need, with many of the still remaining shoe plants. Yet they use, particularly in textiles, enormous amounts of energy and they just do not have the resources to be able to make this kind of investment. This credit will have, I think, an important additive effect in encouraging their determination to take the kind of conservation steps which are in the national interest.

So, Mr. President, just at the time when they need to increase their investment to cut energy use, the costs have risen so that they have less money to make those investments.

Mr. President, I believe that it is critical that we reduce our oil imports. Every major independent study has concluded that investments in energy conservation are the most effective method of reducing oil imports. This legislation will reduce oil imports by the mid-1980's by as much as 1 million barrels a day. It is true that these investments would occur at some time in the far distant future. But, economists such as Paul McAvoy of Yale, who was on President Ford's Council of Economic Advisers, and Morris Adelman of MIT have both estimated that it will take up to 10 years for the market to respond to price increases. Thus, I believe that it is critical that we move forward now. We must increase our incentives for energy conservation. By this action we can increase our energy security, cut the flow of dollars leaving our Nation, and begin to rebuild the economic base of our economy. I hope my colleagues will join me in supporting this amendment.

Before yielding the floor, Mr. President, I note on the floor at this time the distinguished Senator from Wyoming (Mr. WALLOP) who has been a real pioneer in this area. He has introduced separate legislation on this subject matter and has been one who has brought this issue on a number of instances to the Senate's attention. We have worked closely on this measure in the past and I want to acknowledge his leadership in this important area of public policy at the present time. We do have some differences as to the timeliness of addressing this issue. but the Senator from Wyoming has been a real leader in this area and I acknowledge his leadership and

commend it. I am very hopeful that, at some time, we can achieve both his objectives and mine.

Mr. President, I yield the floor.

The PRESIDING OFFICER (Mr. WEICKER). Who yields time? The Senator from Wyoming.

Mr. WALLOP. Mr. President, I thank the Senator from Massachusetts for his kind remarks. I also would like to congratulate him for bringing the issue once again to the Senate's attention. As he knows and has stated, I, too, have long been interested in the subject of tax incentives to encourage energy conservation.

In fact, on September 25, 1979, during the last Congress, I introduced my first bill in this area. That legislation was followed toward the end of that Congress by a revised bill, S. 3006. That is a number that is, perhaps, not attractive to the gun control advocates, but as a westerner, S. 3006 was a very appropriate designation for a bill that was designed to shoot directly to and at the energy problems of this country when it comes to industrial energy.

As a matter of fact, Mr. President, industrial energy results in America are stunning. Our industrial conservation achievements are far greater than the results that have been in conventional domestic energy conservation.

I think it is important to note that what we are talking about now are investment decisions. Industrial efficiency investments are in direct competition for the capital expenditures of any industrial entity for the profits and returns to their company.

My old bill, S. 3006, was the subject of hearings before the Senate Committee on Finance last year, and was the predecessor to my current legislation, S. 750. It is my understanding that the amendment before us as proposed by the Senator from Massachusetts is substantially similar to the legislation that he and I together, with many other Senators, have introduced, and which is currently pending before the Senate Finance Committee. I ask the Senator if that is not correct.

Mr. KENNEDY. The Senator from Wyoming is correct. The amendment proposed is an accommodation of the Wallop-Kennedy bill and the commercial sections of the Tsongas-Kennedy legislation. I commend the Senator from Wyoming for his long-term interest in conservation. I remember he was chief Republican sponsor of the Energy Productivity Act in 1979, which I offered. That amendment related to the importance of industrial-commercial energy conservation. I know we will achieve the passage—perhaps today—of some important tax incentives in this area. But I do acknowledge, as I mentioned before, the very excellent work done by the Senator from Wyoming in this particular area. He has been the pioneer here.

Mr. WALLOP. Again, Mr. President, I thank the Senator from Massachusetts for his kind remarks. As he has indicated, this amendment is similar to the legislation that I have proposed, which Mr. KENNEDY and Mr. BOREN have cosponsored, as well as Mr. PERCY, Mr. LONG, Mr. CHAFEE, Mr. TOWER, and numerous other Members from both sides of the aisle. It is my understanding that this legislation now has in excess of 15 cosponsors, which indicates the general level of interest that the Senate expresses in it.

It also tends to indicate something which I think the Senate ought to be aware of, Mr. President. That is, it is cosponsored by people from energy-producing States as well as from energy-consuming States. It is that kind of philosophical concept which is obviously of benefit to the country when you have the producers and consumers, generally speaking, on the same side of an issue. Industrial energy conservation is of interest and concern of the entire Nation.

The legislation, S. 750, is currently pending before the Committee on Finance. While I find myself in general agreement with what the Senator from Massachusetts is attempting to accomplish today, reluctantly I must oppose his amendment at this time. I take this position not because we disagree on the merits of this proposal, but rather because I think the Senate Finance Committee deserves a further opportunity to review this issue prior to the full Senate acting on it.

One of the reasons is that it is a complicated tax matter. It is a matter which requires a very specific forecasting capability. But at a time when we are narrowly trying to balance budgets, narrowly trying to define areas of revenue which are predictable and areas of expenditures which are predictable, it is the wrong moment in time to move this in.

I am convinced we can achieve that and I am convinced we can get the support of the administration on it. But it is the wrong moment to put it on this bill.

Mr. President, I am chairman of the Subcommittee on Energy and Agricultural Taxation of the Committee on Finance and it is my firm intention to proceed expeditiously with hearings on this and other energy tax issues early this fall.

In fact, we have already had hearings on several pending bills in the energy tax area. We had planned to schedule a hearing on S. 750 earlier this year, but we decided to postpone consideration to allow both the administration and the Senate Finance Committee to concentrate on the more general tax issues contained in the bill here before us. I believe the Department of the Treasury is examining S. 750 and hopefully this measure can be considered in the second tax bill.

I point out to my colleagues that the Senator from Kansas (Mr. DOLE) has discussed this issue with me in the past and I think I can fairly state, even in his absence, that he generally is in agreement with me that the Senate Finance Committee must consider a variety of energy tax issues, including those contained in S. 750 during this Congress. This is particularly true as the majority of the energy tax credits contained in current law will be expiring as of December 31, 1982.

One of the reasons why I believe it is important at this time to view the variety of energy tax incentives is that I believe the tax incentive concept will be basically the only energy game in town. The Senate and Congress have put into place a number of measures which are designed to enhance the public's acceptance of and participation in conservation measures. Now we are trying to do something which is substantially different for the industrial energy users.

Industrial energy users, as I stated earlier, really have done the significant energy conservation job in America to date. They really have made all the investments that are easy, and the record of industry in energy conservation is very significant. That is not to say that there are not some simple things that can be done in a variety of industrial areas of consumption. However, as an entity, as part of the American economy, those industrial users of energy have achieved significant savings. But now the investments they make in energy conservation are substantially more expensive. Without a tax credit incentive, many of those investments will be delayed.

In many respects, I believe it is a demonstrable fact that industrial energy consumption, based on its rising curve or rising predicted curve, has achieved about a 40-percent reduction in energy consumption since the beginning of the energy crises that caught the attention of the country.

So, what we are trying to do now—and the Senator from Massachusetts is quite right in his remarks and in pointing out to the Senate what we are trying to do—is to make, in the scheme of corporate decisionmaking, the most attractive decisions, those in the area of energy conservation.

Where we are now is: Improve the net return on industrial conservation investments to large industrial energy users. We must keep in mind that energy efficiency investments are in real competition with other kinds of production measures.

One other thing: We have perhaps only just begun to recognize that conservation need not be equated with deprivation, with discomfort, with a lower level of productivity. Indeed, the answer to all of it is exactly the opposite—that real industrial energy conservation is part and parcel of the whole scheme of the effort of this administration, of the Senator from Massachusetts, and of myself, which is productivity. The link between energy efficiency and increased productivity must not be overlooked.

Obviously, if you make seven things whereas you made two before, with the same amount of energy, you have achieved two things in the national interest. You have upped productivity and you have essentially decreased energy use, both of which are in the interests of economy and both of which are in the interests of stability in America. We have and continue to have a reliance on sources of energy that are not within our control. Increased industrial energy efficiency can help this Nation reduce its vulnerability to foreign energy supply disruptions.

So, as we proceed down this road, I know that the Senator from Massachusetts will be a strong advocate for this proposal.

It is interesting—and I mentioned it earlier, when I came to the Chamber—that you would have a Senator whose State, if it were a nation, would be about the eighth largest energy-producing country in the world. Wyoming has oil, gas, uranium, and coal in extraordinary abundance, as well as the export of generated electricity. And Senator KENNEDY represents a State whose economy is a large energy consumer.

The fact is that my State has suffered greatly from the increased energy production. We have moved in a decade from essentially a State with an agrarian and tourist-oriented economy, a rural State, with no industrial base, to a State which has been vilified on national television, unfairly, because of urban and social problems that have sprung up in less than a decade.

Now, with the overthrust belt, where the Nation's most prolific, new oil and gas discoveries are taking place, we have communities that have gone in a year from a population of 2,500 to 8,000 or 9,000.

They are trying to provide law enforcement services, firefighting services, hospital and medical services, and roads to transport them, housing for them, as well as sewers and water and some kind of maintenance of lifestyle for the people who are there.

We do not want any more acceleration than we are suffering. We would prefer to have not quite the acceleration that is going on.

That is the kind of thing that brings the Senator from Massachusetts and me into the arena at this time. His dependent industries are critically in need of a reliable and predictable source of energy in this country and a means by which to use that energy efficiently.

We join together at this moment—not at this particular moment, but at this moment in this Congress—in viewing energy conservation through tax incentives as one of the really creative ways to get to a point of common benefit for producers and consumers.

Mr. KENNEDY. Mr. President, the Senator has very eloquently described the common interests of people in his State and my State on this particular issue. Even though we come from dramatically different sections of the Nation and our problems are really quite different, we find a common purpose in this particular approach to the problem.

I see in my own State of Massachusetts and in many other parts of New England, as well as in many other industrial areas of the country, older industries trying to cope with the explosions of costs in terms of energy, with all the implications that has in terms of jobs as well as in terms of the ability of people to heat their homes. With respect to the dislocations of industries, the changing of the various communities in terms of form and structure and the base which had been a part of that community over a period of years, there have been very dramatic and significant changes. The Senator from Wyoming has outlined graphically some of the changes in his own State.

What I believe both of us agree on is that what is clearly in the interests of producers and consumers in this country is energy efficiency, energy productivity, and energy conservation. We know that industries in this country have turned down their thermostats about as far as they can. Some of the most modern industries in this country have done so. At IBM, they have been able to reduce their energy consumption 28 or 30 percent, with the utilization of computers and sophisticated thermostats.

Basically, what we are talking about is the industrial and commercial base of this Nation, and in that area there has been not ready enough movement. We have seen efforts of Congress to try to encourage the producers of automobiles to move toward increased miles per gallon, with some success. I believe that if we had not been as successful as we have there might not be any automobile industry in this Nation, because of the demand of consumers for transportation that will get greater efficiency. We know that of the total oil consumption in this country, about half is used in transportation. We have tried to address that issue in other ways. But a very large percentage of our oil use is used in this industrial and commercial sectors.

Very little attention has been given to that industrial and commercial base by Congress to help the private sector, to assist our national objectives in terms of energy policy.

Mr. WALLOP. Mr. President, as the Senator well knows, we did do some things with the intent in mind of attracting investments in industrial energy conservation. But one of the things we did was so narrowly defined as to what would qualify for those credits that we had expected to spend some $600 million by now in inducing and providing incentives for people to make these investments, and they have not done it. They have not done it for the simple reason that Congress thought it knew better than industry what it would save.

We so narrowly defined the provisions in the law that industry took a look and said, "We cannot qualify no matter what we do."

Part and parcel of that portion of the Senator's amendment which comes from our bill is to broaden the definitions and make qualification dependent not on the technique that they choose but the savings that they achieve. This is the area where we are hung up on right now on this bill. At this moment it is difficult to project the energy savings that will result and we cannot project a predicable amount of money to the satisfaction of the administration or the Joint Committee on Taxation, but certainly it is within the intellectual capacity of this body to arrive at at some time.

Mr. KENNEDY. I again commend the Senator for his leadership in this area and understand his concern about the appropriateness of the timing of this amendment.

The matter that concerns me is that within the framework of this legislation there already are important incentives for the production of new energy. I am aware of what the outcome will be on that issue, and I think there will be an amendment to increase those incentives even further this afternoon. Therefore, it seems to me to be appropriate to remind ourselves of the importance of energy efficiency and productivity. I know the Senator from Wyoming is completely committed to this concept.

I understand his concern about the appropriateness of the time. I want to give assurance to the Senator from Wyoming I will continue to work with him. I have no illusions that we will be successful in the final outcome on the vote, but I give him the assurance that I want to work closely with him in the future on this important area of energy policy. I think it is enormously important for the country. I think it is important in terms of our modernizing American industry, and it is an important aspect of reindustrializing America. I think it means jobs for men and women in this country. I think it helps to make America less dependent upon Middle East oil, and it is in our national security interest.

So I want to give assurance to the Senator from Wyoming of my regard for the work he has done on it and on this issue of my desire to continue to work closely with him.

Mr. WALLOP. I want to express one particular piece of delight at something the Senator from Massachusetts said. It is time America began to realize what it is, that energy conservation and industrial efficiency do not mean a loss of jobs but an increase of jobs.

There was a period of time—we will not go into names or dates, but there was a period of time—when conservation was construed as sort of static status, that we would not or should not grow and everybody had to give up a little bit and suffer a little bit in order to achieve it.

I think where we are now today is saying that it is not necessarily so; that real energy conservation, especially industrial energy conservation, means more jobs, cheaper products, and a better and more healthy economy, a growing economy, and once again a horizon to look up to with hope and confidence.

I think if we have achieved nothing else by our joint efforts in this area it is to take conservation out of the realm of sacrifice and suffering, and put it into the realm of legislative creativity and economic and engineering creativity. Cooperation between business and government can put us to the point where we can look to the future with some kind of optimism that will bring us again to a level of rising horizons and rising expectations while, at the same time, fulfilling the national need to be accountable for what we use at any given moment in that time.

I will ask the Senator if it is his intention to have a vote on this.

Mr. KENNEDY. I would like to get a vote on this question because the leadership of both sides might wish to do so shortly after 2.

Mr. TSONGAS. Mr. President, I rise in support of the Kennedy-Tsongas amend-

ment to the Economic Recovery Tax Act of 1981. It is a consolidated version of Senator WALLOP's Industrial Energy Security Tax Credit Act (S. 750), Senator KENNEDY's Energy Productivity Act (S. 787), and my Commercial and Multifamily Energy Tax Credit Act (S. 1323).

Energy conservation is the lowest cost energy resource available to us today.

Energy conservation has tremendous potential to bolster the economy.

Energy conservation is the best weapon we have against OPEC and it provides insurance against future price rises.

Yet, today there are serious financial and market barriers which inhibit the spread of energy construction measures. This amendment will lower these barriers in the industrial, commercial and residential sectors by expanding the existing tax credits. Such tax credits need no bureaucracy to administer them. Instead, they rely on the decisions of consumers in the marketplace. The administration's stated energy policy recognizes that energy tax credits are an effective mechanism to encourage investments in energy efficiency and recognizes their use.

Studies by the National Academy of Sciences, the Mellon Institute, the Harvard Business School and many others all show that energy conservation is the most readily implemented and most cost-effective energy resource available today. The Mellon Institute study indicated that in 1978, if we had followed the most economic path, we would have used 25 percent less energy—and consumers would have paid 17 percent less for the same energy services. The recent study by the Solar Energy Research Institute concludes that by the year 2000 we could cost-effectively reduce our end use of energy by almost 20 percent and still increase our GNP by 80 percent from today's levels.

Last year we spent nearly $80 billion for foreign oil. This dollar drain greatly increased the trade deficit, fed inflation, and weakened the dollar. Energy conservation can greatly reduce the need for this oil. Recent economic improvement has been due, in part, to conservation efforts and the related world oil surplus and oil price reductions. Long-term economic recovery requires major investments in energy efficient equipment.

Energy conservation is the best weapon we have against OPEC. It is already having a significant impact on the world oil market. U.S. oil consumption in 1980 was 7.7 percent less than in 1979. A further decrease of 4 percent is expected in 1981. As a result America has been able to cut daily oil imports from 8.8 million barrels in 1977 to a daily rate of less than 6 million barrels this year. Automobile fuel economy standards and mileage performance labeling are a major factor in these savings. Worldwide oil demand has also dropped. Even though OPEC production has decreased almost 20 percent since 1979, there is still an oil surplus on the market, which is forcing prices down.

Although conservation efforts have helped already, we cannot afford to be complacent. The current so-called oil glut will not last. Without much more conservation, we will again be subjected to drastic price rises, increasing inflation overall, and a declining economy. Supplies could tighten at any moment due to supply disruptions, an expanding world economy, declining reserves, or a host of other factors. We now have a little breathing space; we must take advantage of it.

To seize this opportunity, we continue to need strong Federal initiatives in support of conservation activities. The private sector alone cannot do the job because market imperfections and financial barriers inhibit private investment in energy conservation. Price controls, expensing of intangible exploration and development costs, depletion allowances, average rather than marginal pricing, and a host of other direct and indirect energy use subsidies reduce the private sector's incentive to make investments. At the same time, high interest and inflation rates make it that much more difficult to invest. Because of this, many cost-effective energy efficiency improvements are simply not being made.

Furthermore, fossil fuels are a finite and diminishing resource; a supplies tighten in the future, prices will rise. The market by itself does not anticipate these price hikes adequately. Capital investments in energy inefficient equipment made today will cost us dearly for years to come. Investment must be steered into energy efficient equipment. This amendment will stimulate these investments by providing appropriate tax credits to the commercial and industrial sectors.

In the residential sector there are market barriers as well preventing conservation improvements in rental housing. At present, neither the renter nor the rental property owner has an effective incentive to invest in energy efficiency. The average renter does not stay long enough to consider the investment warranted. The landlord often finds he can pass along most or all of the energy costs to renters. Because of their ownership interest, landlords are the more likely party to invest in energy conservation. Therefore, this amendment extends the residential energy tax credits to them.

The changes this amendment makes are vital to the energy security of our Nation and the welfare of our citizens. In 1977, the industrial sector used 30 quads of energy; the commercial sector used 10 quads, and rental housing 5 quads. This adds up to almost 60 percent of our Nation's total energy demand—roughly 22.5 million barrsl of oil equivalent per day. With cost-effective investments in energy conservation improvements, one-third of this energy could be saved. This represents more oil than we now currently import. Yet, because of financial and market barriers, this potential is virtually untapped today.

Mr. President, I believe there is a clear need for this amendment. I urge its adoption by the Senate, and I commend Senator KENNEDY for his initiative.

Mr. LEVIN. Mr. President, I would like to direct a question to the distinguished Senator from Massachusetts, the sponsor of this amendment. A number of people have reported to me their dismay over IRS rulings with respect to automatic energy control systems for environmental or space conditioning.

The IRS has interpreted existing energy tax credit law very narrowly. IRS has determined that automatic energy control systems associated with commercial or industrial processes are eligible for the energy investment tax credit. But automatic energy control systems, installed in schools, buildings, retail stores, or hospitals, designed to control room or space temperatures are excluded from the energy investment tax credit. In the interest of clarifying the intent of this legislation, will the Senator from Massachusetts tell me whether automatic energy control systems designed to control room temperatures qualify for the energy investment tax credit under this amendment and, if so, what restrictions would apply to the control systems?

Mr. KENNEDY. I would like to assure the Senator from Michigan that one of the main purposes that I am offering this legislation is to overturn the IRS's interpretation that automatic energy control systems used to control heating and cooling in commercial buildings are not eligible for the tax credit. Section 503(b)(5)(a)V specifically lists automatic energy control systems as eligible for the credit. And, subsection 28 further states that:

> Any reduction of the amount of energy consumed in connection with such a facility will be treated as a reduction of energy consumed in a commercial process.

I hope this information clarifies the situation for the Senator from Michigan.

● Mr. LEAHY. Mr. President, I support the amendment offered by the distinguished Senator from Massachusetts.

Mr. President, energy conservation efforts have played a significant role in reducing U.S. crude oil imports to just 4.7 million barrels a day, down some 30 percent from 1 year ago. Conservation measures have saved Americans and American industry millions of barrels of oil and gasoline and hundreds of millions of dollars.

Although the Energy Tax Act of 1978 provided some incentive for energy conservation investments, the language in and regulations resulting from this act left many effective energy conservation technologies ineligible for the energy tax credit, and prohibited the rental housing and commercial sectors of our economy from applying for energy tax credits. This amendment wisely seeks to expand the definition of eligible property and equipment and increase the credit to 20 percent. In addition, this amendment would expand the credit to cover the commercial and rental housing sectors of our economy—which together account for approximately 20 percent of the energy used in the United States today. Finally, it extends the energy tax credits until 1985.

Mr. President, this amendment would provide needed incentives for industry to make the energy efficiency investments necessary to produce more goods and services with less energy. It will also allow the commercial establishments in this country to reduce their energy use and costs. Finally, landlords will now have the needed impetus to make energy

conservation improvements on the Nation's rental housing stock.

Mr. President, energy conservation is an integral part of U.S. energy policy and must be pursued vigorously. It is unfortunate that this administration has chosen to downplay the demonstrated and impressive results of energy conservation efforts. Nonetheless, passage of this amendment will spur this country on to greater energy efficiency—a most necessary and worthwhile goal. I urge my colleagues to support this amendment and I ask to be added as a cosponsor.●

Mr. WALLOP. The distinguished majority leader is currently on the floor. He too, has had a keen interest in the subject of energy conservation and fuels conversion incentives. It is my understanding that he would like to address the pending amendment at this time, and therefore I would like to yield to him.

Mr. BAKER. I thank the distinguished Senator from Wyoming (Mr. WALLOP) and also the distinguished Senator from Massachusetts (Mr. KENNEDY) for their efforts in this area. The Senator from Wyoming (Mr. WALLOP) is correct in recognizing my support for energy conservation and fuels conversion incentives. My long service on the Senate Environment and Public Works Committee has made me a true believer in the merits of energy conservation. Anything we can do, within appropriate budget constraints, to provide the necessary incentives to replace our outmoded, inefficient, industrial plants and equipment has my support.

Furthermore I am also supportive of efforts to accelerate the pace at which we convert from our more precious liquid and gaseous fuels to coal. This country has tremendous coal resources that even today are not being effectively utilized. We must get on with the job of converting to the direct burning of coal where appropriate and additionally with our programs to indirectly use that coal through conversion to synthetic fuels.

Unfortunately, I too, must oppose the amendment of the Senator from Massachusetts (Mr. KENNEDY) at this time. There are a number of energy issues that the Senate will have to consider in the near future. This is particularly true in the energy tax credit area where many of the current credits are scheduled to expire. Because neither the Senate Finance Committee nor the administration has had the opportunity to address these issues in the manner which they deserve, I cannot support inclusion of this amendment in the legislation before us. I would like to ask the Senator from Kansas (Mr. DOLE) however, what his intentions are in regard to energy tax issues, particularly those credits which are due to expire at the end of 1982.

Mr. DOLE. The Senator from Wyoming (Mr. WALLOP) has requested that we schedule hearings early this fall on energy tax issues. I am fully supportive of that request.

As the distinguished majority leader knows, there are a variety of tax issues, including those in the energy area which are not addressed by the legislation before us. I have committed, as has the administration, to begin consideration of a second tax bill later this year. Under the excellent leadership of the Senator from Wyoming (Mr. WALLOP) I am sure that the pending energy issues will receive extensive and enlightened consideration.

Mr. BAKER. I thank the distinguished chairman of the Finance Committee. As he knows, one issue of particular concern to me that is not addressed by the pending amendment is the issue of progress expenditures for synthetic fuel facilities. While the administration's first bill did include such a provision, the legislation here before us is silent on that subject. Because a synthetic fuel facility typically takes from 5 to 6 years to build, being able to claim depreciation during the construction phase is extremely important. I know this is particularly true for several of the projects currently pending before the Synthetic Fuels Corporation, including at least one in my own State. Would the chairman of the Finance Committee care to comment on whether this too would be an appropriate item for further consideration. As the Senator knows, the economics of Eastern coal are such that a viable synthetic fuels industry based on that energy source will, in my judgment, require appropriate Federal incentives.

Mr. DOLE. As usual, the distinguished majority leader has demonstrated his ability to consider a complex piece of legislation and focus on an issue that deserves further consideration. The issue of progress expenditures, particularly for synfuels facilities, is another issue that the Finance Committee will be addressing in the near future. I know the Senator from Wyoming (Mr. WALLOP) is also interested in that issue.

Mr. WALLOP. My distinguished chairman is correct. I very much appreciate the distinguished majority leader's expression of interest in the issue of progress expenditures for depreciation. I would be most happy to work with him in formulating a proposal for consideration by the Finance Committee in the near future.

Mr. BAKER. I appreciate the comments by the Senator from Wyoming (Mr. WALLOP) and again express my sincere appreciation to both him and Senator DOLE for their leadership in these matters.

Mr. WALLOP. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. DOLE. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER (Mr. PRESSLER). Without objection, it is so ordered.

Mr. DOLE. Mr. President, as I understand it now, there are two matters pending. One is the Kennedy amendment. That is the pending matter, the Kennedy amendment.

The PRESIDING OFFICER. The Senator is correct.

Mr. DOLE. And another amendment offered by the Senator from Kansas has been temporarily laid aside.

The PRESIDING OFFICER. The Senator is correct.

Mr. DOLE. A parliamentary inquiry, Mr. President.

The PRESIDING OFFICER. The Senator will state it.

Mr. DOLE. At 2 o'clock we will dispose of the Kennedy amendment. That will be followed by the Bentsen amendment. Is that the agreement?

The PRESIDING OFFICER. At 2 o'clock the Senate will resume consideration of the Bentsen amendments.

Mr. DOLE. The amendments in the first and second degree?

The PRESIDING OFFICER. The Senator is correct.

Mr. DOLE. If the Senator from Kansas should propose an amendment at this time, if I have consent to propose an amendment, that could be disposed of following the Bentsen amendment?

The PRESIDING OFFICER. The Senator is correct.

Mr. DOLE. In other words, the Senator from Texas has been assured that we will first dispose of his amendment and then there would be an amendment by the Senator from Kansas.

With that understanding, that we will not interfere with the rights of the Senator from Texas, and that I do preserve his right to have either an up or down vote or a tabling motion on his amendments, I ask unanimous consent that I might offer an amendment at this time which would not be taken up until after the disposition of the Bentsen amendment.

The PRESIDING OFFICER. Is there objection? Without objection, it is so ordered.

UP AMENDMENT NO. 257

(Purpose: Relating to the rate of tax on newly discovered oil)

Mr. DOLE. Mr. President, I send an amendment to the desk on behalf of myself, Mr. BOREN, Mr. NICKLES, and Mr. WALLOP, and ask for its immediate consideration.

The PRESIDING OFFICER. The amendment will be stated.

The assistant legislative clerk read as follows:

The Senator from Kansas (Mr. DOLE), for himself, Mr. BOREN, Mr. NICKLES, and Mr. WALLOP, proposes an unprinted amendment numbered 257.

Mr. DOLE. Mr. President, I ask unanimous consent that further reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment is as follows:

Strike out all after "Viz:" and insert in lieu thereof the following:

On page 160, strike out the matter following line 22 and insert in lieu thereof the following:

"For taxable periods beginning in:	The applicable percentage is:
1982	22.5
1983	15
1984	7.5
1985 (and thereafter)	0

Mr. DOLE. Mr. President, I will not discuss the amendment until the amend-

ment of the Senator from Texas is disposed of.

This amendment would phase out the windfall profit tax on new oil after December 31, 1984.

Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The bill clerk proceeded to call the roll.

Mr. DOLE. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. DOLE. Mr. President, it is the understanding of this Senator, and I think the Senator from Virginia, that at 2 o'clock we will vote on the Kennedy amendment. Senator KENNEDY is not on the floor at this time. I understand he was not able to get the yeas and nays because there were not enough Senators on the floor. If that is not clear, I ask unanimous consent that at 2 o'clock there be a motion to table the Kennedy amendment or a vote up or down, depending on the Senator's wishes.

Mr. HARRY F. BYRD, JR. Does the Senator ask for the yeas and nays?

Mr. DOLE. At the appropriate time I will move to table the amendment. If that time has arrived, I will move to table the Kennedy amendment, and I ask for the yeas and nays.

Mr. President, I ask for the yeas and nays.

The PRESIDING OFFICER. Is there a sufficient second?

There is a sufficient second.

The yeas and nays were ordered.

Mr. HARRY F. BYRD, JR. Will the Senator wait until Senator KENNEDY arrives before making his motion?

Mr. DOLE. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The bill clerk proceeded to call the roll.

Mr. DOLE. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER (Mr. SCHMITT). Without objection, it is so ordered.

The question is on agreeing to the motion to lay on the table.

MOTION TO TABLE UP AMENDMENT NO. 256

The PRESIDING OFFICER. The question is on agreeing to the motion to lay on the table the amendment of the Senator from Massachusetts.

Mr. BAKER. Mr. President, was the inquiry whether the yeas and nays have been ordered to the tabling motion or on the amendment?

The PRESIDING OFFICER. The yeas and nays have been ordered on the tabling motion. The clerk will call the roll.

The assistant legislative clerk called the roll.

The PRESIDING OFFICER (Mr. DOMENICI). Are there any other Senators in the Chamber wishing to vote?

The result was announced—yeas 54, nays 46, as follows:

[Rollcall Vote No. 208 Leg.]

YEAS—54

Abdnor	Grassley	Packwood
Andrews	Hatch	Percy
Armstrong	Hatfield	Pressler
Baker	Hawkins	Quayle
Boren	Hayakawa	Roth
Boschwitz	Heinz	Schmitt
Byrd, Harry F., Jr.	Helms	Simpson
	Hollings	Specter
Cochran	Humphrey	Stafford
D'Amato	Jepsen	Stennis
Danforth	Kassebaum	Stevens
Denton	Kasten	Symms
Dole	Laxalt	Thurmond
Domenici	Long	Tower
Durenberger	Lugar	Wallop
East	Mattingly	Warner
Garn	McClure	Zorinsky
Goldwater	Murkowski	
Gorton	Nickles	

NAYS—46

Baucus	Exon	Mitchell
Bentsen	Ford	Moynihan
Biden	Glenn	Nunn
Bradley	Hart	Pell
Bumpers	Heflin	Proxmire
Burdick	Huddleston	Pryor
Byrd, Robert C.	Inouye	Randolph
Cannon	Jackson	Riegle
Chafee	Johnston	Rudman
Chiles	Kennedy	Sarbanes
Cohen	Leahy	Sasser
Cranston	Levin	Tsongas
DeConcini	Mathias	Weicker
Dixon	Matsunaga	Williams
Dodd	Melcher	
Eagleton	Metzenbaum	

So the motion to lay on the table was agreed to.

Mr. DOLE. Mr. President, I move to reconsider the vote by which the motion was agreed to.

Mr. BAKER. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

UP AMENDMENTS NOS. 253 AND 254

Mr. DOLE. It is my understanding that we will now move to the Bentsen amendment, which is in the first and second degree. Do we have a time agreement of 2 hours?

Mr. BENTSEN. We have not reached a time agreement.

First, let me say to the chairman of the committee I want to thank him and I want to express my appreciation for working out the procedure with the distinguished majority and minority leaders, and to thank him for the able manner in which he is running his committee on the tax bill.

Mr. DOLE. Could we agree on, say, an hour to a side?

Mr. BAKER. Mr. President, if the parties will agree to that, I think that will materially assist the Senate. I ask unanimous consent that there be a 2-hour limitation on the Bentsen amendment to be equally divided and controlled in the usual form.

Mr. ROBERT C. BYRD. Mr. President, reserving the right to object, I will have to object, not on my part, but for my side of the aisle until I clear it with my side of the aisle.

Mr. BAKER. I will withhold the request with the hope that it will be cleared a little later. I recommend we go ahead with the debate on the amendment and see if we can obtain an agreement.

The PRESIDING OFFICER (Mr. SCHMITT). The Senator from Texas.

Mr. BENTSEN. I might further say to the chairman of the committee that I will be happy to work with the minority and majority leaders and the chairman of the committee to arrive at an agreement on time.

Mr. President, the Senate will soon pass the largest tax cut in the history of this country, and there has been a remarkable amount of bipartisan support for a tax cut. Obviously there is some disagreement as to the manner in which it should be done.

I take some satisfaction in noting that we finally have begun to put the American economy in the position of responding to incentives. We are seeking to encourage the sort of savings and incentives that can lead to greater productivity and more stability and greater real growth in our economy. I have been an active advocate for years of putting incentives into the tax system.

The PRESIDING OFFICER. Will the Senator suspend for a moment? Gentlemen and ladies we must have order in the Senate. Could the Senators carry their discussions to the cloakrooms so that the Senator from Texas can be heard on this extremely important issue?

The Senator from Texas.

Mr. BENTSEN. I thank the Chair.

I think the work we did in the Joint Economic Committee over the last 2 years helped blaze the trail in trying to develop incentives for savings and capital formation, and for increased production in this country.

I would suggest, however, that there is one important area in which the committee bill can be improved. We have embraced the idea that incentives for investment are a key element in restoring a healthy and dynamic American economy. I am proposing an amendment to the vitally important area of domestic energy production. Specifically, Mr. President, my amendment would exclude the first 1,000 barrels of production by independent producers, and 10 barrels by royalty owners, from what I believe was a misguided and ill-advised windfall profit tax.

Let me take just a moment to explain why I think this amendment is necessary, why it makes sense for all Americans, and bolsters the prospects for energy independence as the years pass.

There are about 12,000 independent producers in this country. We are not talking about small mom-and-pop operators, let us get that understood right now. We are talking about substantial business.

If you want to drill for oil at 10,000 feet in Texas today that is going to cost you $1 million. If you want to drill for oil in Oklahoma at 20,000 feet it is going to cost you $10 million. Those are the kinds of funds we are talking about gambling and speculating today in trying to find oil and gas. It has become extremely expensive to search for domestic energy resources, and the costs are rising every day.

What is remarkable about the independent producers is their total commitment to the search for oil and gas in the United States of America. They are not buying real estate with their revenues,

they are not investing in chemical plants, they are not buying shopping centers, and they are not buying department stores. They are putting it back into the ground, drilling for new oil.

All the testimony we had before the Committee on Finance was that the independent producer puts 105 percent of his well-head revenues back into the hole looking for new oil and gas.

He is the fellow who always believes he is going to hit the big one and, thank God, a few of them finally do. The belief that he is going to hit the golden flow is what keeps him in business.

I have often used the example that it is something like having someone hit the daily double at the racetrack. What you really ought to do is to go out to that racetrack, look down at the pavement and see all those torn up ticket stubs of the fellows who did not hit the daily double.

So it is in the oil and gas business today. I think the fact that they put 105 percent of their money that comes out of that hole into new holes in order to find oil and gas is a compelling statistic. He is investing $105 in American energy for every dollar that comes out of that hole.

Our energy producers are totally committed to exploration. How well do they do their jobs? Well, again the matter may be surprising to those who do not follow energy matters closely, or believe that our domestic production is a function of how the majors choose to use their resources.

It is America's 12,000 independent producers who drill 90 percent of the exploratory wells in this country. It is America's 12,000 independent producers who find 75 percent of the new oil and gas fields in this country.

It is America's 12,000 independent producers that account for 54 percent of the new oil and gas reserves that are found in this country. They are the ones who go out and drill those little knotholes when the reserve is really not that great. But with their lower costs of administration, they can develop oil where a major company cannot.

They are the ones who go out in areas that have been drilled over before, where all the experts tell them they are not going to find it, and darned if they do not go in and find it from time to time. So they are the ones who are taking the long risks, the long shots, the big chances, and I believe they ought to be rewarded for it. They are willing to gamble over and over again on America's energy independence, taking that huge element of risk.

They are the ones who help us try to break the back of the OPEC cartel.

What do the majors do in that regard? They find in many cases it is cheaper to buy those reserves than it is for them to explore for them, so they go to that independent and buy it from him. Again, the independent takes that money and puts it back in the ground, often losing it, but once in a while he hits, and every time he hits, America prospers because of it.

The vital importance of the independent producer to our domestic production cannot be seriously questioned. It is clearly in our national interest to encourage these 12,000 risk takers to do what they do best, go out and find the energy assets for America.

Last year my amendment to the windfall profit tax provided the independents with such an incentive by reducing their tax liability on the first 1,000 barrels of daily production. We took it off entirely in the Senate but it was defeated in the House. We were able to take back part of it in conference.

The independents went to work and spent that money drilling for oil and gas. It is a classic textbook example of how our free market system reacts to incentives, and it can be seen in the response of our independent producers.

I remember when we were considering this amendment in the last Congress, Government energy experts came to us and testified that you could not induce any more drilling, it really did not make sense, because there were only so many rigs. At that time, as I recall, there were a little over 2,000 rigs in operation. Today there are over 4,000 rigs operating in the United States, a very substantial increase. With the incentive of reduced tax rates we drilled 62,500 wells last year, and we reversed a generation-long trend of lagging or declining production.

It is estimated that we will drill 72,500 wells this year. That is welcome news, but it still is not enough. If we are serious about achieving energy independence at the earliest possible date, we should double or even triple our current exploration efforts. With the right signals and the appropriate incentives for the independent producer, we can encourage significant new exploration and production.

To those who would suggest that the incentives already provided are adequate and working as intended, I would reply that we can and must do better. The cost of drilling an oil well has increased over 350 percent since 1970. At the same time costs are going up, the amount of easily recoverable oil is going down. The independent producer will, in the future, be forced to drill deeper and in less hospitable terrain to find energy. And that means that his costs are going to go right through the roof. He will need additional incentives to make the additional costs and risks worthwhile.

It has been said by some, "Well, let's wait. Let's not do that now. Let's do that on the next tax bill. Let's not act at this time."

The Secretary of the Treasury, as I understand it, was appearing on a news program for a cable TV on Sunday and he said that because of the indexing provision that was added to the Senate bill, if that remains in the tax bill, that there will be no significant cut in taxes before 1985.

If the Secretary is correct, then it will be 4 years before we can make the necessary corrections to the windfall profit tax that will increase the drilling for oil and gas in this country.

Mr. President, this amendment would free up nearly $2 billion for new exploration and production of American energy in 1983. It means that this amendment would yield an extra 106,000 barrels per day by 1984, with the figure increasing to 234,000 barrels per day by 1987. For the rest of the decade that would mean 140 million barrels of new production—production that will not be realized without the Bentsen amendment.

If we do not produce that energy in America, you know where we are going to buy it. We are going to buy it from a very unstable source of supply—we will buy it from OPEC.

Do not think that this temporary slowing down in the price of oil will always prevail. Once they get that coalition back together, as the Saudis are trying to do, then you can watch them reduce production to try to achieve a stable supply of oil. The sale price for that oil will accelerate as they deem necessary.

So for the remainder of the decade, we will send millions of dollars to the coffers of the Persian Gulf when we could be spending that money right here in America, creating reserves here, creating jobs here, and keeping our dollars at home.

My amendment has a second, equally important purpose, Mr. President. It is designed to correct the bizarre situation in which America's 2 million royalty owners are treated for the purposes of the windfall profits tax—exactly like a major oil company.

The vast majority of America's royalty owners are people of modest means; many of them are elderly or retired citizens for whom the monthly royalty check is the difference between poverty and a dignified existence. They have become casual, accidental victims of punishing taxation aimed at major producers.

Mr. President, I held a hearing down in Austin, Tex. Senator BOREN of Oklahoma was there at that time. We had over 3,600 royalty owners turn out for that hearing—over 3,600 of them were there protesting what had been done to them. In case after case, we had people testify before us telling us that this really was the difference between having a reasonable existence and having to depend on welfare.

As part of the effort to correct this injustice, I worked last year, along with my friends, the two distinugished Senators from Louisiana and Senator BOREN of Oklahoma and others, to get a one-time $1,000 tax credit for royalty owners. It is important to understand, however, that most of the royalty owners have yet to see a penny of that money. The IRS gave royalty owners until June 15 of this year to assemble their documents and file for the credit. In the meantime, 16 months of sharply lower royalty checks have gone by. Sixteen months of bills have been paid. And the money for the tax credit has not yet been received.

Less of a time-lag problem will apply to the $2,500 tax credit proposed in the committee bill. However, the simplest, fairest, and most effective may to correct the injustice of taxing a retired individual at the same rate as a major oil producer with billions of dollars in revenue is to accept my amendment and exempt from the windfall profits tax royalty income from the first 10 barrels per day.

My amendment to provide new incen-

tives for America's independent producers, to increase domestic energy production by 140 million barrels over the next decade, and to correct the blatant injustice of punishing taxation on 2 million royalty owners will decrease windfall profits tax revenues by approximately $2.9 billion in 1982.

The advantages of the 1,000/10 barrel per day exemption are obvious and important. It would be irresponsible, however, to seek those advantages without demonstrating how this revenue loss can be offset. Once such an offset is identified and proposed we can determine the extent to which it serves our national interest.

To compensate for the revenue loss that would result from the 1,000/10 barrel per day exemption, I am proposing to temporarily delay the ACRS leasing provisions contained in the Finance Committee bill until January 1, 1992.

Let me make it quite clear, however, that the first vote would be cast on the 1,000-barrel exemption for independents and the 10-barrel exemption for royalty owners, and, if that is approved, then there would be a vote on the basic amendment as amended.

I have been a strong and consistent advocate of more rapid schedules of depreciation as an incentive for investment in more modern plants and equipment. I believe the Finance Committee bill provides those incentives. We have done a great deal in the area of depreciation.

The leasing provisions I am proposing to delay in the Finance Committee bill are designed specifically to help industries that are not paying taxes. It is important to understand that the leasing provisions are not necessarily the most effective way to achieve the goals of such industries. By the estimate of the Finance Committee staff, only 25 percent of the current usable investment tax credits are held by the truly needy industries. Despite these reservations and shortcomings, I would urge that we focus now on the 1,000 barrel exemption for independents and the 10 barrel exemption for royalty owners.

The main point I want to make is that we are not going to bust the budget. We are talking about actually providing a surplus to the Treasury as a result of my total amendment if it is passed.

I would suggest, Mr. President, that the 1,000 barrels for the independent producers and the 10-barrel exemption for the royalty owners would do more to help us achieve energy self-sufficiency, improve our balance of trade, and rebuild the American economy. If the Senate will accept this offset, there is no negative budget impact, but a contribution to the Treasury.

Incentives for savings, investment, production, and achievement are part and parcel of the American experience. They are vital to our free market system. With this tax cut we are once again moving our economy and Government policy in the direction of freedom and incentives. With this amendment for a 1,000/10 barrel exemption, I am proposing that we apply the same logic—the logic of success—to the production of our domestic energy resources.

Mr. President, my amendment is sound energy policy. With the offset I have proposed, it is sound budget policy. And with the increased production it will yield, it is an investment in America's future that will pay handsome dividends for years to come. I urge its adoption by the Senate.

Mr. President, I ask for the yeas and nays on the amendment.

The PRESIDING OFFICER. Is there a sufficient second? There is a sufficient second.

The yeas and nays were ordered.

Mr. BENTSEN. Mr. President, I yield to my friend, the Senator from California.

Mr. CRANSTON. Mr. President, I want to applaud the effort of the Senator from Texas. He has worked very hard, very creatively, and very diligently on this matter.

I am in strong support of the amendment of the Senator from Texas providing for an exemption—limited to small, independent producers—from the windfall profit tax for the first 1,000 barrels per day of oil production, and providing for a lesser but needed and equitable extension for royalty owners.

The Senate considered and adopted a similar amendment, 53 to 41, when it was offered by the Senator from Texas during the Senate's original consideration of the windfall tax legislation in 1979, with substantial bipartisan support. Twenty-four of our friends on the other side of the aisle joined 29 Democrats to pass the amendment at that time.

Since I believe those votes were cast wisely and sincerely, I would hope that we could expect substantial Republican support again today.

This issue is one which poses a test of conflicting loyalties for those who have previously supported this amendment.

Will they be consistent with their previous judgment of sound public policy? Will they provide necessary tax relief to the independent sector of the oil industry, whose record of reinvestment of profits from oil production in new exploration and drilling is excellent? Or will they, on the other hand, join President Reagan in repudiating his promise to the independent producers by voting against this amendment? We will have to wait and see.

There is no revenue loss involved. Potential revenue losses have been offset by delaying the effective date of the leasing provisions of the bill until 1992.

The amendment has been carefully drafted to limit the exemption to the small, independent producers and to royalty owners.

I believe it is an excellent provision which will help to maintain a level of competition in the oil industry despite administration efforts to tilt domestic energy policies to the benefit of the big, major oil companies.

The independent sector of the oil industry is the most inclined to use its capital for new production. This amendment will lead to increased new production of domestic oil—something we obviously need and need badly.

I urge my colleagues on both sides of the aisle to join me in support of this very important amendment.

Mr. JOHNSTON. Will the Senator yield me 3 minutes?

Mr. BENTSEN. I yield.

The PRESIDING OFFICER. There is no time agreement. The Senator from Louisiana is recognized for as long as he desires.

Mr. JOHNSTON. Mr. President, I am delighted to again join with my distinguished friend from Texas in pushing for this amendment not just for independent producers, not just for royalty owners, but for those who depend on energy in this country.

The distinguished Senator from Texas made, I believe, a very complete statement on this issue of why we ought to have a 1,000 barrel-a-day exemption and why we ought to have a 10 barrel-a-day exemption for royalty owners.

I would simply like to add two points, Mr. President.

First, the trend toward increased drilling in this country, unless this amendment passes, in my judgment will precipitately come down with the enactment of this tax bill.

Why is that? That is because both this bill and the House Ways and Means Committee are lowering the tax rate on unearned income from 70 to 50 percent, a move which I think is widely supported on both sides of the aisle and in both Houses. I think it is virtually a reality.

But we have to recognize, Mr. President, that when that does become the law, the source of funds for independents will be immediately and precipitately dried up. It so happens that much, I might say most, of the drilling funds for independents comes from that 70 percent money. Ordinary people, doctors and others, who have money taxed at 70 percent, when it gets along about November and December and they figure they have nothing else to invest that money in, cannot stand the idea of paying Uncle Sam 70 percent. So they rush out and buy a race horse or buy some other kind of investment, or, in my part of the country, at least, they will get them a drilling deal and put their 70 percent dollars into the drilling deal.

What is going to change under this bill, Mr. President, is that the 70-percent tax rate is coming down to 50 percent and it is no longer going to be nearly as attractive to put the money into a drilling endeavor. For that reason, we are going to dry up the money for independents to a very large extent.

That particular phenomenon does not apply to corporations, Mr. President, because, of course, corporations, the majors, are taxed at not beyond 46 percent on their income. This is a phenomenon limited to independents. If we do not act through this amendment, we are going to see a great constriction in capital for the independents.

The second point I would make, Mr. President, is that we should not be fooled by the temporary glut, so-called glut, on the oil market today. The oil glut is really, I think, misnamed because the amount of excess, the amount of the surplus, is really quite small compared to the total demand.

Indeed, there are many of the commentators, what you might call the oil

commentators, who now say that in terms of production and consumption, worldwide, at least in the free world, we have already outrun the glut and we are already consuming slightly more than we are producing, worldwide.

The reason for the glut is because of the very large stocks of oil held by majors and independents, stocks in primary, secondary, and tertiary storage. That is soon to be used up even at present rates of production.

It is very widely understood that the Saudis will come down from their rate of production, which is approximately 10.2 million barrels per day, back to where they were, as soon as they have achieved some, what they call, discipline in the OPEC pricing of oil. In any event, it is a virtual certainty that the Saudis are coming back down in their production; that the supply of oil worldwide will again become tight because it is controlled by the Saudis. It is in their interest to make that supply tight again, and again we will see those prices go up.

It is rather difficult to predict the precise time that this will occur. Most analysts say that the present price stability—not a decrease in price but price stability—will last perhaps 6 months.

So the temporary glut and the temporary price stability will not last, Mr. President, and we must get about the business of producing domestic oil.

I am quite certain, Mr. President, or should I say I have great confidence, that our colleagues on the other side of the aisle will again join with us in this endeavor. They did last time when they were in the minority when we had the Bentsen amendment up as part of the windfall profit tax. The only thing that has changed since that time is that we are no longer in the majority but they are. We now have a President who, during the campaign, talked against the windfall profit tax. So we have every opportunity this time, Mr. President, to pass this amendment at a time when it is greatly needed, not just by independents and royalty owners but by all of those in this Nation and in the free world who depend upon the supply of domestic oil.

I congratulate the distinguished Senator from Texas.

Mr. MELCHER. Mr. President, I, too, congratulate the distinguished Senator from Texas (Mr. BENTSEN) for his amendment. As a cosponsor of the amendment, I want to add my 2 cents' worth to this.

One of the things that has changed since we passed the windfall profit tax is that the small royalty owners have figured out that they got soaked. When the bill left the Senate, we had an exemption, a similar provision to that offered today by Senator BENTSEN. But once Treasury started to collect the windfall profit tax, these small royalty owners found out that they were caught with an excessive tax.

The bill before us without the Bentsen amendment will give some relief but not adequate relief. It takes the Bentsen amendment to make sure that the small royalty owners really get adequate relief from the windfall profit tax.

I remind my friend from Kansas of his profound interest in taking care of the small royalty owners. I feel it is his obligation as chairman to protect the committee's bill, which sometimes gets in the way of his better judgment on taking care of the small royalty owners. However, I think in fairness to the small royalty owners, the Bentsen approach or the Bentsen addition, this amendment, would very much help the small royalty owners throughout the States, including my State of Montana and the State of Kansas.

Mr. DOLE. Will the Senator yield for a comment?

Mr. MELCHER. Yes.

Mr. DOLE. Had the Senator from Montana stuck with me on cloture, we would not be arguing about the windfall profit tax today. The Senator from Montana voted for cloture, shut off debate and then the Democrats won over.

Mr. MELCHER. I thank the Senator from Kansas for that comment because I can tell him that this Senator is a much wiser Senator having learned his lesson on this question that the small royalty owners got hooked by the windfall profit tax when they really should not have. Had I followed the lead of the Senator from Kansas at that time I would have been a smarter Senator. I wish I had. I wish the Senator from Kansas would now follow the lead of the Senator from Texas, Senator BENTSEN, and myself for that matter as a cosponsor of this amendment, to really take care of those small royalty owners.

Mr. BENTSEN. Will the Senator yield?

Mr. MELCHER. I yield.

Mr. BENTSEN. I would like to add Senator PRYOR as a cosponsor of this measure, Mr. President.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. MELCHER. Well, we can call it the Bentsen-Boren-Melcher amendment, and a lot of others.

Mr. RANDOLPH. Mr. President, who has the floor?

The PRESIDING OFFICER. I believe the Senator from Texas has the floor or is yielding the floor.

Mr. BENTSEN. I yield the floor.

Mr. DOLE. I am happy to yield to the Senator from West Virginia.

Mr. RANDOLPH. I appreciate the courtesy of the able Senator from Kansas.

Mr. President, I heard earlier this afternoon, Senator BENTSEN speaking about the fact that the so-called oil glut will not always be with us. That is so correct. All we have to do is to look at the history of these situations. Let us move back to the forties, the early forties. We then did not do what we should have done. We went back to doing business as usual when the U-boats went home and World War II was over. We did not protect ourselves but instead left ourselves open to the supplies of petroleum from abroad.

Those supplies were to come from what we now term OPEC countries. I said then, and I have said many, many times—I am not a prophet but I understood the subject matter—that the petroleum coming into the United States would come from unstable and perhaps unfriendly countries. Was I correct on that?

Mr. BENTSEN. The Senator from West Virginia certainly was correct, was a prophet.

Mr. RANDOLPH. Today we have seen that take place. Now, because there is an oil glut, that will not continue we take what the Senator is saying about independent oil production and make it a valid amendment included in this legislation. The Senator's amendment would encourage production. It would take care of conservation to a degree, and he would assure equity for those who are the royalty owners. Am I correct on that?

Mr. BENTSEN. The Senator is correct and I thank him for his comments.

Mr. RANDOLPH. I appreciate very much the opportunity. I thank the Senator from Kansas for allowing me to say that here we have to be very, very realistic in reference to the subject matter before us.

When the windfall profit tax—Domestic Crude Oil Excise Tax—was under consideration on the Senate floor, an amendment to exempt the independent producer and royalty owner was offered. That amendment, which I supported, passed by a vote of 53 to 41.

To tax away exploration funds used by independents in West Virginia, to find new supplies of domestic crude oil is contrary to our Nation's interest. It is the independents which have continued to search for the costly, hard-to-find oil in the United States. They drill 89 percent of our domestic wells. Independent producers have been investing more than 100 percent of wellhead revenues in exploring and developing new domestic oil supplies for this country.

On January 5, 1980, I cosponsored a bill (S. 2521) which would entirely exempt small royalty owners from the windfall profit tax up to a total of 10 barrels per day of royalty interest. This 10-barrel-per-day exemption should cover the vast majority of the small royalty owners who are most severely impacted by the imposition of the windfall profit tax.

Most royalty owners in our State are landowners or working farmers who are struggling to survive in the face of plummeting farm commodity prices and soaring interest rates. There also is a sizable group of royalty owners who are retired persons dependent on small royalty checks to supplement their social security payments. I counsel with these individuals. They are not oil profiteers nor were they ever the intended target of the windfall profit tax.

Earlier this year, I cosponsored legislation (S. 19) to completely exempt royalty owners from the windfall profit tax for the first 10 barrels of daily production. That legislation would have served to broaden the investor base in independent operations. During Senate consideration of the Revenue Reconciliation Act last year I voted for an amendment which totally exempted the first 2 barrels of daily production of all stripper wells from the windfall profit tax. Each stripper well, in 1978, averaged 2.9 barrels per day.

Drilling for oil and gas in West Virginia has been going on for 121 years. In 1922 Ernest Randolph, my father, organized an oil and gas company. I was its secretary and treasurer. As a young man I often stood on a hillside in our State and saw a "dry hole" being drilled.

With due respect to my colleagues who speak of "big oil," I speak for the independent producer.

To date, approximately 103,000 wells have been developed in West Virginia. While it is true that the forces of nature, combined with market forces, have caused many of our societies energy predicaments, it is conversely one of nature's blessings that in our Appalachian region we have the advantage of large amounts of liquid and gaseous fossil fuels. Thus I fully support the Bentsen amendment to aid independent producers and small royalty owners.

Mr. DOLE. Mr. President, when I became chairman of the Finance Committee, it never occurred to me I would have to get into a situation like this. Having been one of the 31 who stood on this floor and voted against the windfall profit tax, now to suggest that there may be a better idea than the one presented by the distinguished Senator from Texas is not easy to do. I hope I can present a better argument for a better amendment that will encourage some of my colleagues on both sides of the aisle to help us defeat the Bentsen amendment. We can then go on with another amendment that I will propose on behalf of myself, Senator NICKLES, Senator WALLOP, and Senator BOREN.

Senator BOREN cannot lose. He is on both amendments. I think many others will be on both amendments.

I do not quarrel with that; I am very pleased to have Senator BOREN on my amendment. But, Mr. President, without being repetitious, I remind Members that there was a time when we were debating the windfall profit tax on this floor. It just happened that I ran across the vote on that particular measure. I noticed the distinguished Senator from California saying that we know that the 24 Republicans who voted for the Bentsen amendment before will vote for it again. I hope they do not. If they do, the Senator from Texas is going to win and the President is going to have a big problem trying to put everything back together again.

I went back and reviewed that critical vote on December 14, 1979, at 1:39 p.m. on the cloture motion on the windfall profit tax. It seemed to me that some of these oil men have short memories. Some of them seem to think that the windfall profit tax happened since January and that President Reagan indicates he does not like it—and he does not like it—it ought to be disposed of in the first 6 months of his term. I think we ought to go back and, in case anybody should read this record by accident, set out what happened in the windfall profit tax debate—who was present at that time, what happened on the Senate floor, what happened in the conference, and, really, why we have the windfall profit tax at all.

Had those who now want to amend the windfall profit tax followed the leadership of some of us, we would not be here today. There would not be any windfall profit tax.

Mr. President, I do not quarrel with those who voted that way, but on that key vote, on the cloture motion introduced December 12, 1979, signed by Senators ROBERT BYRD, Muskie, Nelson, CRANSTON, SARBANES, METZENBAUM, Stewart, HUDDLESTON, DURKIN, JACKSON, Culver, WILLIAMS, McGovern, Church, MOYNIHAN, ZORINSKY, LEVIN, BUMPERS, PRYOR, and BIDEN, on that crucial vote, and it was a crucial vote—there were 56 voting for cloture, 39 voting against cloture. Ninety-three percent of the Democrats voted for cloture. Seven percent of the Democrats voted against cloture and 90 percent of the Republicans voted against cloture. There were five not voting.

Mr. President, I ask unanimous consent that the record be made a part of this RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

YEAS (56)

Democrats (52 or 93%)		Republicans (4 or 10%)

Prepared and Compiled by Senate Democratic Policy Committee, Robert C. Byrd, Chairman

Mr. DOLE. It seems to me, Mr. President, that what we are faced with today is another judgment on how we can best encourage more oil production in the United States and whether or not it is the Bentsen approach. Certainly, I do not have any quarrel with the distinguished Senator from Texas. I know of no one who has done more in a constructive way in this matter than the Senator from Texas. So we are not here in an adversary relationship. Perhaps if we had the money, I would vote for both amendments. I hope we are going to get the money. Maybe we can find some way to accomplish that objective.

We had a group of independent producers in town about 10 days ago. They are very concerned, and I understand that, even on the House side, there may be some bidding going on as to who can get the best deal for the oilmen and maybe get the best vote for their package. I can assure those who are listening that that has not been going on on this side. There has been no bidding war on the Senate side. There has been an effort to develop the best approach to reducing this tax.

It seems to me the best way to have a production response on the so-called supply side is to phase the tax out on new oil. That is the amendment the Senator from Kansas has proposed, a phaseout not at 2 percent a year, but at 7.5 percent a year over 4 years, starting in 1982, as in the amendment offered by the distinguished Senator from Oklahoma in the committee. We can add to that phaseout tertiary and heavy oil. It does not cost much more and we think it should be added. So we are really providing an incentive for more production.

That does not mean that I do not believe that the Bentsen amendment has some merit. I just believe our amendment has more merit. Under our amendment, once that tax starts to fall, 7.5 percent next year, 7.5 percent in 1983, 7.5 percent in 1984, 7.5 percent in 1985, that is the end of it—there would be no tax on new oil.

That, to me, is a giant step in the right direction, in fact, I think a larger step

than I have had authority to do before. I do not have any authority to do this. But it seems to me that in the face of the Bentsen amendment, we have been obliged to develop what I consider to be a better approach. That is the phaseout of tax on newly-discovered oil.

As the minority floor manager of the windfall profit tax bill, this Senator stood on the floor for a number of weeks. We had all kinds of debate on the windfall profit tax. I think there were 31 of us, including about every one I see in this room, who voted against the windfall profit tax on the final vote. I shall put that vote in the RECORD, too, so there will be no misunderstanding. The Senator from Texas did not vote for it, the Senator from Oklahoma did not vote for it. But a number of Republicans strongly opposed the windfall profit tax.

It is hard to see, Mr. President, even at this point why we taxed new oil. But how can you have a windfall profit tax on newly discovered oil? How can you have a windfall profit tax on something you have not found?

We thought we were making some headway but after a number of votes to shut off debate on this new oil tax, cloture was obtained and the Finance Committee exemption for newly discovered oil was stripped from the bill. I think that is an important fact.

Another critical point in the development of the windfall profit tax occurred on the second day of the House-Senate conference on the bill. On that date, the Democratic majority among House and Senate conferees quickly agreed that the conference would evenly split the revenue difference between the House and Senate bills. This required adding $50 billion to the Senate bill and sacrificing most of the production incentives in our version of the legislation. Again some of the proponents of this amendment were among those who sacrificed the Senate position in conference.

I just say again to keep the record straight, because I know that some people forget and some people will not be happy with what happens on the floor, we should consider what this $50 billion compromise meant. It was done before Christmas so we could all go home and there would be some sort of indication that we were serious. It required the so-called 10-percent minimum tax on newly discovered oil to be increased not to a minimum but to 30 percent. It also required a 30-percent tax on hand-to-produce tertiary and heavy oil. The $50 billion compromise also killed any hope of an exemption for independent producers and royalty owners.

So, Mr. President, I suggest that if we look at the record, the record is rather clear. Even though I strongly believe that the windfall profit tax needed to be substantially altered and more quickly phased out—as I shall do, I hope, in an amendment I shall offer for a number of us later—I do not support this amendment. I think, however, that we have made some progress in the Senate Finance Committee bill.

We do understand the plight of the royalty owner. We did increase the credit from $1,000 to $2,500. That, according to estimates from the Joint Tax Committee, will exempt at least 80 percent of America's royalty owners.

I might say, just for the record, Mr. President, because many of us here understand the issue, that in hearings held in Texas by the Senator from Texas, in Oklahoma and Kansas by the Senators from Oklahoma and Kansas, Mr. BOREN and myself, hundreds and hundreds of royalty owners showed up. They are not rich people. They are retired landowners, they are other people who have a small investment. What we say in the $2,500 credit is that anybody with a royalty income of up to $2,500 a year will not have to pay a tax. To me, that is a step in the right direction. That is not as much as Senator BENTSEN would do, but to me, it is a step in the right direction.

Consider the testimony received by the Finance Committee at field hearings on this subject—let us just take my State. Ours is not a big production State. However, 60 percent of the 142,000 Kansas royalty owners received less than $600 of royalty income per year. I recall so well, when the Senate Finance Committee took that action, the reports by some in the press that we were giving a big break to big oil companies. Mr. President, this is not a break for big oil companies. It is an equitable adjustment. In fact, we are correcting a mistake, and in so doing we will benefit a lot of small royalty owners. So I think the Finance Committee proposal goes a long way in that regard.

Also, the Senate Finance Committee bill would phase down the tax from 30 percent to 15 percent by 1986. This change is the single most cost effective means to encourage the continuation of the drilling boom we have been seeing.

I might add that, since that time, we have been encouraged by a lot of things even to make it effective in 1982 and phase it out altogether—phase it out in 4 years. I am not certain that we may come out of conference with, but at least from the Senate, we shall leave here with a 4-year phaseout.

The President supports both of the windfall profit tax changes in the Finance Committee bill. He does not want to go further at this time. As a consequence, the administration opposes this amendment. The tax reduction bill before us today is an economic recovery package.

If one takes a fair and evenhanded look at the American economy, the oil industry is one segment of the economy that is booming and is in little need of economic revival. I agree that more money could be spent. If we had more rigs, we could do more drilling. That does not mean we do not need to undertake a major reform of the windfall profit tax in the near future. If we fail to substantially restructure the windfall profit tax, we may find that drilling boom will trail off and domestic oil production to turn down again.

As I sat with the President discussing this matter with independent oil men from various States, such as Kansas, Texas, and California, I found agreement by these gentlemen that if the President is serious in wanting to phase out the windfall profit tax, plus what he has already done with deregulation, plus what this bill does to the industry, without any talk of the windfall profit tax, all the customary depreciation, all the individual tax cuts, the reduction of the 70-percent rate on unearned income to 50 percent—I believe that most of the men there and the others they represent had to leave their feeling that they had a pretty good thing going, without anything so far as new oil was concerned.

Mr. JOHNSTON. Mr. President, will the Senator yield?

Mr. DOLE. Let me finish my statement, before I forget what I was going to say.

I believe the President's promise. I think he meant what he said. I am going to have included in the RECORD, if we can find it, the letter the President then addressed to C. John Miller, president of IPAA.

Let me remind those who may have forgotten that there was a lot of talk on the floor, when the President ordered decontrol, about how everything was going to go sky high, gasoline prices were going up, and they went down instead.

I believe the President's promise and accordingly I must oppose the 1,000-barrel-per-day exemption. The President has already kept his promise to decontrol oil which added $7.6 billion of unexpected revenue to the oil industry this year.

This Senator is not convinced that a 1,000-barrel-per-day exemption is the best means of providing relief from the windfall profit tax. There are other amendments, like a new oil exemption, that would be far more cost effective in encouraging a continuation of the aggressive oil exploration that we have witnessed over the last year. In light of all of the claims about this amendment that have been made, there are several key facts that should be considered.

First, despite the production response claims for the 1,000-barrel-per-day exemption, most of the relief provided by the exemption does not actually go to independent producers who are likely to put the money back into new drilling. Indeed, in 1982 only about 38 percent of the relief from the amendment will go to independent producers. Let me repeat that important point—only 38 percent of the relief from this amendment will have any likelihood of being put back into exploration.

Second, this is not necessarily a mom-and-pop producer amendment. One thousand barrels per day of crude oil is worth about $35,000 per day and more than $12 million per year. That means that an individual could have more than $12 million in crude oil income and be totally exempted from the windfall profit tax. This exemption would apply whether or not a dime of this revenue was put back into oil production.

I will read what the President said in his letter of July 10:

> I enjoyed meeting with you and your colleagues today to discuss possible changes in the windfall profits tax.
>
> As you know, I opposed this tax when it was proposed, and I spoke out against it several times during the 1980 campaign. At the time I pledged to do something about the tax as soon as it were fiscally possible. I re-

affirm that pledge to you. The so-called windfall profits tax was bad legislation, and should never have been enacted in the first place.

He was not on the Senate floor. He could not vote against cloture, but he can comment on it now:

And I intend to work with the Congress to move as rapidly as feasible, following the enactment of our pending tax legislation.

In other words, he is giving a commitment to the oil industry that as soon as we pass this tax legislation, he is going to move as rapidly as possible to do away with all of it:

In the meantime, our Administration has acted in other areas to encourage the production of energy in this country. We have decontrolled the wellhead price of oil and are opening up new offshore leases. We have proposed an accelerated cost recovery system that would permit the energy industry to retain significant amounts of capital essential for investments in American energy production. And we have endorsed a tax bill which would raise to $2,500 the exemption from the windfall profits tax for royalty owners, and would reduce by half over the next few years the windfall tax rate on newly discovered oil. We believe these steps will greatly encourage the domestic production of energy.

I look forward to working with you on these and related issues in the future.

That was addressed to Mr. C. John Miller, president of IPAA, 1101 16th Street NW., Washington, D.C.

So I suggest that that is a commitment from the President.

Let me discuss one other aspect of the amendment of the Senator from Texas, and I will be happy to yield to my colleagues.

The distinguished Senator from Texas has proposed an amendment which would defer for 10 years the liberalized leasing rules of the Finance Committee bill. This amendment provides a difficult decision for the Senate. The leasing provisions are complex and highly technical. The present law that it changes is even more technical and complex. But the purpose of the provisions is clear: to make the economic recovery provisions of the tax bill work.

WHAT THE LEASING RULES ARE

The leasing rules provide a safe harbor for taxpayers. Those taxpayers who seek to enter into leases of new property will be permitted to characterize their agreements as leases and thus to designate another party as the owner for Federal tax purposes. The amendment maximizes the freedom of taxpayers and expands the free market for equipment leasing.

The effect of designating a corporation—other than the user—as the owner for Federal tax purposes will be to permit the designated owner to take the investment tax credit and the depreciation deduction. The effect will be to permit taxpayers to bargain among themselves to identify the taxpayer who will obtain the greatest benefit from the tax attributes. The result will be to maximize the investment incentives from ACRS because ITC and depreciation deductions will not go to waste.

WHO NEEDS LEASING?

Leasing is particularly important for a wide range of enterprises which will be crucial to the economic recovery of our Nation. One constituency for leasing will be our heavy, distressed industries. Because of the long-term effects of our prior tax policies which were biased against investment, productivity and profits in our most capital intensive industries have fallen. As a result, many companies in such industries are not in a position to best take advantage of tax incentives. The leasing provisions will enable such companies to do indirectly what they cannot do directly.

But the need for leasing is much broader. Our best estimate of the share of the revenue loss attributable to our six basic distressed industries—iron and steel, and automobile manufacturing foremost among them—is only about 25 percent. Where does the other 75 percent go?

We believe, based upon economic analysis by the Joint Committee on Taxation, that the remainder of the benefits will also go to important players in the effort to bring America out of its economic decline. Small, rapidly growing businesses will benefit greatly from this provision. Such taxpayers in the lower brackets of our corporate income tax will be able to transfer tax deductions to corporations which will be able to offset such deductions against income in a 46-percent bracket. These small companies will thus also be part of the dynamic engine that will restore American economic growth. Such businesses have historically been responsible for many of the innovative ideas and new jobs created in America.

HOW THE LEASING RULES WORK

The leasing rules operate by permitting private contractual arrangements to determine which of two parties—the user and the financing party—will be treated as the owner for Federal tax purposes. The leasing markets are a well-established and dynamic financial market for this country. There are established methods and procedures through which investment credits and depreciation can be transferred. Those private legal precedents will easily adapt to the new lease transactions. Above all use of the lease rules will insure that economic investments will be made.

ALTERNATIVES TO LEASING

The failure to provide liberalized leasing rules will effectively guarantee that we will adopt a refundable investment tax credit in the near future. Currently there are unused investment tax credits of approximately $14 billion. That amount will grow at a substantial rate. Either we will forego much of the intended effect of the economic stimulus package or we will be forced to adopt a refundable ITC. Of course, an after-the-fact ITC will be less cost effective, with a larger revenue loss, than liberalized leasing rules.

Liberalized leasing rules are the best way to maximize the benefits of ACRS without the enormous revenue loss of refundable ITC's and its unestimable administrative costs. I urge my colleagues to defeat the amendment.

Who is going to be affected by this? The principal industries that will benefit from the leasing provisions include automobile manufacturers, iron and steel producers, railroads, airlines, copper mines, and paper.

The geographical distribution of benefits will be wide. I ask unanimous consent to have printed in the RECORD a table showing States to which major benefits will accrue.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

Alabama—Steel; Paper.
Arizona—Mining.
California—Autos.
Colorado—Mining; Airlines.
Georgia—Paper.
Idaho—Mining.
Illinois—Steel.
Indiana—Steel.
Kentucky—Autos.
Michigan—Autos.
Minnesota—Iron.
Missouri—Autos.
Montana—Mining.
New Mexico—Mining.
Nevada—Mining.
North Carolina—Paper.
Ohio—Steel; Autos.
Oregon—Paper.
Pennsylvania—Autos; Steel.
Tennessee—Paper.
Texas—Airlines.
Utah—Mining.
Washington—Paper.
Wisconsin—Paper.
Wyoming—Mining.

Mr. ABDNOR assumed the Chair.

Mr. DOLE. Finally, Mr. President, I wish to conclude on a positive note and again to commend the Senator from Texas for offering the amendment. I cannot say that I want the Senator from Texas to prevail, but he has brought this matter to the attention not only of the Senate, but also the administration and the country, and for that reason he has provided a service.

I believe we do have a better idea, and we believe our idea will add more of a production response and is parallel with the President's so-called supply-side economic theories and supply-side tax cuts.

What better incentive could you give anyone than to phase out the tax they now pay, whether it is levied on oil or on anything else? It seems to me that the production response will be immediate. It is going to affect those out there looking for oil right now, not someone who has it and is waiting for an exemption to come along.

I suggest that the best way to proceed—and I hope this will be followed on a bipartisan basis—would be to dispose of this amendment. Then, the Senator from Kansas has an amendment pending which will follow all the discussion and the vote on this amendment and which, as I said, will eliminate the tax on new oil over 4 years, by 7.5 percent a year.

An amendment in the second degree will be offered to that amendment, to take care of tertiary and heavy oil—the oil produced in the State of the distinguished Senators from California (Mr. CRANSTON and Mr. HAYAKAWA). Tertiary oil is important to the State of Texas and the State of Oklahoma and also, to some degree, to the State of Louisiana. So we are not leaving without a solution. We are being positive in our attacks on this

amendment, and I suggest that that is the course we should pursue.

I yield briefly to the Senator from Idaho.

Mr. SYMMS. I thank the Senator.

Mr. President, I would like to make an inquiry of the chairman of the committee, the Senator from Kansas: What is the difference in the revenue projections of the two amendments about which we are talking? We have before us the Bentsen amendment. What is the total projected revenue loss? How much are we talking about?

The Senator from Texas or the Senator from Kansas.

Mr. DOLE. Let me just say we have the figures, we have the net revenue effect. If you remove the leasing provision put in by the Finance Committee, the net revenue effect would be positive for fiscal 1981. It would be $400 million in 1981, $100 million in 1982, $300 million in 1983, $1.5 billion in 1984, and $3.1 billion in 1985 and $4.9 billion in 1986. But I am not so certain——

Mr. BENTSEN. That is a correct statement.

Mr. DOLE. That is correct.

Mr. SYMMS. How much is the Senator from Kansas in his amendment or the Senator from Texas proposing?

Mr. BENTSEN. This is the Senator from Texas' amendment with the offset, which would mean there would be a contribution to the Treasury to help cut the deficit in the year 1984 by $1.5 billion. In addition you would have a net contribution to the Treasury of $2.3 billion during the time period 1981–84.

Mr. DOLE. The added figures requested by the Senator from Idaho on the additional cost of the so-called 4-year phaseout of 7½, 7½, 7½, and 7½ in the proposal I have offered on behalf of the distinguished Senator from Idaho and other Senators will be an additional $226 million in 1982, $547 million in 1983, $1.576 billion in 1984, and $1.8 billion in 1985. That is the additional cost. On the second-degree amendment extending the phaseout to heavy and tertiary we will have the revenue estimates in just a few moments.

Mr. SYMMS. Then the revenue loss from either amendment is not going to have any effect on the Treasury, is that correct?

Mr. BENTSEN. Not as I understand it. I do not know if the Senator from Kansas is coming with an offset. Unless they come with an offset, it would have a substantial impact on the deficit and add to the deficit.

Mr. SYMMS. But the amendment the Senator from Texas offers does have an offset?

Mr. BENTSEN. That is correct. I understand that the Senator from Kansas mentioned that there would be additional money generated by my amendment for the independents. I hope that the Senate will remember that we are talking about gross income, not profits. When the Senator from Kansas discussed the amount of money that would be placed back into production, I have a hunch the Senator from Kansas was tracking numbers prior to my changing of the amendment. The numbers we have say that that producer will put back 105 percent of his gross revenues into additional exploration. When we mention the royalty owners we were trying to correct an inequity, which taxes the royalty owners as a major oil company, which I know the Senator from Idaho opposes.

Mr. SYMMS. I thank the Senator.

Mr. DOLE. So that we have the record complete—and I do not quarrel with anything the Senator from Texas states—and so we have it perfectly clear, as was once said around here, under the Finance Committee bill's provisions relating to new oil, the costs in 1982 would have been zero because the rate reduction is not effective until 1983. The cost in 1983 would be $217 million, 1984 would be $384 million, 1985 $809 million, in 1986 $1.5 billion.

I have given you the additional costs of the 4-year phase in. Let me say, without setting aside the leasing provision, as I understand this provision of the Senator from Texas' amendment, we do not take into account the leasing provision, and the 1982 costs are $2.9 billion, 1983 costs are $4 billion, 1984 costs $4.2 billion, 1985 costs and 1986 costs are each $4.3 billion.

So the Senator from Idaho may recall that last night the Senator from Kansas offered an amendment to bring everything back into balance, and we have been able to do that. In fact, we have a little surplus in 1984. I do not suggest it will last long, but we have about a $700 million surplus in 1982 and about $1 billion in 1982. We are about $3 billion short in 1983, but there is still another effort the Senator from Kansas will make to save enough money for the phaseout on the tax on new oil.

Mr. SYMMS. I thank the Senator very much.

I was trying to recall those figures. I have discussed this issue with our distinguished chairman and others, and I believe we have voiced our disapproval of the tax. I made a statement in committee that in the 8 years I spent in the other body, if I wanted to list all the bad bills passed, and there were some bad bills, I would have to give this tax the golden trophy as the worst bill that passed the Congress since I served in the Congress.

I said that because it is anticompetitive, pro-OPEC, antiproductivity, and antiproduction of oil. If the Government was serious about becoming energy independent, the windfall profit tax would have never been considered. When the bill passed the House, I never thought that the Senate would pass this crazy windfall profit tax, as well. The 96th Congress bailed out the automobile companies from making automobiles that people did not want to buy, and taxed the oil producers who were producing a product that people did want to buy.

If we are serious about terminating the windfall profit tax, we ought to be terminating the tax sooner, in a later year.

This tax is really a severance tax on production at the wellhead—and it is detrimental to our overall energy situation.

The reason the windfall profit bill was passed was to raise revenues to finance social programs. It did not have anything to do with excess profits. I thought it was very interesting that the major newspapers in the country wrote many editorials about the excess, obscene profits, when the newspapers had a higher return on investment than any oil company ever in existence. The tax had nothing to do with oil, it was simply to raise money for social programs.

We are in a dilemma on this issue. I am very sympathetic to the Senator from Texas' amendment, and to the amendment of the Senator from Kansas. Both of them are very meritorious, both of them are very attractive pieces of legislation.

I yield back.

Mr. DOLE. In closing I want to call our attention to a letter from the Domestic Petroleum Council dated July 14.

The Domestic Petroleum Council is a group of 21 domestic producers of oil and gas. They say:

> The Domestic Petroleum Council, a group of 21 domestic producers of oil and gas supports the Economic Recovery Tax Act of 1981 as reported out of the Senate Finance Committee. The Council encourages adoption of the Finance Committee bill in both the Senate and the House.
>
> The DPC believes that the attempt to add an amendment to the tax proposal to exempt producers from payment of the windfall profit tax on the revenue received from the first 1,000 barrels a day of crude oil production is bad energy policy and will provide no additional barrels of oil, even though its members would benefit financially from such an exemption.
>
> The Senate Finance Committee bill provides for a phased down reduction in the WPT on newly discovered oil from 30 percent to 15 percent. DPC believes this provision will encourage domestic petroleum exploration and development activities for all of industry. Further, the DPC believes production will not be maximized until the entire WPT has been phased out.
>
> Members of the Domestic Petroleum Council produce more than 550,000 net equivalent barrels of oil and gas a day.

I would like to list the members of that group. They should not be unfamiliar to us. They are:

American Quasar Petroleum Co.
Champlin Petroleum Co.
Coquina Oil Co.
Delhi International Oil Co.
Energetics, Inc.
Equity Oil Co.
Houston Oil & Minerals Corp.
Hunt Oil Co.
Louisiana Land & Exploration Co.
Mesa Petroleum Co.
Mountain Fuel Supply Co.
Pennzoil Co.
Pogo Producing Co.
Quaker State Oil Refining Corp.
Sabine Corp.
Santa Fe Natural Resources, Inc.
Sinclair Oil Corp.
Southland Royalty Co.
Superior Oil Co.
Tenneco Oil Co.
Terra Resources, Inc.

They are medium- to moderate-sized companies. I think their comments are

an indication that we are moving in the right direction when we start phasing out the tax.

Mr. SYMMS. I thank the chairman very much.

I would just make the point that I am supportive of phasing out the windfall profit tax in later years if it is not possible to do so at the present time. In 1988 the so-called windfall profit tax, the severance tax on crude oil production, the antiproductivity tax, will raise $25 billion, in 1989 it will raise $26 billion, in 1990, $26 billion. We are talking about roughly $75 billion—collected in 1988–90.

It would appear to me that if the Senate means business about alleviating the windfall profit tax that we might consider terminating the tax on December 31, 1987.

I wonder if that would not make more sense than trying to tamper with it now because if we make some adjustments in the 1,000 barrel exemption or any other exemption, we will have to raise $227 billion through the so-called windfall profit tax, is that correct? Is there anybody in the Chamber who would dispute that statement? Maybe the former chairman of the committee, the Senator from Louisiana, might help me on that. But I believe that is the way the law works.

Mr. DOLE. Come 1991—and that seems to be some distance away, it is another 10 years—that is the end of the so-called windfall profit tax, whether we raise $60 billion or $140 billion. But there have been some suggestions——

Mr. SYMMS. Or $227 billion, whichever comes first, is that correct?

Mr. DOLE. Right. I believe 1991 may come before the $227 billion, based on the accumulation so far.

Mr. President, I say to the Senator from Idaho that it would seem to me that his suggestion has some merit. But if we open up that can of worms, we would have a full-blown windfall profit tax debate again on the Senate floor. I believe at this time we do not need such an open-ended debate.

Mr. SYMMS. In deference to my chairman, that is why I am not going to offer that amendment. But I think that point should be made; that the damage was done by the passage of the windfall profit tax last year. And, although I have personally favored in the committee and I still do favor any changes we could make to alleviate the damage, I think that the point should be made that we need to start to phase out this tax, along with all other taxes.

I would hope we could get the economic recovery package passed. Maybe if the results are as good as some of us hope they will be, there may be some room for more effort in this direction in the future.

Mr. President, I yield the floor.

Mr. BOREN addressed the Chair.

The PRESIDING OFFICER. The Senator from Oklahoma.

Mr. BOREN. Mr. President, I have been listening with interest to the various comments that have already been made on the floor in regard to the pending amendment and the amendment which will soon be offered by the Senator from Kansas, the distinguished chairman of the committee.

I also listened with great interest to my colleague from Idaho. I think there is much merit in what he has said about the need to revise the windfall profit tax so that it can be phased out at an earlier date and so that it will not end up collecting far more in revenue than even those who gave us the windfall tax—over the determined opposition of a number of us—would have thought it would ever raise.

I want to say, first of all, Mr. President, as I begin this discussion, that both of the amendments which already have had some discussion today have great merit. Both of them are amendments that I would like to see passed.

I am very pleased that the Senator from Kansas intends to offer the total exemption for newly discovered oil. This is an amendment, as the chairman knows, that I attempted in the committee. We did get half of it. The committee already put it in the bill and I am very pleased about that.

I would also say that I think it is important that we not let this discussion bog down into any kind of a partisanship. I recently had a clipping from a Wichita, Kans., newspaper put on my desk. In that particular article, the chairman of the Finance Committee, the Senator from Kansas, was being attacked by some spokesman—I was not familiar with him—in the energy field for not helping the energy producers enough.

I want to say right off the bat that since I have come to the Senate I have seen two chairmen of the Finance Committee—the distinguished former chairman, the ranking minority member, the Senator from Louisiana—attacked at one point or another for not helping the energy producers enough. I have now seen the distinguished chairman, the Senator from Kansas, attacked on the same basis.

I want to say that, from my vantage point, having heard them on the Senate floor, having watched both of them for as long as I can remember—one of my first experiences in politics was coming into this Chamber and sitting in the gallery and hearing the senior Senator from Louisiana talk about an energy matter when I was still far below the voting age.

To hear either one, either the ranking member, the former chairman, or the present chairman of the committee attacked as being not favorable enough to the interests of more energy production of this country, to me is ludicrous, indeed; it is absurd. It flies in the face of the record of years of service on the part of both of them to the cause of assuring greater independence and energy production in this country.

I think whoever attacked the Senator from Kansas in the Wichita paper—and I do not recall the name—ought to be ashamed of himself.

I do not intend today to take any kind of partisan advantage of the situation. All of us who understand the legislative process know that when a person serves as chairman of a committee, as the Senator from Louisiana did and as the Senator from Kansas now serves, they have certain responsibilities toward a piece of legislation, toward the administration and the White House, and toward the total Federal budget. I think it is most unfair that the Senator from Kansas has been attacked as he was, and the Senator from Louisiana was attacked in the past. Neither one deserves those kinds of attacks.

Having said that, I want to talk for a moment about the legislation introduced by my good friend from Texas, who also for a long, long time has been a leader in the field of trying to secure more energy production for the American people, not in the sense of any narrow geographical interests. It is true that my colleague from Texas, as I do, comes from an area of the country that produces energy. It should be a fact that we are proud of, not ashamed of, because we are trying to establish policies which are in the interest of this entire country, whether people happen to live in Texas, Oklahoma, Hawaii, Massachusetts, or wherever they might happen to live.

I commend the Senator from Texas for offering this amendment. I am proud to join him in sponsoring this amendment.

Let us look at the facts about it for a minute. Statistics compiled by the American Association of Petroleum Geologists over a number of years indicate that independent producers account for much of the new energy discovery in this country and in the production of new oil and gas for the American people.

One 5-year study covering the years from 1969 to 1973 revealed that during that period the independent producers accounted for 89.2 percent of wildcat wells; 75 percent of new fields found; and 54 percent of the oil and gas discovered.

Of the 49,900 wells drilled in 1978—I am talking about exploratory and developmental wells—independents were credited for 42,000 of those wells and major companies with 7,800 of those wells.

This amendment would exempt from the windfall profit tax a very large segment of the industry which has been most active in the exploration for domestic oil and gas reserves—the independent producers who operate here inside the geographical boundaries of the United States.

I might also mention that during the 5-year period from 1973 to 1977, another study indicated that total gross wellhead revenues for independent producers totaled $33.3 billion, and yet those producers spent $34.9 billion on drilling, exploration, and production activities. These expenditures account for 105 percent of their wellhead revenues from both crude oil and natural gas production.

Some people have said to me who do not have much experience in the oil and gas fields, "How could someone be reinvesting 105 percent of their revenues?"

Well, as soon as new reserves are discovered, as soon as that new well is hit, the kind of people we are talking about are on the forefront of exploration and are down at the bank borrowing money against the value of the new reserve they found to go out and punch more holes into the ground to get us more oil and gas. That is the nature of the industry we are dealing with. This is the inde-

pendent entrepreneurial spirit demonstrated by the independent oil and gas producers. That is why there would be a significant production response from the amendment which is now before us to exempt the first 1,000 barrels of production by independent producers.

But there is another factor that is also very important—I have this hammered home to me again and again when I go back into areas where we have large numbers of independent producers—and that is the regulatory burden being imposed by the windfall profit tax.

I have literally had people tell me, people who are making relatively large financial returns, that they just intended to get out of the business because they could not cope with the paperwork burden anymore.

There is a small company without fleets of lawyers and accountants and access to all sorts of computer capabilities. They simply were worried night and day that they were not always going to be accurate in all their reporting, trying as hard as they might. It is a tremendous burden on them. It is something that really weighs on their mind.

Now, some people have said that, because the tax is collected by the first purchaser, the tax really does not impose additional administrative burdens on the independent producers. That, of course, is very inaccurate. Because, although the first purchaser collects the tax, it is the operator that has to certify for each barrel of crude and the applicable tax classifications. This becomes very, very difficult because of the complex categories for tax purposes that have been created by the law.

So I would say that there will be an additional production response, not only from economic factors at work, not only because we are increasing the cash flow of those who traditionally have reinvested more than 100 percent of their cash flow into exploration, but the incentive of reducing the tremendous regulatory paperwork burden also cannot be overestimated.

In addition, a provision of this amendment which applies to the royalty owners is certainly a significant one. It would virtually exempt all the royalty owners in this country because there are very, very few—you can literally count them almost individually—that would have more than 10 barrels per day of oil owner share production.

So that provides almost total exemption for the royalty owners of this country. They were unfairly hit by the windfall profit tax, there is no doubt about it.

They were taxed at a rate equal to that of major oil companies, as has already been said.

I saw a cartoon in one newspaper not too long ago showing an elderly couple, and this, I think, would be a very typical recipient, a royalty interest that we have in Oklahoma. More than any other group, royalty owners are primarily composed of retired farmers and ranchers, with approximately half of them on social security. They are not high income people.

This cartoon showed this elderly couple standing in front of a rural mailbox and the name on the side said "Mr. and Mrs. Exxon," obviously the name of this elderly couple. They were getting their check out of the mailbox. They were looking at their check and they said, "Yes, when they said in the papers that the windfall profit tax was going to hit the Exxons of the world, they were certainly right."

In other words, they fired at the target of the major oil company and hit the little couple who were living on their social security checks, supplemented by a royalty income, at the highest possible rate on all of their holdings.

The major international oil companies not only have holdings in the United States but they have them overseas as well. So while they were hit at a certain tax rate, we have to consider that at least some of their holdings are probably not within the bounds of the United States and were not taxed. But that little royalty owner has all of his or her interest taxed under the windfall profit tax at the same rate as the major oil corporations.

I know that every time we talk about a retired couple, we talk about people not at the highest levels of income; when we talk about the so-called mom and pop amendments, people have developed a certain cynicism about it. They say that cannot be true.

I read an editorial in the New York Times saying, "Why should we feel sorry for J. R. Ewing?" That was the essence of it, that it was the J. R. Ewings of the world who were affected by any provision to help royalty owners.

That is pure nonsense. I am ashamed that a paper with that reputation would not have taken the time to check the statistics to determine the actual breakdown in the income levels of those who were helped by earlier efforts for the small royalty owners.

I would say that this amendment goes a long way in achieving equity for the independent royalty owners. It is an amendment that should be agreed to. It will result in additional production. It will actually provide recognition in the tax laws for those who have been the backbone of the domestic petroleum industry. I am talking about the independent producers who have kept their jobs, their payrolls, in this country searching for energy here inside the United States.

I hope that we will be able to pass this amendment. I again commend the Senator from Texas for taking the lead in offering it. I want to emphasize, in conclusion, that in supporting it, I certainly do so without any kind of disrespect for the Senator from Kansas, the distinguished chairman of the Finance Committee, who has worked along with many others now on the floor to cause more incentives to encourage domestic production of energy in this country.

Mr. NICKLES. Mr. President, I rise in support of the amendments introduced today. I commend their authors, the Senator from Kansas and the Senator from Texas. I think it is important that we enact these amendments, Mr. President.

My reasons for running for U.S. Senator were basically twofold. This goes back to 1951. My father passed away and the Federal Government, through their unfair inheritance tax, took one-third of the small machine shop my family had owned since 1918. And the second which incurred my anger just as easily if not more so was the passage by Congress of the unfair, unjust, discriminatory windfall profit tax last year.

This law as passed makes no sense.

Mr. President, if we had some commonsense, almost every Member of this body would agree that we need more domestic production and less reliance on OPEC. Yet when Congress passed the windfall profit tax we did just the opposite. We put a heavy, burdensome tax on domestic production. At the same time, there was no windfall profit tax on imported oil. So basically what we have done is we have increased our dependence on OPEC. We have actually increased and encouraged OPEC imports while discouraging domestic production. It made very little sense when it was passed and it makes no sense today.

Another argument philosophically is one that comes out so strongly against the windfall profit tax, that it is totally and completely 100 percent anti free enterprise. It is telling one industry, "You are making too much money so we will take anywhere from 30 to 70 percent of whatever increase the price will be." For most people they cannot figure it up, but the windfall profit tax boils down to about one-third of the price of oil they were receiving. So we are telling this industry they will have to pay that tax plus whatever the income tax will be. It used to be 70 percent. Hopefully, with the present program, we will reduce it to 50 percent. At the same time, we come to other industries and tell them they are in trouble so we will subsidize them.

We do not have the free enterprise system. We do not allow people the freedom to suceed or the freedom to fail. I believe free enterprise is just that, that individuals should have the freedom to succeed or the freedom to fail.

I compliment the committee because I think they did take a step in the right direction. The bill that is on our desks that passed the Finance Committee was a step in the right direction. The $2,500 tax credit for royalty owners was certainly a step in the right direction. Not only was this an increase of $1,000, but it also provides, and I am not too sure that many Members realize this, that in the event that $2,500 exceeds their total tax liability before the windfall profit tax, they will not have to make those deductions and then also receive a credit later in that year.

Mr. President, this affects thousands of people. I talked to many people last year. One individual had a royalty income check of a sum total of $1.51. The windfall profit tax on that $1.51 was 50 cents. His net income was 91 cents. That 50 cents was withheld. That person, to receive their credit as it was passed last year and will be passed this year would have to file for a refund to receive his $5 or $6 refund. That is ridiculous.

In the committee's bill, under Senator DOLE's leadership, we were able to put an amendment in that would basically provide for those individuals, if their tax

liability does not exceed $2,500, no deductions would be made.

The committee bill also provided for a one-half phaseout of the windfall profit tax on new oil beginning in 1983. It certainly was a step in the right direction. I compliment Senator BOREN for his initiating that.

The two amendments before us today, both of these, in my opinion, would improve the legislation, if we have been.

Concerning Senator BENTSEN's bill, I guess I do have two reservations about that. One, as we just learned on the Senate floor, is the fact that we are talking about a tax increase.

Most of us really were not knowledgeable or aware of where the new income was coming from, the leasing provisions. My concern is, yes, I think we need the tax cut, but I question where the tax increase is coming to pay for it.

Also, I think Senator SYMMS had a good point when he said yes, as the law is now written, if the Bentsen amendment is passed, the income will have to be made up. It will be basically an overall tax reduction on windfall profit tax through the year 1990 but the net effect will be that the tax burden of this exemption will be pushed onto other segments of the industry, primarily the majors, and that concerns me.

I think Senator BENTSEN's arguments were well stated in the fact that we need to repeal this tax for persons on the first 1,000 barrels of production to insure the incentive, to insure that people have a right to keep part of their own profit.

The amendment that I am very, very excited about is the amendment of Senator DOLE and myself, and Senator BOREN and others who have worked so hard to put it together. That is the total, complete phasing out of the windfall profit tax on new oil. That would begin in the year 1983 with a 7.5-percent reduction so the tax on new oil would be replaced or would be phased out in this 4-year period of time.

This amendment has several pluses that probably have not been discussed or realized by many Members of the Senate.

One is that it does not put the independents, the royalty owners, versus the majors, the big boys versus the little boys.

As Senator DOLE has now graciously acceded to amend our amendment, it would exempt all tier 3 oil. So we would be exempting not only this new oil, but we would also be exempting tertiary oil and also heavy crude.

This has some real positive pluses for increases and for new production. It certainly is a step in the right direction. I applaud Senator DOLE and also look forward to working with him. I very much appreciate the commitment Senator DOLE has offered and also, Mr. President, the commitment President Reagan has made, to work toward alleviating this unfair tax.

Both have made statements that, yes, the time is short, that we have only been in session this year for 6 months. We do have a commitment from both to try to see if we cannot totally eliminate this tax. Mr. President, I think that is the only solution to the windfall profit tax, to totally repeal it.

I believe it can be phased out. The Senator from Idaho has stated, and I talked to Senator DOLE about it also, to move up the phaseout date of 1990. We can move that up to 1984. We can phaseout the windfall profit tax by 1987. Phaseout would begin in 1984 and there would be a 3-percent phaseout where it would be repealed totally and completely by 1987.

Mr. President, another alternative would be to replace the windfall profit tax with the across-the-board excise tax which would boil down to about $3.80 per barrel. Mr. President, I believe this would certainly be a step in the right direction as it would get us away from the obvious inequities of taxing domestic oil and not taxing foreign oil.

I think it is important that if we do have taxes, we shall have them in the constitutional manner; that is the fair and equitable way. Certainly, as the tax is written today, it is not fair, it is not equitable, and in my opinion, it is not constitutional.

Mr. President, I endorse wholeheartedly both amendments. I think both are a step in the right direction to eliminate a very unfair, discriminatory, very antiproduction, very antifree-enterprise piece of legislation. They are certainly a step in the right direction. I hope my colleagues will support them.

Mr. SCHMITT. Mr. President, as one of the Senators who voted for a 1,000-barrel exemption when the windfall profit tax was before the Senate, I say that, at that time, under different political circumstances, that seemed to be all we could hope for. Unfortunately, we could not even get that. Now, under different circumstances, the Senator from Kansas and his cosponsors, including myself, feel that we can begin to undo what we did with the windfall profit tax; that is, begin the phaseout of certain portions of that tax, particularly to phaseout the tax on new oil.

I want to add my endorsement of that approach as being by far the more desirable philosophical approach, as well as the more desirable approach from the standpoint of creating new incentives for domestic exploration and discovery.

That, Mr. President, is the essential element of our short term, must be the essential element of our short-term national energy policy. We must do everything we can to encourage exploration and production of domestically available energy resources and, in the very near term, that means oil and gas.

The Secretary of Interior, operating, of course, under the leadership of the President, is moving to make more areas of Federal land available for exploration. There are many other new incentives appearing, both capital and otherwise, which will encourage new exploration. With the phaseout of the tax on new oil and the phaseout on secondary and tertiary oil, which has also been agreed to by the Senator from Kansas, we shall be able to see, I believe, a very rapid increase in domestic production so that, within a 5- to 10-year period, we can have some hope of at least meeting our essential needs.

When we can do that, we can provide the free world with considerable more security with respect to energy requirements and we can provide the free world with an obviously more stable foreign policy directed toward those nations upon whom we are now dependent for energy production.

So, Mr. President, I commend the approach recommended by the Senator from Kansas to the Senate. Once again, he has shown his leadership in working out a solution that provides, I think, not only an opportunity for all of us to undo what we now realize we should never have done, but also an approach that, on balance, provides a great deal more for the energy industry and for the American people than just a simple 1,000-barrel exemption.

Mr. DURENBERGER and Mr. KENNEDY addressed the Chair.

The PRESIDING OFFICER. The Senator from Minnesota.

Mr. DURENBERGER. Mr. President, the real issue here is not what the Bentsen amendment puts into the bill. It is the impact of what the amendment takes out.

Proponents of this amendment would finance their thousand barrel exemption by deferring the leasing provisions designed to benefit the economically troubled basic industries—industries like rail, steel, air, automobiles, mining and paper. In my judgment, that is an extremely shortsighted proposal.

The problems affecting these industries—as well as their impact on the Nation's economy—should be well known to every Member of this body. These are the industries for which the term "reindustrialization" was coined. No segment of the economy has a greater need for the kind of capital incentives this bill provides.

It is simply unrealistic to suggest that key companies in the auto industry, the steel industry, or the struggling air and rail industries can wait until 1992 for access to the tax relief that we are about to grant their more profitable competitors. And whatever the merits of their case, it is impossible to argue that the independent oil producers have a more desperate or immediate need for this assistance.

The basic industries impacted by this amendment have four things in common:

They employ large numbers of people; directly or indirectly, one out of every seven American wage-earners depends to some extent on the viability of these six basic industries.

They produce products essential to the Nation's economy, as well as its military preparedness.

They face immense capital needs as they seek to comply with federally imposed standards, and modernize aging plants and equipment.

And without exception, they face inadequate earnings on an industrywide basis.

No one would deny that modernization of these basic industries is essential to any national reindustrialization plan.

But because they lack profitability, ACRS, ITC and the various other tax reforms we are about to adopt will have little or no impact on their future. These industries already have more than $4 billion in earned but unused investment tax credits. Rather than providing investment incentives, adoption of ACRS without some form of leasing or refundable credit will only increase that backlog.

The Finance Committee recognized this fact and adopted language that liberalizes current leasing regulations so that through the mechanism of leveraged leasing, basic industries like rail and steel can share in the tax incentives we have granted their more profitable competitors. By cutting out these provisions, the pending amendment prevents this tax relief from reaching the industries that need it most. By preventing the Fords, Chryslers, and AMC's of this world from sharing in benefits that would naturally flow to their more profitable competitors, the amendment would actually worsen disparities within these industries, and make it harder for companies like Ford to survive.

Mr. President, I am not an advocate for bailing out one weak member in an otherwise profitable industry. But if we are serious about rebuilding America's industrial base, we have to recognize that the country cannot prosper without a steel industry, without an automobile industry, and without transportation industries like railroads and airlines. If it cannot impact on the investment decisions of these basic industries, the "Economic Recovery Tax Act" will fail on its essential purpose.

Throughout my brief tenure in the U.S. Senate, I have repeatedly argued the need to address the special problems affecting these basic industries. I believe the President and Finance Committee Chairman DOLE deserve special commendation for their foresight in addressing this issue. By deferring the leasing provisions, this amendment cuts the heart out of the effort to reindustrialize the basic industries. This is too high a price to pay. I cannot support any amendment that would mute the impact of these leasing provisions.

In this case, Mr. President, I would also have to oppose this amendment even if it did not undo important work done by the Finance Committee. The 1,000 barrel per day exemption has been around ever since the windfall profit tax was proposed. It has been rejected by the Finance Committee and it has been rejected on the floor of the Senate.

The past two Presidents have taken actions to decontrol the price of domestic oil. I have supported these actions. We learned from a decade of energy uncertainties that price controls only serve to subsidize the consumption of petroleum and thus increase our dependence on imports. We decided to decontrol prices so as to discourage petroleum consumption and imports. This was the primary objective and it has worked. Americans are using less oil and using oil more efficiently.

A secondary objective was to encourage domestic production. We need independent oil producers to find new wells. We need current producers to apply costly enhanced recovery technology to existing fields. And we need to produce our heavy oil resources. The Finance Committee tried to achieve these production objectives by exempting new, heavy and tertiary oil from the windfall profit tax.

In the bill reported to the floor in 1979 and again in this bill we see special recognition for the role that new, heavy and tertiary oil can play in domestic energy supply. If the authors of this amendment were seriously concerned about domestic energy production, they would design their proposals so that they were incentives to increased production and not simply windfalls to oil producers.

Mr. President, decontrol allows domestic producers for sometime to charge a monopoly price. Saudi Arabia has determined that the monopoly price is about $32 per barrel. It is obvious they have a monopoly. They are controlling the price of oil to promote their own long-term interest. They have oil to last into the next century at current production rates. They see our current efforts, successful efforts, toward conservation as a threat to their long-term interest. They know that conservation will cut deeply into their future, if oil is sold for too high a price. So they are producing at an extraordinary level—to create a glut and force the price down—down to a long-term price that is in the best interest of a monopoly producer. And decontrol allows U.S. producers to get that same price in our domestic markets.

Recognizing that decontrol would create huge economic rents and transfers of wealth in our society, the Congress created the windfall profit tax. I studied the oil industry and the proposed tax carefully before supporting it. My study convinced me that it was possible to create incentives for increased domesitc production—like the phaseout on the new oil tax which is contained in this bill—within the structure of a windfall profit tax. I support the tax. It is a necessary companion to decontrol.

Now, the proponents of the amendment argue that the 1,000 barrel-per-day exemption is necessary to raise the capital for additional exploration. Mr. President, I know that oil exploration is a capital-intensive venture. But the facts suggest that there is and has been plenty of capital to put rigs in the field

In 1979 the domestic petroleum industry reached the alltime record in well completions and exceeded that record last year. By all indications, every spare geologist is gainfully employed in the search for oil. And for that, Mr. President, we should be thankful.

The burst of activity is not the result of extra income from old wells, Mr. President. It results from the promise of the world price for new oil. A price that we should allow without tax and the provisions of this bill move us in that direction—in the right direction to exempt new oil entirely from the tax.

There are provisions in the code—provisions like the phasedown on the depletion allowance—that seek to punish the industry for its success. We ought to treat oil, particularly the independent producers who account for the bulk of our new production—like we treat all other investments in mineral extraction. A continuation of the depletion allowance at 22 percent would be appropriate. That is not a windfall. It is a policy decision to encourage investment in mineral production.

But it would be a windfall to allow all producers the 1,000 barrel per day exemption. It is the kind of windfall that the tax was designed to capture. It is the kind of windfall that will not measurably increase the amount of domestic production.

Mr. President, there are basic industries in the United States that need tax relief to raise the capital to become competitive on the world market again. The Finance Committee bill seeks to provide such relief through the leasing provisions that I have described. The authors of the amendment would cancel that provision in the name of an industry that has sufficient capital, today. Mr. President, I must ask that we once again defeat the 1,000 barrel per day exemption.

The PRESIDING OFFICER. The Senator from Massachusetts is recognized.

Mr. KENNEDY. Mr. President, I oppose the amendment of the distinguished Senator from Texas (Mr. BENTSEN). He has made a very strong case before the Senate this afternoon. As he is the former chairman of the Joint Economic Committee, I have enormous respect for his analysis of the economic implications of this amendment and the importance of it from an energy point of view. So I take seriously his arguments which he has made here, on the floor of the Senate. As usual, he has been eloquent and persuasive. I have also heard him speak on this issue before our Democratic Caucus and respond to questions on this particular issue.

I think, though, Mr. President, that it is appropriate to ask ourselves at this time of discussion and debate on reconciliation—as the various committees of the Congress are meeting with their House counterparts—and as we debate this matter on the floor of the Senate, what is the real cost of this amendment? Over the last, I suppose, 30 hours, I have spent probably 12 to 15 of those hours in conference with the House of Representatives on issues involving student loan programs. We have spent a number of hours discussing that measure as we see that particular program reduced, cut back.

We see further reductions on the floor of the Senate in the minimum social security payment, although, obviously, the Senator from Texas voted for the senior citizens on that issue. Nonetheless, we have read the letters of the President of the United States that indicated that if we were going to take any measures in restoring some of the cuts on the social security measure, we were facing serious economic crisis. That letter has been examined by all the Members of the Senate and the House of Representatives.

Now, we are asked, with this amend-

ment, to deny the Congress of the United States some $17 billion over the period of the next 5 years—$17 billion over the next 5 years. That is the effective cost of this amendment.

Mr. President, I know that there has been a measure that has been developed to offset those particular billions of dollars by drawing down on what I consider to be quite a creative and imaginative measure to help two of the ailing industries of this country, the steel industry and the automotive industry, to get back on their feet. These are industries which are vital in terms of our long-range and short-range security interests and economic interests in this country.

So, although this measure is portrayed as being a tradeoff on the question of denying the Treasury any reductions in funds, I think that it is important to realize that this will be denying the Treasury funds. This amendment means therefore, that there will have to be additional taxes paid the American taxpayer or there will be a reduction of service programs—such as the student loan programs, such as the school lunch program, such as legal service programs and other programs which, today, are in effect.

Mr. President, I think that perhaps, even having said that, a case could be made with regard to this particular segment of the energy industry if there were an important national need and if that industry required the kind of incentives that are being included in the Bentsen amendment. But let us take a look at what some of the independent companies are saying about their own financial situation. I shall mention just a few, read briefly from some of the independents about their current economic standing and their financial condition.

Here is Amarex Coil Co.:

To our shareholders.

In many respects, fiscal year 1980 was an extraordinary year for your company. Expenditures for drilling, on behalf of Amarex and its partnerships, were at an all-time high of $59 million, and that figure should approach $97 million in fiscal year 1981. Consolidated revenues rose to over $17 million, also a record high, a result of increased natural gas production and rising prices of gas and oil.

Then it continues, "On the question of drilling"—that is what we are talking about, are these incentives necessary to encourage more drilling on the part of the independents? Here is their letter to the shareholders on drilling:

Rig utilization at year end was at its highest nationwide level since December of 1956. At year end, almost 2,800 rigs were running in the U.S.—approximately 45 percent more than a year ago. This spurt of activity has made rigs scarce, resulting in higher price demands from drilling contractors. Daywork charges in the Company's operating areas increased 26 percent during the year.

Here is Callon Petroleum Co. letter to shareholders:

Fiscal 1980 marks the beginning of a new era for Callon Petroleum Company during which emphasis will be placed on oil and gas reserves and cash flow. This has been the best year in the history of your Company as reflected by record highs in revenues, net income, funds provided from operations, oil and gas production and estimated future net revenues from proved oil and gas reserves. Your Management is confident further improvements will be shown in the current fiscal year.

Revenues for the 1980 fiscal year advanced 80 percent over last year reaching $6,628,792 as compared to $3,675,057 in 1979. Our net income was $1,228,429, which was an 88 percent increase over the $654,028 earned the previous year. Our future looks extremely bright. Your Company's balance sheet has never been stronger. Earnings, cash flow and the value of oil and gas reserves are at all time highs.

This is with the windfall profit tax, Mr. President.

Here is American Quasar Corp.:

The year just passed has been quite noteworthy in the history of our Company. We enjoyed a record high year in revenues, income, exploration and development—and the future continues to look brighter.

Here is Apache Oil Co.:

Record earnings, cash flow, and increases in the value of proven developed reserves were achieved. . . . Record investor program sales which enabled Apache to continue diversified exploration.

Premier Resources:

Premier Resources is actively preparing itself for a substantial increase in oil and gas drilling activity in the years ahead. Fiscal 1981 should be a dramatic year in the growth of Premier Resources.

Mr. President, these are typical of the independents that will be affected by this amendment.

Let us take a look at Merrill Lynch as it examines at the industry as a whole. I read from Merrill Lynch, May 1981 Monthly Petroleum Summary:

EXPLORATION AND PRODUCING COMPANIES

The fundamental outlook for domestic exploration remains extremely bright. New oil prices exceeding $32.00 per barrel after windfall profits taxes and new deep gas prices of $7.00 per MCF continue to expand domestic exploration. Given these high oil and natural gas prices, new oil discoveries can recover all costs in six to nine months, while deep natural gas discoveries can pay out in less than twelve months. This compares with three to five year payouts prior to the OPEC price increases in 1974. Such payouts probably make the oil exploration business more profitable than any other segment of American industry.

We are being asked here, on the floor of the U.S. Senate, to add $17 billion for that industry over the next 5 years, at a time when this body and its representatives are in conference with the House of Representatives in cutting back on major programs that have an impact on the quality of life for the people of this Nation.

Mr. President, I do not believe that case has been made for the independent oil industry, and I hope the amendment of the Senator from Texas will not be accepted.

Mr. BENTSEN. Mr. President, I thank the distinguished Senator for his comments.

A comment was made earlier with respect to a vote on a cloture motion in 1979. I say to my good friend from Kansas, who has fought shoulder to shoulder with me on most of these issues that concern production, that that particular vote on cloture was a judgment call on tactics. As I recall, whereas the votes had been going rather well on amendments to try to encourage production, the sentiment then shifted, and there was a vote on an amendment to set a minimum tax on newly discovered, tertiary and heavy oil. We lost that vote. At that point, a number of Members decided that we should have cloture because there were many more antiproduction amendments in the wings that would have been considered.

What I am talking about here is trying to help the independent. I am talking about providing an incentive to the guy who takes the big risk, the fellow who drills 90 percent of the exploratory wells. One who takes the gamble, who spends 105 percent of what he finds and goes out to find additional oil and gas. I am talking about the guy who finds 75 percent of the new fields, 54 percent of all oil and gas discovered. That is who this is aimed for, and that is who I am trying to assist by the thousand-barrel exemption.

In addition, I am trying to say to the royalty owner, "You don't have to be taxed like a major oil company. If you are a rancher or a farmer and the oil company comes to you and says they want to lease your land, if you give that lease and they strike oil, you are going to be able to keep some of it."

Otherwise, what is the rancher and the farmer going to say? He will say, "I don't want those oil trucks driving through my place and rutting my fields, leaving the gates open, and letting my cattle out."

Then they are told, "If they discover oil, they are going to tax you like you're a major oil company."

I opposed the tax on royalty owners then and I oppose it now. I urge the Senate to act favorably on my amendment.

● Mr. LEVIN. Mr. President, I oppose the amendment offered by Senator BENTSEN. It would exempt the first 1,000 barrels of oil a day produced by independent producers.

These proposed reductions come on top of reductions made by the Finance Committee in the windfall profit tax. The bill includes a permanent credit for the first $2,500 of windfall profit tax paid by qualified royalty owners each year. In addition, the Finance Committee bill reduces the tax rate on newly discovered oil from the present 30 percent to 15 percent.

I understand that independents reinvest in the oil industry at a higher rate than the majors do. Congress recognized that fact when it passed the windfall profit tax. In that bill, certain rates for independent producers were reduced in light of their investment record.

This amendment goes far beyond the investment record of independent oil producers and the respective tax burden of oil producers and royalty owners. It goes to the heart of the debate over regional implications in this tax relief measure. The Bentsen amendment would increase the tax relief that will flow toward the Oil Producing States while the recapture portion of his amendment seriously cuts

back the tax relief for industrial regions of the Northeast and Midwest.

Mr. President, the recapture portion of this amendment delays an important element of the Finance Committee bill. The Bentsen proposal delays the liberalized leasing provisions recommended by the administration and adopted by the Finance Committee.

The problem of unused investment tax credits is well-known among industries that have been unable to generate sufficient tax liability. The administration and the Finance Committee recognize that some businesses may not be able to use completely the increased cost recovery allowances and the increased investment credits available for recovery property under the accelerated cost recovery system. It is unfortunate that we have been unable to devise ways to recapture the tremendous backlog of unused investment credits. In the very least, the Finance Committee has devised a way for companies to take advantage of tax benefits indirectly through leasing transactions.

Under present law, three-party financing leases are now used to transfer tax benefits to users of property who do not have sufficient tax liability to absorb those benefits. Present law, however, subjects the leasing transactions to strict requirements that effectively limits the number and scope of lease characterizations.

The committee bill wisely establishes an exception to current judicial and administrative guidelines dealing with leasing transactions. In brief, the committee bill creates a safe harbor that guarantees that a transaction will be characterized as a lease for the purposes of allowing investment credits and capital cost recovery allowances to the nominal lessor. This safe harbor responds to an important challenge in the years ahead. To delay the implementation of the safe harbor will seriously impair the ability of companies with little tax liability to invest, modernize, and otherwise take advantage of the business tax relief we provide in this bill.●

Mr. MITCHELL. Mr. President, the Senate has had a number of opportunities to change energy policy to the effect that it is implemented through the tax code.

I have supported those efforts which seem to me to represent a responsible means of achieving valid energy policy goals. But I will not support a massive tax reduction in the form of changes to the windfall profit tax which clearly arise from the desire to undo the work that Congress did barely 2 years ago when it enacted the law.

In early action on this bill, I supported the proposal to improve and expand the tax credits available for conservation expenses borne by businesses and individuals. The goal of increased energy conservation deserves a prominent place in any national energy policy. It merits the support of all who are concerned about an over-reliance on imported oil.

That amendment would rectify the current imbalance in the tax code between subsidies for energy production and subsidies for conservation. The tax code already gives energy production nine times the subsidy it gives to conservation. The tax bill before us worsens the imbalance by extending even more subsidies for production.

Yet, reliance on conservation is a proven and responsible energy policy goal. It has worked over the past several years to reduce our imports and to help bring about the current so-called "glut" on the international oil market. But if we abandon all efforts to encourage conservation, that "glut" may prove as illusory and short-lived as the orginal contention that OPEC simply could not hold together long enough to do any damage. The energy policy the administration unveiled last week leans dangerously in the direction of ignoring conservation altogether.

It contains no clear program to reduce our dependence on foreign oil imports. It assumes continued high levels of imports over the next decade, with all the attendant political and economic vulnerability that such dependence entails. Although the multitude of studies of energy policy and production and conservation which have been issued since 1974 almost all conclude that conservation is the most speedy and cost-effective way to reduce our oil consumption—and thus our dangerous dependence on foreign oil imports—the administration's energy program takes no cognizance of that well-known and documented fact.

This amendment would have helped reinstate a degree of Federal policy that encourages conservation. Such a Federal policy goal is particularly important to Maine and the other New England States. The New England region relies more heavily than any other on imported oil for its basic energy needs. Greater conservation not only reduces the danger and economic costs of a supply interruption, which is a danger that no wise public policy can ignore, it also contributes to the economic health of the region by helping curtail the outflow of dollars to other parts of the country and, most importantly, to foreign countries for their oil production.

New England stands to lose the most from a short-sighted policy that relies on continued import levels as high as they are today. New England, like every other region of the country, needs energy for economic growth, to create jobs, and to maintain current jobs. An energy policy that is even-handed and serves all the regions of the country must take into account the special needs of regions which are not blessed with their own indigenous supplies. New England ought not have to rely on the goodwill of OPEC nations or a fortuitous offshore discovery for its energy supplies in the foreseeable future.

And, of course, the environmental costs of production represent as real a potential cost to that region as they do to any other. Deep-sea drilling in the North Atlantic is not an easy or environmentally harmless undertaking. The potential for massive damage to our fisheries resources is enormous.

On all these grounds, conservation represents a realistic and attractive part of a national energy policy. I deeply regret that it plays no larger role in the administration's energy policy. And I strongly support efforts to modify the tax incentives for conservation where they are clearly inadequate.

But while there are rational and economically defensible grounds on which tax incentives for conservation are warranted, there is simply no adequate ground whatever for the proposals to weaken the windfall profits tax, whether by exempting the first 1,000 barrels of daily production from the tax altogether, or by simply reducing the tax on new oil.

The windfall profits tax was enacted by Congress in response to valid public policy needs. It was our national response to the gradual decontrol of prices which permitted domestic oil prices to rise to the artifically administered worldwide OPEC prices. Its revenues were to be dedicated to the two goals of encouraging conservation through such incentives as the amendment I supported, and to help offset the impact of harshly higher prices for low-income people through such programs as fuel assistance and weatherization.

This year, Congress has already failed to fund either program at the levels anticipated in the windfall profits tax. Further revenue losses of the scope being proposed would only undermine the modest level of funding that now exists for these offsetting energy programs.

The immediate crude oil price decontrol that the President undertook in January underscores the need for a strong and effective windfall profits tax. The decontrol had no effect on conservation or on production, as we were promised. It did have a severe effect on the cost of home heating oil for the second half of this winter in Maine. And it had a favorable impact on the profits of oil companies throughout the first half of this year, as well.

Who doubts that there are sufficient incentives today to explore for new oil? Domestic drilling remains at an all-time high. Oil prices, even with the glut-induced moderation of recent months, still make oil production an extremely attractive investment. The windfall profits tax itself provides generous treatment to newly discovered oil and oil produced through tertiary recovery methods.

What further incentives are we talking about?

A loosening of the windfall profits tax is simply unfair. We have made many difficult choices and cut programs that serve low-income people, that serve elderly people, that serve the vulnerable in our society. To contemplate giving oil companies a massive tax reduction now merely confirms the notion that the prevailing attitude of this Government is to widen the gap between the rich and the poor. It is not a perception or a fact to which I can give my support.

Mr. DOLE. Mr. President, I believe we have had a good debate, and in a moment I will move to table the second-degree amendment, which is the thousand barrel amendment.

Is that satisfactory?

Mr. BENTSEN. It is not satisfactory, but I accept the reality of it.

Mr. DOLE. It may be satisfactory in the outcome.

Mr. President, I do not think the President really believed, when this tax measure was sent to Congress, that there would be anything about oil in the final package. I do believe, however, that the President understands that so far as the royalty owners' relief is concerned, so far as the Senate Finance Committee action is concerned, he supports the committee's bill.

If we are talking about production response, we will be far better off under the proposal offered by this Senator and other Senators, from my State and other States, than we will be under the so-called Bentsen approach. I take nothing away from the distinguished Senator from Texas. I certainly understand the role he has played in the past several years in this area.

However, I come from an oil-producing State and know that nobody likes the windfall profit tax. For that matter, nobody likes the income tax. We are not here to repeal the income tax. But the President has promised that he is going to dismantle the windfall profit tax at the earliest opportunity. He has been in office 6 months. He did not support the windfall profit tax.

Some go to the White House and indicate that they support the President, and some do; but others try to find somebody else to offer amendments to get something more than the President offered. That may or may not be the case in this instance, but it has happened in the past—this year and in former years.

This Senator is prepared to say that we are taking a giant step in the right direction by phasing out the tax on newly discovered oil.

If we can table the Bentsen amendment, it is my understanding that the amendment in the first degree may be withdrawn, and the pending business then will be the amendment offered by this Senator, for himself and a number of other Senators.

MOTION TO TABLE UP NO. 254

So, Mr. President, at this time I move to table the Bentsen second-degree amendment, and I ask for the yeas and nays.

The PRESIDING OFFICER. Is there a sufficient second? There is a sufficient second.

The yeas and nays were ordered.

The PRESIDING OFFICER. The question is on agreeing to the motion to table the amendment by the Senator from Texas (Mr. BENTSEN), UP No. 254. On this question the yeas and nays have been ordered, and the clerk will call the roll.

The assistant legislative clerk called the roll.

Mr. STEVENS. I announce that the Senator from Maryland (Mr. MATHIAS) is necessarily absent.

The PRESIDING OFFICER. Are there any Senators in the Chamber who have not voted, who wish to vote?

The result was announced—yeas 61, nays 38, as follows:

[Rollcall Vote No. 209 Leg.]

YEAS—61

Abdnor	Gorton	Murkowski
Armstrong	Grassley	Packwood
Baker	Hatfield	Pell
Biden	Hawkins	Percy
Boschwitz	Hayakawa	Pressler
Bradley	Heinz	Proxmire
Bumpers	Helms	Quayle
Byrd, Harry F., Jr.	Hollings	Riegle
Chafee	Humphrey	Roth
Cohen	Jackson	Rudman
D'Amato	Kassebaum	Sarbanes
Danforth	Kasten	Schmitt
Denton	Kennedy	Specter
Dole	Laxalt	Stafford
Domenici	Levin	Stevens
Durenberger	Lugar	Thurmond
Eagleton	Mattingly	Tsongas
East	McClure	Warner
Garn	Metzenbaum	Weicker
Goldwater	Mitchell	Williams
	Moynihan	

NAYS—38

Andrews	Exon	Melcher
Baucus	Ford	Nickles
Bentsen	Glenn	Nunn
Boren	Hart	Pryor
Burdick	Hatch	Randolph
Byrd, Robert C.	Heflin	Sasser
Cannon	Huddleston	Simpson
Chiles	Inouye	Stennis
Cochran	Jepsen	Symms
Cranston	Johnston	Tower
DeConcini	Leahy	Wallop
Dixon	Long	Zorinsky
Dodd	Matsunaga	

NOT VOTING—1

Mathias

So, Mr. DOLE's motion to lay on the table UP amendment No. 254 was agreed to.

Mr. DOLE. Mr. President, I move to reconsider the vote by which the motion was agreed to.

Mr. BAKER. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

The PRESIDING OFFICER. The question recurs on the first-degree amendment.

Mr. BENTSEN. Mr. President, in accordance with my discussion with Senator DOLE, I now ask unanimous consent to withdraw the underlying amendment (UP No. 253).

The PRESIDING OFFICER. Without objection, it is so ordered.

The question recurs on unprinted amendment numbered 257.

Several Senators addressed the Chair.

The PRESIDING OFFICER. The Senator from Kansas.

Mr. DOLE. Mr. President, may we have order?

The PRESIDING OFFICER. The Senate will be in order. Will Senators please take their seats so that we can determine the present parliamentary status.

Mr. DOLE. Mr. President, what is the pending business?

The PRESIDING OFFICER. The unprinted amendment No. 257 of the Senator from Kansas.

Mr. DOLE. Mr. President, I ask for the yeas and nays on my amendment.

The PRESIDING OFFICER. Is there a sufficient second? There is a sufficient second.

The yeas and nays were ordered.

Mr. DOMENICI addressed the Chair.

The PRESIDING OFFICER. The Senator from New Mexico.

UP AMENDMENT NO. 258

Mr. DOMENICI. Mr. President, I send an amendment to the Dole amendment to the desk and ask for its immediate consideration.

The PRESIDING OFFICER. The clerk will report.

The assistant legislative clerk read as follows:

The Senator from New Mexico (Mr. DOMENICI), for himself and Mr. SCHMITT, proposes an unprinted amendment numbered 258 to the Dole unprinted amendment numbered 257.

Mr. DOMENICI. Mr. President, I ask unanimous consent that further reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment is as follows:

At the end of the amendment add the following:

"Notwithstanding subparagraph (b)(3)(A), the applicable percentage for heavy oil and incremental tertiary oil shall be the same as the applicable percentage for newly discovered oil."

Mr. FORD. Mr. President, a point of order. The Senate is not in order.

The PRESIDING OFFICER. The point of order is well taken. Will Senators standing in the aisle and talking please take their seats or remove themselves from the Senate Chamber?

The Senator from New Mexico.

Mr. DOMENICI. Mr. President, my amendment amends the amendment that the distinguished chairman of the Finance Committee had pending. It is a very simple amendment. It adds heavy oil and incremental tertiary oil to the percentage diminution that is provided in the distinguished Senator's bill; in other words, his defined new oil 7.5 percent reduction each year in the windfall.

It is my honest belief that heavy oil and incremental tertiary oil should receive the the same treatment. As a matter of fact, it would appear to me that to do otherwise would be to significantly prejudice the development of these two significant oil resources. They are indeed new. They just carry a different name. One is called heavy oil and has been so carried in the tax laws in nomenclature and the same with incremental tertiary oil.

It is my belief that the windfall on those should be coming down at the same time it comes down on the definition of new oil. That is the extent of my amendment.

Mr. SCHMITT. Will the Senator yield?

Mr. DOMENICI. I am pleased to yield to the Senator.

Mr. SCHMITT. Mr. President, my distinguished senior colleague has put his finger on exactly one of the most important parts of this amendment now as it is revised, and that is it includes those major areas where an incremental diminution of the tax will provide a real current incentive to new domestic production.

With the original proposal of the distinguished Senator from Kansas of re-

ducing the tax gradually on new oil and now the addition to that by the Senator from New Mexico—which I am happy to cosponsor—we would encourage heavy oil and tertiary production. We are coming to grips with the essential element of the first phase of a national energy policy which the President has already initiated through his decontrol and deregulation efforts, and that is incentives to produce new domestic oil.

When we have control over our own domestic production, I think the Senator would agree, then we are not only more flexible from our national interests and the protection of those interests, but we are more flexible in our foreign policy in protecting the interests of the free world as a whole.

So this is probably one of the most significant amendments—the total package now that combines the work of the Senator from Kansas and the Senator from New Mexico—one of the most important amendments that we could undertake at this stage, not only of a tax bill, but of the development of a realistic, commonsense energy policy for this country.

I compliment both Senators on their initiative and hope the Senate will concur.

Mr. DOMENICI. I thank the Senator.

Mr. KENNEDY. Will the Senator from Kansas yield for a question?

Mr. DOLE. I am happy to yield to the Senator from Massachusetts.

Mr. KENNEDY. This proposal, as I understand it, is the Dole amendment as modified by the Domenici amendment. Is that what we are considering?

Mr. DOLE. That is correct.

Mr. KENNEDY. Could the Senator tell us what the revenue losses would be over a period of the next 5 years, the total revenue losses to the Treasury between now and 1990?

Mr. DOLE. Well, in 1982, the revenue loss would be $226 million, as opposed, I might say, to the $2.6 billion which would have been in the Bentsen proposal without the offset of deferring the liberalized leasing rules.

The 1983 cost would be $912 million, as opposed to the gross revenue loss of the Bentsen amendment (without regard to the offset of leasing) of $3.3 billion. The 1984 costs are $1.8 billion, as opposed to the $3.6 billion under the earlier proposal. That is through 1984.

Mr. KENNEDY. As I understand it, it is $3.2 billion for 1985 and $4.8 billion for 1986. Am I correct?

Mr. DOLE. It is $3.2 billion in 1985 and $4.2 billion in 1986.

Mr. KENNEDY. What about 1987, 1989, and 1990?

Mr. DOLE. It grows gradually. Of course, the entire tax phases out in 1991.

Mr. KENNEDY. What would be the cost to the Treasury up to 1990?

Mr. DOLE. In 1986, 1987, 1988, and 1989? We can provide those figures at a later time.

Mr. KENNEDY. Is it approximately $10 billion between now and 1986? Is that correct?

Mr. DOLE. Between now and 1986 would be around $11 billion.

Mr. KENNEDY. Has Mr. Reagan expressed any opinion about this proposal?

Mr. DOLE. Mr. Reagan the President or Mr. Regan the Secretary of the Treasury?

Mr. KENNEDY. Either one. Can we get both?

Mr. DOLE. They are both out of town today and I cannot reach them.

Let me say to the Senator from Massachusetts I read an earlier letter from the President of the United States addressed to C. John Miller, the president of IPAA. In that letter, which I have already placed in the RECORD, it says:

> We have endorsed the tax bill which would raise the $2,500 exemption from windfall profits tax for royalty owners, reduce by half over the next 2 years the windfall tax rate on newly-discovered oil.

So they did endorse the concept contained in the Senate Finance Committee bill, the amendment offered by the distinguished Senator from Oklahoma (Mr. BOREN), which would start the phaseout in 1983 and phase the tax down from 30 percent to 15 percent. That costs less money, I might say to the Senator from Massachusetts.

But let us be realistic. We were faced with the choice between a much more expensive amendment or my amendment which provides a sounder energy policy at less cost. The Senator from Kansas decided to pursue the better course. We came up with what we feel is a better amendment which costs less and produces more energy for the Northeast and other parts of the country. I thought certain that would appeal to the Senator from Massachusetts.

Mr. KENNEDY. That is interesting, and also the cost is interesting to the people in Massachusetts. The general taxes are a matter of interest to the people of Massachusetts, and also the profits of the major oil corporations, the record profits, are of interest to the people of this country.

If the Senator can respond, is it, therefore, the administration's position that they are supporting either the Dole amendment, the Domenici amendment or the Dole amendment as amended by Domenici?

Mr. DOLE. I think it would be fair to say that would be an accurate statement.

Mr. KENNEDY. That what would be an accurate statement?

[Laughter.]

I can understand the Senator's reluctance in repeating those words, that the administration supports an additional $11 billion for the oil industry in this country, and, as I understand, approximately $20 billion by 1990, prior to the time of the expiration of the windfall profit tax. That is $20 billion.

I just think, as we meet in reconciliation, and we are talking about social security, about student loans, about the feeding programs for expectant mothers, the school lunch programs, programs for the handicapped—we are cutting back on those programs—that the administration is requesting $20 billion more tax advantage to the major oil companies of this country.

I think it is important, as we are talking about a tax program in the Senate, listening to the chairman of the Finance Committee, who refuses to make the average taxpayer whole 3 years from now from inflation and social security, asking for $20 billion additional for the major oil companies. I think we ought to understand exactly what is being requested and what is included in evidently the administration's amendment, as proposed by the chairman of the Finance Committee.

I would certainly hope that if this amendment is not tabled we will have plenty of time to talk about it to make sure that the American people do understand exactly what the full implications are going to be, that the senior citizens are going to have a chance to understand the belt tightening they will have to accept, that students will understand the belt tightening they will have to accept if this amendment is adopted.

I appreciate the explanation of the Senator from Kansas.

Mr. JOHNSTON. Mr. President, what is the pending business?

The PRESIDING OFFICER. The pending business is the amendment of the Senator from New Mexico to the amendment of the Senator from Kansas.

Mr. DOLE. Mr. President, let me say very briefly, in essence we debated this amendment during the debate on the previous amendment by the Senator from Texas (Mr. BENTSEN).

Let me also say in response to the Senator from Massachusetts and others who may have an interest and who may have missed the earlier discussion, the President of the United States did not favor the windfall profit tax when it was before this Senate. He has indicated that he would hope that at the earliest possible date we could eliminate that windfall profit tax. He indicated, largely because of the pressures being brought by the House Ways and Means Committee in the other body, that he would accept some relief for royalty owners and some relief for so-called new oil.

That is the amendment, in essence, offered by the Senator from Kansas. That has been amended, or at least a second degree amendment is pending by the two Senators from New Mexico and perhaps others.

Just so the record is clear not only for the Senator from Massachusetts but for all others, I understand the House Ways and Means Committee took some action this afternoon on oil. That has been the big holdup on the House side. How much would it take to win on the House side? I want to assure the Senator from Massachusetts we did not have a bidding war on the Senate side.

Mr. KENNEDY. I think it is very interesting that the chairman of the Budget Committee and the chairman of the Finance Committee are offering a budget-busting amendment of the administration.

Mr. DOLE. Let me say there will be another amendment to pay for this. I like to pay as we go.

Mr. KENNEDY. Will that be coming out of social security or the student loan program?

Mr. DOLE. It will be along the lines of the one the Senator and I voted for last evening, to cut back some of the cushion in the bill.

Mr. KENNEDY. How does the Senator decide about the profitability of various industries and decide which industries are going to get the goodies? I do not know whether the Senator was in here earlier when I read from the Merrill Lynch report that it was their assessment that the fundamental outlook for domestic exploration made extremely bright. The report continues that this compares with 3- to 5-years payouts prior to OPEC increases. Such payouts probably make the oil exploration business more profitable than any other segment of American industry.

They are talking about paybacks in 6 to 9 months. Merrill Lynch is talking about the most profitable industry in this country. The chairman of the Finance Committee and the chairman of the Budget Committee are offering $20 billion more.

We have been around for 6 months, cutting back on the immunization program, the student loan program, and the social security programs. Here is $20 billion more for what Merrill Lynch says is the most profitable industry in this country.

I believe this is something that we ought to have a chance to go into in some detail, into the industry structure, and a number of other aspects of it if we are turning this tax program into a $20 billion giveaway to the oil industry. That is an issue which I am sure the American people want to have a full examination of. I look forward to talking about it with my colleagues.

Mr. HATFIELD assumed the chair.

Mr. DOLE. The Senator picks out a figure of $20 billion. That may be impressive unless one understands how the windfall profit tax works and the total revenues. We are taking the windfall profit tax, which this Senator did not vote for. In 1980 the total revenue was $5.7 billion; in 1981, $8 billion. These are, as yet, estimated revenues. In 1982, $19.6 billion; in 1983, $20.7 billion; in 1984, $21.8 billion; in 1985, $22.9 billion; in 1986, $23.8 billion; in 1987, $24.7 billion; in 1988, $25.5 billion; in 1989, $22.2 billion, and in 1990, $26.9 billion. Estimated revenues up through 1990 are $235.9 billion.

We are suggesting this amendment because I think there is a general agreement.

I remember a lot of people standing around there when there was the decontrol on the price of oil, indicating there would be disaster in this country. The results are rather different and I have not heard much about it since. I say if we are talking about production response and supply side economics, giving those in the business an incentive to go out and produce, whether it is oil or anything else they produce, we have to provide some relief.

The Senator from Massachusetts did not vote for the last amendment, but according to our calculations there were enough Senators to pass the 1,000-barrel exemption which cost about $4.5 billion a year, unless we do something else.

It seemed to this Senator that the better part of wisdom was to find some response that might increase production. The more you produce, the more tax you pay. So I just suggest that when we discovered that—when this windfall profit tax left the Senate 2 years ago, the tax on new oil was 10 percent. I venture to say that if the majority of the Senate could have voted a secret ballot, there would never have been a tax on new oil. How can you have a windfall profit tax on oil that has not been discovered? Where is the windfall? That is the only part of the windfall profit tax base that we touch.

There is new oil and tertiary oil, which is hard to find and very expensive to recover, and heavy oil, which is hard to lift and very expensive to recover. We are not going after old production and other areas in the windfall profit tax. We are saying to those who are willing to go out and produce oil, we are willing to lower the tax.

There are new States—Michigan, for example—which are finding more and more production. We are trying to find some incentive for those in new producing areas.

Should there be some penalty imposed for somebody who wants to go out and discover more oil to get away from dependence on foreign sources? This Senator does not think so.

We can make all the arguments we want about social security, food stamps, or farm programs. We are talking about a tax on the oil industry of an estimated $240 billion between now and the year 1990. We are talking about a reduction right now of maybe $18 to $20 billion before we even go to conference. The Senator from Massachusetts knows that once we go to conference, we may be lucky to come back with half that amount.

Mr. President, I hope the Senator from Massachusetts understands that this is a responsible amendment. It may not be one that the Senator from Massachusetts could support, but I say in all candor, it is one that I believe will help create more jobs, help create more capacity as far as the industry is concerned, pick up the slack insofar as the economy is concerned, and maybe help make this country a little more energy independent.

Mr. MATSUNAGA. Will the distinguished chairman of the committee yield for a question?

Mr. DOLE. I yield to the Senator from Hawaii.

Mr. MATSUNAGA. As I understand it, the proposed reduction of the windfall profit tax would apply only to new oil—that is, oil which is not produced from existing oil wells. Am I correct?

Mr. DOLE. That new oil would be only oil from properties where there was no production in 1978. Heavy oil is oil which is 16 degrees gravity or less. Incremental tertiary oil is oil from properties on which tertiary recovery projects are being undertaken with injection of steam heat, chemicals, detergents, and oil production from such properties qualifies to the extent that it exceeds the 2½-percent decline curve.

There was some discussion in the Senate Finance Committee—in fact, it was raised by the Senator from Hawaii—that we ought to make the new oil phased out or apply it from 1979 up to today. We were advised by experts—not by the industry—that we are going to create another tier of oil out there. They suggested that if we are going to do this—and I think the Senator from Oklahoma would bear me out on this—we ought to go back to the category of new oil created in 1978.

Mr. MATSUNAGA. What is the estimate of new oil which will be produced, assuming that the amendment of the Senator from Kansas is adopted?

Mr. DOLE. I think there are some estimates about a million barrels per day by 1990, Mr. President.

Mr. BOREN. Mr. President, if the Senator from Kansas will yield, the chairman is correct. The CBO, in an earlier study indicated that if we would totally exempt newly discovered oil, we would have production of 1.1 million barrels by 1990.

I say to my friend from Hawaii that experts have testified that this is the area of change in the windfall profit tax that would bring about the greatest production response, because we are encouraging people to go out and find the new production.

We have already seen a great deal of response from the decontrol and I think without a doubt, we shall have an increased additional response from this amendment.

Mr. MATSUNAGA. So that the 1.1 million barrels per day additional production at the present rate of——

Mr. KENNEDY. It is a $20 billion tax reduction. For a $20 billion tax reduction, we get 1 million barrels per day.

Mr. BOREN. It is per day. Of course, the $20 billion is not per year in this particular exemption. The cost of the exemption, as we would phase it in, is $228 million the first year, in 1982. It goes to $764 million in 1983, $1.6 billion in 1984. Then, of course, as they are going out and discovering more oil all the time, when you get the cost up to $3.3 billion a year, that assumes you are going to find a lot more oil that has not yet been discovered. It assumes what the tax would be if we did continue to tax the oil discovered.

I think that is really a high figure of the annual cost, Mr. President, because we have to consider that some of that oil would not have been discovered and produced were not the incentives provided in the amendment.

Mr. President, I think in terms of real cost, if we consider the drain on this country by continuing to send the dollars that we are sending to OPEC, it makes a lot of sense economically.

Mr. MATSUNAGA. As I stated in the Committee on Finance, Mr. President, when this matter was being considered, if it means a million barrels per day, that would mean a saving of about $38 million per day, which would mean, of course,

that we would not need to import that additional 1 million barrels, which means a saving to the United States in terms of balance of trade by as much as $38 billion or more per year.

It was on that basis that I voted to support the amendment offered by the Senator from Oklahoma. If, on that basis, it means that by providing incentives for additional production, we shall cut down our deficit in our balance of trade by as much as $38 billion a year, I would say, let us go with it. I would support the Senator's amendment.

Mr. DOLE. Mr. President, let me say, while I am checking my pamphlet, what we are addressing is new oil production. I shall be glad to surrender the floor in a minute, because I think the Senator from Ohio might want to say a word or more. I want him to get rested up.

What are we doing in Ohio these days? Two percent of the newly discovered oil comes from the State of Ohio. I wanted to get that in the RECORD. It is one of the very promising States as we look around for more oil production.

I think they would understand, of course that the Senator from Ohio opposed this amendment but they would probably understand it better if he supported it. Sixty-eight out of eighty-eight Ohio counties are now producing oil. That is almost a bigger percentage than my State.

Mr. President, I want to say that some people may think we are biased because we have oil production. That could cross their minds. Let me make the record clear about the State of Kansas. We produce the grand total of 56 million barrels a year, maybe a little higher now because we are producing more new oil. That is not very much. That is about 1 week of imports. We wish we could do better. But the average well in my State produces about 2.5 barrels a day. So it is not a big windfall for the people of Kansas.

What the producers in Kansas wanted was a 1,000-barrel-a-day exemption. That would have taken care of everybody in the State of Kansas, with maybe one or two exceptions. This Senator opposed that amendment. An amendment—$4 billion per year, going up and up over the years—to support something that might bring about some new production. It seems to me that we are now on the right track. I hope that after a good discussion of this amendment, we may have an expression from the Senate as to whether or not it is supported.

I am not certain where the bidding stopped on the House side, but I assure the Senators from Ohio and Massachusetts that this was not a bidding proposition. That was an amendment in the Senate Finance Committee, offered by the Senator from Oklahoma. I voted against his amendment, and overnight I was able to reduce the cost of that amendment by changing a couple of votes later that evening.

We came back the next morning, suggesting to the Senator from Oklahoma, "Let's not make it effective in 1982. Let's make it effective in 1983 and hold down the cost."

Then we started a whip check on the 1,000-barrel amendment, and we knew that a lot of my good friends on the other side figured if they can vote for the Bentsen amendment, somebody over here had to vote against the Bentsen amendment. So they kept a few Republicans on the hook that way to vote against the independent oil producers. We were able to succeed. I think only 10 Republicans voted not to table the Bentsen amendment. They did it at some sacrifice, because they come from oil-producing States.

However, I believe that the Senators on both sides understand that the best way to go is to phase down the tax on newly discovered oil. The Senator from Hawaii did raise the question in the Finance Committee. We discussed it with Treasury and the Joint Tax Committee and our staff, and we decided not to create another tier of oil. and that is why the Senator from Oklahoma modified his amendment on the following day.

Mr. President, I hope Senators who may have some doubt about this amendment will look at the total industry, not pick out some oil profits of major oil companies. If we are concerned about producing energy in this country and putting people back to work in the private sector, in my view, this is an amendment business can support and an amendment the administration can support.

I suggest that when we leave this floor with this amendment and go to conference with the House, the House Ways and Means Committee—sometime next week, it is hoped—we can work out any problems that have been raised.

Mr. BRADLEY. Mr. President, let me say at the outset that at a different time, I very possibly would support the Senator's amendment, as I believe that increasing domestic production clearly serves our national security interests and reduces our dependence on insecure sources of foreign oil.

However, one of the jobs of a Senator is to make choices, and we are at a time when there are very difficult choices. We cannot do everything for everybody. That is the essence of the budget process.

As one Senator, I believe that one of our major priorities is to reduce the tax on capital and on labor. As one Senator in the Finance Committee over the last several months and on the floor of the Senate, I proposed amendments to reduce the capital gains tax and to provide a greater tax cut for individuals earning less than $50,000. I believe we must now weigh this amendment against the need to reduce taxes on capital and labor. We have to decide whether it is more important, in the long run, to provide larger economic rents to the oil industry or to reduce the tax burden on capital and labor.

The issue is which course most promotes sustained economic growth. I argue that reducing taxes on capital and labor gives us a greater economic push than simply providing higher returns for oil producers.

Similarly, I believe this body has spoken on the record—some more than others—on the need to reduce the deficit. Let it be very clear that if we adopt this amendment, we will be increasing the deficit.

This amendment, according to the Senator from Kansas, will have a budgetary effect of about $4 billion to $5 billion by 1984–85. That again presents the Senate with some very tough choices.

If we lose $5 billion that we planned on and budgeted for, what do we do? One option is to cut programs more deeply. Frankly, I do not believe that is going to happen after the reconciliation bill.

Then, if you look at the budget in the next few years, you see one category that is much larger than others, and that is defense. We did not get at that in the reconciliation bill. You see a defense budget that allows for a 7-percent real increase over the next several years.

Senators might have read in the New York Times a day ago that Mr. Stockman, at OMB, is now questioning whether we can afford to sustain a 7-percent real increase in defense spending. He says that maybe we can have only a 5-percent real increase in defense.

On the other hand, we see Mr. Weinberger at the Defense Department saying that we should not have a 7-percent increase; instead we need to budget for a 9-percent real increase.

It is important for the Senate to recognize that the difference between Mr. Stockman and the budget, 5 percent and 7 percent, or between the budget and Mr. Weinberger, 7 percent and 9 percent, is about $4 to $5 billion: the 1986 revenue loss from this amendment.

So I argue that if this amendment is agreed to, the further reductions will not come out of social programs that already will have been cut in the reconciliation bill, but the budget cuts will fall in the defense area. I do not believe that most of my colleagues would like to see the defense budget cut further.

If you do not have the $5 billion that you would have, absent this amendment, and if you want to have a balanced budget, and if you want to reduce the deficit, then you are going to have to make cuts somewhere.

These are the choices, Mr. President. If you endorse this amendment, which perhaps on the merits makes a lot of sense, and from a national security persective also makes some sense, it means the following: a smaller tax cut for capital and labor on the one hand, and cuts in the defense budget on the other hand.

The Senator from Kansas, in the discussions we have had over the last 2 years concerning the strategic petroleum reserve, has said at times, "Look, it is so important to fill the strategic petroleum reserve that we should put a tariff on foreign oil that would generate revenues that we could use to fill the strategic pertoleum reserve."

I suggest to the chairman maybe this is a way out of our present dilemma, that instead of taxing new American oil maybe instead we should be taxing foreign oil.

Clearly this would serve a number of purposes. It would reduce our vulnerability to oil supply interruptions. It would limit the transfer of wealth that flows from the pockets of American con-

sumers to the treasuries of OPEC. It would clearly promote energy conservation.

The tariff I think would also help us realize important economic objectives. It would enable us to reduce taxes on capital and on labor and to eliminate the windfall profit tax on new oil and heavy oil, to get more domestic production, without adding to the deficit. It would also avoid presenting Senators with the very real possibility that this amendment will necessitate cuts in the defense budget.

Mr. President, I wish to submit for the RECORD an article by William Safire of the New York Times that I think very clearly states the opportunity we have to break OPEC by moving now to impose a $5 a barrel tariff on foreign oil.

Yes, it would result in an increase of about 10 cents at the gasoline pump. But it would also reduce our vulnerability to oil supply interruptions; allow us to lower even further taxes on capital and labor; and perhaps even realize the goal that the Senator from Kansas had in mind when he proposed this amendment.

So let me suggest that as this debate progresses, and I am sure that it will extend for a while, all of us should consider the choices posed: ending the windfall profit tax on new oil, one choice; further reducing taxes on capital and labor, a second choice; keeping defense spending at the level required to serve our national security objectives, a third choice. If, as I have argued, we cannot achieve all three goals at once, I suggest that maybe we consider the idea that has been suggested by Mr. Safire and others as a way to break OPEC once and for all.

So, Mr. President, I offer those thoughts only as this amendment has been proposed. I hope that in the course of this debate we might come back and go into some greater detail on the specifics of this amendment and the critical choices it poses.

Mr. President, I ask unanimous consent to have printed in the RECORD an article by William Safire entitled "Essay—Gluts To The Gluttons," from the New York Times, June 4, 1981.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ESSAY—GLUTS TO THE GLUTTONS

(By William Safire)

WASHINGTON.—The time is ripe to crack the OPEC cartel.

For nearly a decade, oil producers have combined to force the rest of the world to pay all that the traffic would bear. An international monopoly has helped inflict a raging inflation on the world, stunted the growth of the poorest nations and brushed off all criticism of its price fixing with a cool "business is business."

Now all that is changing. High prices reduced demand for oil more sharply than anyone predicted, and enabled competing sources of energy to grow. Three years ago a "glut" appeared but was quickly absorbed by the economic collapse of Iran; last year another oil glut threatened but was postponed again by the Iran-Iraq war, which took another giant out of production.

Today the world is awash in oil. "Awash in oil" is a mandatory phrase in all writing on this subject.) Refineries are refusing shipments; twice as much oil as normal is floating in tankers and storage; this week Mexico, not an OPEC member but tied to its pricing, lowered the price of crude oil by $4 a barrel; Britain and Norway are likely to follow. Nigeria, an oil-rich but cash-poor member of OPEC, is under pressure to lower its price.

Why the turnabout from shortage to oversupply? Not, as State Department Arabists fondly believe, because Saudi Arabia is producing 10 million barrels a day instead of its usual 8 million; that "favor" picks up less than one quarter of the production lost by the disappearance from the market of Iran and Iraq. Within a year, some Iraqi production may be back and the Saudis would cut production without sopping up the glut.

The reason for glutsmanship is plain: The high price is being artificially maintained by the monopolists; in a normal market, the unfixed price would drop. Thus the moment is propitious to smash the cartel. Not to weaken it, or induce it to be more reasonable, but to break it once and for all. Nothing personal, not for revenge; simply in our own economic self-interest.

The United States is the world's largest oil importer. Here is how we, acting alone, could bring the cartel to its knees:

1. Impose a $5-per-barrel import fee. What? Raise prices about a dime a gallon of gas? Are you crazy? Like a fox; the present high price of oil has reduced demand, encouraged conservation and brought in new sources of energy. A higher price would make oil even less attractive, ultimately forcing the producer's price downward. Meanwhile, the top $5 will stop flowing out to the sheiks and start flowing into the U.S. Treasury to the tune of $10 billion a year.

This idea was hooted at when proposed, in an extreme form, by John Anderson last year. But if repackaged as part of the plan to flex American economic muscle—with the proceeds to be refunded via tax credits used to lower income taxes—it ceases to be laughable.

2. Set import quotas for oil. This is a device to get monopolists fighting among themselves. Require oil companies to buy tickets, at auction, from the U.S. Government for the right to import oil. (Such allocations were given away in the 1950's; in the future, they should be sold.)

The companies would then go to foreign suppliers and pass on the cost of the tickets. Because oil is in oversupply and we are the biggest buyer, some oil producers would secretly go along—effectively discounting their prices without losing face. Whatever the posted monopoly price, the fluctuating deduction of the ticket price would enforce a true market price.

3. Play favorites among producers. Exempt Mexico from all oil import fees in return for a long-term, below-market contract for oil to fill our strategic reserve. Exempt Venezuela if it will resign from OPEC and join an all-American production alliance. Switch half our Libyan purchases to Nigeria, and the remainder if this does not affect Colonel Qaddafi's support of terrorism.

4. Put on the commercial squeeze. Tell the companies to slow down acceptance of foreign oil; run 15-knot tankers at 8 knots; stall on payments and go to court on contracts. Let the vulnerable suppliers feel a cash pinch, miss a few payrolls, endure a few strikes. Replace the arrogance of the seller with the arrogance of the buyer.

This is not ordinary business practice. But in kowtowing to a monopoly, or in seeking to break it, long-term business relationships mean nothing. To a cartel, only economic power counts.

Only if we force the monopolists to undercut each other will we discover if the Saudis are really the moderates they claim to be. Only when we take the lead will the other major importers, Japan and West Germany, see their self-interest in following.

The glut is a black-golden opportunity; with daring and imagination, we can seize this moment to turn back the assault on the American economy.

Several Senators addressed the Chair.

The PRESIDING OFFICER. The Chair recognizes the Senator from Louisiana.

Mr. JOHNSTON. Mr. President, I have what is an amendment to this amendment which I think is not in order, and I wish to ask the distinguished Senator from Kansas if he might be ready to accept it at the proper time. The Domenici amendment, which adds heavy oil and incremental tertiary oil, I think is an excellent amendment because these are very price incentive sensitive kinds of production, but there is one very conspicuous omission from that amendment, and that has to do with stripper oil which, as the Senator from Kansas well knows, of all categories of oil it is most sensitive to incentive because most of those stripper wells, 10 barrels a day or less, are held together with baling wire and to the extent that we give them a higher price we get more of that oil, to the extent that we give them a lower price we get much less oil. Of all kinds of production that deserves more tax incentive than any other kind because that truly is incremental production. When we are talking about new oil, that may or may not be produced at some time in the future, but if they do not produce the stripper oil right when that well is ready to play out, if they let the well go down they can never bring it up again because of the dynamics of the geology with a well that is playing out.

So I wonder if the distinguished Senator from Kansas will be ready at the proper time or may I ask, perhaps, a parliamentary inquiry.

The PRESIDING OFFICER. The Senator will state it.

Mr. JOHNSTON. Is a substitute amendment to the Domenici amendment in order at this point?

The PRESIDING OFFICER. The Chair rules that it is a third-degree amendment and therefore not in order.

Mr. JOHNSTON. Very well.

Mr. DOLE. Mr. President, will the Senator yield?

Mr. JOHNSTON. I yield.

Mr. DOLE. The Senator knows if that were offered it would take care of 80 percent of production in my State, but it would also cost about between $3 billion and $4 billion a year. I certainly have an interest in what is produced in my State, but, on the other hand, I am also constrained by the comments of the Senator from Massachusetts and the Senator from Ohio, and others, that we have to have some restraint on what we are going to do.

So, as much as I wish in other circumstances to somehow work out such an amendment, I have to oppose any effort to amend this present amendment even if it were possible.

Mr. JOHNSTON. I ask the Senator: The Senator is aware of how sensitive to price is this production and how they do lose this production if the wells go down and they can no longer produce them because of the economics of the dollar?

Mr. DOLE. The Senator from Kansas

is sensitive to that. In fact, as I have indicated earlier, I said 2.5 barrels in my State and I understand new figures indicate about 3.3 barrels is the average well production from each well in my State.

But again, it seems to me, and I have talked to some of the producers in Kansas, they wish to have everything exempt. Obviously they would rather not pay any windfall profit tax. They were opposed to it at the outset.

In Louisiana the average well produces about 54.5 barrels but the stripper production is only about 1.5 percent. The stripper production in the State of Kansas is about 80 percent and as I said the average well produces about three barrels a day.

Mr. JOHNSTON. I certainly think that the Senator is in position to know that what I am saying is entirely correct.

Mr. DOLE. It is correct.

Mr. JOHNSTON. Is the Senator willing to take that amendment to conference? I understand they have to move things around in conference and make everything fit. But of all the categories of production is it not stripper category that deserves the most break? I mean after all that oil was decontrolled before the windfall profit tax; whereas new oil was under controls, and the windfall profit tax on new oil came out of the incremental increase. But with stripper oil it all came off the top and it seems to me that is not only unjust if we want to talk about the justice of it, but what it does in terms of production of incremental amounts of oil stripper deserves more sympathy than any other kind of oil. Is that not correct?

Mr. DOLE. I say to the Senator from Louisiana that is correct.

In fact, I believe the RECORD indicates the Senator from Kansas was partially instrumental in keeping the rate down for stripper production in the conference along with the help of the distinguished senior Senator from Louisiana to 30 percent.

Mr. JOHNSTON. Does the Senator wish to be a coauthor of this amendment?

Mr. DOLE. The Senator will probably wish to be a coauthor at a later time. It seems to me this is an ideal provision. We should be talking about some relief for stripper production in the second tax bill which will be on the floor later this year.

Mr. JOHNSTON. Right after indexing?

Mr. DOLE. Later this year.

But I hope the Senator from Louisiana might go back and visit with the Senator from Massachusetts and the Senator from Ohio and see if we just cannot move ahead with this excellent amendment we have now. That would be most helpful.

Mr. JOHNSTON. I wonder. I ask my friends from Ohio and Massachusetts if the stand is going to be made on the pending Domenici amendment or whether it is going to be on the main amendment because I wish to offer, after the Domenici amendment, this amendment on strippers. I know my friends from Ohio and Massachusetts even though they oppose the main amendment cannot and would not oppose the stripper amendment and cannot resist it.

Several Senators addressed the Chair.

The PRESIDING OFFICER. The Senator from Pennsylvania.

Mr. SPECTER. Mr. President, as I heard this debate unfolding, it is my thought that this entire issue would be better left to the second tax bill.

As I listen to the proposals of the distinguished Senator from Kansas has made it seems to me that it is obviously in response to the amendment which was made by Senator BENTSEN, of Texas, as having the lesser of a tax impact as an alternative to what Senator BENTSEN has proposed. I think it may be there might be merit in making some modifications on the windfall profit tax if it were tied into a plowback provision in the interest of exploration.

There are arguments to be made that we do need to develop as much energy as possible, and if profits were conditioned on being plowed back into exploration there might be some justification for modifying the windfall profit tax, at least in my judgment, and it might be that, as the distinguished Senator from Louisiana has suggested, stripper production might be more meritorious as a point of definition than the definition of new oil.

But as I listen to this debate on oil it is my view that these issues ought best to be considered in the context of hearings and a greater deliberative procedure than is afforded here this afternoon as we are rushing to complete a tax bill.

Mr. JOHNSTON. Mr. President, will the Senator yield at that point?

Mr. SPECTER. I do yield.

Mr. JOHNSTON. Is the Senator aware when we had the regime of oil control existing in the country that we put in an amendment in the Energy Committee, as well as another one in the Finance Committee, on the question of decontrol of strippers, that we not only had hearings, long, extensive hearings, but we had extensive debate here on the floor, and we actually went through the entire legislative process of decontrolling stripper oil. That was the regime that was in existence for many, many months, in fact a couple of years, as I recall.

So that we dealt with that very issue and, in fact, what was not dealt with was putting a windfall profit tax on stripper.

If you will talk to those on the Finance Committee, I think you will find that was almost an inadvertence because I think nobody had stopped to realize that stripper was decontrolled, so that when you put the tax on top of stripper, that was actually reducing the take of those stripper people. Is the Senator aware of those facts?

Mr. SPECTER. Only to a limited extent. That is part of the concern that I express. Since those matters were heard in committee and debated on this floor, there are a fair number of Senators who are new to this Chamber who have not had the advantage of knowing the details of those events, and I, for one, think it would be very useful if before a number of us were called upon to vote on these complex and important matters that an issue of this importance came through the procedure of having hearings in the Finance Committee with a full range of exploration of the complicated issues which are herein involved.

Mr. JOHNSTON. Does the Senator feel the same way, if he will further yield, on the Domenici amendment which deals with heavy oil and tertiary?

Mr. SPECTER. I might feel the same way or not feel the same way because I am not prepared at this time to express an opinion on that subclassification.

Mr. JOHNSTON. That is the pending amendment and that is the reason I ask the question. I just wanted to join in on the pending amendment because this is an even stronger case than heavy and incremental tertiary, even though those are very strong cases.

Mr. SPECTER. I sense, Senator, that the case for stripper may well be stronger from what I know about stripper oil. But as I listen to this debate on the amendment by Senator BENTSEN, on the amendment by Senator DOLE, on the amendment by Senator DOMENICI, I believe there needs to be more exploration of this matter and, as I say, it may well be, in the event of exploration, if there were obligations to plow back the profits that there should be some relief from the windfall profit tax—I am not sure—but that would be my candid inclination, and it may well be that stripper, as you have suggested, may be a more meritorious recipient of some special consideration than the category of new oil, which would go to the very large producers who may not be in quite the need of extra incentives, considering the profits picture which they have reported in the past several years.

Mr. JOHNSTON. The Senator makes a very strong case.

Mr. SPECTER. All of which lead me to the conclusion that for quite a number of us who have recently joined this body that a more deliberate procedure would be more helpful to the Nation than that which is presented in the course we are now embarked upon.

Mr. DOLE. Mr. President, will the Senator yield? Will the Senator permit me to ask a question of the Senator from Pennsylvania?

The PRESIDING OFFICER. Does the Senator yield for a question?

Mr. SPECTER. I do.

Mr. DOLE. I just want to point out, I do not quarrel with the observations of the Senator from Louisiana and the Senator from Pennsylvania. I think 78 percent of the production in Pennsylvania is classified as stripper production, with the average of one-third of a barrel per day being stripper, and they have less than one-tenth of 1 percent of new oil.

But I do want to indicate that there are a number of States that have newly discovered oil. New Mexico 2.7 percent, California 2.3 percent, Colorado 1.6 percent, Louisiana 11.4 percent, Oklahoma 13 percent, Kansas 4.8 percent. While I am sympathetic also with the plowback the Senator mentions, I might add that was an area this Senator pursued, but I

could not find much support in the industry or even among my colleagues.

I do not recall the exact vote on the Senate floor on the so-called plowback provision but, as I recall, we had less than 35, 36 votes to support that proposal. That made more sense to this Senator on the theory that if you really wanted to increase production, we ought to have some incentive within the structure to put it back into exploration. But for some reason no one has ever been very excited about that, at least not excited enough about that.

Mr. WALLOP. Mr. President, will the Senator yield for a question?

Mr. SPECTER. I do.

Mr. WALLOP. I would phrase it this way: When you are talking about plowback, the record of the industry is one of plowback. Indeed, the investment is greater than the return.

The other thing is I do not know whether the Senator has seen recent profit pictures out of the industry, but they are significantly less attractive than they were during the times of the highlighted press coverage of them during the Carter administration when the stresses of the new Middle East reductions in production and the price increases took place.

Those were profits primarily generated from the brokering of overseas oil and which the windfall profit tax, to my dismay, ever since it has been around, leaves untouched.

In effect, what we have done by the institution of this tax is to put a tax on American production and American exploration, and leave still untouched the brokerage concept, the brokerage activity, of the major oil companies as they bring them in, where those profits were being generated from.

So when you are talking about trying to structure an incentive for American production, new oil is the one place where you cannot claim a windfall profit because in my State, which has now the highest and the hottest area of exploration in the lower 48, in the Overthrust Belt, wells that were once on an average 2,000 to 4,000 feet, and costing in the neighborhood of a half million dollars, now go to 12,000 to 17,000 feet and costing in the neighborhood of $4 million.

So given the history of the industry's plowback, we do not need an incentive to do that. What we do need is some incentive for some exploration and that is the incentive and thrust of what we are trying to achieve here.

Mr. SPECTER. Senator. I do understand the facts of reinvestment. But the bill would be greatly more palatable, at least in my judgment, if the obligation existed to use those profits to plowback.

Under existing law, a company may or may not plowback, as the company sees fit. There has been widespread criticism about the use of energy profits, oil profits, in collateral investments. So when we touched on this issue of changing the windfall profit tax, which is a very fundamental and important change, it is my view it ought to be tied back to the specific obligation for plowback.

Mr. WALLOP. First of all, in some respects I do not quarrel with the concept of it, if we could ever structure it. But you know that has been the problem, to structure it in such a way that it was meaningful, and it is not so easy as it sounds, as we make such a decision on the floor now because, as Senator DOLE pointed out, we have been trying to discover ways to do that and have it, you know, answer the problems that are inherent in trying to do and achieve just what the Senator is suggesting.

But I will again point out for those on the other side that the profit picture is just plainly not so rosy as it was only last year. It is dramatically lower. But the press never looks at that profit picture. They only want to show the inflammatory ones. When the process reverses a little bit and the profits go down, nobody pays any attention to that until they start up again and they always go from the down side and they never go from where it once was when that takes place. I just think it is not such an attractive thing as it once was.

I do not mean to say that the industry is in poor condition. But the exploration is already beginning to bump up against the economic attractiveness of these heavy investments that are going on. I am not saying we have reached that yet, but it is really very close and some decisions to explore are certainly being postponed right now.

Mr. SPECTER. The additional argument advanced by the distinguished Senator from Wyoming about modifications or changes in the profit picture, I think, is further support for a more orderly inquiry into the subject without making a decision under these circumstances.

Mr. WALLOP. If the Senator from Pennsylvania could tell me one moment in time when the discussion of the oil industry was orderly and intelligent, I would be happy to join with him in that. But it does not seem to be the process. Nobody ever seems to be reasonable when he discusses this. I know the Senator is and I compliment him for it.

Mr. SPECTER. If we have not yet found that moment, I think we should continue to search for it before we make such fundamental changes.

Mr. KENNEDY. Will the Senator from Pennsylvania yield for a question?

Mr. SPECTER. Yes.

Mr. KENNEDY. I thought the Senator from Pennsylvania made a good point that this was not a timely measure. It is my understanding from the Joint Committee on Taxation that the budget loss for the period of 10 years on the Dole-Domenici amendment is $40.8 billion. The best estimate on the stripper well amendment between 1980 and 1990 is another $30 billion.

So what we are talking about, if we are taking the amendment of the Senator from Louisiana and the Dole-Domenici amendment, is a loss of some $70.8 billion.

I thought the point that the Senator from Pennsylvania made that before taking any action on measures of those kinds of economic implications, let alone what are the issues of equity to fairness, which I think are of equal importance, it seems to me that the comments that the Senator from Pennsylvania made that we ought to give due consideration and examination to this issue are extremely well-founded.

I just wanted to commend the Senator from Pennsylvania for raising at least some questions so that the Members of the Senate would understand that these kinds of questions about the budget implications and issues of equity are on the minds of a number of Senators.

Mr. SPECTER. I am pleased to have yielded for the question from the distinguished Senator from Massachusetts.

As I listen to this debate and hear these figures expounded, I have some questions as to whether there has been sufficient time to authenticate the reliability of all of these figures. We have a tax bill which has been prepared with the deliberation of the Finance Committee, written up and presented to the body. But, as the amendment process comes, it is substantially more hurry and there are hasty references to books and notes and representations made which I have some question about.

I certainly would prefer to see it presented in a more systematic way and have some opportunity to deliberate and to make some kind of comparisons as we rush to some conclusions on such an important matter.

Mr. KENNEDY. A final question, if the Senator would yield for it: The Senator from Kansas indicates that he is going to offset these budget considerations with other changes in the tax program. I understood from what he might be suggesting that these would be measures similar to the measures the Senator from Texas proposed, which would have an importance and significance to a major industry in our country, for example, the steel industry or the automotive industry.

I was just wondering whether the Senator was aware of where, or whether the Senator from Kansas would tell us where, he is going to get those other offsetting revenues. I was wondering whether that was a concern to the Senator from Pennsylvania because of the measures that have been included in the Senate Finance Committee bill that will permit the steel industry and other industries to be treated fairly and equitable with other industries that have a subsidy in terms of capital formation through the investment credit.

Mr. SPECTER. I thank the Senator from Massachusetts for the question. That is a concern to me, whatever the cost may ultimately be in terms of what it might do if similar assistance were given to other industries or balancing the other cuts and costs which have been made during the course of the past several weeks. All of those raise a lot of questions which require a lot of deliberation, in my opinion.

Mr. RIEGLE. Will the Senator yield to me for a moment for an observation or two? Would he be kind enough to do that?

Mr. SPECTER. I yield to the Senator.

Mr. RIEGLE. I thank the Senator from Pennsylvania for yielding.

Earlier today, I am struck by the juxtaposition of events here where we

had a vote on the restoration of the minimum benefits under social security, a $122 a month minimum payment to the people on the lowest rung of the social security ladder. If I am not mistaken, I believe the Senator from Pennsylvania voted with others of us to consider restoring and maintaining that payment to those people who now receive it.

In the outyears, the total revenue impact was something over a billion dollars, but in that range. It seems to me, as I hear these cost estimates for these oil changes as they would extend out over the next decade totalling something on the order of $70 billion, it seems to me that, on the same day that we are withdrawing the minimum benefits under social security that goes to 3 million people in the country—half of them with incomes below $3,000 and we have 80,000 of them who are very elderly people 90 years old or older—in the name of restraint and cutting down on Government spending and so forth, we are snuffing out that benefit but, at the same time, apparently finding that it is within our means to suddenly come up with a new item that is considered and presented right here on the floor. It has not come through any orderly process. We find ourselves looking at an expenditure with a pricetag of $70 billion and, apparently, some folks just cannot wait to spend that money.

So I have a hard time reconciling how, in the one instance earlier today, the Senate found that there was not any money to maintain the minimum benefit under social security but, lo and behold, 4 hours later, we have come up with, apparently, $70 billion worth of room where we can take and make new entitlements, if you will, new help, and new financial resources available to the people who are fortunate enough to have these oil holdings. So I am disturbed about that.

But my second observation would be this: The Senator from Wyoming, who was on the floor a moment ago, said that he was concerned, and I am paraphrasing, words to the effect that he might not have an opportunity in the normal and more orderly course of events to have this item considered within the committee of jurisdiction and hearings and the opportunity for people to be heard and have it come forward later in a more normal legislative sequence.

My response to the Senator from Wyoming would be that his party controls the Senate, controls all the committee chairmanships and controls all the subcommittee chairmanships. I would think that if he has a case to make, or others on that side, that it ought to be quite within the realm of what is feasible to be done to sit down and work out a schedule within the normal committee system and to allow hearings to take place—public hearings—to get these facts out on the record and let all sides be heard. Let us look at the revenue implications. Let us see what this will do to the inflation rate, what it will do in terms of impacting capital investment decisions in the country, and other things.

Let us get that information on the public record and be in a position to then make an evaluation and to decide this in the normal process. But to actually bring it up here in the late stages of a tax bill that is aimed at quite a different set of issues, to bring it up without that kind of orderly process, it seems to me is not a responsible way to approach this kind of issue.

I do not think the assertion of the Senator from Wyoming that he is not going to be able to get a proper way in which to consider this in a reasonable period of time is an accurate observation. I think he can. He certainly ought to be able to speak to his leadership and see what can be worked out here. Then there would be an opportunity for factfinding.

I would certainly hope and expect that there would be people across the country who would have feelings about not taking this step, who would want to come in and be heard. They ought to have a right to be heard. They obviously are not going to be able to jump on a plane 10 minutes to 6 on a given evening and get down here and have any orderly way to have a hearing on these kinds of deliberations; $70 billion is not pocket change. Therefore, I think we ought to proceed far more carefully and in the regular fashion in considering something of this size.

Mr. MATSUNAGA. Will the Senator yield?

Mr. RIEGLE. I yield.

Mr. MATSUNAGA. Earlier I quoted the figure of $38 billion in savings in imported oil. Upon recheck, I have learned that the figure should have been $15 billion.

In addition, I would like to state that that is based on an estimated domestic production of new oil of 1.1 million barrels per day.

Mr. President, I cannot be, and have never been, labeled as a friend of big oil, yet I have stood on this floor in support of the amendment offered by the Senator from Kansas for the reason that I am fearful that we are losing sight of the major purpose of all the debate on the budget and on the tax cut measure which has been going on for weeks.

What are we striving to do? We are combating inflation. We are saying we have to stem the tide of inflation in order to bring our economy back on its feet.

What is the biggest cause of inflation? The escalating price of energy. And what has been behind this? Imported oil. A barrel of oil which cost $2.40 in 1972, today, under contract, costs $38. On the spot market, it goes even as high as $48 per barrel.

On the Island of Molokai, the Molokai Electric Co. pays $44.50 a barrel. Consumers, who used to pay $50 a month, pay as much as $240 a month for their electric bill.

This is the most serious cause of inflation, inflation to the consumer. The other, of course, is the high interest rate.

What disturbs me, however, is that the administration, and from representations made on the floor here today, I understand this is an administration proposal, the administration on the one hand proposes an amendment such as that which is pending, and on the other proposes to reduce drastically funds for the development of alternative sources of energy. It is only by increased production of oil and increased production of alternative sources of energy that we are going to make ourselves self-sufficient and independent of the whims of our foreign suppliers of oil, the OPEC cartel and others.

In this respect, I wish the Senator from Kansas would support the amendment I will be offering to retain the present law, which the Treasury Department is trying to amend, to remove the incentives for the commercial development of alternative sources of energy. His support would indicate that the administration and the distinguished chairman of the Finance Committee are indeed bent on fighting inflation by making this Nation of ours energy self-sufficient.

I repeat, Mr. President, it is by the development of energy sources within our own country that we will be able to achieve energy self-sufficiency, independence, and, as a consequence, reduce the ever-rising tide of inflation.

Mr. ANDREWS. Will my colleague yield?

Mr. MATSUNAGA. I yield.

Mr. ANDREWS. My colleague is raising a good point. No one can disagree with the fact that the inflation which is now rampant in this country came about largely because of the increased cost of energy over which we have no control because so much has to be imported from OPEC countries. I share with my colleague from Hawaii the concern about the administration moving more actively toward the development of synthetic fuel, and in the case of Hawaii the fantastic exploration being done to extract power from the depths of the ocean. These projects have to move ahead.

At this time, if I could, I would like to point out that we need some incentives in the tax law. I have a letter I received not too long ago from one of my constituents in North Dakota. Mr. Neiman Behm, who is on the board of the Sun-Behm Gas, a small company in Minot, N. Dak.

Mr. President, I ask unanimous consent that this letter in its entirety be printed in the RECORD at this point.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

SUNBEHM GAS, INC.,
July 17, 1981.

Senator MARK ANDREWS,
5205 Dirksen Senate Office Building, Washington, D.C.

DEAR MARK: SunBehm Gas, a family owned independent oil producer in the State of North Dakota, is in firm support with the omnibus tax reduction bill.

We, as a producer, have been exploring for crude oil reserves since 1961. During this period we have drilled in excess of 69 wells, successfully completing 54 wells as producers. Our approach has always been to plow back all revenue into increased production.

The investment capital to SunBehm available for future drilling has been substantially reduced over the past 18 months. Drilling and exploration costs have increased 200

percent over the past 10 years for shallow wells and, for wells drilled to deeper depths, costs have escalated 40 percent over the past two (2) years, while today's interest rate on borrowed capital ranges from 20 percent to 23 percent versus 7 percent to nine percent just five (5) years ago. The windfall tax, and state production and extraction tax, on newly discovered properties, are in excess of $9.00 a barrel or 26 percent of gross revenue, before operating costs are deducted. On the income side the value of a barrel of crude oil has dropped 20 percent in the past seven (7) months.

With the present legislation, SunBehm gas will be forced to curtail future exploration plans. The tax reduction bill aimed at giving relief from the windfall profits tax to independents will improve our development plans and permit us to continue exploration.

Sincerely,

NEIMAN BEHM,
Chairman of the Board.

Mr. ANDREWS. This letter points out the problems they have in drilling the small type oil and gas wells, and how they need this type of tax incentive to move ahead.

I might point out to my colleague from Hawaii we need a balance in this whole outlook on energy production and energy development, synthetic fuel development, new developments in energy, as my colleague has pointed out so uniquely done in the great State of Hawaii. And not only that but synthetic development of coal in my home State of North Dakota, and also the basic continuation of drilling by these small producers from whence most of our energy comes from now and must come for the years in the future.

With that kind of balance I think we in the Senate can meet the needs that my colleague and good friend from Hawaii has so well pointed out. If we do that, we will have met the challenge that faces this country and our Nation's economy will be far better off.

Mr. MATSUNAGA. I thank the Senator from North Dakota, especially since he comes from the opposite side of the aisle. I am glad the thinking is not altogether unanimous in canceling out alternative energy. OTEC, for example, is one of the most promising, if not the most promising, new indigenous sources for baseload electricity, but it was zeroed out by the present administration. Fortunately, it appears that all Republican Senators and Members of the House do not completely agree with the administration, and we may yet witness a bipartisan effort to save OTEC, ocean thermal energy conversion, solar energy, wind energy, lowhead hydro, geothermal, and other alternative energy projects, started during the last few crucial years.

Mr. ANDREWS. Not only that, but at the present moment, the White House is making a decision on whether or not to go ahead with the coal gasification plant which will be unique in the world that can give us the knowledge we have to have to move forward in producing these Btu's in this country. I sincerely hope that the administration will look with favor on this coal gasification plan, just as I would hope that they would look with favor on the development of the alternative energy source that my colleague points out is so uniquely available in his State of Hawaii.

Mr. MATSUNAGA. As the Senator from North Dakota so well knows, the Senator from Hawaii happens to be the author of the In-situ Coal Gasification Act, even though there is not a single pile of indigenous coal in Hawaii.

Mr. President, the Senator from North Dakota has touched upon the whole thrust of what we should be striving for; that is, the development of every source of energy within our own borders. We have to look more and more toward regional development of alternative sources of energy such as, in the case of Hawaii, taking advantage of the ocean around the islands; geothermal energy; and, in certain areas, lowhead hydro and solar energy, et cetera.

We must get away from the notion of centralized energy, such as building 300- or 400-foot dams to supply hydroelectricity to half the continent. We can accomplish the same thing through decentralized low-head hydro systems, geothermal wells, OTEC, solar and wind energy projects.

Whatever it is, if we can develop sectional energy self-sufficiency throughout our country, we shall accomplish national energy self-sufficiency, reduce the amount of imported oil, and help to reduce inflation.

Mr. President, I yield the floor.

Mr. DURENBERGER assumed the chair.

Mr. METZENBAUM. Mr. President, I want to take off my hat to and indicate the great respect that I have for the Members on the other side. Both the Finance Committee and the Budget Committee chairmen have really tremendous guts, they have a lot of nerve to bring to the floor of the Senate an amendment to give the oil companies $20 billion more on the very day that we turn down a minimum social security benefit. I tell you, Mr. President, I respect people who can do that; I think anybody who can be that brazen about not caring about senior citizens who have a chance to get social security, but who can say, we have to get into this bidding war for the oil company support; if we do not bid up the price in more tax incentives, those guys over in the House may do it. And the worry around here is who is going to get those oil companies——

Mr. DOLE. Will the Senator yield? They may have been here in the Senate. I just checked. There are 29 members of the Senator's party who supported the $4 billion amendment and only 17 said "No."

Mr. METZENBAUM. As the Senator from Kansas will remember, I voted with him in opposition to the last amendment and because the last amendment was worse than the present one, does not make this amendment better. He, I am sure, knows that full well. I am not sure which was better or worse. I am not sure that you can take something that is not very good to begin with and change it around a bit and make it look better.

As a matter of fact, Mr. President, think what we are talking about. I am hearing people talking about more production. The oil industry says we are going to get a million barrels of oil a day more. Well, as long as I have been in the Senate, I do not remember a day where, in any debate on any issue concerning the oil industry or the natural gas industry, I have not heard that increasing the price will result in the production of a million barrels of oil a day more, and something similar in the field of natural gas.

The fact is, Mr. President, that you do not get more oil by merely taking off this windfall profit tax. The windfall profit tax is not that big. The windfall profit tax is only 30 percent. There are very few people in this country who have the privilege of paying a tax as low as 30 percent. But I am aware of the fact that it is 30 percent on top of the regular taxes and I do not wish to overlook that point. But by the time we get done with all the amendments that the Finance Committee has made and by the time the oil companies use all of the special privileges such as the right to write off about $3 billion a year in intangible drilling costs each year—that no other industry in America has—the oil industry will continue to pay and does continue to pay a very low rate of tax.

What we did, Mr. President, was this: A couple of years ago—I think it was 2 years ago—we enacted the windfall profit tax. But those of us who sought to make the tax fair and equitable did not really win. In fact, those who today are on the majority side actually prevailed in that instance because they and some Members of our side joined together to enact a windfall profit tax that was quite modest. It was not what the previous administration was seeking. It was a whole lot less.

What we now have is the Finance Committee coming to the floor of the Senate with an even greater wind-down of the windfall profit tax which would reduce the tax rate on newly discovered oil from the present 30 to 25 percent in 1983 and 1984, 20 percent in 1985, and 15 percent in 1986 and subsequent years.

But that crowd out there with the highest paid lobbyists serving them of any group in America is never satisfied unless they get it all. What do they care if there are not school lunch programs available? What do they care if kids cannot go to college? That does not matter to them. "Cut our taxes"—that is all they want. More and more and more.

Sure, it is important that they have more and more so they can go out and buy up some more companies such as Kennecott Copper acquired by Sohio or Exxon moving out to buy other companies. Everybody is out there in the field now borrowing money; $5 billion for Gulf Oil, and let us not forget Mobil. Everybody want to use all these billions that they have been telling us they needed for more production so that they can go out and gobble up all of American industry.

But Mr. President, after they do acquire companies, things do not always work out very well. Exxon bought Reliance Electric. They said, "If we get this company, we have a new mechanical device, a new machine and with it we are going to save more energy"—You

know how much? The equivalent of 1 million barrels of oil a day. Always the same—always a million barrels of oil a day.

"And when we buy up Reliance Electric," said Exxon, "we are going to have this great piece of equipment and we are going to save so much energy that it is the equivalent of a million barrels of oil a day. So, Mr. Antitrust, do not interfere with us."

Do you know what happened, Mr. President? They bought the company and Mr. Antitrust did not interfere. Then, a year later, Exxon said, very meekly—no headlines, no big press releases—"The machine does not work; it is not effective. We are sorry, everybody; but we still have Reliance Electric."

Now, you people have the courage of your convictions and your convictions just happen to be that the oil companies ought not to pay any taxes. Then you even have enough temerity to say that we have to do this for new oil so that we may get new oil. My good friend from Hawaii is talking about a million barrels of oil a day that is new.

If it is all for new oil, why are you making it retroactive to 1978? That is not new oil. That is old oil at this point. But that is going to be a real bonanza for the oil companies.

As a matter of fact, with all the existing advantages, with all the higher prices, and with everything else that the oil companies have had, oil production has been dropping and will continue to drop. The EIA has said that oil production has decreased 100,000 barrels a day every year since 1974, and they forecast that by 1990, there will be even less.

As a matter of fact, some small company by the name of Exxon wrote a book entitled "Energy Outlook: 1980 to 2000." In the first line, where they talk about domestic oil production, they say, "Domestic oil production peaked in the early 1970's and is declining."

That is the way it is. There is not an unlimited supply of oil out there. When the price of oil was $3 or $4 a barrel, they said, "If we could get it up to $5 or $6, there will be a million more barrels." When it was $6, they said that if it went to $8, then $12, then $14, then $16, "we could get more oil." There was always a million barrels more if we could get the price a little bit higher. It is not a little bit higher. It is a whole lot higher, and a million barrels a day is not coming through.

Now we are told that the windfall profit tax is the reason we are not getting more oil. So the Finance Committee has proposed a change in the tax.

The Senator from Ohio took a look at what the Finance Committee did and had some inclination to challenge it, but it did not seem to me that it was of sufficient dimensions to make it worth going to a floor fight on it.

But you cannot sit back idly. You cannot relax around here, because every time you relax for 1 hour or 2 hours or 1 day, you may be certain that there will be a special amendment to benefit the oil companies.

I cannot think of anybody, in recent years, who has exhibited more power, more strength, more effectiveness than the oil companies of this country, regardless of whether the administration was Democratic or Republican.

Now I see that we are trying to push this amendment through, and we are told that it is possible that we will have to make some compromises in the conference committee. I do not know about those conferences, but if my experience in the past is any indicator of the future, the public will not be represented in those conference committees, but the oil lobbyists certainly will.

Mr. President, I believe this is an amendment the American people should know about. I do not think they know about it. It is a quarter after 6 on a Tuesday evening, and I believe that when they find out about it, they will be opposed to it and indicate to some of their Senators that this is an amendment that does not serve the Nation well.

Mr. MATSUNAGA. Mr. President, will the Senator yield?

Mr. METZENBAUM. I yield.

Mr. MATSUNAGA. I do hope the Senator is not implying that anyone who speaks for the pending Dole amendment has been approached by oil lobbyists and that we are serving the oil companies in this Chamber. Frankly, I have not been lobbied by any one on this amendment, I will have the Senator from Ohio know.

Cynicism can go just so far. To impute ill intentions on the part of any Senator, that a Senator who votes for such an amendment as now pending is against the people and for the big oil companies is doing grave injustice to Members of this body, individually and collectively.

A statement such as that made by the Senator from Ohio would make the front pages. So how can we blame the average American for saying, "Damn Members of Congress. Damn Senators. They are always thinking about big oil people. They don't give a damn what happens to the average citizen, the average consumer."

I hope the Senator is not implying by his cynical remarks that everyone who supports an amendment to encourage the production of new oil is in the pocket of the big oil companies.

Mr. METZENBAUM. I would never think of impugning the integrity of the Senator from Hawaii or any other Member, and I am not suggesting that any particular Member is in the pocket of the oil companies. But I have no reservation in saying that the oil companies are an extremely powerful lobby.

I have no doubt in my mind that the oil industry supports this amendment. I am aware of the fact that it is the oil industry that represents to the Finance Committee that if the windfall profit tax were sufficiently cut, it would mean 1 million barrels a day extra. I do not in any way wish to impugn the integrity of any Member. But I do say that this amendment better serves the interests of the oil companies then the interests of the American people, and I do not have any reservations in making that statement. I believe that it is contrary to the interests of the people of this country, and I believe it is very, very inflationary.

Mr. KENNEDY. Mr. President, will the Senator yield?

Mr. METZENBAUM. I yield to the Senator from Massachusetts.

Mr. KENNEDY. Mr. President, I should like to ask a question of the Senator from Ohio. I know that my colleague from Massachusetts, Senator TSONGAS, is prepared to speak and that the Senator from Arkansas is prepared to speak, so I will not get into this issue very much at this time. However, I do believe it is important that the following point be made.

What have the major oil companies done with their profits from last year? We have heard on the floor of the U.S. Senate that the principal reason for this amendment is to increase incentives so that we will get new production and therefore we will increase the economic vitality of our Nation, by becoming more energy independent. At a later time, I will get into the question about balancing the funding for productivity sources—energy conservation and efficiency—with the subsidies for energy production which we talked about earlier in the day.

We could show that even with their best estimates, made by those who support this amendment, we could produce far more energy at less cost to the taxpayers through energy efficiency and productivity. I will make that case at a later time.

Do these figures seem to be reasonable to the Senator from Ohio? I am quoting now from the Department of Energy figures. Of the additional $29 billion available to the 16 companies in 1980, less than half, or 44 percent, was reinvested in ongoing petroleum operations; 38 percent was invested in nonpetroleum lines of business and acquisition; 6 percent was used to increase holdings on their direct assets, primarily cash and marketable securities. The remaining 10 percent was used to pay dividends to stockholders.

The figures that have been made available by the Department of Energy indicate that of the distribution of the uses of the cash flow, the top four companies use only 34 percent of their resources for petroleum; other investments are 16 percent; dividends are 10 percent; and current assets are 36 percent.

Is it the understanding of the Senator from Ohio that the evidence is quite clear and convincing that the major oil companies in this country are taking the rather extraordinary profits that have been realized in the past year and, rather than investing them in new production, new sources, new discoveries, are investing them in nonpetroleum lines of business and acquisitions?

Therefore, taking these facts into account, plus the Merrill Lynch reports of late spring, which indicate that the oil industry is the most profitable industry in this country, will the Senator not agree with me that the American people are being basically hoodwinked by this particular series of amendments when they are told that the amendments are really going to increase additional production or that the amendments meet the standards of fairness and equity, which the President has talked so much about recently?

Mr. METZENBAUM. The Senator from Massachusetts as usual is right on target.

The Energy Information Administration of the Department of Energy has made studies to this effect, and the fact is that the oil companies of this country come before us constantly and beg for financial assistance and tell us that they need more money so they can get more production. And then when we make it possible for them to amass these billions of dollars in their treasuries, what do they do? They go out into nonoil areas, and, if my recollection serves me right, invest a figure of approximately a little bit more than half of those dollars in nonproductive areas.

I think that is truly the crux of the problem. I do not think there is any Member of the Senate or House who would deny the oil companies more and more and more if it would indeed solve the energy problem of the Nation or if we were convinced that it would mean meaningful and substantial increases in production. But the fact is that they have had more and more and more, billions more. So that they do not even know what to do with the cash. What is happening? They go out and pay prices for other companies that no one could have conceived that they would pay. In some instances they are offering twice as much as the market value of certain stock that is held by the shareholders. That is good for the shareholders, but it certainly does not add anything to the productivity of the country. It does not add anything to the economy but in some instances it adds considerably to the whole inflationary impact that we have in this country.

I say to the Senator from Massachusetts that unfortunately the facts do not support the plea of the oil companies about their intentions and need for the additional billions of dollars that would be provided under the amendment offered by the Senator from New Mexico as well as the Senator from Kansas.

Mr. TSONGAS. Mr. President, will the Senator yield?

Mr. METZENBAUM. I yield to the Senator from Massachusetts.

Mr. TSONGAS. Mr. President, I wish to make a few preliminary comments and then later tonight talk specificly about oil production versus other sources of energy.

One of the points I have stressed in my 2½ years here, which has been used by Exxon in the company's newsletter, is my criticism of those liberals who criticize the oil companies. The energy situation is very complex and it is going to take an equally complex solution to deal with it. Of course, the "production, production, production" scenario advocated by the proponents of this amendment is erroneous, and I will get into that later, but equally erroneous are those who say that the energy crisis is a function of the oil companies. The fact is that if Sister Teresa were put at the head of Exxon the energy crisis would not go away. So criticizing the oil companies is very satisfying but does not solve the problem.

However, there are times when even these institutions surprise us, and suggest that to them there are no limits. It has been said and quoted often that power tends to corrupt, absolute power corrupts absolutely. And any reader of history will understand that there are pendulum swings and what causes a pendulum to swing toward center is the function of how far it swung to the extreme. And there are some of us on the minority side who feel that the quickest way for Democrats to regain power is to allow the pendulum to swing. This is a current example which I consider classic because here we have the chairman of the Budget Committee, whom I consider a friend who otherwise has rather rational judgments, and the chairman of the Finance Committee, together suggesting that well, here is some—we can argue the figures—$22 billion, $20 billion, whatever, that somehow we do not need. This is an interesting approach considering the fact that we just told the senior citizens and those who hope to go to college with loans and people on food stamps, and so forth, that we do not have the money, we cannot find it. These are times of austerity and the good old days are over and everyone has to tighten his belt, as it were.

So from a long-range political strategic view it would be in the interest of the Democrats to have this amendment passed. Then those who advocate it will simply have to go out and explain to the elderly and to students and to the children who will not have school lunch programs, and to others, that, "No, we did not have money for you, but we clearly had money for major oil companies." I would hate to be in a position of having to defend that were I up for reelection in 1982, which I am not.

So a cynic in the discussion of cynicism would argue that it is in the long-range strategic interest of the Democratic Party to let this amendment pass and by its sheer outrageousness create a constituency to bring the pendulum back.

It is a function of two attitudes. One that I spoke of involves power and those who exercise power not knowing where those limits are, and inviting the backlash. This happens cyclically throughout history, and here is just another example. The second attitude belongs to those who live on the hill whose basic instinct is "Let the devil take the hindmost."

It is the same attitude that bred Marx, bred Lenin, and bred all those who would argue that there is nothing in the capitalist system that understands the plight of the disadvantaged. The United States has I think demonstrated that democracy and democratic institutions are by definition the most likely to take care of those who need help the most. Those societies that have not been sensitive to the disadvantaged have become a breeding ground for violence and counteraction, including the Marxist-Leninist ideology that we have had to contend with throughout this century.

I think there are two other issues that should be raised beyond the question of those who exercise power because they happen to have it.

One is the question of the budget. We have talked about a balanced budget and we have talked about fiscal austerity and responsibility. Here we are talking about some $20 billion that we find available to give back to the oil interests. But that $20 billion comes from someplace, and the question is to understand the someplace.

If I were to ask you to give me $2,000, your response might be, "Well, I can do that but if I do that I will not be able to send my child to college next year." That is a very clear understanding of the trade off.

Well, here is the same thing except the numbers are bigger. If you want to spend $20 billion to provide to the oil interests, be prepared to walk into a senior citizens' club and explain to them why it is not available to them; and be prepared to go to high schools and explain to those students who, like myself, went to college only because there was a loan program why the money is not available.

There is not one Member of the Senate who will vote for this who will do that.

Look at the child nutrition program. These are just children. We do not have enough money for them, which means there are innately brilliant children in this country who will never be nourished and whose minds, therefore, will never reach their potential because we do not have the money; $20 billion for oil interests, no problem. Just take a number and send us your address and we will send a check to you.

What kind of a society is this? The larger question is how does a society with that sense of priorities survive or do you not in time end up in a situation where those who have been the targets of these priorities, those children whose minds have not been nourished, those students who have not gone to college, those deprived of all the various social programs that have been cut away, smolder in anger when they realize that those who run this country have shunted them aside in favor of those who live on the Hill, those who have already made it and will make more?

The least we can expect from that situation obviously is that they would vote the other way. But I think one has to be realistic to understand that urban violence and terrorism are functions of those who have brilliant minds, who feel suppressed, who are frustrated. Obviously, you have some who are simply demented, but a reasonable proportion of the European violence that we see, which has not been visited upon these shores, is a function of a government that appears to be insensitive.

I can tell you a lot of people are out there, people like myself, who did not grow up with means, who went to school because there was a government that cared about us, and we are not about to sit back and allow those who live on the hill to continue to get more than their fair share.

The other concern I would raise with you in terms of budget priorities is the long term. My State of Massachusetts, throughout the time I was growing up, relied upon very traditional industries such as shoes and textiles. From the time

I was born, and even prior to that, until recently, the State was in decline, and the reason was because there was not the kind of reinvestment in those basic industries that was required.

Today the State is undergoing a resurgence that extends even to the older communities. The reason is high technology, and the reason for the high technology boom is because somebody did the basic research years and years ago.

The Japanese, who as you know, laugh at the notion of "get Government off people's backs," are the most enthusiastic advocates of governmental activity. They have decided on a program that will take them eventually out of their energy-intensive industries and put them into the high-technology area because high technology is not a function of energy; it is a function of knowledge. If we continue the same reinvestment policies and they continue their reinvestment policies, in time the high-technology industry in my State will suffer the same fate as the shoes and textiles.

How does it make sense to provide a $20 billion larding of the oil interests if you weigh that against providing $20 billion of investment potential for the high-technology industries? There is not a Japanese citizen who does not support this amendment because $20 billion for the oil industry is $20 billion not put into high technology or other basic research.

You know the old attitude of what is good for General Motors is good for America? Well, in the case what is good for Exxon is good for Japan.

One of the great misunderstood issues in this country is called resource allocation. If you think of energy, economic growth, and defense as the three great issues of investment in this country, it has to be understood that the capital and the technically trained personnel available to address those three issues are limited. To use an analogy, when we went to school the teacher there tried to explain to us finite resources and would give out 10 straws and say, "Construct for me three rectangles."

In our naivete we would take four straws, make the first rectangle, take four more straws, make another rectangle, and then when we went to make the third rectangle we only had two left. Eventually, by using common walls, we understood how one allocates resources.

One of the major arguments that is not now understood at 1600 Pennsylvania Avenue is that to the extent you absorb capital and technically trained personnel for defense, for example, you drain away the resources necessary to deal with the energy and economic spheres.

Similarly, I do not know anyone who would argue that it makes more sense to provide $20 billion in additional capital to the oil interests when that money should be going, for example, to develop the technology that will keep our industry intact in the future.

The third issue I would raise is one of the energy issue generally. There is nothing more powerful than that kind of psychological placebo when someone gets up and says, "Yes, we have an energy crisis and what we will do is produce our way out of it."

Oil, which is the subject of the amendment, is a finite diminishing resource, and there is not going to be any more. All the amendments and rhetoric in the world will not change that one basic fact. Oil is a finite diminishing resource.

So how do you deal with the fact that it is becoming a finite, diminished resource? Well, this amendment and the policy of this administration will diminish it even faster. With oil finite and diminishing, they will resolve the problem by diminishing it faster.

So, in essence, a maximum production scenario is the same thing as a "Drain America First" approach. The faster we produce it, the less there is; the less there is, the more dependent we are on OPEC. Who is perpetrating this outrageous scheme that weakens American security? Not OPEC but ourselves.

There have been a number of studies on energy policy starting with the report of the energy project at the Harvard Business School called "Energy Future." The Ford Foundation did one called "Energy—The Next 20 Years." The Mellon Institute did a study entitled "The Least Cost Energy Strategy." The National Academy did one called "Energy in Transition, 1985 to 2010." Resources for the Future did a report called "Energy in America's Future."

Ross and Williams did a report entitled "Our Energy: Regaining Control," and finally there is a report that I will get into subsequently by the Solar Energy Research Institute (SERI) called "Building a Sustainable Future."

These various, basically unrelated, sources of study arrived at the same conclusion: conservation and renewable resources of energy are priorities. We cannot produce our way out of the energy dilemma.

What is interesting about these studies is there are no counterparts on the other side of this argument. So someone coming to this Chamber through a time warp—and I suppose there are some people who believe that is how a lot of us got here—would ask the obvious question: "Well, I don't understand. If all these studies argue for one thing, why is that not the policy?"

Well, science is not political power. The people who do these studies do not work in campaigns and do not contribute to campaigns and simply do not have any muscle. They happen to have the argument, but not the power.

What we are dealing with here is not science and is not technology. It is political power in its raw form.

Where is the study to contradict "Energy Future?" There is not one. Where is the study to contradict the Mellon Institute? There is not one, either. Where is the study to contradict the National Academy of Sciences? There is not one there, either. Where is the study to contradict Resources for the Future or the Ford Foundation or Ross and Williams or SERI? The fact is, there are not any.

We are not dealing here with data. We are dealing here with political power. Let us understand that.

When you deal with political power in a way that disregards——

Mr. DOLE. Mr. President, will the Senator from Massachusetts yield for a question?

Mr. TSONGAS. I will yield on the assumption that I get the floor back.

Mr. DOLE. I am just wondering how long the Senator from Massachusetts wishes to proceed. We have speakers on this side who would like to comment on what some on that side have said.

Mr. TSONGAS. Well, my voice is going pretty well, so I would say for another 10 minutes.

Mr. DOLE. I thank the Senator from Massachusetts.

Mr. President, may I just make one comment just to correct the record? It is only a one sentence correction.

I do not think the Senator from Ohio (Mr. METZENBAUM) totally understood the amendment, because he talked about the amendment being retroactive. It is not. The amendment I have offered is not retroactive.

It applies to oil produced after January 1, 1982, from properties on which no oil was produced during 1978. So it is not a retroactive amendment. I think the Senator from Ohio may have misunderstood the thrust of that amendment.

I thank the Senator from Massachusetts.

Mr. TSONGAS. I thank the Senator from Kansas.

Mr. President, we are talking here about billions of dollars. Let me give you an example of the perspective of many experts in the energy field. Back in, I believe it was, the end of April, I was invited to go to Geneva to give a speech on photovoltaic energy, since I had sponsored an amendment on that issue several years ago.

A photovoltaic cell, as you know, converts sunlight into electricity. And since sunlight is infinite and nondiminishing and nonregulated, photovoltaic energy, in the minds of many scientists, is the wave of the future. In fact, there are some who would argue that photovoltaics, if they could drop the peak watt cost down at the same rate they have over the last 3 or 4 years, will be seen in homes throughout America by the turn of the century.

This was the first international conference on photovoltaics. Basically, it represented European, American, and Japanese interests, with a smattering of OPEC representatives.

When I arrived at the conference, the Europeans and the Japanese came up to me and said: "We don't understand what is going on. The United States is on the cutting edge of technology in photovoltaics. It has a headstart on all other nations in the technology of solar cells. Why are you cutting back? What do you know that we don't know?"

The budget for photovoltaics in 1981 was $160 million. The proposed budget under the Carter administration in 1982 was $161 million, which is basically level funding. The budget that came out of this administration was $62.9 million. So you have a cut of something like 60 percent.

So the Japanese and the Europeans came up and said: "If you think photovoltaics are such a great technology, why are you cutting the budget 60 percent?"

I tried to argue—although I do not feel this way—that we are under budget constraints and everything has to take its share of the cuts; that although we think the technology of photovoltaics has enormous potential, it must take its share of the burden, as well.

Now, if I should go back to that same conference next year, anybody who has followed the actions of the Senate could come up to me and say: "Well, that was a very interesting explanation that you could not find $100 million for a technology of enormous potential—in terms of both energy and economics—but you could find $20 billion or more for the oil interests. How is that?" Well, obviously, that would be hard to explain.

Active solar heating and cooling, funded to a paltry $43.7 million in 1981, is now down to $11.5 million. We could not find $32 million for active solar heating and cooling, but can find 1,000 times that for oil interests.

Passive solar heating and cooling is a technique that was known to the ancients. If you look at any ancient civilization, you will find they understood the Sun and basically oriented their buildings and their lifestyles around that. Of course, they were remarkably unsophisticated and, because they were so unsophisticated, did not have an energy crisis.

You really have to be a modern man to get into the dilemma we find ourselves in.

Passive solar was funded at a meager $33.4 million and is now down to $10.3 million.

Solar thermal was cut from $141 million down to $44 million. Biomass, from $46 million down to $20 million. Wind, and there is certainly no lack of that on Capitol Hill, from $85 million down to $19 million. Ocean thermal, a great interest of the Senator from Hawaii was cut from $39 million to zero.

So it is somewhat confusing to those of us who care about these technologies and who have been told we just do not have the money, we do not have $10 million, to find all of a sudden that we are contemplating giving the oil interests $20 billion. I am sure that even the most ardent supporter of the oil interests on the other side would have to acknowledge that. If one is to pursue the $20 billion, the availability approach, to say you do not have the $20 billion rings somewhat hollow. It rings hollow now but even more so after that approach.

I will go into the specifics of the energy alternatives later. I will yield to the Senator from Arkansas in a moment.

Let me mention a personal note about the "Drain America First" approach. To believe in a maximum production scenario is easier the older you are.

If you see your lifetime on this Earth as limited, then by definition your time horizon is equally limited. The younger you are, the more concerned you are going to be about the future. It is not always true, but, in general, if you do not think you will be around in the year 2000, you tend to be less concerned about the year 2010. The "Drain America First approach," the maximum production approach, argues for maximum production today, and by obvious implication the more you produce today the less there is tomorrow. This means, in a generational sense, that our generation is saying to our children, "We want the oil now and to hell with you later on."

So it is possible, actually, that Members of this body who care deeply for their children can support an amendment that maximizes production, allegedly, knowing that that production comes out of the oil available for other generations. They will vote that way and go home and have dinner with their kids and not feel guilty. Yet what you are doing by serving the oil interests and that lobby is taking that oil out of the availability of the generations that follow. By doing that, you are increasing the likelihood of not only economic and social chaos but violence.

Fifty-three hours ago I was in a hospital room in Boston and watched my third child be born. That child is totally dependent for her survivability on the adult generation.

As hard as it is to remember, we were all 48 hours old or 53 hours old at one point, and those who brought us into the world gave us the gift of survival.

What we are doing here today, with the maximum production scenario is maximizing the comforts, the benefits, the advantages to us, the adults, the older generation, the establishment, we who live on the Hill, and, in essence, saying to those we brought into the world, "Good luck. We hope you make it."

That child deserves more, not only my child but yours as well. If we do not provide an approach of transition from a fossil fuel based economy to one based on inexhaustibles, the fact is we are dooming those generations that follow, and all the nice cars and all the candy and all the whatever bestowed on those children will make no difference. You will bequeath to them a world of violence.

"Drain America First" is an outrageous intellectual, political, and moral approach to energy. Not outrageous to us, because we benefit from it, but outrageous to those who follow.

I would challenge you to go home and look your children in the eye and explain to them why it is such a great idea to produce more oil today when we do not have in place the transition to inexhaustibles—the renewables and fusion. Explain to them what their life is going to be like 40 years from now or 20 years from now, and why you participate in this.

Are all these oil lobbyists worth that?

When all is said and done, when we leave this place at some point we think about what we have done to those we have brought into this world, and there is no issue that threatens them, in my opinion, more than the 20- to 40-year time frame that is arriving, where fossil fuel production declines and there are not the inexhaustibles to bring on line. That is going to be a period of enormous social and political tension in this country. If we do not handle it correctly today, it is going to be very difficult to get through that time frame.

The approach that is being suggested in this amendment is the opposite of what we ought to be doing. I would hope at some point, when we sit in our armchairs away from the public debate, we give some very serious consideration to the long-term implications of what we do as Members of this body.

I yield to the Senator from Arkansas.

Mr. DOLE. Mr. President, I will be happy to yield to the Senator from Arkansas in a moment. I wonder if I might ask those in opposition to the amendment, can they give us any light or guess on what we might be facing?

Mr. KENNEDY. I believe we have not finished talking about it.

Mr. DOLE. Does that mean you are not ready to accept it on a voice vote?

Mr. KENNEDY. We have thought about it a good deal.

Mr. BUMPERS. Perhaps a voice vote right now.

Mr. DOLE. Well, not right now.

Mr. BUMPERS. Is that the privilege of the Senator from Kansas?

Mr. DOLE. If we could just indicate, would there be some opportunity, or does the Senator have any idea what time tomorrow we might be able to vote on the amendment? If we can work out some agreement we can all go home or set it aside and take up the amendment of the distinguished Senator from South Carolina (Mr. HOLLINGS), which is a substitute, I guess.

Mr. BUMPERS. I certainly have no objection to setting this amendment aside.

Mr. DOLE. I wondered if we could set it aside with a time when we might vote to table or up-or-down.

Mr. KENNEDY. I do not think it would be possible to determine that now.

Mr. BUMPERS. I think the Senator could lay it aside without prejudice and bring it back up at a future time.

Just for whatever it is worth, I do not think that with just these present, we could give the Senator from Kansas a definite time at which we might be willing to vote.

Mr. KENNEDY. There would be no problem if the Senator wants to withdraw the amendment and we could move on to some other matters. That would be a way of proceedings.

Mr. DOLE. That is one option.

Mr. KENNEDY. I thought there was as good a chance of that as there would be of getting a vote on it.

Mr. DOLE. Mr. President, I do not want to interfere with what is happening on the other side, except to indicate, as I indicated earlier, that this amendment is not retroactive. I think that is something that may not be clearly understood. It applies to oil produced after January 1, 1982, or properties on which no oil was produced before 1978.

I also indicate that on the Bentsen amendment, which was probably 2.5 times the cost of this amendment, the vote on that side was 29 Democrats for the amendment and 17 opposed. So I suggest that maybe this amendment is not expensive enough for some on the other side, though I must say that the four

Senators who have been discussing it did indicate their opposition to the Bentsen amendment.

I only suggest that there were 61 votes to table the Bentsen amendment; only 17 came from the other side of the aisle. So I guess there must be strong support, nearly 2-to-1 support on the Democratic side for that amendment that started off costing between $4 and $5 billion the first year. I would not want anyone who might be listening to this debate to have any misconception about the attitude of the 2-to-1 majority on the Democratic side when it comes to amendments affecting the oil industry.

As the Senator from Kansas pointed out earlier, maybe the 17 who have a different view will prevail, but in an effort to reduce the cost and to establish incentive for new production, it was the view of this Senator and a number of others that we should start to phase out the windfall profit tax as it pertained to new oil, heavy oil, and incremental tertiary. That seemed to us to provide the supply response.

I know we can all make speeches, but I think that, sooner or later, it will be understood that, when the windfall profit bill passed the Senate in 1979, the tax on newly discovered oil was only 10 percent. The Democrats controlled the Senate. In fact, there was a debate at that time whether there should be a windfall profit tax on new oil since if you have not found it, how can you tax it? The theory was that we would provide some incentive for new production.

There have been figures given by the Congressional Budget Office, certainly not an arm of the administration or the Republican Party, that we would create a production response of over 1 million barrels by the year 1990. So, while we talk about social security and all the social programs and all the other things, I just suggest that they may not be relevant to this debate. We are talking about, in the next 6 years, a tax reduction program of over $750 billion. I have heard estimates on this floor tonight that this amendment costs $20 billion, $40 billion, and $70 billion. I am not certain which is accurate, but I know the $70 billion is not accurate. It is probably somewhere between the other two.

Mr. President, I say to the 29 Senators who supported the big oil amendment on the Democratic side—the Bentsen amendment, the thousand barrel exemption, which said you do not have to produce any more, we are just going to exempt you from the tax—that we have now adopted an approach that requires somebody to go out and find more production before they get any relief from the tax. Those who do not have any oil production in their States, I assume, can stand up here all night, all day tomorrow and all the next day and tell us how bad it is. But some of us have production in our States—not much in this Senator's State. We also understand that we have some responsibility as far as independence is concerned and those who want to play into the hands of the OPEC countries, as we have been doing around this Chamber for the last several years, have adopted the right course.

But some of us believe in and have confidence in the private sector. We have confidence in industry in this country. We should not be dependent on foreign sources of oil because, with all the problems in the Mideast today, who knows what may happen tomorrow or next week? I hope that there would be some enlightenment of the 17 or so on the other side that, sooner or later, we are going to have to come to grips with energy production in this country.

It is not enough to equate this amendment with all the ills that some may visualize as far as social programs are concerned. It is not as though those in the industry were not paying taxes. As the Senator from Ohio pointed out correctly, this is a tax in addition to the other taxes added onto the oil industry.

Some may think that is fine. The oil industry is an easy target, particularly where you do not produce it in your States. You use a lot of it in your States. It seems to me that it might be at least worth discussing this amendment on its merits.

Mr. President, it is my hope that, sooner or later, we can have a vote on the amendment.

Mr. BUMPERS. Would the Senator be willing to engage in a dialog with the Senator from Arkansas for 2 or 3 minutes?

Mr. DOLE. I would be happy to, if I have anything to add.

Mr. SYMMS assumed the chair.

Mr. BUMPERS. Let me start off with the rationale which I have heard most of the afternoon from those in support of the Bentsen amendment and also in support of the Dole-Domenici amendment, that is, the incentive that reduced taxes give the oil companies to find more oil. I wonder if the Senator from Kansas can tell me how much more incentive, how many more wells we will get over any period of time and also, how much production we shall get?

Mr. DOLE. I can only go by the Congressional Budget Office, which is not known as a Republican stronghold. They estimate, by the year 1990, about 1.1 million barrels.

Mr. BUMPERS. Here are figures from the Oil and Gas Journal, and that is not known as a Democratic publication. They say that on July 6, 1981, we had 3,984 drilling rigs in operation. That is up from 3,386 in January. They say that the industry is operating at 90 percent capacity and that is the highest capacity at which they are capable of operating.

That also represents, according to Hughes Tool Co., another organization not known for its Democratic leanings—a 33-percent increase from 1 year ago.

Therefore, if we are operating at the highest possible capacity, what further impetus does a $40 billion windfall provide for more production? What further incentives are needed?

Mr. DOLE. Let me respond to that question.

Mr. BUMPERS. Did the Senator understand the question?

Mr. DOLE. The first part.

Mr. BUMPERS. The last part was the better part.

[Laughter.]

Mr. DOLE. I am not sure I understood the first part, but go ahead.

Mr. BUMPERS. Drilling is up 35 percent, according to Hughes Tool. The industry is now operating at 90 percent of capacity, as it was 1 year ago, and that is the maximum capacity at which the drilling industry can actually operate.

My question is this: How can you drill beyond capacity, whether you give them another $40 billion or not? If they are doing all they can to find all the oil and gas they can possibly find, what is another $40 billion going to do?

It is my understanding that drilling rigs are being manufactured at the maximum rate, being put into operation at the maximum rate, and have been for some time. So my question is, Where is the need for a further $40 billion incentive?

Mr. DOLE. First of all, as to giving them $40 billion, I suppose the Senator's attitude is that the Government is entitled to all the money it is taking in and that we give it out to people. That is the wrong premise, as this Senator understands it. I do not know of anybody who likes to be taxed in this country. We hope they will get relief, once the Reagan economic package is passed.

In 1972 there were 1,000 rigs out there. Now it is up to 3,000. In 1972 they were up to capacity with a 1,000-some rigs drilling and now are up to 3,000, and may be in the middle of that. I do not have the figures.

Mr. BUMPERS. In 1973 there were 1,194 rigs, on an average, in operation; and in April of this year there were 3,728 rigs. As a matter of fact, I have one even more current than that.

Mr. DOLE. The Senator from Arkansas is not opposed to more production?

Mr. BUMPERS. Absolutely not. I do agree with the Senator from Massachusetts that I do not believe we should find all we can possibly find just to see how fast we can use it.

Mr. DOLE. The Senator from Arkansas would rather import it from the OPEC countries?

Mr. BUMPERS. No. I should like to see the Energy Department, for example, release a report they are sitting on that shows that with a massive conservation effort in this country, we could save 5.9 million barrels a day by the year 2000.

My point is, further, that we do the people of this country a grave disservice when we mislead them into believing that, somehow or other, we are going to produce our way out of this. It is very difficult to talk sense about this without being accused on one side or the other of total insanity and irrationality.

I have confidence in the accuracy of the figures showing that the oil industry is hunting for oil. My point simply is that we do not have to give oil companies another $40 billion to encourage them. They are making enough money to cause them to operate at 90 percent, or maximum, capacity now, as they have been for some time. Also, if they were really serious about trying to help this country become energy independent, they should consider the alternatives.

Around January 1 of this year, I watched Charles DeBono on television, and I heard him say that the oil industry in this country was going to spend $75 billion this year on exploration.

I want to make another point in a moment, so I want to separate exploration from research and development.

As a rule of thumb, the Energy Committee has assumed that with $2 billion—make it $3 billion, because it comes out a little easier—with $3 billion of today's dollars and with known technology, you can produce 50,000 barrels a day from coal.

That means, for example, that if the oil companies were really serious about making us energy independent, they could dig fewer holes in the ground and go into the synthetic fuel business. We have close to a trillion tons of coal in this country, and that is supposed to be our ace in the hole, the thing that is going to keep this country afloat when we run out of oil.

If you divide $3 billion into $75 billion, that is 25 plants the oil industry could build, at the conclusion of which it would produce 1,250,000 barrels of oil a day.

I do not believe that Charles DeBono, even in his most fervent public relations statement, would be willing to say that the industry is going to find enough oil to increase production in this country by 1,250,000 barrels a day.

On the contrary, both the Energy Department and Exxon have reported that under the very best efforts production will decline. Exxon says that domestic production in the year 2000 will be 8 million barrels a day, or a half million barrels a day less than we are producing right now. A DOE study says domestic production will decline 14.4 percent by 1985.

Mr. DOLE. What about this dialog we were going to have? I am dying, but you are doing all the logging. [Laughter.]

Mr. BUMPERS. I am enjoying the dialog, and you hurt my feelings, so I will stop talking.

Mr. DOLE. The Senator from West Virginia said he is going to leave and I said, "Where are you going?" He said, "To West Virginia." I said, "You'll be safe." I wanted to check with the Senator from Massachusetts.

Mr. BUMPERS. To continue with the dialog, I ask the Senator this: Does he think it is better for the oil industry to spend $75 billion drilling holes in the ground and get a fewer barrels of oil for every foot drilled every year, or does he think it would be better for them to put $75 billion into a known technology and use a raw material we know we have in great abundance and produce a lot more coal for the country?

Mr. DOLE. I would rather there be a mix of that. In other words, I do not believe we can continue to put holes in the ground, because many of those are dry holes, as the Senator from Arkansas knows. I believe we have to look for alternate sources of energy. I believe that for some time we are going to rely basically on oil and gas.

What we are addressing, I say to the Senator from Arkansas, is phasing out the tax on newly discovered oil. That is all it is. If there is a windfall on something that has not been discovered, notwithstanding the activity, the increased drilling since 1972–73—that has gone up because of price, and that is the way the market responds. The higher the price, the more people are willing to invest their money. Some people have done very well, and they should pay taxes.

I do believe that if we go back and—I will not say review the bidding—but I suggest that the amendment that was before the Senate today was a 1,000-barrel exemption with less production response, because only half the benefits of that amendment would have gone to the producers.

The Senator from Kansas, after a careful nose count, decided that unless there was some alternative to that amendment, that amendment would be agreed to—not with the vote of the Senator from Arkansas or the vote of the Senator from Kansas; but, having been here a while, I have learned to count to 51. It seems to me that that was the choice we had.

Mr. MELCHER. Mr. President, will the Senator yield?

Mr. DOLE. I will yield in a moment.

I believe we have a better idea, and I suggest that we would like to vote on it. If there are those who want to go into a slowdown, that is certainly their right. The Senator from Kansas is willing to work out some time agreement, is willing to stay here all night, because I want to pass the tax measure.

The House Ways and Means Committee is meeting at this moment, and it is my understanding that they will finish the tax bill tonight, try to get a rule, and go to the floor with a bill this week and pass it some time late this week or early next week.

This Senator would like to be in a position to go to conference with the House immediately after this happens.

I am not certain what the House of Representatives may do as far as the oil amendments are concerned, but I suggest that this is in the joint resolution because there was a strong feeling, in fact almost a certainty, that a majority of my colleagues were going to insist on some such amendment.

Mr. MELCHER. Who has the floor? The Senator from Arkansas?

Mr. DOLE. The Senator from Kansas has the floor.

Mr. MELCHER. Mr. President, will the Senator yield?

Mr. DOLE. I am happy to yield.

Mr. MELCHER. I thank the distinguished chairman for yielding.

I wish to just say something in response to the Senator from Arkansas that I have heard in his recent remarks. I simply do not want to get too excited about the energy companies going into $25 billion worth of synfuel plants to convert coal into oil. As far as I know there is no proven technology that is cost effective as of this time, and coming from the State of Montana, where the energy companies look at the coal resources there as being a target for synfuel plants, I urge a word of caution about what we know about that technology and what we know about cost effectiveness of that technology. Unfortunately what we know about the technology is that cost effectiveness is not within our grasp yet.

What we would wish to be assured also in terms of massive development of synfuel plants using coal from Montana or some other Western State to produce oil or other types of synthetic energy, we wish to know that we are not going to be using too much of the water that we have in scant supply anyway, that the impact of the plant itself or where it is going to be built would be under State control and a few answers as that before we get very excited about a whole host of synfuel plants being produced.

Second. I encourage the Senate to consider that what we are about in this country doing in a massive way in conservation is to look at the old oil fields and to convert through secondary and tertiary means the oil that remains in the ground. Since we only remove anywhere from about 25 to 35 percent of the oil in primary production, that remains in the ground is still there in much larger quantities and if we can get it out through secondary and tertiary means it does require much more investment, but I think it is an investment of a conservation nature and is a wise investment. To the extent that energy companies make that investment I think they are doing the country a great service and I think they are helping to alleviate the shortage of petroleum products.

I wanted to make those remarks in context with the very profound remarks of my friend from Arkansas, not that I entirely disagreed with my friend from Arkansas but simply I think there is another side to what we are looking at when we are talking about synfuels and there is another side to what we are looking at when we are talking about the oil companies drilling more oil wells. We want to encourage oil companies to go after those existing wells, those wells that are in the fields that already exist and through secondary and tertiary recovery get as much out of those fields as is possible.

Mr. BUMPERS. Let me ask the Senator this question, if the Senator from Kansas will yield. I do not think he minds me asking the Senator a question.

Mr. MELCHER. Will the Senator from Kansas continue to yield?

Mr. DOLE. Yes.

Mr. MELCHER. He will.

Mr. BUMPERS. What does the Senator think we will get, for example, in exchange for the $7 billion that Mobil and DuPont have offered to Conoco? Do we get any oil out of the ground or do we get any oil through synthetic fuel processes? What do we get out that?

Mr. MELCHER. The Senator is asking what about the proposed Conoco merger? Is this one of the mergers that would be friendly or is this an unfriendly merger?

Mr. BUMPERS. If I owned Conoco stock it would be very friendly, but I do not happen to own any. I am sure everyone in the country wishes they did because that is the only way they would ever get any of these massive profits that oil companies are going to get. The only

way they ever get it is if they happen to own Conoco stock.

Mr. MELCHER. In answer to the Senator's question let me state this: There is a Conoco refinery in Billings, Mont., that I am familiar with the operation of Conoco's refinery. I am familiar with their dependence on oil out of Canada during previous years which has been shut off. I am familiar with the fact that Conoco has sold their assets in Canada.

I am also familiar with the fact that Conoco has some coal holdings, and I think it is quite apparent that DuPont and others, including Seagram, who are interested in a merger with Conoco, either friendly or unfriendly, are interested in what happens not only to the Conoco refinery, the Conoco distribution system, whatever holdings Conoco has in oil, but also the holdings that Conoco has in coal.

So I think we are looking at an energy conglomerate when we look at Conoco, not just an oil company.

Mr. BUMPERS. Does the Senator know of anything that will preclude Conoco from developing all those resources? Do they have to have DuPont or Mobil or Seagram or someone like that to do it for them?

Mr. MELCHER. I do not think so. The word I get from Conoco officials is that first, they prefer perhaps to be left alone, second, they would think they would consider Seagram's acquisition of enough stock to take control of Conoco as entirely unfriendly, and they are hoping that in avoiding that it will be some American company and will not be Seagrams. Might I just add that for anyone who might not know Seagram is a Canadian firm.

Mr. BUMPERS. Mr. President, it is my opinion that the battle for Conoco is just an omen of things to come.

I saw an article in the Wall Street Journal the other day which asked why DuPont or Mobil or some other companies are trying to buy Conoco? And for that matter why are they trying to buy Amax, St. Joe Minerals, and others? The Wall Street analyst concluded that they have so much money that it is just falling all over the floor, so they have to do something with it.

Are these the people we have to encourage with a $40 billion incentive to go out and find oil? Answer that objectively.

The President and some people on that side of the aisle ran on the proposition that they were opposed to the windfall profit tax. Why do not they give us a bill to abolish it? Then they can say, "I campaigned against the windfall profit tax; now I want to keep another campaign promise and abolish it." We could just have an up or down vote.

If the President is really opposed to the windfall profit tax, and if he really believes this country can produce its way out of the dilemma by giving more incentives to the oil company, why did he send word down here to oppose the Bentsen amendment? The same arguments were made in support of the Bentsen amendment that are now being made in favor of the Dole-Domenici amendment.

We all know that the vote on the Bentsen amendment was rather embarrassing to a lot of people. Sometimes those votes are not only embarrassing but they are very difficult to explain.

This amendment is designed to alleviate a little of the pressure and a little of that embarrassment, and to give people something they can answer their mail with.

Consider this matter analytically. Forget party affiliation, forget economic philosophy and just look at this whole issue, embodied in the Bentsen amendment and the Dole-Domenici amendment, clinically and analyze it.

Mr. STEVENS assumed the chair.

Mr. BUMPERS. No. 1, the argument that it will encourage people to drill is nonsense. I have already made the point that the drilling companies of this country are operating at 90 percent capacity. That is the maximum at which they can operate. They cannot drill another hole more than they are drilling because the incentives are absolutely overwhelming. The idea that this amendment is an incentive to produce more oil and will produce more oil is palpable nonsense.

No. 2, if we just turn our energy destiny over to the paternalistic care of the oil companies, we will somehow or other produce us out of this either by drilling holes in the ground or by developing coal gasification plants.

The U.S. Geological Survey and the Department of Energy and every thoughful person know that that is nonsense. In the short term you are not going to produce your way out of this energy shortfall. We do the American people a grave disservice by deceiving them and misleading them into believing that American technology can somehow create more of what God did not produce in the first place.

In 1979, the American oil industry put 11 percent of its revenue into R. & D. They put 11 percent into research for coal and oil shale gasification.

Well, Senators, for all the money that has been spent—and it has been a pitiful amount—on R. & D. for the development of other alternative sources of energy, particularly gasification, the oil industry has only put up 40 percent. They are even waiting for the Government to pick up the tab for that.

I was rather pleased when the President said he was not for synthetic development on a crash basis and, above all, he did not think the Government ought to finance this crash program.

If you think the oil industry is going to invest money in an alternative source of energy that just might sell for less than $38 a barrel when they have a bird's nest on the ground with their reserves for which OPEC is setting the price and if you think the corporate board rooms of the oil industry of this country are going to suggest developing alternative sources of energy to compete with the oil reserves they already own, let me tell you about the tooth fairy.

Of course, they are not going to do it. It would be an economic disaster for them to make that kind of decision, and that is the reason they have only invested 40 percent of the money that has been put into research and development for coal gasification and development of oil shale.

I can promise you it is good business sense for the American oil industry not to produce alternative sources of energy too quickly, and particularly alternative sources that just might be competitive with the 27 billion barrels of reserves they have in the ground.

You all know what the decontrol of oil prices meant to the value of those reserves. You talk about finding a bird's nest on the ground. When you have a cartel raising the price in a period of 7 years from $3.40 to $40 a barrel, all you have to do is just sit down and watch those reserves in the ground go up about twelvefold in a period of 7 years. That is faster than the U.S. Mint can print it.

It is very difficult to debate this issue. I know I sound like a populist who enjoys kicking big oil. I can tell you something else. The American people love it. I saw a poll the other day, incidentally, that showed that the oil companies are just below the U.S. Senate in credibility with the American people. Is it any wonder?

But are they really serious? Do they really respond to the kind of amendments that are pending on the floor right now? Listen to this little chronological sequence of events from yesterday's Wall Street Journal: June 25, Seagram mails a $73 a share hostile offer for 41 percent of Conoco stock, the offer expires this coming Friday.

July 6, Conoco and DuPont announced an agreement under which Du Pont will offer $87.50 a share in cash for 40 percent of Conoco and 1.6 shares of Du Pont common stock for 60 percent of Conoco.

July 13, Seagram sweetens the pot. Seagram sweetens the offer to $85 a share and increases the number of Conoco shares sought to 51 percent.

July 15, just 2 days later, DuPont sweetens the pot. DuPont sweetens its terms to $95 a share in cash and 1.7 Du Pont shares for each Conoco share, and mails its offer, and the offer expires August 17.

July 17, just another 2 days elapsed, and Mobil, which runs all of the highly intellectual, sophisticated ads in the Wall Street Journal, mails a $90 a share offer for 50 percent of Conoco stock and proposes to follow it with a merger also at $90 a share payable in either new or Mobil preferred stock or debentures at the option of Conoco holders, and that option expires on August 13.

Seagram is in this because they sold Texas Pacific Oil Co. and they received $2 billion in cash. They have been trying to find a place to invest this cash ever since they sold Texas Pacific. They tried to buy St. Joe Minerals. Now they are trying to buy Conoco. I can tell you if I were any oil company in the United States besides Exxon, Mobil, Texaco, and Gulf, I would be shuddering because I can tell you that every one of them is an endangered species.

Mr. President, the cheapest oil of all is the oil you do not burn. We have not ever really made a concentrated effort to conserve in this country except through

the pricing mechanism. You know you can carry that just so far, but the Achilles' heel of this administration is its energy policy or I should say lack of an energy policy. Let me read you something. I want to read to you twice because I did not believe it the first time I read it. The Senator from Ohio said earlier today that he could not believe that we could vote to take away the minimum social security benefits of $122 a month from about 3.5 million people, a good number of whom totally rely on that supplement for their very existence, and on the same day vote for a $40 billion additional windfall for the oil companies.

But if you think that is a "let 'em eat cake" policy, here is a brandnew energy policy right off the press, "Securing America's Energy Future, the National Energy Policy," mandated July 1981, and here is a quote from it:

As a practical matter holding energy prices down is ineffective as a means of helping people on low or fixed incomes. Such a policy impedes improvement across the board in both the energy and the social welfare fields.

I can tell you that is going to come as a great shock to about 90 percent of the people in my State, who just got utility bills this last month which range anywhere from $50 for a very modest home to $300 for something a little more than modest. A lot of people in my State who rely totally on social security received their electric bills this past month. They ranged anywhere from $100 to $200. They are going to be shocked to learn that "as a practical matter holding energy prices down is no way to help those people."

I will read some more from the energy policy. It is all just great. The whole idea is that if prices are high enough—two things will happen: First, the oil companies will just dig it out everywhere and, second, people may freeze to death or they may die of heat stroke. That is not an exaggeration. In Arkansas last year, 113 people died because they were afraid to turn on their air-conditioners for fear they could not pay the electric bill at the end of the month. Those are the options this administration is offering. Do away with the windfall profit tax for more incentive when they do not need an incentive and, for all those folks out there making less than $20,000 to $25,000 a year, let them eat cake.

It says:

The new efforts by this administration are productive even though much of our easy oil may be gone.

Now, there is an understatement for you.

In 1979, the last year for which nationwide industry data are available, additions to reserves were 2.2 billion barrels and the discovery of new fields accounted for 239 million barrels within that figure. No larger volume of new field discoveries has been added at any time in the last quarter century except for 1970 when the giant Prudhoe Bay was found.

Now, that is what the Department of Energy says. But let me tell you what the Department of Energy says as they boast about the fact that they say some additional oil has been found: At the same time, the barrels of oil found per foot drilled in 1978 was 14. That is the last year for which figures were available.

Let me tell you what we are getting for all these wells we are drilling. In 1973 we got 49 barrels of oil for every foot we drilled. In 1974, it went down to 40; in 1975 to 20; in 1976 to 16; in 1977 to 18; and in 1978 to 14.

Now, I do not have the statistics to back it up, but I am told that that figure is continuing to decline.

Mr. President, I want to repeat what the Senator from Massachusetts has already said. I do not understand the rush to use up whatever we have and deprive our children of a secure future. For that matter, from a purely national security standpoint, it makes no sense to see how fast we can find it and use it. What good is it going to do to build B-1 bombers when, by the year 2000, we will not have enough fuel supplies to get those bombers off the end of the runway?

If I were to ask every Member of this Senate who has children what is the most important thing in his life, he would say his children. But our children will be the beneficiaries of the bankrupt energy policy of this administration.

I do not understand why the United States is still the most profligate waster of energy in the world. We still do not carpool and we are in the process of even cutting back this year on mass transit.

This administration did some of the strangest things I have ever seen in my life in developing its energy policy. Let me give you the statistics. Not only has this administration said that we just have two things in mind, higher prices and more nuclear, but they went further.

They said we are going to cut conservation programs in this fiscal year 1981 by 35 percent and we are going to cut conservation programs in 1982 by 78 percent. Did you know that those conservation programs cost us a small fraction of the barrel of oil that we save with them?

Let us put it this way: If you weather strip your front door for $3 and you save $3 worth of oil or oil equivalent the first year, you spent $3 but that weather stripping may stay there for 20 years and so you really have saved 60 barrels of oil. It is the most cost-efficient thing we can do. And yet this administration says that in 1982 we want to cut 78 percent of this nonsense called conservation.

That is despite the fact that the Department of Energy has a report right now which says that if this country really committed itself to conservation, we could save 5.9 million barrels a day, or 400,000 barrels more than we are importing today, by conservation.

Well, that report obviously did not impress the President or anybody associated with his administration. Fossil research and development is being cut 73 percent in 1982, and the solar energy conservation bank is totally eliminated. Only one program was spared in the Energy Department budget and that was nuclear. And nuclear contributes less to this country's energy independence than any other form of energy on a dollar basis.

Mr. SARBANES. Will the Senator yield for a question?

Mr. BUMPERS. I am happy to yield.

The PRESIDING OFFICER. The Chair would indicate that the Senator from Arkansas does not have the floor.

Mr. BUMPERS. The Senator from Arkansas does have the floor.

The PRESIDING OFFICER. The Chair is informed that the Senator from Montana had the floor and no Senator has been recognized. If the Senator from Arkansas seeks recognition, the Chair would be most happy to recognize him. No Senator has been recognized at the present time.

Mr. BUMPERS. Mr. President, before the Senator from Kansas left the floor, he yielded to the Senator from Montana to make a point. The Senator from Kansas left the floor. He nodded to me; I assume to make sure I was not going to move to table the amendment, or something like that, on a voice vote while he was gone. Certainly that is the way I interpreted it, and I would never do a thing like that. The Senator from Montana finished, and he left the floor. I stood up and I said, "Mr. President," and the President said, "the Senator from Arkansas." So I ask the Chair who has the floor?

The PRESIDING OFFICER. When the present occupant of the chair assumed the chair, he was informed that no Senator was recognized.

Mr. BUMPERS. Mr. President, I seek recognition on my own right.

The PRESIDING OFFICER. The Senator from Arkansas.

Mr. BUMPERS. I yield to the Senator from Maryland.

Mr. SARBANES. Earlier today the Senator from Kansas moved to table the amendment of the Senator from Massachusetts that dealt with energy conservation, which sought to provide an additional credit in order to encourage energy conservation in commercial and industrial enterprises. In part, that was addressed to the cost that would run with that.

Yet we now have before us an amendment of the Senator from Kansas which would cost the Treasury very large sums of money. Would not a far better use of that money be to use it as the Senator from Massachusetts was proposing, to encourage the conservation, rather than to use it in the way that the Senator from Kansas is now proposing, to lift the windfall profit tax on the oil companies?

Mr. BUMPERS. The Senator's point is so obvious it should not even require a response. But the short answer to it is that the $40 billion that this amendment would cost, if that $40 billion could be spent on conservation programs, it would produce roughly 10 times as much oil in oil savings for this country as it will produce in production under the terms of the rationale for the amendment.

Mr. SARBANES. Even if you accept their rationale on production for the amendment, because, as I understood the Senator from Arkansas—and it is a point I agree with—all the incentive that you need for production is there now.

Mr. BUMPERS. Mr. President, let me see if I can just take these figures off the top of my head. The Senator from

Kansas, when queried about how much additional production we were going to get with this, as I understood him, said that by 1990 it would be 1.1 million barrels a day.

I do not know where the estimate comes from, but I am confident that the cost would probably be less than half of the $40 billion this is going to cost.

The point I was making a while ago is the Department of Energy already has a plan under which we could save about 6 million barrels a day through conservation. This amendment is going to cost $40 billion over 10 years, and, if it costs no more in the following 10 years, that would be $80 billion. Compare spending $80 billion over a 20-year period to get 1.1 million barrels per day of extra production with an expenditure of one-fourth of that amount necessary to meet Energy Department's conservation program, which would save 6 million barrels a day.

Mr. SARBANES. I thank the Senator.

Mr. BUMPERS. Mr. President, I was about to mention a while ago the fact that this administration is championing nuclear in an effort to make us independent.

I am not going to make my Clinch River breeder speech, but everyone who has read the front pages of the newspapers around here for the last 2 or 3 days knows that project is now being classified as an unmitigated disaster, which some of us have been saying for several years. Three years ago, the last computation that was made, it showed that nuclear energy had, by far, the lowest Btu return per dollar of any known technology. Even today, the percentage of electricity generated by nuclear is down 2 percent. Only six reactors have been ordered since 1975 and 21 have been canceled.

All of this occurred before the disaster at Three Mile Island.

A nuclear powerplant is being built on Long Island which will cost $3 billion and generate 800 megawatts of power. That converts to $3.75 a watt.

Let me repeat that. This nuclear powerplant is to be completed on Long Island, N.Y., in 1982 or 1983, and each watt of power will cost, a capital cost, $3.75 per watt.

Do you know what DOE says a watt of solar power costs? It is $2.80, or 95 cents less than nuclear. Yet solar was nearly eliminated in the President's budget.

You talk about energy independence and renewable resources and trying to protect our children.

Mr. President, you are not going to solve this country's energy problems by just throwing more money at the oil companies. We ought to be funding solar energy and conservation programs right now. Solar energy and conservation now displaces 102 billion barrels of oil a year, or a 20-day supply of imports.

Let me repeat that. We just put a pittance in conservation and solar in this country and yet right now we are saving, with those two, 20 days of imported oil.

Do you know what 75 nuclear plants displace? They displace 4 days of imported oil.

So does it make any sense, really, to say we can solve this problem if we just raise prices enough? It is such a harsh solution.

Are there people, particularly on the other side of the aisle, who do not get mail from people complaining about energy prices, gasoline, electrical bills, or gas heating bills in the wintertime? What is the inflationary impact of high prices? It is just devastating.

Last year, CBO said that 60 percent of the inflation of this country was due to energy prices. Even that is not as harsh as trying to struggle along with $300 or $400 or $500 a month from social security and having to pay those exorbitant electric bills.

Consider the consequences of these high prices. Figure it out for yourself. Today, the national average price of natural gas is $1.90.

The first year I was Governor of my State I had to referee a fight between a gas utility and the Public Utility Commission, because the Public Utility Commission was trying to hold gas at 18 cents per Mcf, and the utility company who sold the gas to the consumer was trying to get 23 cents. They said:

> If we can just get 23 cents per Mcf, or 1,000 cubic feet, if we can just get 23 cents for a 1,000 cubic feet of gas, we would never ask for anything again.

Today, the price is $1.90 per Mcf because of President Carter's decision to decontrol gas prices. In my State, most of the electricity is being generated by natural gas. It is a terrible waste of the best available source of energy to burn it under boilers to generate electricity, but that is what is being done with it.

An even more important indicator is the gas which is already decontroiled.

In the home State of the Senator from Louisiana, they are drilling gas holes below 15,000 feet. When we decontrolled natural gas in this body we said, "If you can find gas below 15,000 feet, sell it for whatever you want to." They did. They found it, and they are selling it for $7. Decontrolled gas is selling for $7 per Mcf in this country right now. That is today's dollar.

So instead of the national average price of gas being $1.90 as it is today, in 1985 when the phaseout of controls is completed, you can bet—you can bet your mother-in-law on this—it will be a minimum of $10 per Mcf. People have had $200 electric bills this month, and, 5 years from now, they will be the happy recipients of a bill that will run somewhere between $400 and $1,000. Tell me how they are going to absorb that.

Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. STEVENS. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER (Mr. RUDMAN). Without objection, it is so ordered.

POSTAL STRIKE AVERTED

Mr. STEVENS. Mr. President, I have just been notified that the Postal Service and the postal unions have tentatively agreed upon a contract. The economic package consists of a $300-a-year pay raise for each of the 3 years of the contract for a total of $900. In addition, a $150-a-year minimum bonus for each of 3 years will be given, based upon productivity, which means the bonus could be even greater than the prescribed base. The COLA concept remains the same as in the base formula which presently exists. Finally, there will be a management contribution to the health plan.

We do not know the total impact on the Postal Service yet, but as chairman of the Subcommittee on Post Office and Civil Service, with jurisdiction over the Postal Service, I wanted all Senators to know that there will be no postal strike. There has been a contract agreement.

Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. DOLE. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER (Mr STEVENS). Without objection, it is so ordered.

ECONOMIC RECOVERY TAX ACT OF 1981

The Senate continued with consideration of the joint resolution.

Mr. DOLE. Mr. President, it is the understanding of the Senator from Kansas that there are a number of Senators on the other side who are prepared to speak at length on this amendment this evening—the bottom line being that there will be no votes this evening as I understand it. The distinguished majority leader is on his way to the floor and should be here in about 10 or 15 minutes. Therefore, unless somebody feels the need to address the matter further, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. DOMENICI. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

UP AMENDMENT NO. 258

(Subsequently numbered Amendment No. 510.)

Mr. DOMENICI. Mr. President, I modify my amendment and the form that I send to the desk.

The PRESIDING OFFICER. The modification will be stated.

The assistant legislative clerk read as follows:

The Senator from New Mexico (Mr. DOMENICI) for himself, Mr. SCHMITT, and Mr. MELCHER, proposes an unprinted amendment numbered 258.

In lieu of the matter proposed to be inserted, insert the following:

"For taxable periods beginning in:	The applicable percentage is:
1982	22.5
1983	15
1984	7.5
1985 and thereafter	0

"Notwithstanding subparagraph (b)(3)(A), the applicable percentage for heavy oil and incremental tertiary oil shall be the same discovered oil."

Mr. DOMENICI. Mr. President, my modified amendment includes the changes contemplated by the amendment previously submitted by the distinguished Senator from Kansas (Mr. DOLE) and my amendment thereto which added two other kinds of oil that would be covered by the same phaseout of the windfall profit, so that what we have now in the Domenici modified amendment is the inclusion of the subject matter that was in both amendments, the Dole amendment and the Domenici amendment.

Mr. President, I think it is obvious to those who followed the debate today that there were a number of us on both sides of the aisle, but I know on our side, that did not support the 1,000-barrel exemption proposed by the distinguished Senator from Texas and that in lieu thereof we were prepared to support what many of us think is far better energy policy than that behind the 1,000-barrel exemption or inclusion.

From my standpoint, there is little doubt if we are talking about energy policy that the Senate was right when we first started debate on the windfall profit tax. I can vividly recall the debate here. I can recall the distinguished Senator, Senator Ribicoff, who is no longer with us, who was a distinguished member of the Finance Committee, taking to the floor and arguing while he did not agree with many of us who opposed the entire windfall profit tax, he made the point and made it very strong that if we were going to have some relief from that tax the way to do it was to exempt new oil; I can remember that he took the floor and talked to the Senate, while he favored windfall profits, warned us that if we wanted production it was not going to come from various exemptions and exclusions that we were talking about by not taxing new oil.

My recollection is that when the Senate passed the windfall profit tax we had a very small tax on new oil. I think it was 10 percent. On the other hand, when the two bodies finally conferred and passed the ultimate windfall profit tax we put new oil in with all the other.

So today in lieu of the 1,000-barrel exclusion I am pleased to join with the distinguished Senator from Kansas in excluding the tax on new oil, on incremental, tertiary, and on heavy oil by reducing the 30-percent tax by an increment of 7½ percent per year.

From my standpoint this is not only far superior to the 1,000-barrel exclusion, but as to my particular part of this amendment heavy oil and tertiary oil there is no doubt in my mind that it is good energy policy to include those in new oil. Both of those are marginal, very expensive to produce incremental tertiary, yet our country abounds in that in terms of the quantity that is around. From New Mexico's standpoint there was no reason to include heavy oil. We do not have any heavy oil, but it is obvious to this Senator that the State of California has literally millions of barrels of heavy oil, which is difficult to recover. We recover most of it by injecting steam, and there are new technologies to accomplish that, but it is going to be expensive. In addition it contains qualities that require more cost to refine it. They have to take some of the metals out of it. Yet it is there.

So I submit that in lieu of the 1,000-barrel exclusion that was discussed today if we are going to modify the windfall profit tax this is precisely the way to do it. This has a chance of producing as has been estimated here today in a few years an extra million barrels of oil a day. That is the kind of good tax law that we should write. If we are going to change the windfall profit it should be changed in such a way to produce additional oil.

No one needs to do the arithmetic to know that a million barrels of oil a day produced in the United States 5 or 6 years down the lane amounts to literally billions of dollars that America will not spend buying its oil from either the OPEC cartel or others that supply us with our oil.

If we are going to change the windfall profit tax, this is probably the best energy policy way to do it. I hope that since there is much to do here, that this is clearly understood. Those who oppose it, who want to talk, could have talked 2 or 3 days about the 1,000-barrel exclusion. Talking about not wanting to change the windfall profit tax, not wanting to cost the Treasury an exceptional amount of money, without any real evidence from the energy policy standpoint that it would produce new oil not otherwise to be produced, that was the one to filibuster or to talk about tonight and tomorrow and for as long as some want. But that did not occur.

It seems some want to do that now on this. I submit that since the House is moving with some tax policy changes with reference to windfall profits, that the U.S. Senate ought to pass this amendment, the Dole-Domenici amendment, because it will be evident that we really understand if we are going to start phasing the tax out in any way this is the way to phase it out. Ours is 4 years. It could be 5 years, it could be 6.

But the point is if you want to get oil through reduction in taxes, this is the way to do it.

I know the Senate has heard from the distinguished chairman of the committee as to how many billions of dollars will be recovered in windfall profits from now until its expiration date, and how much this will cost the Treasury. It is obvious to this Senator if we are going to do anything we ought to do this one, and I wholeheartedly support it, and I hope we can vote on it soon and get on with completing this very important bill.

Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. BAKER. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. BAKER. Mr. President, what is the pending question?

The PRESIDING OFFICER. The amendment offered by the Senator from New Mexico to the amendment offered by the Senator from Kansas.

Mr. BAKER. I thank the Chair.

Mr. President, I very much hope we can dispose of at least this amendment tonight. We have been on it now for a long time. It is clear that there is no possibility, it seems to me clear there is no possibility, that we can agree on a time certain to vote tomorrow. I would be willing to do that. But if we cannot agree to a time certain to vote on this second-degree amendment, then I know of no alternative except to continue with the debate tonight and try to reach a time when we can vote.

Mr. President, may I inquire of Senators if they are in a position to agree to a time certain tomorrow to vote on this amendment?

Mr. METZENBAUM. I am not, Mr. President.

Mr. BAKER. If that is the case, then I am not prepared to ask the Senate to recess over at this point and I would propose then that they continue.

Mr. METZENBAUM. I think that is an excellent idea.

Mr. BAKER. I yield the floor for that purpose.

Mr. METZENBAUM. Mr. President, I ask for the yeas and nays on the pending amendment.

The PRESIDING OFFICER. Is there a sufficient second? There is a sufficient second.

The yeas and nays were ordered.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from New Mexico.

Mr. METZENBAUM. Mr. President, the Senator from Ohio was not on the floor at the time the Senator from New Mexico offered his amendment. Is it my understanding, is my understanding correct, that the Senator from New Mexico's amendment would pretty much incorporate the original amendment, that is, the original amendment in chief, the first-degree amendment, in the second-degree amendment?

Mr. DOMENICI. I think it would be better to answer it by saying it is a substitute for the Dole amendment, the language of which is now that which was in the Dole amendment and that which was in the Domenici amendment.

Mr. METZENBAUM. And is it fair to say that this amendment now pending, plus the original language of the Finance Committee in connection with the windfall profit tax, would cost the Federal Treasury $40 billion in the next several years?

Mr. DOMENICI. Mr. President, I do not believe that is fair to say. I do not have the exact estimates of what it would cost. We will get them here and add up the tertiary and heavy to the previous amendment and get it for the Senator. But I do not have it with me right now.

Mr. METZENBAUM. According to the Joint Economic Committee, that is the figure.

Would the chairman of the Budget Committee be good enough to indicate how this is going to help balance the budget or whether it is going to unbalance the budget, and, if that be the case, how the chairman of the Budget Committee, who has worked so arduously and so zealously to attempt to bring about a balanced budget, intends to make up for this lost revenue?

Mr. DOMENICI. Mr. President, I explained in the Senator's absence that from my standpoint the Bentsen amendment, which you heard the numbers on in terms of the cost, were far in excess of the cost of the Dole amendment as modified by my amendment; that from my standpoint, I think this is a much better amendment than it was. It is for that reason that I did not support the Bentsen amendment, and there are a number of Senators that did not support it for that reason, because the cost was excessive and there is little real tangible evidence that it is an energy policy that will produce new oil.

So, from my standpoint, the Dole amendment was pending prior thereto and had been set aside for purposes of letting Senator BENTSEN proceed with his two-part amendment. I did not vote for the Bentsen amendment because I favored the Dole amendment, if we were going to change it.

Then I looked at the Dole amendment carefully and thought there was a bit of a policy imbalance. If you are going to begin a gradual diminution of windfall on new, you should not exclude heavy and tertiary, which are marginal; in fact, perhaps even more marginal than new.

It is my understanding that the distinguished chairman of the Finance Committee—and, of course, it is his call—will be looking back through this bill before we finish—and I am not talking about the budget, I am talking about a tax bill—and make an effort to recapture somewhere the moneys that this amendment cost for years 1982, 1983, and 1984. I hope he can do that. I will join him in that.

It is also my understanding that he intends to offer an amendment indicating that it is the intent of the Senate that when we come out of conference with the House that this bill will cost no more for years 1981, 1982, 1983, and 1984 in terms of tax loss than the bill originally reported by the Finance Committee. He and I have talked, and I am going to support him in that. It is the administration's numbers for the Finance Committee's bill.

We are going to conference. It does not mean that everything in this bill is going to come out of conference. So it is very difficult for me to answer the Senator's question as to what effect does it have on the budget.

The Senator knows that, to the extent that the economics that we have assumed for years 1983 and 1984 are a reality, we are going to have to find additional budget cuts to come in and balance in 1984. I can repeat those numbers if the Senator wants them.

We have still to find somewhere between $35 billion and $40 billion. The Senator is aware of that, in terms of the 1984 budget to be in balance, assuming good economics, the economics that we have assumed in the first resolution. That is still the case.

To the extent that this tax bill in the year 1984 exceeds the numbers that we contemplated, we will have to either fund that much more to be in balance or we will have to assume that the economy will do even better.

I can work that up for the Senator, but I will give the Senator a rough number now. We would be talking about somewhere between $3 billion and $4 billion more in 1984 than what we started with when we first came to the floor. That is not all a result of this, as my good friend, the chairman of the Finance Committee, knows. We still have not found all of the money that we spent on the charitable deductions in the years 1983 and 1984, have we?

Mr. DOLE. If the Senator will yield, I will respond to that.

Mr. METZENBAUM. I yield.

Mr. DOLE. We have a deficit in 1983 by about $300 million and we have, I think, another opportunity or two to find additional savings.

But the Senator is correct, the last amendment to be offered on this floor by the Senator from Kansas and I hope by others, will instruct the conferees to come back to the Senate with a bill that is within the administration's numbers. I would guess everyone should have an opportunity to give a little in the conference.

Mr. METZENBAUM. Well, is it not a fact that, in order to do that which you are talking about, you are going to have to say, "Well, we have reduced taxes for the oil companies by $40 billion and, in order to find a way to balance the budget, if we are going to have to go back and get some money out of the social services programs?"

Mr. DOLE. If the Senator will yield, I think I have been fairly candid in saying that the reason we have oil in this amendment is because there were not many other choices. The Senator from Kansas is new as chairman of this committee, but I learned how to count before I became the chairman. It took some doing to keep the cost down in the committee.

We were convinced, based on a whip check and other information, that unless we had some substitute for the so-called Bentsen amendment, that amendment would prevail—I did not see anybody filibustering that amendment on that side. That was really a big amendment, $4 billion or $5 billion a year.

So, it occurred to this Senator and others that the best way to defeat that amendment, which did not do much for increased production, was to have some amendment that would phase out the tax on new oil. I am sorry that there was not all this interest in the Democratic amendment earlier.

As far as this Senator knows, that amendment probably would have passed. Twenty-eight Democrats voted with Senator BENTSEN and 17 opposed it. So I am not so certain whether it is the amendment or the cost or which side it comes from.

Mr. METZENBAUM. I think the Senator from Kansas is aware of the fact that he offered a motion to table and it, therefore, became totally unnecessary to explain to the Nation the problems about the Bentsen amendment. I am not going to stand here and tell you that I think the Bentsen amendment was great or yours is not great. As far as I am concerned, neither of them were very good and neither of them should have passed the Senate.

It is just a question of whose ox is going to be gored. But the bottom line with the Bentsen amendment was that the American consumer was going to wind up paying the bill. So I supported the Senator from Kansas on his motion to table.

I think we ought to recognize that both of my good friends today voted against the minimum social security benefit of $122 a month, yet in the same 24-hour period, or much less than that, both are talking about reducing oil company windfall profit taxes by $40 billion.

One of the things that has been suggested here this evening is that what we are really talking about is that we are going to get new oil.

Let us make it clear that the Domenici amendment is not only for new oil. It has to do with secondary and tertiary oil as well. That is not new oil. That is oil where the wells have been in operation. This is a question of going back in on a secondary or a third basis.

Then you have the other question of this being retroactive. I do not know how much that is actually going to cost, but it will be retroactive. That certainly is not going to produce any oil.

Frankly, I do not believe this amendment is going to produce any new oil at all.

I think the Senator from Arkansas very ably pointed out that the rigs are operating at maximum capacity, that there is not that much more potential that they are going to find more oil. Somebody comes up with the figure of 1 million barrels a day extra but nobody offers any supportive evidence. It is just a figment of the imagination, a figure dropped out of the sky. That is the way we have dealt with a lot of energy issues around here for a number of years.

The only argument being made for this amendment is that we had to come up with this amendment or else we might have had the Bentsen amendment passed.

I do not think that is a very logical or sound basis by which to pass any amendment. Neither amendment, in my opinion, provided much support for the American people.

All I see it doing is reducing more and more of the taxes of the oil companies of the country. It is just a question of which companies will get the main benefit. Certainly, even the Bentsen amendment was not special relief for small producers.

Somebody said to me that people could have an income as high as $15 million a year and still get the benefit of the Bentsen amendment.

Mr. DOLE. If the Senator will yield, that is about accurate. That was one

reason it was opposed. An additional reason is that for about 50 percent of the producers you do not get much of a production response.

I want to clarify about the retroactive part. The amendment pending is now the Domenici substitute. It is not retroactive. It applies to oil produced after January 1, 1982, on properties on which no oil was produced during 1978. So it is not retroactive in the true sense of the word. We are not going back and picking up all the oil from 1978. It is new oil produced after January 1, 1982.

Mr. METZENBAUM. And what was the balance?

Mr. DOLE. It applies to oil produced after January 1, 1982, from properties on which no oil was produced during 1978.

Mr. METZENBAUM. And if oil was produced in 1979 and 1980, then it would be applicable?

Mr. DOLE. Not that oil. But any well drilled on that property after January 1, 1982, would receive this tax reduction.

Mr. METZENBAUM. What logical reason would the Senator from Kansas suggest that oil drilled on those same properties would be entitled to this tax relief?

Mr. DOLE. I say to the Senator from Ohio it is the same question the Senator from Kansas raised in the Finance Committee. We were told by the Joint Committee, and I think by Treasury, though they did not support the amendment, that all we are going to do is create another tier of oil. We have three tiers now. In fact, that was the amendment first offered by the distinguished Senator from Oklahoma, Senator BOREN. This Senator voted against that amendment. We defeated that amendment.

That was the recommendation we had, to modify it for any oil produced after January 1, 1982, even though it was on a lease that had been producing in 1979, 1980, and 1981.

Mr. METZENBAUM. I think the term "tiers" of oil is an appropriate one because it is the tears of the consumers of America which will be shed. The American taxpaying consumer will be required to pay more taxes by reason of the benefits that will accrue to the oil companies.

Mr. DOLE. I can only say to the Senator from Ohio that the tears will be real tears if we have another uprising in the OPEC countries and do not have enough production to go around. I often wondered what would happen to all those Senators who do not want to do anything but simply keep importing from the OPEC countries and hold down domestic production. What will happen one of these days when we have a shortage in this country? I suggest that there will be some real tears shed then and they will be shed by consumers.

Mr. METZENBAUM. Does the Senator from Kansas and the Senator from New Mexico think it really helps us produce more oil when Exxon buys Kennecott Copper? During the past 8 years, domestic production has declined at an annual rate of more than 800,000 barrels per day and prices have gone up during that period 12 times.

What is there about this particular amendment that suddenly is going to reverse the decline?

The Energy Information Administration forecasts that the decline went further, dropping from 20.4 quads to 20.2 quads in 1980. Exxon says there will continue to be declines in production.

All of these figures assume that oil prices will run ahead of inflation and they also include new Alaskan production as well as enhanced oil recovery, oil shale, tar sands and synthetic fuels. Even under the high-price scenario, whereby crude oil is $49 to $79 a barrel, total production from all of these sources would be 250,000 barrels a day less than in 1976. For the lower 48 State production, both onshore and offshore, which is where most of the independent drillings are, production is forecast to decline from 7.8 million barrels a day to 5.8 million barrels per day.

I want to say what I said before: I do not understand how you can justify turning down the senior citizens who are entitled to social security benefits on the very day that you come with this amendment to provide more than social security for the oil companies of this country. It is unbelievable.

Mr. DOLE. If the Senator will yield, anybody who is in the private sector, I guess, would consider it unbelievable.

Mr. METZENBAUM. I am in the private sector and I am not unbelievable. I am very believable.

Mr. DOLE. I understand the Senator has done very well in the private sector.

The Senator from Kansas would indicate there are thousands of people out there looking for oil, so it is not really fair to single out one company that produces maybe 100,000 barrels a day out of 8.5 million barrels and say we cannot do this because of Conoco or somebody trying to take over Conoco. That is not relevant to this debate. Neither are many of the other arguments made by the Senator from Ohio. A lot of my arguments have not been relevant in the past, either. I do not suggest that the Senator operates differently than other Senators.

The point is we would like to have a vote on this. It seems to me there are probably a handful over there, the same handful who gave us the windfall profit tax, who gave us 20-percent interest, who gave us the highest unemployment in history, the highest inflation rate in history, and who are now telling us "Let us keep doing it our way."

We have done it your way for too long. For 26 years this Senate was burdended with Democratic rule. Now we have a little fresh air in the Chamber. We are looking in a different direction. We want production response. I would hope the Senator from Ohio would let us try it out. We are going to come back from conference, I would suggest, with a much smaller amendment than that being offered at this time. For all those who gave us what we have today—high interest, high inflation, high unemployment, and a lot of regulations—I am not so certain what service that has provided the American people.

That may be why we cannot fund the social security program. That is part of the reason we cannot fund all the social programs. That is part of why we are so reliant on foreign oil.

But we are willing to help the Senator from Ohio work this out. There are a lot of things he could learn from listening to President Reagan.

Mr. METZENBAUM. Mr. President, I have heard a lot about what the past administrations have done. I have also heard what this new administration is going to do. They have been in office now about 6½ months. I do not see anything happening. I see high interest rates getting higher. I see the market falling out of bed. The stock market today, if my recollection is correct, is far lower than it was when this administration took office. I see inflation running at the same rampant rate. I see unemployment as high or higher.

Mr. DOLE. I want to correct that, Mr. President. Inflation is coming down. Give us more than 6 months. After 26 years of domination by the Senator's party, give us at least a year to straighten it out.

Mr. METZENBAUM. I like to pay attention to what the stock market is doing, Mr. President, because it is some indication of how the business community feels about how the administration is doing. If that is any criterion, then you certainly have to agree that they do not think you are doing very well.

There is not any indication that I know of, Mr. President, that says if you take the windfall profit tax off—which is what they are proposing to do, and that is the audacity of this proposal. The audacity first was to come with a proposal that would reduce it under the Finance Committee bill—I guess it was to be 30 percent. Let me see if I have that here.

Mr. DOLE. Will the Senator from Ohio yield for a question?

Mr. METZENBAUM. I was just about to make a good speech, Mr. President, but if the Senator wants to ask a question, that is all right with me.

Mr. DOLE. Let us suppose this is the so-called Bentsen amendment on the floor. Let us assume this amendment was not around. Would we have this same conviction about how bad the amendment is? Would it be the Senator's intention to filibuster the Bentsen amendment if it is brought up at a later date?

Mr. METZENBAUM. I should like to suggest to the Senator from Kansas that he call Senator BENTSEN over if he wants someone to defend the Bentsen amendment. I am not of a mind to do that. I voted against the Bentsen amendment. I voted with the Senator from Kansas.

I am not sure I would be on the floor as I am at this very moment in opposition to the Bentsen amendment. But I was sure the Senator from Kansas was not going to let it pass. I was not worried about it.

Mr. DOLE. Would the Senator worry about it if it had not been for the Senator from Kansas?

Mr. METZENBAUM. The answer is yes.

Mr. DOLE. To this extent?

Mr. METZENBAUM. I am not prepared to say to what extent, Mr. President, or what my convictions would be or the eloquence of my remarks. But I am prepared to say I would be equally opposed to that as I am to this.

Mr. DOMENICI. Will the Senator yield?

Mr. METZENBAUM. Yes.

Mr. DOMENICI. I just wanted to ask if the Senator would give me 2 minutes, because I have to leave the floor and he is apparently prepared to stay here. I just wanted to make an observation to the Senator.

I have served with him now on the Budget Committee for how many years? Six?

Mr. METZENBAUM. I think 5.

Mr. DOMENICI. And I really say this in all honesty to the Senator. It is really amazing to me that, all of a sudden, the Senator is so concerned about balancing the budget. He asked the Senator from New Mexico—and I greatly respect him and love him as a person. He knows that. We argue a lot and fight a lot. But it is almost kind of hilarious to me that, for some reason, the Senator now happens to worry.

Is it because the people of America are demanding a balanced budget that he is the strong proponent of it? He was not very concerned about it before, as a matter of fact, Mr. President, I do not believe, to accuse any of us to be for unbalancing the budget as if he had some lock on having a better record for that or being more disposed.

I just close with this: I have watched how the Senator has proposed to balance the budget, and I assume, since he is an articulate person, he wants the people in his State to really know what he is doing. He surely wants to be in tune with them. He has been talking about how he would balance the budget.

Mr. METZENBAUM. I gave a way to do it.

Mr. DOMENICI. I just want to say unequivocally, absolutely, I am familiar with the Senator's way of balancing the budget. It is very simply: Raise taxes. That is the Senator's approach to balancing the budget. It is very simple: Raise taxes. That is the Senator's approach to balancing the budget. He can argue it any way he wants. No matter what way you look at it, Mr. President, he can say he is going to close tax loopholes and the like, but, Mr. President, the Senator from Ohio has been telling his people for the last 5 months, since the President of the United States has proposed budget restraint, tax cuts, changes in programs—he has been saying that he had a way to balance the budget.

I submit that I listened to it in my committee; I have permitted him to make his proposals. I conclude, and if he feels that I am misstating his position, certainly he is plenty articulate to tell the Chair and the U.S. Senate where I am off. But what I heard over and over is he will balance it by raising taxes.

Mr. METZENBAUM. Mr. President.

Mr. DOMENICI. I do not see anything different about it here tonight. He is concerned about a reduction in taxes when we are talking about reducing them less than someone else would have reduced them in order to produce, rather than to merely cut more taxes with no production of oil. Now we are back on the point of how we are going to balance the budget if we do this. I just want to make that point.

He would like to talk all evening. I do not care to. But if the distinguished Senator from Ohio clearly intends to balance the budget by cutting programs in a significant way, I have not seen it. I have seen it by raising taxes or supposedly taking out loopholes. One man's loopholes is another man's very exciting permanent exemption or deduction, but that is basically the approach.

Mr. METZENBAUM. Mr. President, I point out to my good friend, the chairman of the Committee on the Budget, I tried to convince him that there was a way he would not have to slash some of the human service programs, to which I find some of my friends on the opposite side of the aisle are so indifferent—sometimes I think callous. I said to him then on that committee that he could find $1.3 billion by eliminating the commodity straddles and that that was a tax loophole.

As a matter of fact, I came here to the floor of the Senate and I offered such an amendment that we might anticipate that revenue, and he indicated his opposition to it and he was very successful in leading the majority to turn the amendment down. But I am happy to say that the yea vote of the distinguished Senator who chairs the Finance Committee recognized that there is merit in that area and his committee did make that change and $1.3 billion will be picked up in that area. That is one of the loopholes I thought would be eliminated.

I came to our committee with a whole white book of ways we could pick up billions of dollars—whether it had to do with the $2.9 billion that the oil companies get by writing off their intangibles in the first year and no other industry gets; whether it had to do with the fact that you could take your manufacturing operations out of this country and take it into one of our island possessions and save anywhere from $1.2 billion this year to $5 billion next year. There were a host of other areas in which we could have saved money; whether it had to do with the question of treating timber as a capital gain—there is no logical reason for that. It is discriminatory against all the farmers in this country. But, no, there was not a willingness to make that change whether it had to do with the subsidy that we provide for the tobacco growers of this country. But, no, there was not a willingness to do anything about it.

There are areas upon areas that have to do with the way in which we could pick up the dollars we are talking about. But instead of doing that, the majority party wanted to be certain to eliminate the social security minimum. Hooray, we won that battle. We would not let those members of the minority put back the minimum for those who are on social security. What difference does it make if we are breaking a commitment that has been made over a period of years to people on social security?

This administration came forth with another great idea to save the social security fund and to say that people at 62 would get their benefits slashed if they retired at that age; and to eliminate the cost of living adjustment, another one of those great ideas is that we pick out the people on social security. Students who would be otherwise entitled to benefits under social security—we slashed that back. All these things we can do. We also can take care of the oil companies.

That is just a question of perspective. It is a question of what this country is all about. To me, the country is all about caring for those who cannot care for themselves. Certainly, the oil companies of this country can take very good care of themselves, as they do day in and day out throughout the city of Washington.

What we are really talking about here is a broken commitment to the people of the country.

You enacted the windfall profit tax, and it was not the windfall profit tax that the previous administration advocated. It was the windfall profit tax that was negotiated and compromised and worked upon and figured out in seven different ways. The purpose was to take care of the oil companies; and those of us who felt that the windfall profit tax should be stronger failed. We were unsuccessful.

Now you come back here in the very first year of this administration, and the Finance Committee, after its hearings, decided it is going to cut the windfall profit tax and is going to cut it by $200 million in fiscal year 1983, $400 million in 1984, $1.5 billion in 1986; and the report does not indicate what happens in 1985, so I do not have the answer.

However, the fact is that now you come in and you really want to go whole hog. First, we get the chairman of the Finance Committee, who says that with respect to newly discovered oil, we are going to cut 30 percent, to 22.5 percent, to 17.5 percent, and takes it out entirely. It is not enough, no. Let us go all the way. Let us rip into this whole windfall profit tax deal. Why should we do it? Because the Bentsen amendment would cost more. But the Bentsen amendment has been defeated, and the Bentsen amendment is no longer on the floor. So now we are going to add secondary and tertiary oil as well and eliminate the windfall profit tax on that.

Why not go whole hog? Why not take the whole thing off and eliminate the windfall profit tax right from the beginning?

Based upon your arguments, that would seem to be the logical conclusion. The only thing is that it is the wrong thing to do, and it might be a little too much to digest. This, too, is a little too much to digest. It is going beyond the pale of reason.

I believe that you cannot make good sense or good logic by trying to repeal the windfall profit tax that was enacted, if my recollection serves me correctly, less than 2 years ago.

Mr. President, this amendment is the kind of amendment that the people of the country are not demanding. The oil companies are demanding it. As a matter of fact, if the people of the country knew exactly what was happening on the floor of the Senate tonight, at 9:15, they would be aghast—that tonight we want to cut taxes more for the oil companies. This amendment does not make good sense and should not be adopted.

I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr BAKER. Mr. President, I ask unanimous consent that order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. BAKER. Mr. President, I inquire now if there is willingness to submit this amendment to the Senate for its determination.

Mr. METZENBAUM. I must advise the majority leader that a number of Senators have indicated that they thought the Senate was going to adjourn somewhere around 8:30 or 9 o'clock. They want to address themselves to the issue further—Senator KENNEDY, Senator BUMPERS, Senator BRADLEY, Senator TSONGAS, Senator SARBANES, Senator RIEGLE, and a number of other Senators. I do not believe there is much chance that we can conclude the subject this evening.

I had understood that the other side had indicated at an earlier point that they did not expect to go much beyond 8 or 9 o'clock, and I said I would be on the floor until that time. So that at this point, I am in no position to agree to bring this issue to a conclusion.

Mr. BAKER. Mr. President, I hear and I understand the Senator from Ohio, but I think he will agree with me that there was no representation by me that we would quit at 8 or 9 o'clock. I was not consulted on any such arrangement with respect to a recess of the Senate.

Mr. METZENBAUM. I am not making that suggestion. I just say that I think word was going around the Senate that we expect to stay in session until 8 or 9 o'clock, and a number of Members asked whether I expected to be on the floor that late, and I said I did.

Mr. BAKER. Mr. President, I really do not want to appear to be unreasonable, but we have been at this amendment or some variation of this amendment for a number of hours, and it is one that has to be disposed of at some point.

I wonder if the Senator will agree or will consider some sort of agreement on a length of time for the consideration of this amendment, either for the remainder of this evening or for a time in the morning.

Mr. METZENBAUM. I always try to be accommodating to my friend from Tennessee, but in this instance I cannot be.

Mr. BAKER. Mr. President, that leaves me in a very difficult position. I respectfully submit to my friend from Ohio that we simply have to continue with the debate on the issue, unless we can try to find some way to do that. I am not trying to force the issue by sheer brute strength. I am simply saying it is a matter that has to be dealt with. I did not initiate the idea that it would be a day's long debate, which seemed to be the idea running around the Senate. I do not wish to invoke cloture against the amendment. I would wish for a time to vote tonight or tomorrow. If we cannot do that, we have no reasonable alternative except to continue the debate or to suggest the absence of a quorum.

I do not intend to suggest the absence of a quorum. If we do that, we run the real risk that we may, in fact, have a live quorum; and I do not know what quorum we have here at this hour.

I must tell my friend from Ohio that I am not prepared at this time to ask the Senate to recess.

Mr. METZENBAUM. I say to my friend from Tennessee that I have never been one who thought that in order to discuss a subject, we had to keep talking; but I thought the opportunity for meditation and for thought processes to work sometimes has a lot of value for the Senate.

I never liked the idea of wearing out my throat trying to persuade those who I do not think are very persuadable.

So that when the Senator from Tennessee indicated that we might have to be here for a while, I, in the past, have found it a privilege to be on the floor of the Senate during the wee hours of the night and would not be unwilling to have that occur. But I think, under those circumstances, it is entirely likely we might have a number of rollcalls. If the majority leader feels that that is his wish, I certainly have no objection, and since I am here, I do not mind having rollcalls. But I am willing to accommodate the Senator from Tennessee in any way he wishes.

Mr. BAKER. The way I wish is to get a vote.

Mr. METZENBAUM. With that one exception.

Mr. BAKER. With that exception?

Mr. METZENBAUM. With that one exception.

Mr. BAKER. Mr. President, could I inquire of the distinguished Senator from Ohio, is it his intention to prevent or attempt to prevent the Senate from ever voting on this issue?

Mr. METZENBAUM. If I could achieve that objective I would consider it a great success.

Mr. BAKER. I have no alternative except to assume, then, that the Senator from Ohio intends to filibuster this amendment.

Mr. METZENBAUM. I do not believe it necessarily need be described in that manner, but I think that the country is entitled to understand what is happening in the Chamber, and I think one of the best ways of doing that is by extensive debate.

Mr. BAKER. Then I recommend that the Senator continue with that debate.

Mr. METZENBAUM. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. BAKER. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

Mr. METZENBAUM. Objection.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. METZENBAUM. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. METZENBAUM. Mr. President, I suggest the absence of a quorum.

Mr. JEPSEN. Mr. President, reserving the right to object—is Senator DOLE here?

The PRESIDING OFFICER. There is no unanimous-consent request. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. DOLE. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. DOLE. Is the Senator prepared to vote?

Mr. METZENBAUM. Not at this time.

Mr. DOLE. Maybe later this evening?

Mr. METZENBAUM. I do not think today. Not today. There are some others who I know want to be heard and I would not want to deprive them of that opportunity. I am certain that I am not prepared to vote tonight because I want to protect their positions.

Mr. DOLE. I think you could probably find out their positions.

Mr. METZENBAUM. I do not think we should count on voting quite this early. I sent word to some of them to come back to the floor if they want to be heard later tonight. But I am not too optimistic about the probability of bringing this issue to a vote this evening.

Mr. DOLE. Would the Senator from Ohio think that we have covered the amendment after being with it for a couple of hours?

Mr. METZENBAUM. I would feel particularly hopeful if the Senator would agree to take it down.

Mr. DOLE. Then they would reoffer the Bentsen amendment.

Mr. METZENBAUM. Maybe we can prevail on Senator BENTSEN not to do that. Would the Senator from Kansas be willing to take this amendment down if the Senator from Texas were not to reoffer this amendment? I am in no position, I might say, to give any assurance of that.

Mr. DOLE. That thought had not occurred to the Senator from Kansas.

Mr. METZENBAUM. It is a good thought.

Mr. DOLE. I did not want to bring it down this early, and, in fact, not at all. I have no intention of doing that at all. It is based, as the Senator from Kansas indicated, on a production response. We believe it would be particularly helpful to the State of Ohio which has about 2 percent of all new production. They would really benefit from having this.

Mr. METZENBAUM. Are those not stripper wells in my State? I think 70 percent of those wells are strippers, and they would not be affected unless we had the $30 billion adjustment which had earlier been proposed. That is what I am advised.

Mr. DOLE. This would apply to stripper oil.

Mr. METZENBAUM. This would apply to stripper, too? According to Senator JOHNSTON, it does not. I thought this only applied to secondary and tertiary oil.

Mr. DOLE. It applies to all newly discovered oil whether it is stripper or whatever.

Mr. METZENBAUM. Yes, but it does not apply to stripper wells, as such.

Mr. DOLE. I think what Senator JOHNSTON would like to do is to phase out the tax on the present stripper wells which would cost about $3.3 billion a year, which would take care of about 85 to 90-percent of the production in the State of Kansas. As attractive as that amendment is, it is just too costly. As the Senator from Ohio knows, we have been trying to keep this within the administration numbers. In fact, at the very moment I think it is fair to say to the Senator from Ohio that in fiscal 1982 we are in good condition. In fiscal 1983 we are about $300 million short. In fiscal 1984 we are about a $700 million or $800 million plus. So there has been no effort to exceed the administration's figures.

The Finance Committee, under the urging of the Budget Committee, the Senator from New Mexico and the Senator from South Carolina, has tried to hold down the cost of this overall tax bill. I think between now and 1986 we are talking about a bill with a total tax reduction of over $700 billion. It is going to do a lot of good for this country and we would like to move ahead with it, if not tonight—well, we would maybe like to hear the Senator speak an hour or 2 on it.

Mr. METZENBAUM. I do not think I want to speak for an hour or 2. I would be very happy to think about the subject. I am very comfortable with that. I have never thought these matters get resolved by lengthy speeches. But if someone else wishes to speak, I will be pleased to listen to them. If not, we can continue with a quorum call. I will be glad to speak if the Senator from Kansas is particularly interested to hear me. I might be able to persuade him to take the amendment down. I have no intention of making a long speech.

Mr. DOLE. The Senator from Ohio has never bored this Senator. He never has.

If the Senator would rather not say anything at this time.

Mr. METZENBAUM. Yes; I am perfectly happy to say something. That is, I would like to see the Senator from Kansas take his amendment down. That is right to the point. Then we can proceed to other matters.

Mr. DOLE. I appreciate the Senator's recommendations. I shall take it under advisement.

Mr. METZENBAUM. I certainly would appreciate the Senator's doing that.

Mr. DOLE. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The bill clerk proceeded to call the roll.

Mr. DOLE. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. DOLE. Mr. President, I should like to get some movement on this proposal. We have been on it since, I think, about 2:30. It seems to me the best way to do that is to move to lay my own amendment on the table and, obviously, vote against it and urge everyone else to do the same. I think we can indicate to the distinguished Senator from Ohio just how much support there is for this outstanding amendment.

I now have the floor and I shall make that motion to table, Mr. President. I am prepared to either vote now or tomorrow morning.

Mr. President, I move to lay this amendment—I guess it is now the Domenici substitute. Would that encompass both the new oil and the tertiary and heavy oil? That is a parliamentary inquiry, Mr. President.

The PRESIDING OFFICER. It has been so modified. That would not carry with it the basic amendment of the Senator from Kansas, however.

Mr. DOLE. Mr. President, I move to lay the first-degree amendment on the table.

Mr. ROBERT C. BYRD. Mr. President, I ask for the yeas and nays.

The PRESIDING OFFICER. Is there a sufficient second? There is a sufficient second.

The yeas and nays were ordered.

Mr. BAKER. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The bill clerk proceeded to call the roll.

Mr. BAKER. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. BAKER. Mr. President, I ask unanimous consent that I may proceed for 2 minutes.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. BAKER. Mr. President, in negotiations with the distinguished minority leader and the Senator from Ohio as well as the distinguished Senator from Kansas and others, it appears that the best way to proceed is to vote on the tabling motion which has now been ordered and the yeas and nays obtained.

ORDERS FOR WEDNESDAY

ORDER FOR RECOGNITION OF SENATOR THURMOND

Mr. BAKER. Mr. President, I ask unanimous consent that, after the recognition of the two leaders under the standing order on tomorrow, the distinguished Senator from South Carolina (Mr. THURMOND) be recognized on a special order not to exceed 15 minutes.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER FOR RECOGNITION OF SENATOR ROBERT C. BYRD

Mr. BAKER. Following discharge of the special order in favor of the distinguished Senator from South Carolina, I ask unanimous consent that the distinguished Senator from West Virginia be recognized for not to exceed 15 minutes.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER FOR ROUTINE MORNING BUSINESS AND VOTE AT 11 A.M.

Mr. BAKER. After the discharge of the special order in favor of the Senator from West Virginia just entered, I ask unanimous consent that there be a brief period for the transaction of routine morning business solely for the purpose of statements to be offered by Senators and that the time for that period extend to the hour of 11 a.m. tomorrow; and that, at the hours of 11 a.m., the vote occur, without any further intervening debate or other action on the tabling motion which has now been made.

Mr. METZENBAUM. Reserving the right to object, and I do not intend to object, Mr. President, will the distinguished Senator from Tennessee yield for a question?

Mr. BAKER. Yes.

Mr. METZENBAUM. Am I correct in assuming that those of us concerned with this matter need not be on the floor until the time for the vote on the tabling motion and that our interests will be protected in matters pertaining to this amendment?

Mr. BAKER. Mr. President, yes, I am tempted to frame the request so that no business can be transacted beyond the standing order, which only provides for the recognition of the two leaders for the purpose of statements; the special orders, in which no executive or legislative business can be transacted; a period for the transaction of morning business, but limited to statements only. I do not believe it would be possible, under the frame of the order just entered, for any business to be transacted prior to the vote on tabling.

To make abundantly sure that that does not occur, I add to the request that no business be transacted by the Senate, either legislative or executive in character, past the recognition for statements by the two leaders, a special order, routine morning business for the purpose of statements only, until after the vote on the tabling motion which is contemplated.

The PRESIDING OFFICER. Is there objection?

Mr. METZENBAUM. I object.

Mr. DOLE. Mr. President, reserving the right to object—and I shall not object—I address a question to the majority leader. Will there be an opportunity tomorrow for the Senator from Kansas to tell everybody to vote "no" on my tabling motion?

Mr. BAKER. Mr. President, knowing the Senator from Kansas and his resourcefulness as I do, I expect that he will find an opportunity.

Mr. DOLE. Just in case those present now are here, it would be much appreciated if you vote "no." [Laughter.]

Mr. BAKER. Mr. President, I add to the request that in the period for the transaction of routine morning business, Senators be permitted to speak for not more than 2 minutes each.

The PRESIDING OFFICER. Is there objection? The Chair hears none, and it is so ordered.

Mr. BAKER. Mr. President, I thank all Senators. I know this has been a long

evening. I see an opportunity to resolve this matter on some basis tomorrow.

Let me reiterate that I believe there is a chance we can finish this measure this week. I hope that on tomorrow, the distinguished minority leader and others will be agreeable to sitting down—I believe he has; they have had some preliminary and informal discussions on this subject—to compare our lists on the amendments we know of yet to be disposed of, and try to arrange those amendments in some sequence, perhaps with some time limitations, and gain some insight as to when we might have final passage of this measure.

MORTGAGE REVENUE BONDS

Mr. SASSER. Mr. President, during the last session of Congress we adopted an amendment to the Omnibus Reconciliation Act which imposed a series of prudent limitations on mortgage revenue bonds. Those limitations were generally very well advised, for the mortgage bond program was mushrooming almost out of control prior to passage of the Mortgage Subsidy Bond Tax Act of 1980, and there were some instances of the misuse of the mortgage bonds.

However, it was not the intent of the 1980 act to stop the entire program in its tracks. That was never the intent of Congress. Several of my colleagues from both sides of the aisle have cosponsored technical amendments to the Mortgage Subsidy Bond Tax Act of 1980. Such legislation will help to make available, through the private sector and through State and local issuers, a limited amount of housing for moderate- to low-income families.

Supporters of remedial legislation have discussed these amendments with Senators DOLE and LONG. They now agree that this matter might be more appropriately considered in a context other than this tax bill. I can live with that. I would, of course, have preferred to see this kind of technical matter resolved at the earliest possible opportunity. I am advised that the Senate Finance Committee will agree to hold early hearings to deal with this matter in the very near future. That is sound judgment on the part of the Finance Committee, because the tax-exempt mortgage revenue bond program is one of the most cost-effective means available to allow first-time homebuyer families to enter the market, to own their own home.

There are misconceptions in some quarters that allowing the mortgage bond program to function would distort the municipal bond market. It should be pointed out that the limitations on mortgage bond volume imposed in last year's bill are not in any way affected by the new language. The aggregate amount of housing bonds that may be issued in a State during any calendar year is limited to the greater of $200 million or 9 percent of the average of all 3 years. These limits are not changed by the technical corrections.

It should be further pointed out that for every $1 billion in tax-exempt mortgage bonds issued, there is a cost to the Treasury of $22.5 million. However, the resulting increase in revenues, through increased production and other related gains, is estimated at $24 million at the Federal level, and $7 million at the State and local levels. The Joint Tax Committee, Mr. President, has underscored this point by providing me with a letter which states that the overall revenue effect of S. 1348, a bill to make the required changes, is negligible. I ask unanimous consent that the Joint Taxation Committee letter on S. 1348 be included in the RECORD at this point.

The advantages of such a approach are self-evident. I look forward to working with members of the Finance Committee on this matter. I am very much encouraged by the assurances I have received that these issues will be promptly and fairly dealt with, and I thank all those who have participated in this colloquy for the demonstration of bipartisan support that this matter deserves.

I ask unanimous consent that letters of endorsement for S. 1348 from the National Association of Homebuilders, the National Lumber and Building Material Dealers Association, the National Conference of State Legislatures, the National League of Cities, and the Council of State Housing Agencies be included in the RECORD at this point.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

JOINT COMMITTEE ON TAXATION,
Washington, D.C., July 15, 1981.

Hon. JIM SASSER,
U.S. Senate, Washington, D.C.

DEAR SENATOR SASSER: This is in response to your request of July 9, 1981, for a revenue estimate of S. 1348, which amends the Mortgage Subsidy Bond Tax Act of 1980. In general, the provisions of the bill that loosen restraints imposed on the issuance of bonds would allow middlemen, such as underwriters, servicers, or trustees, to realize higher levels of profits, which would increase their taxable income and tax payments. However, because purchasers of homes would pay higher mortgage payments as a result, their home mortgage interest deductions would be higher, and consequently their taxable income and tax payments lower. Therefore, for the most part, these two effects are offsetting. The other provisions of the bill will encourage the issuances of additional mortgage bonds compared to present law, but because the 9 percent or $200 million per state cap under present law is restrictive in most cases, the provisions are unlikely to have a significant revenue effect. Therefore, the overall revenue effect of S. 1348 is estimated to be negligible.

Sincerely,

MARK MCCONAGHY.

NATIONAL ASSOCIATION OF
HOME BUILDERS,
Washington, D.C., July 15, 1981.

Hon. JAMES SASSER,
U.S. Senate,
Washington, D.C.

DEAR SENATOR SASSER: On behalf of the more than 124,000 members of the National Association of Home Builders, I am writing to express our strong support for your amendment to H.J. Res. 266, the Economic Recovery Tax Act of 1981, which would make necessary corrections to the Mortgage Subsidy Bond Act of 1980 in order to allow state and local agencies to issue mortgage revenue bonds for housing.

We believe that Congress clearly intended to create a workable mortgage revenue bond program by its passage of the 1980 Act. However, virtually no revenue bonds have been issued by state or local agencies since passage of the Act. There are a number of corrections which are essential to be made such as in the areas of arbitrage, the "good faith" rule, and reserve requirements, in order to allow these programs to continue to operate. These changes are vitally important now that the Treasury Department has issued its regulations implementing the program.

With the housing industry in the midst of its worst downturn since World War II (housing starts dropped to 1.15 million in May) and over 90% of first-time homebuyers priced out of the housing market, the revenue bond program represents one of the few options available to assist the average young family in finding decent shelter.

It is our understanding that your amendment will have no new revenue impact on the bill. For all of the reasons outlined above, we believe that passage of your amendment is critical to the housing industry and to the millions of American families who have been priced out of the housing market due to inflation and high interest rates.

We appreciate your interest in this important area, and we urge your colleagues to support the Sasser amendment when it is offered on the Senate floor.

Sincerely yours,

HERMAN J. SMITH,
President.

NATIONAL CONFERENCE OF
STATE LEGISLATURES,
Washington, D.C., July 16, 1981.

Hon. JAMES SASSER,
U.S. Senator,
Russell Senate Office Building,
Washington, D.C.

DEAR SENATOR SASSER: On behalf of the National Conference of State Legislatures, I want to commend and support your efforts to clarify the Mortgage Bond Subsidy Tax Act of 1980. As you know, NCSL supported yours and other efforts last session to control, yet allow these bonds to be used by states and local governments. Unfortunately, since the effective date of the Act only two isues have been sold, one through private placement rather than on the public market and the other for home improvement loans which did not have to meet all of the conditions applicable to single and multi-family programs.

We urge you to seek prompt action on your bill or to take other actions which would bring about clarifications to this law at the earliest possible time. We feel that the regulations recently issued by the Treasury Department have not sufficiently corrected the problems with this law and that expeditious legislation is needed to carry out the true intent of the Congress.

Thank you again for your support on this and other issues. If we can be of assistance to you in our efforts, please do not hesitate to contact our Washington office at 624–5400.

Sincerely,

WILLIE BROWN,
Assistant Majority Leader.

NATIONAL LEAGUE OF CITIES,
Washington, D.C., July 16, 1981.

Hon. JIM SASSER,
U.S. Senate,
Russell Senate Office Building,
Washington, D.C.

DEAR SENATOR SASSER: It is our understanding that you intend to offer an amendment to the omnibus tax bill now being considered on the floor of the Senate that would encompass the proposed changes in the mortgage revenue bond law included in S. 1348. We want you to know of our support for your efforts.

Since passage of the Mortgage Subsidy Bond Tax Act of 1980 (part of the Omnibus Reconciliation Act of 1980), only two single-family mortgage revenue bonds have been issued. One was a small $8 million issue in

Larimar County, Colorado and the other by the Minnesota Housing Finance Agency for home improvement loans only. This extremely low level of activity is evidence that Congress effectively eliminated mortgage revenue bonds with passage of a severely restrictive and complex law last year. We do not believe that that was the true intent of a majority of the members of the Senate and House, however.

Your amendment would alleviate some of the fundamental problems in the new law that prevent issuance of bonds such as the unreasonable "good faith" requirement and the unrealistic arbitrage restriction. Your proposal should by no means be viewed as a sweeping change in the limitations placed on mortgage revenue bond issuance that Congress intended. It leaves intact the state-by-state volume cap and the home purchase price limitations that were meant to control overall bond volume and to assure that the mortgages were targeted to the more needy families.

At a time when federal housing assistance is being severely cut back, we need to make the tool of providing housing assistance through mortgage bonds workable once again Thank you for your continued interest and assistance on this issue.

Sincerely,

JOHN F. SHIREY,
Legislative Counsel.

NATIONAL LUMBER AND BUILDING MATERIAL DEALERS ASSOCIATION,
Washington, D.C., July 16, 1981.

Hon. JAMES SASSER,
U.S. Senate,
Washington, D.C.

DEAR SENATOR SASSER: The National Lumber and Building Material Dealers Association is an organization which represents 25 state, local and regional federations and approximately 15,000 retail lumber dealers throughout the United States. We are extremely supportive of the technical correction legislation (S. 1348) you have sponsored which would alleviate the problems that state and local finance agencies are having with the issuance of tax-exempt mortgage revenue bonds for single family housing.

NLBMDA is greatly troubled by the virtual cessation of single family mortgage bond issuances. We recognize that a properly structured tax-exempt mortgage bond program as envisioned in your legislation would provide desperately needed help for the currently depressed housing construction industry.

Furthermore, quick Congressional approval of S. 1348 would be the most immediate legislative remedy to assist housing construction for 1981. NLBMDA believes that we cannot afford to let the mortgage bond program, once a productive and substantial financing avenue for the home building industry, remain idle any longer.

Therefore, we endorse your plan to introduce the technical mortgage subsidy bond amendment package to the Economic Recovery Tax Act of 1981 during full Senate consideration. NLBMDA, through its federated associations, has been actively garnering support for your legislation and is backing your floor amendment effort. We are confident that your success in the Senate will make this very necessary housing finance program once again viable.

With best regards,

JOHN M. MARTIN,
Executive Vice President.

COUNCIL OF STATE HOUSING AGENCIES,
Washington, D.C., July 17, 1981.

Hon. JIM SASSER,
Russell Senate Office Building,
Washington, D.C.

DEAR SENATOR SASSER: The Council of State Housing Agencies supports your effort to modify the undue restrictions placed on state and local issuers of Mortgage Revenue Bonds. The present statutory and regulatory restrictions make it virtually impossible to issue bonds due to the radical changes last year in qualifying such bonds. Additionally, limitations on arbitrage and yield and the impact on the security of the bond issue raise interest costs and disqualify many issuers.

We were told last year that Congress was not attempting to prevent issues, but wanted to limit the total dollar volume and to eliminate alleged abuses. Unfortunately, the legislation went too far and is actually precluding issues.

The immediate passage of your bill would allow bonds to be sold again without changing the basic restrictions of last session. The Council of State Housing Agencies supports immediate efforts to correct problems with arbitrage and yield, noncompliance, and unfair registration requirements which apply only to housing bond issues. This registration requirement adds to the cost of housing low and moderate income families.

Your bill would solve these problems and we support your efforts to make these and other changes. In addition to immediate relief, we need hearings wherein other important issues and concerns could be raised. Multifamily and rehabilitation problems are also being encountered under the present law. It is important to note that the Mortgage Bond issue has never had the benefit of Senate hearings.

In summary, we need immediate relief to allow for workable mortgage bond programs. Your legislation would allow issuers to move forward. You have our support for immediate passage.

Sincerely,

THOMAS W. WHITE.

MORTGAGE REVENUE BONDS

● Mr. DURENBURGER. Mr. President, this Nation faces a critical shortage of low- and moderate-income housing. The debate surrounding both the All-Savers Act and the HUD budget outlines the enormous magnitude of this problem all too well. We must act promptly and responsibly to address this problem.

There are several changes needed to allow the issuance of mortgage revenue bonds in full compliance with the intent of the legislation passed last year. Last year's bill never intended to kill this program. It was meant to better target mortgage revenue bond proceeds and to tighten up the administration of these programs.

This is not a budgetary question. We have always presumed that mortgage revenue bonds would be issued this year in substantial numbers. It is a matter of being able to carry out the intent of last year's legislation to make a good program even better.

The first half of this year saw virtually no bonds issued as new regulations were awaited from Treasury. This delay in and of itself was far longer than anticipated. Now, the new regulations are out, and they cause virtually insurmountable problems according to housing agencies all across the country.

My State of Minnesota has always been one of the most sophisticated users of mortgage revenue bonds. Our bonds have always been targeted toward low- and moderate-income housing as last year's legislation directed. My State has tried to issue bonds under the new regulations with poor results. The underwriters have had $13 million of bonds returned due to the manner in which the good faith provision in the new regulations was written. This will mean the loss of 4,000 home improvement loans for low- and moderate-income people trying to maintain the quality of their housing stock.

Without changes in the arbitage regulations the State of Minnesota will have to forego issuance of single family mortgage revenue bonds this year. This means 2,500 to 3,000 fewer mortgages in 1981 for those people most seriously affected by rising inflation and soaring interest rates.

Mortgage revenue bonds are a workable way of providing housing. Some adjustments were needed to improve the program. The outline of these changes was proposed in last year's legislation, and Treasury was expected to draw up workable regulations. The result has been contrary to the intent of Congress. We have a virtually nonworking mortgage revenue bond program exactly when a good strong program would be filling a large hole in our Nation's housing needs.

In light of all the discussion surrounding housing in recent days and months, I think we must find a way to set free this proven program for helping people obtain shelter.●

Mr. BUMPERS. Mr. President, I am pleased to join with the Senator from Tennessee (Mr. SASSER) in support of legislation (S. 1348) to amend the Mortgage Subsidy Bond Tax Act of 1980.

When Congress placed these limitations on State and local mortgage subsidy bond programs last year, it virtually shut down the mortgage subsidy bond market.

Mr. President, I have no quarrel with many of the changes that were imposed. Abuses existed in the program and changes need to be made.

But, I do not believe Congress intended to prevent States and local governments from being able to issue bonds for single-family housing. Our Nation's housing industry is in a crisis caused by unprecedented high interest rates that show no signs of abatement.

Given the critical contribution the homebuilding industry makes to the economy, it is imperative to alleviate this present situation. The consequences for the American home buyer are simply that almost no person will be able to purchase their own home.

Since 1979, when the Federal Reserve Board further tightened controls on credit, housing prices and interest rates have hit record levels. Those too young to join the housing boom of the early seventies—or who chose to wait—have suddenly found they can no longer afford the price of admission.

Without a successful mortgage subsidy bond program, there are virtually no alternatives in place to provide relief for the key housing problem of the 1980's—affordability for the first-time buyer.

The use of these bonds enable thousands of people to purchase their own homes, create jobs in the construction industry, and expand the local economy. The mortgage subsidy bond program is less costly to the Federal Government

than any other similar type of direct Federal housing relief.

Without the mortgage bond program in Arkansas, the housing industry would have been at a standstill. The Arkansas Housing Development Agency has issued $300 million in tax-exempt bonds since April 1978. These bonds have provided mortgage loans for 7,311 residences throughout the State.

In Arkansas 25 local governments have issued $619,100,000 in bonds which have provided mortgage loans for 14,710 residences.

Without the mortgage bond program, there would not have been any housing construction in Arkansas. The high-interest-rate policy of the Federal Reserve combined with our constitutional usury limit virtually made housing money unavailable. The provision of the omnibus banking bill that exempts residential mortgage loans from the State usury limit has not had a positive effect on the availability of housing because of the sustained high interest rates on mortgages.

A sound mortgage subsidy program is essential for a strong housing industry. Since the enactment of the Mortgage Subsidy Bond Act, no bonds have been issued under the new act despite the efforts of several States to comply with the new requirements. It appears the procedures for qualification of the bonds are not workable.

Mr. President, delaying the adoption of these amendments will prolong a critical situation for the housing industry in this country. I urge the Senate Finance Committee to hold hearings as soon as possible on this legislation and report it favorably to the Senate.

Mr. PRYOR. Mr. President, with the development of housing bonds as a tool for financing single-family homes came widespread abuses, which the 96th Congress quite properly corrected with the restrictions included in last year's budget reconciliation bill.

Unfortunately, those restrictions went a bit too far. Meant to tighten up eligibility requirements and limit the overall level of such issues, the restrictions have instead put a complete stop to the housing bond program across the country.

With interest rates at record levels, the homebuilding industry is languishing, and we need to act immediately to get this program producing again before the building season is behind us.

Even in this notoriously cyclical industry, current indicators are eye-popping. Housing starts dropped by 14 percent from April to May of this year nationally. May's housing starts drooped to the lowest level in a year; 1981 starts are expected to be 41 percent below the 1978 level. Many counties in my State have issued only one or two housing permits since last fall. We have seen a decline in housing starts for the past 30 months—the longest housing recession since WWII—and unless the prime rate quickly drops 5 or 6 points, there is little likelihood that we will see any improvement this year. Unfortunately, policies designed by the administration and enacted by the Congress to bring rates down will not take effect for months to come.

In the meantime, however, workers are being laid off, and construction firms are closing their doors, no longer able to get credit. We must also consider housing-related industries—furniture, appliance and building supply dealers, landscapers, and others—who are suffering equally.

Housing bonds are no substitute for low interest rates, but they can keep homebuilding and related firms alive until we see better days, while providing a limited number of homes for the lucky families who are able to buy.

The legislation which Senator SASSER and others of us have offered is the bare minimum necessary to get this program off dead center. It does not relax eligibility requirements or increase the revenue loss to the Treasury. It merely removes several technical requirements which have proved to be unrealistic and obstructive.

I am delighted that several of my colleagues have decided to raise this important issue today. I hope that the Senate is fully aware of the seriousness of the problem and that we can take action on this matter as soon as possible. We cannot afford to prolong the current crisis in the homebuilding industry, which is so important to the overall health of our economy. Early action would be a helpful step toward the recovery of that industry.

Mr. BAKER. Mr. President, I want to thank my distinguished colleagues, the Senator from Tennessee (Mr. SASSER), the Senator from Minnesota (Mr. DURENBERGER), and the Senator from Arkansas (Mr. BUMPERS) who have spoken so eloquently on this important topic.

I join with them in their conviction that it was not the intention of Congress to eliminate mortgage revenue bond financing for housing. Yet, this is exactly what has happened. As the distinguished speakers before me have pointed out, mortgage revenue bonds have not been issued this year—compared with over $10 billion in bonds last year. Housing agencies, State and local, have not been able to meet the constraints placed on them in December of last year. These were restrictions designed to limit the volume of bond activity and target the proceeds to the people who need it the most. However, no one is being served at the present time.

Mortgage revenue bonds provide financing for housing for those otherwise unable to purchase a home. Many of these people are first-time home buyers or residents of substandard housing who, without this program, would be forced to live in inadequate housing.

Various housing agencies around the country have done a commendable job in the past of administering this program and providing valuable services to our citizens. In my own State, the Tennessee Housing Development Agency has in its 7 years of existence, helped to secure housing for literally thousands of the citizens of Tennessee. They have operated in a fair and equitable manner while providing a model of administration for many other housing agencies. Their service and record is indeed exemplary, but they have not been able to provide that service this year.

The ramifications of their incapacity, as my colleagues before me have correctly pointed out, are indeed far reaching. The entire housing industry has been affected. Homebuilders, already besieged by high interest rates are closing their doors. Suppliers and other housing related businesses have also been crippled, paving a deleterious path through our communities. It is obvious that mortgage revenue bonds have a valuable role in our economy.

I believe that the Finance Committee, under the capable leadership of the Senator from Kansas (Mr. DOLE) is in a better position to fully consider the legislative remedies which will be needed. Subsequently, Mr. President, I do not favor an amendment to the tax bill concerning this problem. I pledge my full support to the committee in order to provide an expeditious solution to the crisis, and restore independence and strength to our housing agencies nationwide.

Mr. DOLE. Mr. President, I thank those Senators who have spoken on the issue of mortgage revenue bonds. I can assure each of them that I am aware of their concerns.

I am willing to hold Finance Committee hearings as soon as practical which I hope will be early this fall. I cannot commit to a date certain without consulting with the Senator from Oregon (Mr. PACKWOOD) the appropriate subcommittee chairman. These hearings will provide an excellent opportunity to examine the points that you have raised.

● Mr. PELL. Mr. President, I would like to associate myself with the remarks of Senator SASSER and the other cosponsors of S. 1348 in calling attention to the need for congressional revision of the mortgage revenue bond program.

In the past 10 years, mortgage revenue bonds have worked well in assisting lower- and moderate-income citizens to purchase their own homes. Last year, in the Mortgage Subsidy Bond Tax Act, the Congress attempted to place reasonable restrictions on the use of these bonds, to target the limited number of low-interest mortgages to those who are most in need of assistance in order to purchase their first homes.

Some of these restrictions have proved unworkable from the standpoint of the State agencies which administer the mortgage revenue bond program, and, consequently, the number of bond issues has fallen off substantially. In my own State of Rhode Island, where mortgage revenue bonds have in the past supplied as much as 65 percent of new residential mortgages, there is an urgent need to get this program back on its feet.

It is very important that the Congress act this year to remove the various legal and financial uncertainties created by last year's mortgage revenue bond legislation. I hope that the Finance Committee, once consideration of the pending tax bill is completed, will give priority attention to this problem, so that we can revive a housing program which can as-

sist first-time home buyers priced out of the mortgage market by high interest rates.●

RESEARCH AND EXPERIMENTAL WAGE EXPENDITURES

● Mr. DANFORTH. Mr. President, I should like to bring to the attention of the Senate a matter relating to the tax credit for research and experimental wage expenditures, contained in section 221 of the bill, which is of concern to high technology and other companies.

As reported by the Senate Finance Committee, the bill provides an incremental credit for wages paid for services performed in conducting research. Subject to certain exclusions, the bill adopts the definition of research as used in existing Internal Revenue Code section 174. That section permits the deduction of certain research or experimental expenditures, including research wage expenditures. The committee report on the bill indicates the expectation of the committee that the Treasury and the IRS will provide additional guidance through regulations and rulings, not inconsistent with existing regulations, regarding the types of wage expenditures eligible for the credit.

The reference to code section 174 in defining qualifying research for purposes of the new credit does not make completely clear the treatment of wages which are part of the cost of developing computer "software", that is, costs incurred in developing new or significantly improved programs or routines that cause computers to perform desired tasks. (These types of development costs are to be distinguished from other software costs where the operational feasibility of the program or routine is not seriously in doubt. For purposes of code section 174 deductions, the Internal Revenue Service has taken the position since 1969 (as announced in Revenue Procedure 69–21) that taxpayers may treat cost incurred in developing new or improved computer software in a manner similar to costs incurred in product development which are deductible under section 174. However, the Service has not expressly stated that such software development costs are within the scope of section 174 expenditures.

As one of the principal sponsors of the research credit in the Senate, it is my understanding and intent that wages which are part of the costs of the development of new or significantly improved computer software should be eligible to qualify for the new credit to the extent that such wages are treated as similar to wages, incurred in product research or experimentation, which are deductible as research or experimental expenditures under present code section 174, provide that such wages meet those new requirements of new section 44F that are not part of section 174. That is, wage costs which otherwise would qualify for the new credit are not to be disqualified solely because such costs are incurred in developing computer "software" rather than in developing "hardware."

Of course, only amounts paid by the taxpayer directly for such computer software wages would be eligible for the credit. Other software costs paid by the taxpayer—such as expenditures for supplies used in developing computer software, or for overhead—would not be eligible, and amounts paid by the taxpayer to purchase or lease software programs would not be eligible. The credit exclusions and limitations which apply in the case of product research and experimentation costs also apply in the case of the costs of developing new or significantly improved computer software.

To eliminate any possible ambiguity on this point, I would like to ask the distinguished chairman of the Finance Committee whether it is also his understanding that wage expenditures which are incurred in developing new or significantly improved computer software, and which may presently be treated in a manner similar to research or experimental expenditures under code section 174, are not to be disqualified from the new credit for research and experimental wage expenditures under section 221 of the bill solely on the ground that such costs are incurred in developing "software" rather than "hardware"?

Mr. DOLE. Yes, that is my understanding. As the Senator from Missouri has stated, wages incurred in developing new or significantly improved computer software and which presently may be treated in a manner similar to section 174 research or experimental expenditures are intended to qualify for the new research credit, provided that they also meet the requirements of new section 44F which are added to the requirements of section 174 and provided they are not subject to the specific exclusions of new section 44F.●

ESTATE TAXES

Mr. DOMENICI. Mr. President, I rise to support Senator DOLE and the Finance Committee's proposal to reduce the estate tax burden. Originally this tax was passed to help finance World War I and to limit the power of certain very wealthy families in this country. Over 50 years later, the estate tax raises only 1 percent of Federal revenue, and precious little of it comes from the Nation's wealthiest families. They avoid the tax through complicated arrangements which are not available to the people who really pay this tax—our farmers and small businessmen. Unfortunately, they have little cash flow, but inflation increases the value of their land and assets to the point where their family must sell the farm or the business to pay the estate taxes. This is a major cause of the decline of the family farm and the family business.

The Finance Committee proposal would raise the estate tax credit so that by 1986, a $600,000 estate would pay no taxes. The tax free levels for 1982 through 1985 would be $225,000, $275,000, $350,000, and $450,000, respectively.

Under present law, a widow is often forced to sell the farm or business she and her husband owned throughout their marriage because the estate tax grants only a 50-percent marital deduction. The Finance Committee bill grants an unlimited marital deduction so that all surviving spouses will be free from the fear of having to sell their home or business during their lifetime to pay estate taxes.

The bill also makes important changes to expand the special valuation provisions of the estate tax. Under present law, the real estate portion of a farm or closely held business may be valued at current use rather than fair market value so long as the estate value is not reduced by more than $500,000. This provision is especially important when adjacent land is subdivided for residential or industrial development.

In addition, this bill simplifies and liberalizes the deferred payment of estate tax provisions for closely held businesses.

It has been nearly 40 years since we last changed the gift tax exclusion. The $3,000 exclusion will be raised to $10,000 per recipient. A husband and wife would be able to donate twice that amount.

These changes to the estate tax law will reduce the onerous burden on the Nation's farmers and small businessmen, and I urge that the Senate complete action on this matter as soon as possible.

THE MGM GRAND HOTEL

Mr. CANNON. Mr. President, on Thursday, July 30, Las Vegas will pass a significant milestone. This will not be just another hotel opening, but a reopening that may mean more to the future of this great city than any of the spectacular debuts which have preceded it.

The MGM Grand Hotel will be back, welcoming guests for the first time since a tragic fire closed it last November. "Bigger and better than ever" is, perhaps, a cliche when used to describe many events in Las Vegas, but in this case it is the literal truth.

It will be bigger because in addition to the 2,076 rooms in the original structure, a new wing of nearly 800 rooms has been added. And it will be better because no expense has been spared to make the MGM Grand as safe as human ingenuity can guarantee.

The new safety system built into the MGM Grand includes an elaborate network of sprinklers, smoke detectors, and alarms, as well as special smoke exhaust and communication features.

A central computer will monitor 1,300 locations throughout the facility and will automatically activate up to 1,000 different life-safety functions to halt the spread of fire or smoke and help guide occupants to safety. All MGM employees have received fire and safety training, as well as special instruction on the resort's new system.

In all, there will be 30,500 sprinkler heads positioned throughout the hotel, including every guestroom, corridor, restaurant, showroom, convention and casino facility, and storage area. Even the "porte-cochere," the famous roof over the MGM's driveway, will be sprinklered to guard against an automobile fire at the hotel entrance.

A typical guestroom will have four sprinklers, located in the bathroom, closet, entry hall, and central room. Their combined output is 65 to 70 gallons of water per minute.

I could go on and on about the three kinds of smoke detectors, the manual alarm systems, life safety communications or the smoke control capability. But the point should be clear: The owners and management of the MGM Grand have spent millions of dollars to assure their guests that they are staying at one of the safest hotels in the world.

The comeback of the MGM is both remarkable and crucial for Las Vegas. It is remarkable because the fire which destroyed the hotel occurred only 8 months ago. It took a prodigious effort by workers to get the facility ready in such a short time. I have inspected the worksite and can personally attest to the pride and sense of mission that the workers have exhibited.

And it is crucial because of the effect the MGM's closure had on Nevada's economy. The tourism industry is Nevada's main economic force and all economic indexes—gross gaming receipts, tax collections, employment—have been depressed in recent months. That is in part attributable to a slowdown in the overall economy, but it also reflects the enormous economic impact the MGM has on our State.

With nearly 5,000 employees and the capacity to house 5 to 8 thousand guests, it represents millions of dollars in payroll and tourism revenue each month. Nevada has missed that economic stimulus, and we will be pleased to have the MGM back in operation.

But even more important than its immediate economic boost, the MGM's rapid comeback represents an affirmation of Nevada's future. The people at MGM are committed to erasing the memory of that tragic November morning and replacing it with a vision of a new and ultra-safe hotel and casino which will regain its position as one of the world's most glamorous. And with the MGM's comeback, I am confident the entire State of Nevada will rally. One of the brightest lights of the famed Las Vegas Strip will soon be shining again and that is good news for all Nevadans.

DENVER DICKERSON

Mr. CANNON. Mr. President, a member of one of Nevada's great political families and a man known and loved by many Members of this body died this past weekend. Denver Dickerson, who retired last year after 7 years as staff director of the Joint Committee on Printing, was one of the finest gentlemen it has been my privilege to know.

Denver came to Washington in the 1950's as an aide to my former colleague, Senator Alan Bible. He had been a State legislator and a newsman of note in Nevada, having served as a State assemblyman and, at age 28, speaker of the assembly.

In 1963, President John Kennedy appointed Denver Lieutenant Governor of Guam, in which post he served until 1969. He had previous foreign experience as press officer to the U.S. Embassy in Burma from 1952–55.

The Dickerson family has been prominent in Nevada politics throughout this century. Denver was born in Carson City, the State capital, although not quite in the Governor's mansion. At the time of his birth, his father was warden of the Nevada State Prison and so Denver began his life within the prison walls.

It is indicative of Nevada's colorful political history that Denver's father, who also bore the name Denver, had just 4 years earlier completed a term as Governor of the State, serving from 1908–1910.

Following Denver's career in the State legislature, his brother Harvey continued the family tradition of political service by serving three terms as State attorney general. His brother George served as district attorney. Harvey, as well as two other brothers, George and Belford, and one sister Norinne Buck still live in Nevada.

Denver was a cheerful and gentle man, who gave no one a hint of his physical problems. All who worked with him in the Senate grieve for his widow, Maxine, his two children and three grandchildren. They have our prayers.

MESSAGES FROM THE HOUSE

At 9:58 a.m., a message from the House of Representatives, delivered by Mr. Berry, one of its reading clerks, announced that the House insists upon its amendments to the bill (S. 815) to authorize appropriations for fiscal year 1982 for procurement of aircraft, missiles, naval vessels, tracked combat vehicles, torpedoes, and other weapons for research, development, test, and evaluation for the Armed Forces, to authorize appropriations for fiscal year 1982 for operations and maintenance expenses of the Armed Forces, to prescribe the authorized personnel strength for each active duty component and the Selected Reserve of each Reserve component of the Armed Forces and for civilian personnel of the Department of Defense, to authorize the military training student loads, to authorize appropriations for fiscal year 1982 for civil defense, and for other purposes; asks a conference with the Senate on the disagreeing votes of the two Houses thereon, and has appointed Mr. PRICE, Mr. BENNETT, Mr. STRATTON, Mr. WHITE, Mr. NICHOLS, Mr. BRINKLEY, Mr. MOLLOHAN, Mr. DAN DANIEL, Mr. DICKINSON, Mr. WHITEHURST, Mr. SPENCE, Mr. BEARD, Mr. MITCHELL of New York, and Mrs. HOLT; and Mr. BOLAND, Mr. MINETA, Mr. GORE, and Mr. ROBINSON, from the Permanent Select Committee on Intelligence, only when differences regarding intelligence-related activities are under consideration; and in addition, solely for the consideration of section 908 of the House amendment. and section 915 of the Senate bill, Mr. HUGHES, Mr. MAZZOLI, Mr. SAM B. HALL, JR., Mr. SAWYER, and Mr. MCCLORY as managers of the conference on the part of the House.

The message also announced that the House has passed the following bill, in which it requests the concurrence of the Senate:

H.R. 4083. An act to designate certain public lands in the State of California as wilderness, and for other purposes.

The message further announced that the House has agreed to the following concurrent resolution, in which it requests the concurrence of the Senate:

H. Con. Res. 96. Concurrent resolution calling for an indefinite moratorium on the commercial killing of whales and otherwise expressing the sense of the Congress with respect to conserving and protecting the world's whale populations.

HOUSE BILL REFERRED

The following bill was read twice by unanimous consent, and referred as indicated:

H.R. 4083. An act to designate certain public lands in the State of California as wilderness, and for other purposes; to the Committee on Energy and Natural Resources.

HOUSE CONCURRENT RESOLUTION REFERRED

The following concurrent resolution was read, and referred as indicated:

H. Con. Res. 96. Concurrent resolution calling for an indefinite moratorium on the commercial killing of whales and otherwise expressing the sense of the Congress with respect to conserving and protecting the world's whale populations; to the Committee on Foreign Relations.

EXECUTIVE AND OTHER COMMUNICATIONS

The following communications were laid before the Senate, together with accompanying papers, reports, and documents, which were referred as indicated:

EC–1623. A communication from the Acting Assistant Secretary of Defense (Comptroller), transmitting, pursuant to law, notification of the intent to obligate $5.2 million in the Air Force Stock Fund for war reserve stocks; to the Committee on Appropriations.

EC–1624. A communication from the Secretary of the Army, transmitting, pursuant to law, notification that the Department of Defense will move all chemical munitions currently stored at Rocky Mountain Arsenal, Colorado, to Tooele Army Depot, Utah, for safe and secure long-term storage; to the Committee on Armed Services.

EC–1625. A communication from the Administrator of the Energy Information Administration, Department of Energy, transmitting, pursuant to law, a report on sales of refined petroleum products and sales of retail gasoline for April 1981; to the Committee on Energy and Natural Resources.

EC–1626. A communication from the New York Life Insurance Co., transmitting, pursuant to law, the 1980 annual report on the Sacramento Farm Credit Employees' Retirement Plan; to the Committee on Governmental Affairs.

EC–1627. A communication from the Acting Commissioner of the Immigration and Naturalization Service, Department of Justice, transmitting, pursuant to law, copies of orders entered in the cases of certain aliens whose visa petitions have been accorded third and sixth preference classification under section 204(d) of the Immigration and Nationality Act; to the Committee on the Judiciary.

EC–1628. A communication from the Acting Director of the Office of Congressional Affairs, Equal Employment Opportunity Commission, transmitting, pursuant to law, a report on activities under the Age Discrimination in Employment Act for the period July 1, 1979 through September 30, 1980; to the Committee on Labor and Human Resources.

PETITIONS AND MEMORIALS

The following petitions and memorials were laid before the Senate and were referred or ordered to lie on the table as indicated:

POM–330. A resolution adopted by the City Council of San Marcos, California, expressing its support of efforts by the Federal Administration to return powers to local entities and urging a careful implementation of those efforts in ways that will, enhance, not impede, home rule; to the Committee on Governmental Affairs.

POM–331. A joint resolution adopted by the Legislature of the State of Alaska; to the Committee on the Judiciary:

"LEGISLATIVE RESOLVE No. 29

"Be it resolved by the Legislature of the State of Alaska:

"Whereas the key provisions of the 1965 Voting Rights Act will expire August 6, 1982, unless renewed by Congress; and

"Whereas the Voting Rights Act is rightly considered the most effective civil rights legislation ever enacted in the United States; and

"Whereas the Voting Rights Act has substantially increased the number of individuals voting in state, municipal and national elections; and

"Whereas the extension of the Voting Rights Act as the law of the land constitutes the single best assurance to all citizens of the United States that their right to participate in the American political process will be guaranteed; and

"Whereas the extension of the Voting Rights Act will allay the fears of many groups that a regression of voting rights may occur if the Act is not extended;

"Be it resolved by the Alaska State Legislature that Congress is urged to extend the Voting Rights Act in its present form.

"Copies of this resolution shall be sent to the Honorable George Bush, Vice-President of the United States and President of the U.S. Senate; the Honorable Thomas P. O'Neill, Speaker of the U.S. House of Representatives; the Honorable Strom Thurmond, Chairman of the Senate Judiciary Committee; the Honorable Peter W. Rodino, Jr., Chairman of the House Judiciary Committee; and to the Honorable Ted Stevens and the Honorable Frank Murkowski, U.S. Senators, and the Honorable Don Young, U.S. Representative, members of the Alaska delegation in Congress."

POM–332. A joint resolution adopted by the Legislature of the State of Alaska; to the Committee on Rules and Administration:

"LEGISLATIVE RESOLVE No. 32

"Be it resolved by the Legislature of the State of Alaska:

"Whereas great sacrifices were made by military personnel serving our country in the Vietnam war and many were killed and could not be identified; and

"Whereas to this day no adequate information exists as to the identification of those military personnel of the United States of America who were killed in the Vietnam war; and

"Whereas unknown dead from the Vietnam war are not represented at the Tomb of the Unknown Soldier in the national cemetery at Arlington, Virginia; and

"Whereas unidentified military personnel who were killed in the Vietnam war deserve a place in the nation's memory equal to that accorded those in other military conflicts involving the United States of America;

"Be it resolved that the Alaska State Legislature requests that the United States government establish a suitable memorial to the unidentified dead from the Vietnam war in conjunction with the memorial at the Tomb of the Unknown Soldier in the national cemetery at Arlington, Virginia, where unidentified military personnel from World War I, World War II, and the Korean War have a representative memorial.

"Copies of this resolution shall be sent to the Honorable Ronald Reagan, President of the United States; the Honorable George Bush, President of the United States Senate; the Honorable Thomas P. O'Neill, Jr., Speaker of the United States House of Representatives; the Honorable Alan K. Simpson, Chairman of the Senate Veterans Affairs Committee; the Honorable G. V. Montgomery, Chairman of the House Veterans Affairs Committee; Mr. Jan Scruggs, Director of the Vietnam Veterans Memoral Fund; and to the Honorable Ted Stevens and the Honorable Frank Murkowski, U.S. Senators, and the Honorable Don Young, U.S. Representative, members of the Alaska delegation in Congress."

POM–333. A resolution adopted by the Republican Party of Hawaii, commending George Bush on his discharge of the duties of the Office of Vice President of the United States; ordered to lie on the table.

POM–334. A resolution adopted by the City Council of Roseville, Calif., expressing its support of efforts by the Federal Administration to return powers to local entities and urging a careful implementation of those efforts in ways that will enhance, not further impede, home rule; to the Committee on Governmental Affairs.

POM–335. A resolution adopted by the Junior Order United American Mechanics, relating to a more restrictive immigration policy; to the Committee on the Judiciary.

REPORTS OF COMMITTEES

The following reports of committees were submitted:

By Mr. THURMOND, from the Committee on the Judiciary, without amendment, and with a preamble:

S.J. Res. 74. Joint resolution designating the week of October 4 through October 10, 1981, as "National Diabetes Week";

S.J. Res. 84. Joint resolution to proclaim March 19, 1982, "National Energy Education Day"; and

S.J. Res. 94. Joint resolution to designate October 10, 1981, as "National Jogging Day".

By Mr. DENTON, from the Committee on Labor and Human Resources, with an amendment in the nature of a substitute:

S. 1090. A bill to amend the Public Health Service Act to support services and research relating to adolescent pregnancy and parenthood (Rept. No. 97–161).

EXECUTIVE REPORTS OF COMMITTEES

The following executive reports of committees were submitted:

By Mr. THURMOND, from the Committee on the Judiciary:

William C. Lee, of Indiana, to be U.S. district judge for the northern district of Indiana; and

William Bradford Reynolds, of Maryland, to be an Assistant Attorney General.

By Mr. MCCLURE, from the Committee on Energy and Natural Resources:

James R. Harris, of Indiana, to be Director of the Office of Surface Mining Reclamation and Enforcement;

James G. Stearns, of Nevada, to be Director of the Office of Alcohol Fuels; and

James R. Richard, of Virginia, to be Inspector General of the Department of Energy.

(The above nominations were reported from the Committee on Energy and Natural Resources with the recommendation that they be confirmed, subject to the nominee's commitment to respond to requests to appear and testify before any duly constituted committee of the Senate.)

By Mr. HELMS, from the Committee on Agriculture, Nutrition, and Forestry:

John V. Graziano, of Virginia, to be Inspector General, Department of Agriculture.

(The above nomination was reported from the Committee on Agriculture, Nutrition, and Forestry with the recommendation that it be confirmed, subject to the nominee's commitment to respond to requests to appear and testify before any duly constituted committee of the Senate.)

INTRODUCTION OF BILLS AND JOINT RESOLUTIONS

The following bills and joint resolutions were introduced, read the first and second time by unanimous consent, and referred as indicated:

By Mr. NICKLES (for himself, Mr. THURMOND, Mr. EAST, Mr. GOLDWATER, Mr. GRASSLEY, Mrs. HAWKINS, Mr. HELMS, Mr. HUMPHREY, Mr. MATTINGLY, and Mr. SIMPSON):

S. 1505. A bill to repeal the Davis-Bacon Act, and for other purposes; to the Committee on Labor and Human Resources.

By Mr. HAYAKAWA:

S. 1506. A bill to provide greater protection against the introduction and dissemination of plant pests; to the Committee on Agriculture, Nutrition, and Forestry.

By Mrs. KASSEBAUM:

S. 1507. A bill to amend the Social Security Act to provide that the repeal of the minimum benefit shall not apply in the case of individuals who receive $300 or less per month in other benefits; to the Committee on Finance.

By Mr. HEINZ (for himself and Mr. SPECTER):

S.J. Res. 99. Joint resolution to provide for the awarding of a special gold medal to Fred Waring; to the Committee on Banking, Housing, and Urban Affairs.

STATEMENTS ON INTRODUCED BILLS AND JOINT RESOLUTIONS

By Mr. NICKLES (for himself, Mr. THURMOND, Mr. EAST, Mr. GOLDWATER, Mr. GRASSLEY, Mrs. HAWKINS, Mr. HELMS, Mr. HUMPHREY, Mr. MATTINGLY, and Mr. SIMPSON):

S. 1505. A bill to repeal the Davis-Bacon Act, and for other purposes; to the Committee on Labor and Human Resources.

REPEAL OF DAVIS-BACON ACT

(The remarks of Mr. NICKLES on this legislation, and the text of the bill, appear earlier in today's RECORD.)

By Mrs. KASSEBAUM:

S. 1507. A bill to amend the Social Security Act to provide that the repeal of the minimum benefit shall not apply in the case of individuals who receive $300 or less per month in other benefits; to the Committee on Finance.

RESTRICTION ON REPEAL OF MINIMUM SOCIAL SECURITY BENEFIT

● Mrs. KASSEBAUM. Mr. President, the social security minimum benefit has become a source of mounting controversy. Earlier today, the Senate took the most

recent of several actions to reject restoration of the minimum benefit to individuals now receiving it. To date, the choices before us have been either to eliminate the minimum benefit entirely or to restore it to all current recipients.

Feeling that there are serious problems with both of these options, I am today introducing legislation designed to target the minimum benefit to those who are in need of it. Under this measure, the minimum benefit would continue to be available to individuals who receive $300 per month or less in other pension income. Current minimum benefit recipients with pension income in excess of this amount would receive a social security benefit based upon their actual contributions to the system.

During the numerous Senate debates on the minimum benefit, we have heard many times that the benefit constitutes a windfall to its recipients. I recognize that current minimum benefit provisions provide unintended benefits to a number of individuals. I see no need to continue to provide overly generous benefit amounts to those who are able to rely on other sources of pension income, particularly at a time when the system as a whole faces serious financial problems. It is for this reason that I have not supported efforts to restore the minimum benefit to all recipients.

At the same time, there are many other minimum benefit recipients who are greatly dependent upon this benefit and who have depended upon it for many years. Women, who constitute an estimated 85 to 90 percent of all minimum benefit recipients, would be particularly hurt by the elimination of this benefit. The outside resources available to these individuals are limited indeed.

The social security system attempts to balance adequacy and equity concerns. Maintaining the minimum benefit for the elderly individuals who rely on it as a mainstay of their support is clearly a legitimate means to advance the adequacy goals of the system. Although supplemental security income may fill the gap for some, the stringent assets test applied to the SSI program may preclude this option to many others.

This legislation may seem premature given the fact that the minimum benefit has not yet been formally repealed. However, because it does not appear that there will be an opportunity to address this issue during the conference on reconciliation legislation in spite of some second thoughts about previous House and Senate action, I felt it important to begin discussion now about ways in which the minimum benefit might be targeted.

Mr. President, I ask unanimous consent that the text of my bill be printed in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 1057

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) section 215 of the Social Security Act is amended by adding at the end thereof the following new subsection:

"MINIMUM PRIMARY INSURANCE AMOUNT FOR INDIVIDUALS WITHOUT PENSION INCOME

"(j)(1) In the case of any individual who is entitled to a monthly benefit under this title which is determined on the basis of a primary insurance amount which is less than $122, such individual's monthly benefit amount shall be determined as if such primary insurance were equal to $122, but only with respect to such a benefit payable for a month described in paragraph (2), and subject to the provisions of this title as in effect prior to those amendments made by the Omnibus Reconciliation Act of 1981 relating to the repeal of the minimum benefit provision.

"(2)(A) The provisions of paragraph (1) shall apply only with respect to a month for which there is not payable to such individual periodic monthly benefits (other than benefits payable under this title) which are greater than $300 and which constitute a pension, retirement or retired pay, annuity, or any other similar payment, which is based on the previous work of such individual or any other individual.

"(B) For purposes of this paragraph, any periodic benefit which otherwise meets the requirements of subparagraph (A), but which is paid on other than a monthly basis, shall be allocated on a basis equivalent to a monthly benefit (as determined by the Secretary) and such equivalent monthly benefit shall constitute a monthly periodic benefit for purposes of subparagraph (A). For purposes of this subparagraph, the term 'periodic benefit' includes a benefit payable in a lump sum if it is a commutation of, or a substitute for, periodic payments."

(b) The amendment made by subsection (a) shall be effective with respect to monthly benefits under title II of the Social Security Act for months beginning after the date of the enactment of this Act.●

By Mr. HEINZ (for himself and Mr. SPECTER):

GOLD MEDAL TO FRED WARING

S.J. Res. 99. Joint resolution to provide for the awarding of a special gold medal to Fred Waring; to the Committee on Banking, Housing, and Urban Affairs.

● Mr. HEINZ. Mr. President, today it gives me great pleasure to join with Senator SPECTER in introducing legislation to award a special gold medal to one of our country's greatest and most beloved musicians, Fred Waring.

Born and raised in Tyrone, Pa., Mr. Waring has devoted his long and fruitful life to popularizing music and in doing so, has brought countless hours of enjoyment to the American public. Whether he was leading the Boy Scout drum corps as a young child, or performing songs heard by millions of Americans, Mr. Waring has pursued his musical aspirations with vehemence.

Pennsylvania is especially fortunate to have witnessed the development of Fred Waring's music. As a teenager, he and several other local boys formed a quartet known as "Waring's Banjo Orchestra." This group began to develop an innovative style, using faster rhythms and exciting new harmonies. Leaving behind his studies in engineering at Pennsylvania State University, Mr. Waring threw his full energies into the band. It is a decision that I am sure he has never regretted.

Mr. Waring is perhaps best known as the "Man Who Taught America How To Sing." His prodigious contributions to the music industry include vaudeville, movies, radio, recordings, Broadway, television, and live concerts. In all these mediums, Mr. Waring has repeatedly distinguished himself with a distinctive blend of timeless music styles, earning an endearing place in the hearts of contented listeners of all ages.

Nowhere was Fred Waring's love for music better evidenced than during his many concert performances. Despite the rigors of travelling nearly 40,000 miles each year on tour, Mr. Waring treated each concert with enthusiasm and verve. Fred Waring clearly knew the musical tastes of his audiences and he satisfied their craving for live performances with hundreds of concerts.

Not only was Fred Waring a tireless performer on stage, but he was also a pioneer and innovator in the recording industry. His electronic recordings were among the first successfully produced in the inchoate recording industry. In addition, he was the first to use a female singer, to feature vocalists with an orchestra, and to combine orchestra and glee club.

It would be difficult to enumerate all of the successful songs that Fred Waring has written and performed over the years, but he and his group, the Pennsylvanians, have recorded over 1,500 songs and 100 albums. His songs have ranged from college alma mater fight songs to patriotic tunes to jazz pieces.

During World War II, Fred Waring made a significant contribution to the war effort by performing at war bond rallies, Army camps, naval training centers, and the New York Canteen owned by the Pennsylvanians. He also composed many patriotic songs for all branches of the armed services. His unselfish dedication to the allied cause is yet another example of the tradition of service that Fred Waring has so perfectly embodied.

Mr. Waring is also recognized as one of the finest music educators in the country. He has received awards from the Association of Professional Vocal Ensembles, the National Music Educators, and the American Choral Directors Associations. His efforts to foster better singing techniques led to the establishment of the Fred Waring Choral Music Workshop in 1947. He still teaches and supervises the workshop now held on the campus of Pennsylvania State University.

Throughout the past 65 years of Fred Waring's musical life, he has rewarded his dedicated listeners with many enjoyable moments and memorable tunes. This joint resolution which I am introducing today would honor his accomplishments with a gold medal, a small token of our esteem for his contributions to the music world. I am sure you will agree with me that Fred Waring deserves to be remembered in such a fashion for his unique and enduring gifts to music lovers everywhere.●

ADDITIONAL COSPONSORS

S. 169

At the request of Mr. HEINZ, the Senator from North Dakota (Mr. ANDREWS)

was added as a cosponsor of S. 169, a bill to amend sections 169 and 103 of the Internal Revenue Code with respect to tax treatment of pollution control facilities.

S. 178

At the request of Mr. DURENBERGER, the Senator from Nebraska (Mr. ZORINSKY), the Senator from Vermont (Mr. STAFFORD), and the Senator from Tennessee (Mr. SASSER) were added as cosponsors of S. 178, a bill to amend the Powerplant and Industrial Fuel Use Act of 1978 to further the objectives of national energy policy of conserving oil and natural gas through removing excessive burdens on the production of coal.

S. 464

At the request of Mr. DURENBERGER, the Senator from New Jersey (Mr. BRADLEY) was added as a cosponsor of S. 464, a bill to amend the Internal Revenue Code of 1954 to adjust provisions governing private foundations.

S. 539

At the request of Mr. DURENBERGER, the the Senator from South Carolina (Mr. THURMOND) was withdrawn as a cosponsor of S. 539, a bill to prohibit the use of funds to establish a nine-digit ZIP code.

S. 1018

At the request of Mr. CHAFEE, the Senator from Michigan (Mr. LEVIN), the Senator from California (Mr. CRANSTON), and the Senator from Pennsylvania (Mr. HEINZ) were added as cosponsors of S. 1018, a bill to protect and conserve fish and wildlife resources, and for other purposes.

S. 1037

At the request of Mr. MELCHER, the Senator from Texas (Mr. BENTSEN) was added as a cosponsor of S. 1037, a bill entitled the "National Rangeland Research Act of 1981".

S. 1131

At the request of Mr. DANFORTH, the Senator from Wisconsin (Mr. KASTEN) was added as a cosponsor of S. 1131, a bill to require the Federal Government to pay interest on overdue payments and to take early payment discounts only when payment is timely made, and for other purposes.

S. 1288

At the request of Mr. DURENBERGER, the Senator from Alabama (Mr. HEFLIN), the Senator from Mississippi (Mr. COCHRAN), and the Senator from Minnesota (Mr. BOSCHWITZ) were added as cosponsors of S. 1288, a bill to amend the Internal Revenus Code of 1954 to encourage greater energy conservation by commercial businesses, and for other purposes.

S. 1348

At the request of Mr. SASSER, the Senator from Vermont (Mr. STAFFORD), the Senator from Vermont (Mr. LEAHY), and the Senator from Florida (Mrs. HAWKINS) were added as cosponsors of S. 1348, a bill to amend the Internal Revenue Code of 1954 to clarify certain requirements which apply to mortgage subsidy bonds.

S. 1467

At the request of Mr. LEAHY, the Senator from Arizona (Mr. DECONCINI) was added as a cosponsor of S. 1467, a bill to eliminate the exemption for Congress the application of certain provisions of Federal law relating to employment, privacy, and social security, and for other purposes.

S. 1487

At the request of Mr. BOREN, the Senator from Hawaii (Mr. INOUYE) was added as a cosponsor of S. 1487, a bill to amend the tax laws of the United States to encourage the preservation of independent local newspapers.

SENATE JOINT RESOLUTION 74

At the request of Mr. THURMOND, his name was added as a cosponsor of Senate Joint Resolution 74, a joint resolution designating the week of October 4 through October 10, 1981, as "National Diabetes Week."

SENATE JOINT RESOLUTION 76

At the request of Mr. RANDOLPH, the Senator from Delaware (Mr. BIDEN), the Senator from Alabama (Mr. HEFLIN), the Senator from Nebraska (Mr. EXON), the Senator from Nevada (Mr. CANNON), the Senator from New Jersey (Mr. BRADLEY), the Senator from Oklahoma (Mr. BOREN), the Senator from Florida (Mr. CHILES), the Senator from South Carolina (Mr. HOLLINGS), the Senator from Massachusetts (Mr. KENNEDY), the Senator from Georgia (Mr. NUNN), and the Senator from Kentucky (Mr. HUDDLESTON) were added as cosponsors of Senate Joint Resolution 76, a joint resolution providing for the commemoration of the 100th anniversary of the birth of Franklin Delano Roosevelt.

SENATE JOINT RESOLUTION 83

At the request of Mr. CHAFEE, the Senator from Connecticut (Mr. WEICKER), the Senator from New York (Mr. MOYNIHAN), the Senator from Vermont (Mr. LEAHY), and the Senator from Massachusetts (Mr. KENNEDY) were added as cosponsors of Senate Joint Resolution 83, a joint resolution to authorize and request the President to call a White House Conference on Education not later than January 15, 1982, and for other purposes.

SENATE JOINT RESOLUTION 94

At the request of Mr. THURMOND, the Senator from New Mexico (Mr. SCHMITT), the Senator from South Dakota (Mr. ABDNOR), the Senator from Rhode Island (Mr. CHAFEE), the Senator from Nevada (Mr. LAXALT), the Senator from Mississippi (Mr. COCHRAN), the Senator from Alaska (Mr. STEVENS), the Senator from Washington (Mr. GORTON), the Senator from Kansas (Mr. DOLE), the Senator from North Carolina (Mr. EAST), the Senator from Arizona (Mr. GOLDWATER), the Senator from Missouri (Mr. DANFORTH), the Senator from North Carolina (Mr. HELMS), the Senator from Indiana (Mr. LUGAR), the Senator from New York (Mr. D'AMATO), the Senator from Pennsylvania (Mr. SPECTER), the Senator from Alabama (Mr. DENTON), the Senator from California (Mr. CRANSTON), the Senator from Arizona (Mr. DECONCINI), the Senator from North Dakota (Mr. BURDICK), the Senator from Montana (Mr. BAUCUS), the Senator from West Virginia (Mr. RANDOLPH), the Senator from Massachusetts (Mr. TSONGAS), the Senator from Louisiana (Mr. JOHNSTON), the Senator from Arkansas (Mr. PRYOR), the Senator from New York (Mr. MOYNIHAN), the Senator from New Jersey (Mr. WILLIAMS), the Senator from Wisconsin (Mr. PROXMIRE), the Senator from South Carolina (Mr. HOLLINGS), the Senator from Michigan (Mr. RIEGLE), and the Senator from Minnesota (Mr. DURENBERGER) were added as cosponsors of Senate Joint Resolution 94, a joint resolution to designate October 10, 1981, as "National Jogging Day."

SENATE RESOLUTION 153

At the request of Mr. HEINZ, the Senator from Delaware (Mr. ROTH) was added as a cosponsor of Senate Resolution 153, a resolution to require full adherence to U.S. Trade Agreements.

AMENDMENT NO. 504

At the request of Mr. BUMPERS, his name was added as a cosponsor of amendment No. 504 proposed to House Joint Resolution 266, a bill to provide for a temporary increase in the public debt limit.

At the request of Mr. RIEGLE, the Senator from Massachusetts (Mr. KENNEDY), the Senator from Tennessee (Mr. SASSER), the Senator from Michigan (Mr. LEVIN), the Senator from Maryland (Mr. SARBANES), the Senator from Ohio (Mr. METZENBAUM), the Senator from West Virginia (Mr. ROBERT C. BYRD), the Senator from Connecticut (Mr. DODD), the Senator from Arkansas (Mr. PRYOR), the Senator from Missouri (Mr. EAGLETON), the Senator from Illinois (Mr. DIXON), the Senator from New Jersey (Mr. WILLIAMS), the Senator from Louisiana (Mr. JOHNSTON), the Senator from Massachusetts (Mr. TSONGAS), the Senator from Nebraska (Mr. ZORINSKY), the Senator from Rhode Island (Mr. PELL), the Senator from Arizona (Mr. DECONCINI), the Senator from Montana (Mr. MELCHER), the Senator from New York (Mr. MOYNIHAN), the Senator from Maine (Mr. MITCHELL), the Senator from North Dakota (Mr. BURDICK), the Senator from California (Mr. CRANSTON), and the Senator from West Virginia (Mr. RANDOLPH) were added as cosponsors of amendment No. 504 proposed to House Joint Resolution 266, supra.

AMENDMENTS SUBMITTED FOR PRINTING

ECONOMIC RECOVERY TAX ACT OF 1981

AMENDMENT NO. 505

(Ordered to be printed and to lie on the table.)

Mr. HEINZ (for himself and Mr. DODD) submitted an amendment intended to be proposed by them to the joint resolution (H.J. Res. 266) to provide for a temporary increase in the public debt limit.

REPEAL OF SECTION 189 OF THE INTERNAL REVENUE CODE

● Mr. HEINZ. Mr. President, I am pleased to join the distinguished Senator from Connecticut, Senator DODD, in submitting this amendment to repeal section 189 of the Internal Revenue Code.

In view of the accelerated depreciation changes for real property voted by the Senate last night, passage of this amendment is made all the more important as a needed stimulus to housing and other construction.

For the benefit of my distinguished colleagues who do not serve on the Finance Committee, let me briefly explain section 189. Added as part of the Tax Reform Act of 1976, section 189 prevents the expensing of construction period interest and real property taxes incurred during the construction period of low-income housing, residential, and other real property. Instead, section 189 requires amortization of these expenses over a 10-year period. This amortization requirement has been phased in—beginning in 1976 for commercial real estate, 1978 for rental housing in general, and 1982 for low-income housing. Because construction period interest and taxes can be expensed for nonreal estate investments, section 189 has placed real estate in general and rental housing in particular at a competitive disadvantage.

To revive rental housing production—which declined from 185,000 starts in 1977 to fewer than 50,000 in 1980—our amendment would repeal section 189 immediately for all residential rental property. This would provide an immediate stimulus to rental housing production. In fact, the Forecasting and Policy Analysis Division of the National Association of Realtors estimates that repeal of section 189 would increase housing starts by 16,000 units in fiscal year 1982; 19,000 units in fiscal year 1983; 21,000 units in fiscal year 1984; and 23,000 units in fiscal year 1985.

Besides repealing section 189 immediately for residential rental real property, this amendment would phase out for all other forms of real property. Beginning January 1, 1982, it would require amortization over 8 years in 1982, amortization over 6 years in 1983, amortization over 4 years in 1984, amortization over 2 years in 1985, and expensing beginning in 1986. Nonresidential construction is also expected to increase dramatically as a result of this amendment; by $75 million worth of new construction in fiscal year 1982, by $400 million in fiscal year 1983, by $725 million in fiscal year 1984, by $1.1 billion in fiscal year 1985, and by $1.7 billion in fiscal year 1986. I ask unanimous consent that a factsheet explaining in greater detail the case for repeal of section 189 be printed in the RECORD at this point.

There being no objection, the fact sheet was ordered to be printed in the RECORD, as follows:

WHY REPEAL OF SECTION 189 IS NECESSARY

I. Present Law:

Section 189 of the Internal Revenue Code prevents the deduction of real cash outlays for interest and real property taxes incurred during the construction period of low income housing, residential, and other real property. Instead, this section requires that these costs be amortized over a 10-year period.

II. Reasons for Repeal:

Repeal of Section 189 is urgently needed for the following reasons:

1. Capital Formation. By forcing those who develop low income housing, residential and other real estate to capitalize these true "out-of-pocket" costs rather than allowing current deductions as permitted to others who have "business interest" expenses, section 189 artificially increases the required capital needed to develop these facilities.

2. Inflation. Section 189 is highly inflationary because by increasing the capital required it increases the cost of development, and those who construct a property must recover this increased cost of development through higher rents to lessees and higher prices to purchasers. In addition, businesses who lease, or who construct their own facilities, may pass these costs on to consumers through higher prices.

3. Real Expenses. Repeal of section 189 would merely allow individual's a dollar-for-dollar deduction of amounts actually paid during the construction period, which is the time when capital is most needed.

4. Competition. Section 189 is especially harmful to new and/or not-so-wealthy entrepreneurs, who do not have large amounts of capital and who must raise additional capital as a result of this provision. Consequently, these entrepreneurs are discouraged or prevented from entering into otherwise viable housing and other real estate developments or constructing new or expanded facilities for their businesses. Thus, Section 189 discourages competition and increases prices.

5. Equity. Repeal of section 189 will equalize the treatment of interest and taxes, which are out-of-pocket expenses, between residential and other real property construction and all other industries, none of which is subject to this onerous provision.

Mr. HEINZ. Mr. President, the revenue loss from this amendment is more than offset by the accelerated depreciation changes made on the Senate floor last night. Ironically, this amendment will do more to stimulate construction than the Senate Finance Committee package would have—and at less cost to the Treasury. The revenue loss resulting from this amendment has been estimated as follows:

[In millions]

	Fiscal year—					
	1981	1982	1983	1984	1985	1986
Sec. 189 repeal: Residential rental		−150	−300	−275	−250	−225
Phased repeal: Sec. 189 non-residential		−.02	−60	−150	−450	−720
Total		−150	−360	−425	−700	−945

Mr. President, this revenue loss is more than offset by the savings resulting from the 200/150 accelerated depreciation amendment accepted last night, which are as follows:

[In millions of dollars]

	Fiscal year—					
	1981	1982	1983	1984	1985	1986
Savings	+100	+800	+1,300	+1,800	+2,100	+2,500

In closing, Mr. President, I urge my distinguished colleagues to join Senator DODD and I in support of this amendment to help revive the housing and construction industries.

● Mr. DODD. Mr. President, I am pleased to join my colleague from Pennsylvania (Mr. HEINZ) in offering this amendment to phase out and repeal the amortization requirements for real property construction period interest and taxes. Unlike other legitimate business expenses, section 189 of the Internal Revenue Code prevents the deduction of these costs when incurred in connection with investments in real property. Instead, this section requires that these items be amortized over a 10-year period. We are proposing to repeal this provision beginning in 1982 for investments in connection with residential rental housing and to phase out the applicability of this section with respect to other forms of real property over the next 5 years.

The eventual repeal of section 189 will contribute significantly to increased investments in real property and overcome the inequities which currently exist between the real estate and other industries which are not subject to this requirement. This section has the effect of increasing capital needs and decreasing competition for these resources. In addition, I believe the adoption of this amendment is essential in light of the action taken last evening reducing the rate of cost recovery on 15-year real property, other than low-income rental housing.

Mr. President, the Senator from Pennsylvania and I had originally intended to offer our amendment in connection with changes in the rates of depreciation for real property contained in the Finance Committee bill. Such action would have provided, in my opinion, both improved incentives for real property investment and significant revenue gains over the next several years over the committee bill. The amendment already adopted goes beyond depreciation changes we were prepared to offer. I believe we must move forward with this proposal to eliminate the negative effects of section 189 from an industry which can now expect significantly less by the way of incentives compared with those in the bill proposed by the administration and approved by the Finance Committee.

I want to emphasize that our original intention is still valid. We can improve the climate for real property investment and still gain substantial revenues over the original bill. The amendment by the Senator from Kansas (Mr. DOLE) will produce a revenue gain of $8.6 billion through fiscal year 1986. When offset by the cost of our amendment, there is still a net gain of approximately $6.1 billion. I hope my colleagues will join us in supporting this amendment which restores approximately 30 percent of the reduction to this essential industry which results from the adoption of the amendment last evening.●

AMENDMENT NO. 506

(Ordered to be printed and to lie on the table.)

Mr. KENNEDY (for himself, Mr. RUDMAN, and Mr. PELL) submitted an amendment intended to be proposed by them to the joint resolution, House Joint Resolution 266, supra.

TAX CREDIT FOR CERTAIN HOME HEATING

● Mr. KENNEDY. During this week's consideration of the tax legislation we plan to offer an amendment which will establish a home heating tax credit. A similar amendment passed the Senate in 1977 with only 27 dissenting votes.

The credit of up to $300 will be available to offset major increases in heating bills that occur in the future. The credit will only be granted to the extent inflation increases heating costs.

We are offering this amendment because the increase in home heating costs are a serious burden on many families. In just the last 2 years, the costs of heating bills have increased from $600 to $1,200. While families are attempting to cut their costs by increasing the efficiency of their energy use, they need this tax credit to avoid significant declines in their standard of living.

This credit is also necessary to avoid a significant tax increase. Changes in U.S. pricing policies will increase a family's energy costs by $638 this year. Half of the increase in total energy bills, or about $319, is increased taxes paid to the Federal Government as the windfall profit tax.

Although this tax is normally thought of as a tax on the oil companies, it is in fact only collected by the oil companies. It is actually paid by energy consumers. Thus, this tax credit is necessary to offset a significant increase in the tax burden of citizens that was caused by the decision to decontrol with a windfall profit tax.

Mr. President, I ask unanimous consent that a factsheet on the amendment be printed in the RECORD.

There being no objection, the factsheet was ordered to be printed in the RECORD, as follows:

FACTSHEET ON KENNEDY-RUDMAN-PELL AMENDMENT

PURPOSE

Tax credit: Provide tax credit for residential heating costs.

Effective date of tax: Taxable years 1981–1984.

Maximum credit: $300.00.

Eligibility: All households (both renters and owners) with incomes up to $30,000; above that level the credit is reduced until it is phased out at $35,000.

Credit is also reduced dollar for dollar for any amount received in the form of grant assistance from any government source by the taxpayer for residential heating costs.

Formula

The sum of:

(1) Annual amount paid by household, individual, or family for residential heating from any source—oil, wood, gas, coal.

Multiplied by:

(2) CPI increase from previous year (12.4 in 1980, current projected CPI: 8.4 in 1981).

Example of formula

Example of the formula is based on average price and consumption of No. 2 home heating oil in Rhode Island as of January, 1981.

Average price is $1.26/gallon.

Average consumption is 1,200/year.

Amount paid times CPI: $1,512. times 0.124 equals $187.48 (maximum credit: $300.00).

Revenue loss to U.S. Treasury: $1 billion to $1.3 billion estimate from Joint Committee on Taxation.●

AMENDMENT NO. 507

(Ordered to be printed and to lie on the table.)

Mr. TOWER submitted an amendment intended to be proposed by him to joint resolution House Joint Resolution 266, supra.

AMENDMENT NO. 508

(Ordered to be printed.)

Mr. DOLE proposed an amendment to the joint resolution House Joint Resolution 266, supra.

AMENDMENT NO. 509

(Ordered to be printed.)

Mr. DOLE (for himself, Mr. NICKLES, Mr. BOREN, and Mr. WALLOP) proposed an amendment to the joint resolution House Joint Resolution 266, supra.

AMENDMENT NO. 510

(Ordered to be printed.)

Mr. DOMENICI (for himself, Mr. SCHMITT, Mr. TOWER, and Mr. NICKLES) proposed an amendment to amendment No. 508 to the joint resolution, House Joint Resolution 266, supra.

ADDITIONAL STATEMENTS

THE RIGHT TO EMIGRATE

● Mr. KASTEN. Mr. President, as many of my colleagues know, Congressman MICHAEL BARNES of Maryland is the chairman of the Congressional Call to Conscience Vigil, 1981. I commend his efforts, and those of more than 100 Members of the House of Representatives, to speak out for Soviet Jews, Christians, and others who have been denied the right to emigrate; who have been harassed and imprisoned for their beliefs; who have been denied the right to join their families in other countries.

I call the attention of this body to the plight of Mr. Vladimer Tsukerman who has requested permission to join his wife and son in Israel. Soviet authorities have ignored this request and imprisoned Mr. Tsukerman on charges of organizing public disorder.

Mr. President, the Helsinki accords of 1975 guarantee the citizens of signatory nations the right to emigrate. The Soviet Union is a signatory of these accords, yet its record on allowing free emigration is dismal. I hope the efforts of this body will have some positive effect on protection of basic human rights in the Soviet Union and on Soviet compliance with both the spirit and letter of the Helsinki accords.●

SURVEY SHOWS BROAD PUBLIC SUPPORT FOR TRADING COMPANY LEGISLATION

● Mr. HEINZ. Mr. President, in January 1981 Union Carbide commissioned a study of public opinions concerning trade issues and the Government's role in trade policies. The survey was recently made public and I would like to share some of the results with my colleagues.

The majority of those polled supported new and existing Government incentives that would directly stimulate increased exports. Fifty-nine percent endorsed an increase in the low-interest loans provided through the Export-Import Bank to firms selling abroad and 54 percent supported tax incentives for exporting firms to allow them to compete with other nations. Seven out of ten Americans favored the creation of trading companies for smaller firms in order to boost foreign sales. They also favored permitting U.S. corporations to work together on foreign sales, even if they would not be permitted to do so in the United States.

On the issue of our Nation's present trade deficit, 75 percent of the Americans polled felt that this was a serious problem. Most Americans also expressed the view that our domestic and trade problems are very closely linked together and, therefore, the gap in our trade balance will not be closed merely by restricting imports. Eighty percent of those polled also favored reciprocity, agreeing that if we wish to sell our products abroad, we must allow other countries to sell their products here.

In the area of foreign oil, U.S. dependence on imported oil was cited as a major reason for our trade and domestic economic problems. More than 90 percent of those polled considered U.S. reliance on unstable areas of imported oil to be a serious problem. However, there was substantially less agreement on the necessity for U.S. oil import dependence or on effective ways to reduce it.

In regard to U.S. competitiveness, over 50 percent felt that American products were not competitive with foreign products in terms of price and quality. A smaller percentage also felt that American companies were not managed better than foreign companies. Almost 60 percent of those polled agreed that foreign firms receive more governmental support in attempting to market their products overseas than their U.S. counterparts and that there should be stricter enforcement of U.S. laws against dumping and subsidized imports.

These survey results are clear indicators of the need to take immediate action to promote U.S. exports in order to increase U.S. competitiveness. The emerging consensus is that our domestic economic problems are closely linked with our trade difficulties and that these problems can be resolved in part by aggressive U.S. Government policies to encourage U.S. companies to export competitively in the world market. We must continue our efforts to improve domestic export performance and to continue the reduction of our trade deficit.●

OVERWHELMING SUPPORT BY ARIZONA PRO-LIFE LEGISLATORS FOR SANDRA O'CONNOR

● Mr. GOLDWATER. Mr. President, single-issue religious groups have leaped before they looked in opposing the nomination of Sandra O'Connor to the Supreme Court. I have previously warned

that the fundamental error of her critics is in attempting to use a specific issue, on which some people feel passionately, to dominate every sphere of public activity. As James Madison, the Father of the Constitution, explained at length in his famous Federalist Paper No. 10, the concentration of power in factions is alien to the intent of the framers and destructive of a free government.

Beyond violating this basic concept, the self-proclaimed morality groups attacking Mrs. O'Connor's confirmation are just plain wrong about her positions. They have mistakenly distorted or lied about her past actions.

There is proof of what I say. Just today I have received the mail from Arizona and in it was a copy of an endorsement of Sandra O'Connor signed by 26 members of the Arizona House of Representatives, all of whom have consistently voted for memorials urging ratification of the right-to-life amendment.

This bipartisan group hailed the integrity and morality of Sandra O'Connor and deplored the opposition to her nomination as being founded on a "lot of unfounded rumors and innuendo."

At the press conference held on July 13, State Representative Pete Corpstein, who sent me a copy of the letter of endorsement, said of Sandra O'Connor: "I don't know anyone who has more Christian integrity."

Representative Corpstein added in his note to me that this endorsement proves "there is overwhelming support by the Arizona right-to-lifers for Sandra's nomination."

One of the signers of the endorsement, Representative Donna Carlson West, is a leader both of Arizona's pro-life and anti-ERA forces. She, too, publicly criticized opposition to Mrs. O'Connor as being unfounded and untrue. Representative West announced she has carefully examined the votes cast by Judge O'Connor, "when she served in the State Senate, and has not seen anything that tells me Sandra shouldn't be the Justice."

Mr. President, I believe these statements by Arizonans, who have worked with and know Sandra O'Connor, will satisfy my colleagues that the foes of her nomination are misrepresenting her views. So that Senators may judge for themselves, I ask that the pertinent news reports shall appear in the RECORD.

The material follows:

ARIZONA HOUSE OF REPRESENTATIVES,
July 13, 1981.

NOMINATION OF SANDRA O'CONNOR FOR THE UNITED STATES SUPREME COURT

Today 26 Republican and Democrat members of the House of Representatives have signed letters to Senators Strom Thurmond, Howard Baker, Orrin G. Hatch and Jesse Helms which give the following statement:

"The undersigned members of the Arizona House of Representatives have consistently supported the Right to Life Constitutional Convention Amendment to the United States Constitution.

"We wholeheartedly endorse the honorable Sandra D. O'Connor for nomination to the United States Supreme Court. Because of her integrity, morality and knowledge, we believe Sandra D. O'Connor will be an asset to the United States Supreme Court."

We are bringing this to the attention of the media and to the nation as we feel there have been a lot of unfounded rumors and innuendo in regard to this nomination.

We enthusiastically support her nomination.

PETE CORPSTEIN,
State Representative.

ARIZONA HOUSE OF REPRESENTATIVES,
Phoenix, Ariz., July 10, 1981.

Hon. STROM THURMOND,
Chairman, U.S. Senate Judiciary Committee, Russell Senate Office Building, Washington, D.C.

DEAR SENATOR THURMOND: The undersigned members of the Arizona House of Representatives have consistently supported the Rights to Life Constitutional Convention Amendment to the United States Constitution.

We wholeheartedly endorse the Honorable Sandra D. O'Connor for nomination to the United States Supreme Court. Because of her integrity, morality and knowledge, we believe Sandra D. O'Connor will be an asset to the United States Supreme Court.

Sincerely,

Pete Corpstein, Donna Carlson West, Frank Kelley, Speaker; Burton S. Barr, Majority Leader; Art Hamilton, Minority Leader; Jim Cooper, Bart Baker, Jane Dee Hull, Jim Meredith, Joseph J. Lane, Paul Messinger, Pete Dunn, Tony West, E. C. "Polly" Rosenbaum, Lillian Jordan, Carl J. Kunasek, Donald Kenney, James B. Ratliff, Doug Todd, Rhonda Thomas, Pat Wright, Debbie McCune, Edward G. Guerrero, D. Lee Jones, Daniel Peaches, Morris Courtright.

[From the Phoenix Gazette, July 14, 1981]

TWENTY-SIX SUPPORT O'CONNOR NOMINATION

Twenty-six Arizona House members who are strong foes of abortion have endorsed Appeals Court Judge Sandra O'Connor in her nomination to the U.S. Supreme Court.

In a letter to four members of the U.S. Senate, where the nomination will be considered later this summer, the bipartisan group disputed the "unfounded rumors and innuendo" circulating about Mrs. O'Connor, and said they "enthusiastically support" her appointment.

"Because of her integrity, morality and knowledge, we believe Sandra D. O'Connor will be an asset to the Supreme Court," the group wrote.

All 26 were among the 31 who voted last January for the House resolution calling for a constitutional convention to draft a right-to-life amendment to the U.S. Constitution. It passed the House without a vote to spare, and later died 9–0 in a Senate committee.

The Arizona judge and former legislative leader has come under attack from right-to-life groups which insisted she had a "consistent" pro-abortion voting record in 1970–74, when she was in the Senate.

"I just wish half the people in the Moral Majority had the moral integrity of Sandra O'Connor," said Rep. Peter Corpstein, R-Paradise Valley, who circulated the letter. "I don't know anyone who has more Christian integrity."

Corpstein said only two of those voting for the convention resolution last winter—Flagstaff Republicans Sam McConnell and John Wettaw—refused to sign the letters. Two others were out of town and unable to sign, while Corpstein conceded he hadn't asked Scottsdale Republican Jim Skelly, the House's most ardent abortion opponent.

[From the Phoenix Gazette, July 13, 1981]

REPRESENTATIVE WEST CLAIMS JUDGE O'CONNOR'S LEGISLATIVE VOTES ARE MISINTERPRETED

(By John Kolbe)

Rep. Donna Carlson West, R-Mesa, a leader of Arizona's pro-life and anti-ERA forces, has mounted a strong defense of Judge Sandra O'Connor against the attacks of right-wing groups.

In a letter Friday to Senate Majority Leader Howard Baker, R-Tenn., the five-term lawmaker said she was "deeply distressed" at the anti-abortion and anti-ERA opposition to Mrs. O'Connor's Supreme Court nomination, and insisted there was nothing on her record "that warrants the many unfounded, untrue charges that are being raised."

Mrs. West explained several of the votes cast by Mrs. O'Connor as a state senator from 1970–74 were being misinterpreted by her rightist foes.

She told the Phoenix Gazette her conclusions were based on a recent conversation with Judge O'Connor, in which she sought to clear up the jurist's positions on several issues.

While the judge backed a resolution aimed at ratifying the Equal Rights Amendment, she conceded, so did two other conservative Republicans—Trudy Camping and Bess Stinson, both of Phoenix—who later became ardent foes.

"Since 1975, Sandra has been on the bench and has not spoken out for or against the ERA," Mrs. West wrote Baker.

Judge O'Connor's legislative opposition to various anti-abortion proposals was often for other reasons, Mrs. West added. She voted against one measure to ban abortions at Tucson's University Hospital because it was not germane to the original bill, and opposed a pro-life memorial to Congress because of her "general opposition to constitutional conventions."

Mrs. West, past chairman of the American Legislative Exchange Council (ALEC), a national organization of conservative state lawmakers, said rumors that Mrs. O'Connor favored gun control or opposed religion and capital punishment are "views which she has never held."

Although Kathleen Teague, ALEC's executive director, appeared at a press conference of right-wing groups Thursday to join in the attack, Mrs. West said she did so without authority from the group's executive board.

"This is really starting to disturb me," said Mrs. West. "What they're doing now is questioning President Reagan's judgment. I just haven't seen anything that tells me Sandra shouldn't be the justice." ●

VOTING RIGHTS ACT

● Mr. HART. Mr. President, this morning's New York Times carried an excellent column by Tom Wicker which effectively makes the case for full extension of the Voting Rights Act. Quite simply—and quite sufficiently—the act works. It is needed and it is working in 1981 as the only real guarantee to minority groups that their voting power will not be diluted by subtle but powerful means.

As Mr. Wicker points out, it is becoming clear even to the doubters, that only the full extension of the Voting Rights Act will safeguard what the President recently described in Denver as: "the most sacred right of free men and women." The options which have been suggested, particularly nationwide preclearance, would seriously weaken the act and impair its crucial safeguards. Mr. Wicker's editorial provides an especially good four-point analysis of why nationwide preclearance has no intrinsic validity and should not seriously be considered. I commend the article to my colleagues and urge them to support efforts to extend the full force of the act for 10 more years.

I ask that the editorial be printed in the RECORD.

The editorial follows:

NO AMBIGUITY JUSTIFIED

(By Tom Wicker)

If anyone—say President Reagan—has harbored honest doubt about the need for renewal of the historic Voting Rights Act of 1965, that doubt should have been dispelled by the Reagan Justice Department's rejection last week of a Virginia reapportionment plan.

That state's legislature, ostensibly acting on the 1980 census, outlined state senate boundaries that would have split Norfolk's black population—37 percent of the total—and resulted in two majority-white districts. A Justice Department official said the legislature had rejected the alternative of one black-majority district, and claimed that the choice was "made with full awareness." That's a roundabout way of describing an effort to deprive blacks of justified representation in the state senate.

A "strikingly similar" plan, the official said, was rejected on the same grounds in 1971, after the last census—which says something about the extent to which underlying Southern attitudes have resisted change even in recent years. Then and now, the Justice Department acted under the pre-clearance provisions (Section 5) of the Voting Rights Act.

Section 5 applies to nine states (including Virginia) and portions of 13 others (including New York) with a history of such discrimination. It requires these jurisdictions to clear any change in their voting procedures with the Justice Department, or to obtain the approval of a Federal district court in Washington.

But Section 5 will expire in 1982, and considerable opposition to its renewal has surfaced with the election of the conservative Reagan Administration and Republican control of the Senate. Such a sharp change in the political climate no doubt influenced the Virginia legislature to try again what it could not get away with in 1971.

Mr. Reagan's own position is ambiguous, though it was not during his 1980 campaign. At that time he said he favored extension of Section 5 to all 50 states, rather than limiting it to the 22 now affected. That seemed still his position on June 15, 1981, when he wrote Attorney General Smith to ask for a full review of the Act.

But on June 29 the President told the N.A.A.C.P. in Denver that he intended to safeguard voting as "the most sacred right of free men and women." Howell Raines of The New York Times has reported that Mr. Reagan later gave black leaders private assurances that he would not "do anything to dilute the enforcement provisions of the law." But a "senior White House official" told Mr. Raines that the 50-state plan was an option "still very much on the table."

If so, that option can only reflect the political pressures from Southern whites and others of the right wing; it has no intrinsic validity, for at least four good reasons:

Practically, to bring all 50 states under the requirements of Section 5 would swamp the Justice Department with clearance requests, particularly as the states reapportion themselves following the census. The effective result would be to lessen the department's ability to enforce the Act anywhere, and increase the likelihood that discriminatory changes might slip through.

Intellectually, it is outright sophistry to claim that extending Section 5 to all 50 states would provide equity for all. What is fair about the saddling states that have no history of voting discrimination with the same tough requirements imposed on those with blatant histories of such discrimination? This penalty was earned by the offending states—Mississippi, for example, where in 1965 only 6.7 percent of eligible blacks were registered.

Constitutionally, the United States already has a voting rights requirement that applies equally to all 50 states—the 15th Amendment, which prohibits voting restrictions based on race. The Voting Rights Act merely enforces this amendment against offending jurisdictions.

Politically, moreover, all 50 states are already liable, even if not now subject, to preclearance procedures. Under Section 3(c) of the Act, if a court finds that any one of them has violated the 14th or 15th Amendments to an extent justifying relief, it can require pre-clearance of the state's election laws either by the Attorney General or—in this case—a Federal district court in that state.

Representative Henry Hyde of Illinois, a conservative Republican, at first opposed but now favors renewal of the Act, including Section 5. He has offered a "bail-out" provision by which a formerly discriminating jurisdiction could escape the pre-clearance requirements by demonstrating a record of 10 years of nondiscriminatory voting practices. That appears reasonable, as long as a "trigger" is maintained to include any jurisdiction right back in Section 5 if it should lapse into its old discriminatory ways.

Mr. Reagan could reasonably and responsibly take that position, too, but it won't appease the Act's opponents. Nothing will, except the effective nullification of highly successful legislation that has increased the number of black elected officials in the South from 100 to 2,400. That's enough, or too many, for them.●

ALLOCATION UNDER THE BUDGET RESOLUTION

● Mr. HATFIELD. Mr. President, on July 10, the Committee on Appropriations filed its report required under section 302 of the Budget Act. This report subdivides by subcommittee the total allocation provided in the first budget resolution. The Senate will refer to these subdivisions to compare the fiscal year 1982 appropriations bills to the first budget resolution.

My purpose today is to share with other Members of the Senate the concern felt by the committee as it prepared this report. The committee discovered that the only way to fit within its total allocation was to assume funding only for the regular appropriations bills and for current estimates of the so-called mandatory items to be funded in a supplemental. These include Defense Department cost-of-living increases, the guaranteed student loan program and two veterans' programs: readjustment benefits and compensation and pensions.

The total allocation does not, however, provide sufficient room for other programs which the committee expects may require additional funds in fiscal year 1982, such as the food stamp and child nutrition programs, and disaster requirements. These additional requirements result from either circumstances beyond the control of Congress such as overall performance of the economy, or natural disasters.

In addition, the allocation does not provide room for anticipated budget amendments for programs such as EPA construction grants. As for the Defense Department, the fiscal year 1982 inflation rate assumed is 8.7 percent as proposed by the administration and assumed in the budget resolution. If Congress decides that the inflation assumption requires an upward adjustment, program cuts will have to be made or the allocation increased.

Because of these specific concerns, the committee's report noted that:

Between the time this report is filed and conference reports on appropriation bills are finalized, changes could occur within the economy which could affect Federal programs. This could create a shifting of priorities which would in turn have a significant impact on the budget as well as individual appropriation bills. The committee is concerned that such shifting of priorities, together with any added budget requirements, would impact on the subcommittee subdivisions contained in this report. Therefore, the committee reserves the right to make necessary revisions to the section 302(b) report at a later date as may be necessary and appropriate.

I rise today to voice these concerns and serve notice that the Senate faces a hard choice—either raise the total allocation for the Appropriations Committee in the second budget resolution, or not fund what we previously have considered very important programs. I feel that the committee has been honest and forthright in making its subcommittee allocations, and it is in that same spirit that I make these comments about the possibility of a new allocation being required. The committee will continue to work with the Budget Committee on these matters.●

NATIONAL POW/MIA DAY OF RECOGNITION—JULY 17, 1981

● Mr. DURENBERGER. Mr. President, on July 17 we honored those POW's who served their country heroically during times of war. Our joy that many returned to their homes and picked up the threads of their lives again is tempered, however, by the knowledge that some 2,500 U.S. military personnel remain missing in action as a result of the Vietnam conflict and 389 are unaccounted for as a result of the Korean war.

Many of the 140,000 Americans who were captured and imprisoned in the four wars of this century endured a harsh existence. They underwent not only the constant physical threats and mental stress that other military personnel experienced, but many were also subjected to the added pressures of confinement in POW camps. Those nearly 100,000 former POW's who are still alive today will never forget the treatment they received at the hands of the enemy.

The international conditions for the treatment of prisoners of war set down in Geneva in 1929, and reaffirmed in 1949, did little to insure humane care for many U.S. military personnel who were captured in wartime. Starvation diets, rudimentary health care, death marches, executions, and in some cases unbelievable torture were endured by thousands of POW's.

Today, despite their return to the United States, psychologists and medical personnel continue to detect a disturbingly high incidence of ill health effects among POW's. These health problems vary depending on the campaign in

which servicemen participated. But one thing is certain: the physical deprivation and mental stress of captivity have taken a severe toll on our servicemen.

Unfortunately, our servicemen are not the only ones who have suffered by their imprisonment. The families of POW's and MIA's suffer greatly from anxiety, lack of information, and the fear that one whom they love is being maltreated. The National League of Families of American Prisoners of War and Missing in Southeast Asia has been instrumental in assisting families whose relatives remain missing in action in Vietnam.

Through their efforts to disseminate information to the general public, these league members have rallied support for investigations into the status of the POW's and MIA's, and have coalesced national support for an accounting of our servicemen by the Vietnamese Government. They have shared their sorrow and given each other the needed encouragement to raise their families without those missing fathers and brothers. But their determination for a final accounting is their strongest concern, and rightly so.

Therefore, once again I urge the Government of Vietnam to give our Nation a full accounting of our military personnel who are missing in action and whose whereabouts are still unknown. On this day of national recognition for our MIA's and POW's, it is appropriate that once again we call upon all concerned governments to provide the information that our President, the Congress, and the people of this Nation have requested regarding our missing personnel.

Let there be no doubt in Vietnam, Laos, and Cambodia: We are determined that no Americans shall be held against their will by any country at any time. The continued support of all Americans will strengthen our resolve to accept nothing less than a full accounting.●

TITLE I PROGRAMS FOR EDUCATIONALLY DISADVANTAGED SCHOOLCHILDREN A SUCCESS

● Mr. LEVIN. Mr. President, I recently came across an editorial in the Detroit Free Press that addresses the merits of the title I program for disadvantaged children. As the article points out, title I has been an extremely successful program. A recent Stanford Research Institute report on title I demonstrated that, "In terms of the unofficial standard of success, which is a month's gain for a month in the program, title I must be judged a significant success."

In addition, the National Assessment of Educational Progress reports in 1981 that title I is one of the primary factors contributing to a dramatic increase in reading scores of disadvantaged students over the last 10 years. Because of this program's achievements, one should be wary of any efforts to change its structure which could hinder its effectiveness.

The administration's proposal to include title I in an education block grant and reduce the appropriation for that block grant would have had such an effect. According to several coordinators of State compensatory programs, "Without title I, few States would have initiated, or would continue, funding for this special purpose—assistance to disadvantaged children."

In examining the success rate of title I, the Senate has wisely chosen to retain this program's independent integrity and increase its authorization for the next 2 fiscal years. The basic formula and structure of the program will remain the same.

I have had a long-time interest in the education problems that confront disadvantaged children. I will continue to support such successful programs as title I and in fact have been studying other possible solutions to the unique problems at issue. Because the Free Press editorial so clearly delineates the issues we have had to consider recently in dealing with all social service programing and discusses this fine program, I ask that it be printed in the RECORD.

The article follows:

TITLE I: CONSERVATIVE PRINCIPLE SHOULDN'T RULE OUT THIS VALUABLE SCHOOL PROGRAM

Terrel Bell must be either incredibly naive or completely insulated from the realities of big city schools. The secretary of education justifies cutbacks in compensatory education funds under Title I on the grounds that local officials will do their best to serve their students even without federal help. That's probably true. But in the days before Title I's special earmarked aid, urban schools made little headway in coping with problems crippling them.

Title I was born of the frustration and ferment of the '60s. The program threw a lifeline to urban educators who were sinking in a sea of problems but still clinging to the belief that something could be done. At the time, poor urban schools faced soaring dropout rates, swelling numbers of youngsters barely able to read, students coming to school hungry, tired, trailing a whole set of troubles. Title I, through pre-school and intensive reading and math programs, along with efforts to involve entire families in the life of schools, tried to change all that.

In a very real sense, it was a gamble. Early participants took a chance that early childhood education, reading co-ordinators, school community agents and cultural enrichment would pay off. It worked against the odds in places such as Detroit where top school administrators were committed to change. National studies have documented reading improvements among minorities, and an 18-year study sponsored by the Carnegie Corp. indicates the value of pre-school education for the urban poor. Eighth graders who had pre-school education under the study tested 1½ grade levels above those who did not, and they were less likely to get involved in muggings and vandalism.

However, Title I's success, ironically enough, may have jeopardized its future. The conservatives running Congress these days seem to feel that once a program becomes a success nobody needs it any more. Some members of the New Right believe the War on Poverty worked so well it wiped out poverty in the U.S., so they have begun cutting back on food stamps and public service jobs. But, just as such cutbacks only swell the ranks of the poor, the 12 percent slash authorized for Title I programs in 1981–82 will serve to make the need for the programs more apparent.

Secretary Bell says special categorical grants infringe on the rights of local and state officials by forcing them to spend federal money only on poor children. The administration would like to abolish categorical aid in favor of bloc grants that could be spent for a wide variety of purposes. The fact is, of course, that programs such as Title I would never have been possible with bloc grants.

In the best of all possible worlds, states and cities would still make sure that those most in need got special help. Given such vagaries as city and state budget problems, rising labor costs, institutional racism, human indifference and greed, though, many local systems would likely react to any freeing of their hands by dropping all or part of the Title I effort or diluting it to the point of ineffectiveness. A working program is being gutted on the altar of abstract conservative principle. The tragedy is that the next generation may not read well enough to understand what happened.●

THE DEATH OF WILSON E. SCHMIDT

● Mr. HELMS. Mr. President, it was with deep sadness that I learned of the death earlier today, of Dr. Wilson E. Schmidt, who was the victim of a fire at the Cosmos Club, Sunday night. I understand he never regained consciousness.

Dr. Schmidt's loss is an immeasurable one to his family and a great one to the Nation. He was to have served as the U.S. Director at the World Bank. Dr. Schmidt was already on the job, learning about the operations of the Bank and its affiliates. He had already earned the respect and friendship of those in the Treasury Department and those in the Bank with whom he worked.

Dr. Schmidt will be remembered, too, for his scholarly work in economics. As professor of economics at the Virginia Polytechnic Institute at Blacksburg, Va., he earned distinction as a nationally recognized expert on monetary affairs. A member of the shadow open market committee, an organization of free-market monetarist economists, he helped critique Federal monetary policy when it became too lax. As a long-time member of the Philadelphia Society and the Mont Pererin Society, he contributed his intellect and good humor to the serious discussion of the problems of our society.

His Federal service began in 1956 when he served on the staff of the late Senator William Knowland. In 1968, he served on a task force on balance of payments problems for the President-elect.

He was Deputy Assistant Secretary of the Treasury for Research in 1970–72, and assisted with the Presidential transition team for international financial organizations last fall.

I did not have the pleasure of personally meeting Wilson Schmidt until early this year. In a very personal way I deeply regret that I will not have an opportunity to learn from a great intellect, a great teacher, and a true gentleman.●

AGGRESSION ON CYPRUS—7 YEARS LATER

● Mr. SARBANES. Mr. President, I deeply regret that it should be necessary to recall that 7 years ago Turkish troops invaded the sovereign Republic of Cyprus, an action that was followed less than 1 month later by the brutal occupation of 40 percent of that island republic.

This occupation resulted in thousands of deaths, the displacement of 200,000 people from their homes, the disappearance of many who still remain unaccounted for, the destruction of hundreds of churches, schools, and hospitals and the seizure of 70 percent of the island's productive capacity.

Mr. President, the aggression of 1974 has not been redressed. Forty percent of Cyprus remains under occupation, Turkish troops continue to occupy the island, and Turkish settlers have been brought into the island. The 200,000 refugees are unable to return to their homes and this is a special tragedy in a land where roots go very deep. The missing persons have not been accounted for and the failure to resolve this pressing humanitarian issue imposes a sharp pain upon the families and friends of the missing.

Mr. President, in his first report to the Congress on the Cyprus negotiations President Reagan stated:

> A just, fair and lasting resolution to the problems of Cyprus will remain a priority for my administration.

I urge the administration to follow up on this undertaking and to focus its efforts and attention upon achieving a just settlement on Cyprus. The gross injustice committed on Cyprus must not be allowed to continue and the United States is in a position to use its influence, particularly with Turkey whose troops currently occupy a large portion of the island, to bring about a just solution on Cyprus.

Mr. President, the people of Cyprus have suffered, and continue to suffer—a suffering which must be ended. It is imperative for the United States and other freedom-loving nations to join in a concerted effort to bring peace and justice to that tragic land. We must renew our commitment to that objective so that the people of Cyprus may begin to mark a new and different anniversary—the anniversary of the return of peace and justice to their country.

Mr. President, the Baltimore News American published a very perceptive and thoughtful editorial entitled "A Depressing Anniversary" regarding the Turkish invasion of Cyprus. It should be carefully reviewed by all those concerned about this issue and I therefore ask that the full text of the editorial be printed in the RECORD.

The editorial follows:

A DEPRESSING ANNIVERSARY

Today is the seventh anniversary of the Turkish invasion of Cyprus, and the world really is nowhere closer to achieving justice for the Mediterranean island republic than it was the day the Turkish army stormed ashore. Forty percent of Cyprus, which is about the size of Rhode Island, is occupied by 30,000 Turkish troops; in addition, 40,000 mainland Turks have been shipped into the occupied area as colonists. Some 200,000 of the indigenous Greeks uprooted by the invasion still are refugees in the southern part of the island. Two thousand Cypriot Greeks—as well as eight Americans—have been missing since the invasion; the democratic government of Cyprus suspects they were murdered by the Turks.

Turkey staged its 1974 invasion because it claimed that Cypriots of Turkish descent were in danger as a result of a coup taking place on the island. It claimed, too, that the coup would result in Cyprus becoming part of Greece, and that as one of the guarantor nations of Cyprus's independence, it had a duty to invade. But all that was pretext, and the Turks are still there and, indeed, sinking their talons deeper as the years fly by.

Despite international pressure, including a since-lifted arms embargo by the United States and repeated calls for withdrawal by the U.N., the Turks have refused to leave, or to seek any other kind of solution. In March, President Reagan told Congress that "a just, fair and lasting resolution to the problems of Cyprus will remain a priority for my administration." But under a law passed by Congress about the time of the arms embargo, presidents are required to speak out on Cyprus; every 60 days, they must report to Congress the status of progress toward a solution.

In his March message, President Reagan said he was encouraged that U.N.-sponsored talks between "the Greek Cypriot and Turkish Cypriot communities are continuing." The fact is that the Cypriots of Turkish descent have no say at all; the Turkish government calls the tune. But it is not doing much calling; indeed, it refuses to discuss any of the concessions put forward by the Cypriot government, including a separate area for Cypriot Turks and a federal system of government to give these people better representation.

But why should the Turks agree to any concessions, let alone to getting out of Cyprus, which is the only real answer, when they don't have to? The fact is that United States pressure against the Turkish presence has been slight. President Ford applied no real pressure, nor did President Carter. Nor has President Reagan. The reason is a fear that Turkey, which well understands it can get away with talking tough to Washington, might decide to lessen its role in the NATO military alliance. But in view of Turkey's current chaotic social and fiscal plight, pressure easily could be brought to bear.

Then there is the fact that Cyprus is very small—its population, discounting the colonist who have entered since the invasion, is about the size of New Hampshire's. And Cyprus has little lobbying clout in Washington. The net result: Nearly half of a peaceful, democratic nation has been occupied by foreign troops for seven years. And one of the saddest aspects is that American taxpayers, whose money goes in vast quantities to buy arms for Turkey, are paying to support that occupation.●

RECESS UNTIL 10 A.M. TOMORROW

Mr. BAKER. Mr. President, if there is no further business to come before the Senate this evening, I ask unanimous consent, in accordance with the previous order, that the Senate stand in recess until 10 a.m. tomorrow.

There being no objection, the Senate, at 10:13 p.m., recessed until tomorrow, Wednesday, July 22, 1981, at 10 a.m.

HOUSE OF REPRESENTATIVES—*Tuesday, July 21, 1981*

The House met at 11 a.m.

The Chaplain, Rev. James David Ford, D.D., offered the following prayer:

O God, You know how Your people suffer from the conflicts that are manifest in our world, and how the innocent so often know the pain of deadly strife, we pray that You will lift our vision that we may become messengers of good will and guardians of peace. Give us the courage to speak the truth that will free us from prejudice and selfish motive, and fill our hearts with the desire for understanding and trust among peoples and nations. Transform our spirits to see more clearly Your purposes for us that all people may be blessed and know the comfort of Your love. Amen.

THE JOURNAL

The SPEAKER. The Chair has examined the Journal of the last day's proceedings and announces to the House his approval thereof.

Pursuant to clause 1, rule I, the Journal stands approved.

MESSAGE FROM THE SENATE

A message from the Senate by Mr. Sparrow, one of its clerks, announced that the Senate had passed bills of the following titles, in which the concurrence of the House is requested:

S. 863. An act to establish a uniform law on the subject of bankruptcies; and

S. 1224. An act to amend the provisions of title 39, United States Code, relating to the use of the frank, and for other purposes.

COMMUNICATION FROM THE CLERK OF THE HOUSE

The SPEAKER laid before the House the following communication from the Clerk of the House of Representatives:

WASHINGTON, D.C.,
July 20, 1981.

Hon. THOMAS P. O'NEILL, Jr.,
The Speaker, House of Representatives, Washington, D.C.

DEAR MR. SPEAKER: I have the honor to transmit herewith a copy of the Certificate of Election for the Honorable Michael G. Oxley, who was duly elected Representative in Congress from the 4th Congressional District of the State of Ohio in a Special Election held on June 25, 1981.

With kind regards, I am,

Sincerely,

EDMUND L. HENSHAW, Jr.,
Clerk, House of Representatives.

SWEARING IN OF THE HONORABLE MICHAEL G. OXLEY OF OHIO AS A MEMBER OF THE HOUSE

Mr. LATTA. Mr. Speaker, a couple of weeks ago the Speaker had the pleasure on his side of swearing in a new Member from Mississippi. On our side we are pleased to have that privilege this morning in swearing in a new Member, MICHAEL OXLEY, who will make a good Member of this House.

The SPEAKER. Welcome. Will the Member-elect kindly present himself in the well, and will the senior Member and others of the Ohio delegation come forth with him?

Mr. OXLEY appeared at the bar of the House and took the oath of office.

The SPEAKER. Congratulations. The gentleman is a Member of the Congress of the United States.

PRIVATE CALENDAR

The SPEAKER. This is Private Calendar day. The Clerk will call the first individual bill on the Private Calendar.

FOR THE RELIEF OF REMEDIOS R. ALCUDIA, CHRISTOPHER, EZRA, VERMILLION, AND PERISTELLO ALCUDIA

The Clerk called the bill (H.R. 1547) for the relief of Remedios R. Alcudia, Christopher, Ezra, Vermillion, and Peristello Alcudia.

Mr. SENSENBRENNER. Mr. Speaker, I ask unanimous consent that the bill be passed over without prejudice.

The SPEAKER. Is there objection to the request of the gentleman from Wisconsin?

There was no objection.

FOR THE RELIEF OF ANDRE BARTHOLO EUBANKS

The Clerk called the bill (H.R. 1681) for the relief of Andre Bartholo Eubanks.

There being no objection, the Clerk read the bill as follows:

H.R. 1681

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, in the administration of the Immigration and Nationality Act, Andre Bartholo Eubanks may be classified as a child within the meaning of section 101(b)(1)(F) of the Act, upon approval of a petition filed in his behalf by George E. and Aparecida A. Eubanks, citizens of the United States, pursuant to section 204 of the Act: *Provided,* That the natural parents or brothers or sisters of the beneficiary shall not, by virtue of such relationship, be accorded any right, privilege, or status under the Immigration and Nationality Act.

With the following committee amendment: On page 2, line 3, delete the words "citizens of the United States," and insert in lieu thereof the following: "a citizen of the United States, and a lawful resident alien, respectively,".

The committee amendment was agreed to.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

FOR THE RELIEF OF GLADYS BELLEVILLE SCHULTZ

The Clerk called the bill (H.R. 1785) for the relief of Gladys Belleville Schultz.

There being no objection, the Clerk read the bill as follows:

H.R. 1785

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, in the administration of the Immigration and Nationality Act, Gladys Belleville Schultz may be classified as a child within the meaning of section 101(b)(1)(F) of the Act, upon approval of a petition filed in her behalf by Gordon R. and Dolores A. Schultz, citizens of the United States, pursuant to section 204 of the Act: *Provided,* That the natural parents or brothers or sisters of the beneficiary shall not, by virtue of such relationship, be accorded any right, privilege, or status under the Immigration and Nationality Act.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

RELIEF OF KAI-MEE CHEN

The Clerk called the bill (H.R. 2010) for the relief of Kai-Mee Chen.

There being no objection, the Clerk read the bill as follows:

H.R. 2010

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, in the administration of the Immigration and Nationality Act, Kai-Mee Chen may be classified as a child within the meaning of section 101(b)(1)(F) of the Act, upon approval of a petition filed in her behalf by Wei-Jen and Mei-Suey Chen, citizens of the United States, pursuant to section 204 of the Act: *Provided,* That the natural parents of brothers and sisters of the beneficiary shall not, by virtue of such relationship, be ac-

corded any right, privilege, or status under the Immigration and Nationality Act.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

FOR THE RELIEF OF MOSES BANK

The Clerk called the bill (H.R. 2573) for the relief of Moses Bank.

There being no objection, the Clerk read the bill as follows:

H.R. 2573

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, for the purposes of the Immigration and Nationality Act, Moses Bank shall be held and considered to have been lawfully admitted to the United States for permanent residence as of the date of the enactment of this Act, upon payment of the required visa fee. Upon the granting of permanent residence to such alien as provided for in this Act, the Secretary of State shall instruct the proper officer to deduct one number from the total number of immigrant visas which are made available to natives of the country of the alien's birth under section 203(a) of the Immigration and Nationality Act or, if applicable, from the total number of such visas which are made available to such natives under section 202(e) of such Act.

With the following committee amendment: Strike out all after the enacting clause and insert in lieu thereof the following:

That, in the administration of the Immigration and Nationality Act, Moses Bank, the uncle of a citizen of the United States, shall be deemed to be an immediate relative within the meaning of section 201(b) of such Act, and the provisions of section 204 of that Act shall not be applicable in this case.

The committee amendment was agreed to.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

YUK LEE LI

The Clerk called the bill (H.R. 2975) for the relief of Yuk Lee Li.

There being no objection, the Clerk read the bill as follows:

H.R. 2975

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, for the purposes of the Immigration and Nationality Act, Yuk Lee Li shall be held and considered to have been lawfully admitted to the United States for permanent residence as of the date of the enactment of this Act, upon payment of the required visa fee. Upon the granting of permanent residence to such alien as provided for in this Act, the Secretary of State shall instruct the proper officer to deduct one number from the total number of immigrant visas and conditional entries which are made available to natives of the country of the alien's birth under section 203(a) of the Immigration and Nationality Act or, if applicable, from the total number of such visas and entries which are made available to such natives under section 202(e) of such Act.

With the following committee amendments:

Page 2, delete the word "and", and all that follows through "entries".

Page 2, line 9 delete the words "and entries".

The committee amendments were agreed to.

AMENDMENT OFFERED BY MR. ERTEL

Mr. ERTEL. Mr. Speaker, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. ERTEL: Page 1, line 4, strike out "Lee" and insert in lieu thereof "Yee".

The amendment was agreed to.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed.

The title was amended so as to read: "A bill for the relief of Yuk Yee Li.".

A motion to reconsider was laid on the table.

REINSTATING AND VALIDATING U.S. OIL AND GAS LEASES

The Clerk called the bill (H.R. 1946) to reinstate and validate U.S. oil and gas leases numbered OCS-P-0218 and OCS-P-0226.

Mr. SENSENBRENNER. Mr. Speaker, I ask unanimous consent that the bill be passed over without prejudice.

The SPEAKER. Is there objection to the request of the gentleman from Pennsylvania?

There was no objection.

TRAGEDY IN KANSAS CITY

(Mr. SKELTON asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. SKELTON. Mr. Speaker, on Friday, July 17, a tragic event occurred in Kansas City. Once again, the people of Kansas City were called on to demonstrate their courage and skill under the most adverse circumstances.

When the walkways collapsed in the lobby of the Hyatt-Regency Hotel, a horror story began. But, there also began, at the same instant, a story of the love, caring, and compassion which deserves recognition.

The first assistance available to the injured and the dying was from the others who nearly missed being hurt. Eye witness descriptions and early news accounts tell of people helping one another, administering to the wounded, and calming the shocked and frightened survivors.

Professionals, in the form of police, firefighters, and ambulance paramedic personnel responded quickly and efficiently. The job of providing emergency care and transportation to area hospitals received praise from area officials.

As the news accounts began to show the severity of the situation, lines began to form at the local blood bank. It was soon operating at capacity.

During the evening, construction workers joined rescue units at the scene to remove the beams that trapped several people. They did so believing that they were in danger of further collapse of the structure.

The final results have been well documented in the national media. It deserves our repeated attention that while this is a sad story, there is reason here to commend the people of Kansas City. Once again this community has been called upon to demonstrate an extra measure of the strength and love of its people. That measure was there. I pray it always will be.

HIGH INTEREST RATES

(Mrs. SCHROEDER asked and was given permission to address the House for 1 minute and to revise and extend her remarks.)

Mrs. SCHROEDER. Mr. Speaker, I hope all of us here are listening very closely to what our closest allies and our most historic allies have been trying to tell us at the recent summit.

First, they have been saying that these high interest rates are going to kill the international economy. I think they are absolutely correct, and they should see what high interest rates are doing to our own domestic economy.

One of our main concerns in this body should be dealing with high interest rates. What are we going to do? We see more small businesses collapse every week and fewer people able to buy a home every week.

Second, was their warning about what will happen to the world if we do not take much more seriously arms control. I think this is something this administration has neglected. Arms control is certainly not on the front burner.

□ 1110

Arms control should be on the front burner. Very soon we are going to see people singing instead of "We Shall Overcome," the terrible parable of, "We Shall Overkill."

We must work on arms control together with our allies. Our allies are correct. I hope we are listening. I hope we will act.

UPDATE ON RECONCILIATION

(Mr. PANETTA asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. PANETTA. Mr. Speaker, this is an additional update on reconciliation.

Two additional committees have now completed their work on their reconciliation conferences. Education and

Labor yesterday completed almost all of its conference on education issues, and the Interior Committee this morning completed their conference on natural resources issues.

Yesterday there were conferences on Energy and Commerce, on health, in which the staff was directed to prepare documents for a committee conference this morning at 11 o'clock.

Ways and Means met and completed 35 percent of their agenda on agreeing on issues.

Education and Labor, as I stated, completed their conference on education issues.

Armed Services met yesterday and will meet again today to deal with their reconciliation area.

Banking met also yesterday in conference on subsidized housing issues.

Today Interior, as I said, met at 9 o'clock, and completed their work.

Energy and Commerce met on Conrail at 10 o'clock. Energy and Commerce is also meeting on health care at 11 o'clock.

Education and Labor is meeting on higher education at 1 o'clock.

The Agriculture Committee is meeting at 1:30.

The Government Operations Committee is meeting at 2:30.

I would urge all Members and staff to push as hard as possible to meet our deadline to complete reconciliation by the end of this week.

DAILY REPORT ON CONFERENCE ACTIVITY—JULY 20, 1981, 6 P.M.

COMPLETION OF CONFERENCE

SOCIAL SECURITY PROGRAM IS NOT A WELFARE PROGRAM

(Mr. ALEXANDER asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. ALEXANDER. Mr. Speaker, like many of my colleagues, I have received a mounting volume of mail on the Reagan administration's social security proposals.

What follows is representative of the sort of message I am getting from my constituents.

DEAR CONGRESSMAN: I'm writing to you about the social security. In January 1982 my husband will be 62. He could start drawing then and that's all we have to look to. He got disabled to work in the factory about 10 years ago. He had to quit.

What does Ronald Reagan expect poor people like us to do? We haven't seen nothing yet if the bad bills keeps on getting past.

My husband worked and paid in social security for 40 years and I believe something should be done when he is forced to retire and nothing to look to.

Thank you for your time.

DOROTHY BAKER, *Enola, Ark.*

NEEDS OF SENIOR CITIZENS SHOULD BE CONSIDERED IN DEBATE ON SOCIAL SECURITY PROGRAM

(Mr. BONER of Tennessee asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. BONER of Tennessee. Mr. Speaker, I wish to share with my colleagues a letter from Mrs. Mary M. Butt of Hermitage, Tenn., one of the many letters I have received concerning the proposed reduction of social security benefits to those between 62 and 65 years old and the proposal to restrict benefits to the disabled. I believe Mrs. Butt's letter speaks for itself in expressing the concern of many older Americans in this country:

400 MONA DRIVE,
Hermitage, Tenn.

DEAR MR. BONER: What is this administration trying to do to us future retirees? I have been putting in social security since I was 14 years old, now I am 59, and I had hoped to collect at 62. Now they are considering having us work longer. I can't work now at all because of ill health.

They can't balance the budget, that is not my fault. If they can't or won't give us our social security they are going to have us all on welfare. Somehow there is always money for that.

Are you and all the other representatives of the people going to let them do this to us? We are not asking or expecting something that we haven't worked hard for or earned.

Thanking you in advance for your consideration on this subject, I am

Sincerely yours,

MARY M. BUTT.

I hope that all of us will consider the needs of our senior citizens as we discuss and debate the social security program.

REPRESENTATIVE CHARLES E. BENNETT INTRODUCES LEGISLATION TO INSURE MINIMUM SOCIAL SECURITY BENEFIT IS MAINTAINED

(Mr. BENNETT asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. BENNETT. Mr. Speaker, I have today introduced legislation to insure that the minimum social security benefit is maintained and at the same time protect the financial integrity of the system. In doing so, we will bind our country to the promise made years ago of a decent future for 3 million elderly Americans.

Human dignity cannot be reduced to dollars and cents nor can it be defined in terms of politics. Yet in our zeal a few weeks ago to restore fiscal sanity in this country, we lost sight of our responsibility to those who have been described as the poorest of the poor—a group who by our own actions may soon be helpless and utterly alone.

I have twice made the difficult decision to cross party lines and support the President's economic program. It is here that we must part company. The proposed elimination of the minimum benefit is a cruel and unconscionable assault on those least able to defend themselves. This benefit provides the very margin of survival for tens of thousands of retired Americans, many of them very old women over the age of 80 who have worked hard and worked proudly for all of their long lives and who would rather subsist on a grossly inadequate income than submit to what they would view as the humiliation of welfare.

My legislation will allow these 3 million Americans to continue to receive the minimum benefit and will also protect those who apply within the next 3 years. By allowing general revenue funds to be used to reimburse the social security trust fund for the difference between the current benefit and that allowed under the standard formula, this bill coincides with the commitment we all share to restore social security to a solid financial base.

There are those who claim that no one will be hurt by cutting the minimum benefit. But no one can account for the 800,000 who are potentially without other sources of income. No one can account for those who will not be eligible for SSI because they have assets of more than $1,500 or who are too proud to apply.

Mr. Speaker, I urge quick passage of this vital legislation for it is time once again for the Congress to speak out for those who have no voice. Also, in the reconciliation measure, now in conference, as I sit there as a conferee I will do my best to eliminate the minimum provisions from that measure.

PUBLIC BACKLASH ON BUDGET CUTS

(Mr. PEASE asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. PEASE. Mr. Speaker, last month the Washington Post carried an interesting headline which said, "White House Chief of Staff Predicts Public Backlash on Budget Cuts."

It read:

White House Chief of Staff James Baker predicted yesterday that the administration will face a backlash on its budget cuts when they begin being felt by the public later this year. "I think you will see some fairly strong reactions to the budget cuts when they hit the street in October or November," Baker said.

What he is referring to is the $37 billion in spending cuts which have been made by the reconciliation bill. I ask the Members to consider that built into the budget for the next 2 years under Gramm-Latta is between $48 and $58 billion in additional cuts beyond the $37 billion. Those are unspecified cuts. Last week David Stockman told us we had to add another $10 billion in cuts because of changed economic assumptions; that is nearly $70 billion we have to worry about.

If you think there is a backlash this year, watch out for next year and the year after. And think about whether you really want to force Draconian spending by voting now for a 3-year tax cut bill.

SOCIAL SECURITY MINIMUM BENEFITS

(Mr. WYDEN asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. WYDEN. Mr. Speaker, I, too, would like to join in the opposition to the cuts in the proposed minimum benefit in social security. I think again we are seeing another case of playing footloose and fancy free with statistics. The administration would like us to believe that the vast majority of social security minimum recipients are double- and triple-dippers who are in effect trying to pad their pockets with the minimum benefit. They would suggest that only 300,000 people would be hurt by the cut in the minimum benefit. My figures indicate that a minimum of 800,000 people have no other additional pension besides the minimum benefit, and the immediate loss of the minimum benefit would work an extreme hardship on them.

Mr. Speaker, the administration has played footloose and fancy free with statistics on social security again and again. Just several weeks ago the administration predicted very high interest rates and little real economic growth when they argued for proposed social security cutbacks. However, when they advocate the Kemp-Roth tax plan, they predict a significant reduction in interest rates and significant economic growth.

I support the resolution to restore the minimum benefit because the facts are that most recipients of this assistance need this assistance very, very much. Those are the facts, and when we vote today those facts are all we should consider.

□ 1120

REGULATORY REFORM JUDICIAL REVIEW

(Mr. DANIELSON asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. DANIELSON. Mr. Speaker, I want to announce to my colleagues that last night I received from the judicial conference a very exhaustive analysis of the proposed regulatory reform bills now pending in the House and the Senate, addressed specifically to the features of judicial review.

I will, at the time of special orders this evening, go into that matter in a little greater detail in case any of my colleagues are interested. I will be here at that time.

THE SUCCESSES THAT CAUSED SOCIAL SECURITY'S ILLS

(Mr. WILLIAMS of Montana asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. WILLIAMS of Montana. Mr. Speaker, what has happened to the social security system and how did it reach the difficulty we find it in today? We hear many reasons, usually having to do with cost accounting, but we do not hear much about the good news which has contributed to the current social security difficulties.

In 1900 there were 3 million senior citizens in this country. A half century or so later, during the administration of Jack Kennedy, there were 16 million. Today there are 25 million.

A child born in 1900 could expect not to see his 50th birthday. A child born today will live to see his 80th birthday and beyond.

Those are successes in this country that have, unfortunately, helped to jeopardize the social security system; but occasionally when we talk about that system, we ought to know the good news that has placed it in some trouble, as well as the bad news.

HOW MANY DISTRESSED INDUSTRIES WILL BE MISSED

(Mr. MOORE asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. MOORE. Mr. Speaker, the Ways and Means Committee has included in its tax cut bill a special tax break to help certain distressed industries. One problem with this proposal is that it will exclude major sectors of American industry and individual companies which are truly distressed.

The distressed industries tax break will only help six select distressed industries. Any company which is distressed but not in one of these six will not qualify.

One example of a distressed industry which will be excluded is the consumer electronics industry. In the last 15 years many domestic electronic companies have gone out of business. Admiral, Philco, and Emerson are three such companies just to name a few. Another distressed industry which will be excluded is the shoe industry. How many more are there?

While these industries will be excluded there are many profitable companies who will be able to cash in on this special tax break simply because they are associated with one of these select industries.

Any tax break to help distressed industries should be based on need, and should be applicable to all companies who meet the requirement. A slush fund for a few select industries is not fair and will not help American productivity. This Ways and Means provision should be removed from the tax bill.

GIVE THE TAX PLAN AN HONEST TRIAL

(Mr. JEFFRIES asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. JEFFRIES. Mr. Speaker, for the first time in almost 50 years, the Government of this country is undergoing a drastic change in its taxing and spending policies.

I do understand that change is not always easy, but, the point is we have tried the tax and spend policies of the more liberal elements of our society since 1933—and, as a result, we find ourselves in a very serious economic crisis.

We tried to make the old system work for five decades—now I think it is only reasonable to seek some new solutions. We are asking Congress to try our plan for 3 years—on the basis that we need a 3-year tax reduction for all Americans to renew the confidence of the people in the free-enterprise system.

If the citizens are convinced that we are serious—that we plan to continue to reduce Government expense—and lower individual and business taxes—only then will the full force of the Reagan economic recovery plan come into play.

We simply cannot do the job with halfway measures any longer—we must give the entire package an honest trial period. You have had 48 years—all we ask in return is 3—without strings attached.

FAIR TAX RULE?

(Mr. LOTT asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. LOTT. Mr. Speaker, it was only a few short weeks ago that this body considered and passed the reconciliation bill. As I am sure many Members will recall, one of the major battles was over the rule providing for the consideration of that legislation.

A majority of the House thought the rule as reported by the Rules Committee was grossly unfair and therefore voted for a substitute to the rule. One of the major arguments propounded by those supporting the rule as reported by the Rules Committee was that Gramm-Latta II was a moving target and therefore such a rule was necessary.

Today, Mr. Speaker, the shoe is on the other foot. The concepts in the President's tax proposal have been available for quite some time and it is the Rostenkowski-O'Neill tax bill that has become the moving target. Daily it is reported by the various news media the numerous changes and alterations being made to your tax package.

Faced with this situation the following questions must be asked: What will the rule composed by the Democratic leadership be this time? Will it be fair and equitable to all parties or will it be another "reconciliation type" rule?

Mr. Speaker, I ask you to give us a chance to offer our concepts as we draft them and give the Members a clear choice rather than requiring that votes be put on the auction block to go to the highest bidder. I urge all Members to begin thinking about the rule on the tax bill and to examine any proposed rule with fairness and equity foremost on their minds.

RESPOND TO THE VOICE OF THE PEOPLE

(Mr. DAUB asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. DAUB. Mr. Speaker, this House is a distinctive institution in that each Member must be elected on a biennial basis. It is for this reason that this body ought to be most responsive to the will of the people.

No one can honestly say that in each section of this country there has not been an earnest and persistent call for real relief from the increasingly oppressive taxes inflicted on working America. Unfortunately, it appears that some Members of this House are unwilling to respond to the clear voice of the American people and support the President's 3-year program.

What is most discouraging is that this opposition insists that in opposing the 3-year plan, that it provides a more equitable 2-year plan targeted at middle-income groups. As anyone who would spend 30 seconds comparing the bracket schedules for 1984 can see, those persons earning between $18,200 and $55,300 today would pay marginal tax rates from 13 percent to 26 percent higher under the Ways and Means alternative than under the President's program.

It appears that we sometimes forget for whose benefit and interest we serve. President Reagan won an overwhelming mandate in 1980 for a very clearly delineated policy of reduced Government spending and taxes. If we ignore this mandate or attempt to circumvent it by providing less while claiming more, we demonstrate to the American people that this House is an unrepresentative body that acts in contemptuous defiance of the people's will.

Let each one of us honestly examine the real wants and needs of our citizens and dedicate ourselves to the pursuit of those goals. President Reagan has proposed tax reductions that are reasonable, responsible, and reflect the will of the American people. I am firmly in the President's camp and on the side of a real tax reduction that will benefit every American.

I urge each of you to stand with the President and the people.

THE PEOPLE ARE WAITING

(Mr. LUNGREN asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. LUNGREN. Mr. Speaker, this morning an article in the New York Times caught my attention. It reported that although President Reagan has pressed repeatedly for final passage of a tax bill by August 1, aides to

the chairman of the Ways and Means Committee indicated that—

It was increasingly doubtful that this target could be achieved. The aides again disputed the repeated White House assertions that enactment by August 1 was a prerequisite for a tax cut to take effect on October 1.

Then they went on to say:

Even if enactment comes later, perhaps even too late to reduce withholding taxes in 1981, a tax cut could still be delivered by giving taxpayers refund checks next spring after they file their tax returns.

Mr. Speaker, this suggests to me that some aides to some very important people around here think that the only way the people can attain justice is if we give it to them. We cannot give them a tax cut, so that they do not transfer the money here first. We have to pay it and then, in our infinite wisdom, we will decide how much we should give back to the people in an election year.

Mr. Speaker, this should not be an election year bit of rhetoric. There ought to be action to try to get the economy moving, and I would hope that we would be able to move before August 1.

The people are waiting, Mr. Speaker.

A WELCOME TO MICHAEL G. OXLEY

(Mr. McEWEN asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. McEWEN. Mr. Speaker, today it is indeed a pleasure for me and a very special day for the House of Representatives, to welcome our newest Congressman from Ohio, MICHAEL OXLEY, of the Fourth District of Ohio.

Michael is a former FBI agent who is a practicing attorney in Findley, Ohio, and has served with distinction for some 9 years in the Ohio General Assembly. As a member of the Ohio House of Representatives, he served on the State government committee and on the committee on the judiciary. I can assure the Members that this House will benefit from his service and that Ohio has chosen a distinguished Member to represent the Fourth District of Ohio.

I extend to MICHAEL, to his charming wife Pat, and to their handsome son Chadd my best wishes for a long and distinguished career in the U.S. House of Representatives.

□ 1130

THE NEED FOR A TAX CUT AND SPENDING REDUCTIONS

(Mr. CARMAN asked and was given permission to address the House for 1 minute, and to revise and extend his remarks.)

Mr. CARMAN. Mr. Speaker, I am proud to be an American. I am proud to be a Member of this legislative body, as are all of us. We are the House of the people, and we must listen carefully to the people.

There is not one working person whom I have met who does not think that we need to have a tax cut. There is not one sincere person I have met who does not want to have a program—that is to say, the program of the President, for economic recovery to succeed.

Social security is in financial and economic problems today because of inflation brought about by 25 years of overspending and overtaxation, which caused it to be in that state.

What we need to do now is to stop haggling and implement the President's program for tax relief. In that manner we will indeed be able to expand social security benefits for all the people.

Mr. Speaker, let us not delay any longer the President's tax program. Let us implement the President's tax program now for all the people.

INTRODUCTION OF MEASURE TO RESTORE AND EXTEND MINIMUM SOCIAL SECURITY BENEFITS

(Mr. McCOLLUM asked and was given permission to address the House for 1 minute, and to revise and extend his remarks.)

Mr. McCOLLUM. Mr. Speaker, today I have joined with the gentleman from Florida (Mr. BENNETT) in introducing a measure which would restore the social security minimum benefit for those presently receiving it and to extend that benefit for those who will be eligible up to the date of January 1, 1984, at which time the minimum benefit would end. So as not to further endanger the social security trust fund, the additional money needed to maintain the program would come from general revenues.

I deplore the fact that social security has become a partisan football, and I call on my colleagues to join with me in the spirit of equity and fairness in making an orderly phaseout of this program, which presently is obsolete and unworkable. Many of those receiving it today do not need it and are a drain on the social security trust fund. However, we should not precipitately cut them off.

My point is that we should not grab away money that people have been counting on for years; we should allow our older Americans time to make plans for the future.

Mr. Speaker, I think the measure offered by the gentleman from Florida (Mr. BENNETT) and me for an orderly phaseout and an end to the program is an appropriate response to the problems of the social security program.

THREE SETS OF REMAINS OF MISSING IN ACTION IDENTIFIED

(Mr. DORNAN of California asked and was given permission to address the House for 1 minute, and to revise and extend his remarks.)

Mr. DORNAN of California. Mr. Speaker, America's sorrow for her missing and imprisoned men in Indochina continues. The Navy and Air Force have just identified the three sets of remains the People's Republic of Vietnam returned to the United States a few weeks ago. Capt. Richard H. Van Dyke, Lt. Stephen O. Musselman, and Comdr. Ronald W. Dodge must now be numbered among the other brave young men who gave their lives for their country in Indochina.

A photograph of one of these men, Commander Dodge, was reproduced on the cover of Life magazine in 1972. This photo showed Commander Dodge after his capture by Vietnamese forces. His shirt was torn. His face was badly swollen.

We have proof, therefore, that the Vietnamese knew about Ron Dodge in 1967. They knew about Richard Van Dyke in 1968. They knew about Steve Musselman in 1972.

Mr. Speaker, I want to know why it took 14 years for the Vietnamese to account for Ron Dodge. Fourteen years is an unbearably long time to live with uncertainty about the fate of a son, a husband, or a father. Vietnam's conduct in the cases of these three men, and in the cases of the 2,000 men still unaccounted for, has been intolerable.

PRESIDENT REAGAN'S ECONOMIC PROGRAM: RIGHT CURE FOR OUR ECONOMIC ILLS

(Mr. FIELDS asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. FIELDS. Mr. Speaker, I came across some interesting figures the other day that show just how necessary it is to pass the Reagan economic program of budget and tax reductions so that we can reduce inflation and restore economic prosperity to our people.

According to the Departments of Labor, Commerce, and Energy, if the Reagan economic recovery program is not enacted and inflation continues to increase at the rate it rose from 1971 to 1981: our 18-cent postage stamp will cost 40 cents by 1991; our $1.15 "Big Mac" will cost $2.40 by 1991; a week's worth of groceries, which now cost $112, will cost $260 by 1991; the cost of a new home, now $69,000, will rise to $191,000 by 1991; a carton of cigarettes, which now cost $6.17, will cost $10.40 by 1991; 2 pounds of coffee, which costs $5.12 now, will set one back by $14 in 1991; and a six-pack of

beer, now costing $2.45, will cost $4.30 by 1991.

I believe these figures graphically represent the reason why fiscal sanity and the President's economic recovery program of spending cuts and tax reductions should be enacted immediately. The President's program will insure a better, not a worse future for all Americans.

TAX CUT LEGISLATION SHOULD NOT BE DELAYED

(Mr. GINGRICH asked and was given permission to address the House for 1 minute, and to revise and extend his remarks.)

Mr. GINGRICH. Mr. Speaker, there is an alarming report in this morning's newspaper that the chairman of the Ways and Means Committee and the staff are now thinking about delaying the final passage of the tax bill until after the August recess. That would virtually guarantee no effective tax cut this year. That would guarantee a slower growth of the economy, higher interest rates, a longer term of inflation, and a weaker job market. That would guarantee continued economic decay.

I for one would vote against our going out in August on any kind of a recess until we have finally passed the tax bill, one that guarantees a real tax cut for Americans this year rather than a phony tax cut or a very, very delayed tax cut.

MEMBERS SHOULD SUPPORT HOUSE RESOLUTION 181

(Mr. MOAKLEY asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. MOAKLEY. Mr. Speaker, I rise today to express my strong support for House Resolution 181, introduced by the distinguished gentleman from Texas (Mr. WRIGHT), which would urge the House of Representatives to insure that minimum social security benefits not be reduced.

I believe the cuts in social security proposed by the Gramm-Latta substitute reconciliation bill are unreasonable and irrational and will cause many retired persons in our Nation to suffer extreme financial hardships. To place such major retroactive changes on current beneficiaries, particularly in light of the promise by President Reagan not to do so, is an abandonment of our commitment to the elderly of our Nation. The elimination of the $122 minimum payment has wrongly been presented as a painless move that would affect relatively few persons. The truth of the matter is that over 60 percent of the current recipients of this minimum payment are elderly women over 70 years of age, 75 percent of whom would qualify for welfare assistance should this payment be eliminated. I fail to see how this would save the Government money. All this would accomplish would be to add these presently self-sufficient Americans who have earned their retirement benefits to the welfare roll, that the Reagan administration claims is already too large.

We must all take a careful look at the serious and irreparable effects that will result should the $122 minimum be repealed. We have a responsibility to our retired persons, a responsibility to maintain the social security benefits as they have been promised to these individuals. Again, I strongly urge my colleagues to support this resolution that will preserve the social security system.

PRIME MINISTER BEGIN WILL NOT LEAVE HIS PEOPLE'S SECURITY IN THE HANDS OF OTHERS

(Mr. SCHUMER asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. SCHUMER. Mr. Speaker, in the last few days, the State of Israel has taken a series of actions in Lebanon to protect itself and predictably the nations of the world once again have lifted their voices in condemnation of Israel's action.

But let me ask the Members of this House, if another nation had been in a similar situation, what would have happened?

Well, history tells us that when one nation harbors and abets terrorists and allows them to invade a bordering nation, the former nation must respond. And response has been the answer over and over again—in Africa and Asia, in Europe and in Latin America, and in our own continent—in every continent on this Earth.

Mr. Speaker, the Prime Minister of Israel, Menachem Begin, is empowered by what is a moral imperative.

In the 1930's, in the early 1940's, the diplomats of this world and even of this Nation, told the Jews of the world, "Leave it to us, diplomatically we will solve your problems."

They did not. Menachem Begin feels that he can no longer leave this vital item of his people's security in the hands of the diplomats of the world.

THE MINIMUM BENEFIT

(Mr. MARTIN of North Carolina asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. MARTIN of North Carolina. Mr. Speaker, there has been a lot of pious posturing around here today about budget cuts and social security and the minumum benefit. Much of the talk has framed easy, but sharp attacks on the President. Those congressional liberals who created an extravagant array of expensive programs have no sense of responsibility for the consequences of high inflation, high unemployment and high-interest rates that have resulted from their excessive government, excessive income redistribution, and excessive regulation.

Like the alimentary canal of a 6-month old, they have no sense of restraint on one end and no sense of responsibility on the other.

Now they sing their sad and angry songs attacking any proposal for saving the social security system. Listening to their speeches today, I have learned two things:

One, it is very easy to criticize someone else's proposal for balancing the social security fund.

Two, it is not easy for these same critics to propose any constructive solution to the excessive costs of social security.

I congratulate them on their strategy coordinating today's rally to oppose any social security reform. I look forward with minimal optimism to that distant day when the taxpayers will catch on to their pious posturing.

RESTORATION OF SOCIAL SECURITY MINIMUM BENEFITS

Mr. WRIGHT. Mr. Speaker, I move to suspend the rules and agree to the resolution (H. Res. 181) providing for the restoration of social security minimum benefits.

The Clerk read the resolution as follows:

H. RES. 181

Whereas the House Ways and Means Committee reported a reconcilation bill which did not cut benefits for current recipients of social security; and

Whereas the House, by adoption of the Latta substitute, nevertheless adopted changes in the social security minimum benefit which will result in reduced benefits for an estimated two million current recipients of social security; and

Whereas the Senate adopted a similar reduction affecting current recipients of social security: Now, therefore, be it

Resolved, That the House of Representatives strongly urges that the necessary steps be taken to insure that social security benefits are not reduced for those currently receiving them.

The SPEAKER pro tempore. Pursuant to the rule, a second is not required on this motion.

The gentleman from Texas (Mr. WRIGHT) will be recognized for 20 minutes, and the gentleman from Illinois (Mr. MICHEL) will be recognized for 20 minutes.

The Chair recognizes the gentleman from Texas (Mr. WRIGHT).

Mr. WRIGHT. Mr. Speaker, I yield myself 1½ minutes.

Let us be clear just exactly what this resolution does. I refer expressly to its resolving clause. By its enactment we

in the House will urge "that necessary steps be taken to insure that social security benefits are not reduced for those currently receiving them." That is what it does.

I would hope that its passage might serve as a signal of encouragement to the conferees on the reconciliation bill to drop the offending provision which soon will reduce the benefits of 1½ million people. If it does not serve that purpose, at the very least this resolution should commit us to the adoption of separate legislation to correct that unintended inequity that afflicts some 3 million elderly Americans, about half of whom will suffer almost immediate reductions in their monthly benefits unless we act.

Among these are some of the oldest and the poorest in our society. They have nobody to protect them except the Members of this Congress.

I trust that we will not betray their faith nor disappoint them, in that they are counting on us to defend them today. I trust that we will take meaningful action to make abundantly clear that it is our absolute intention to do so.

I reserve the balance of my time.

□ 1150

Mr. MICHEL. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, let us set the record straight at the very outset of this very limited 40-minute debate.

The resolution before us will resolve nothing. It has no force of law. It is not binding. I do not believe that it will be honored as an instruction to our conferees on reconciliation.

This resolution as a legislative instrument is meaningless. I fear that we are here today for no other purpose than to play poker for the political support of those outside this Chamber who are here in Washington today petitioning their Government on behalf of social security.

At stake here is not the salvation of the social security system or the security of its recipients. This resolution delivers neither. The only thing to be decided on the floor today is who will keep the advantage in the bidding war over the social security issue.

We could up the ante on our side with a resolution that reads something like this:

Whereas, the House Ways and Means Committee has not as yet taken any action to report out legislation restoring the financial soundness of the system: Therefore, be it

Resolved, that the House of Representatives strongly urges that the necessary steps be taken to insure that the social security system is on a sound financial footing and designed to insure that those relying on social security as a "floor of protection" will not be adversely affected.

That would be our resolution.

Then I would like to add something else to the pot. I am going to gamble that the working people of this country whose backs are being broken by increased taxes, including social security taxes, and even those receiving social security now will not agree with the complete restoration of the minimum benefit when they learn the truth.

I am reminded of the chaplain's admonishment in the opening prayer that, "Today we do speak the truth."

The truth is that in current form the minimum benefit program does not belong in the Social Security Act. The truth is that the minimum benefit is being abused like food stamps, low-income energy assistance or trade adjustment assistance and a long list of other well-intentioned Federal programs.

There are people on the rolls who do not belong there. The truth is that the Congress has never had the courage to face up to these facts. The truth is that too many Members of this body still believe that the Treasury is a bottomless reservoir of tax dollars. If a few billion slip through the cracks while some good is being accomplished, well, the American taxpayer can afford it. That is the unfortunate truth and that's the case with the minimum benefit.

Currently, there are 3 million people receiving the minimum benefit. That is the truth.

The majority leader and a good many other members of the Democratic leadership argue that these 3 million people are destitute and would, as they say, "not survive" if the minimum benefit were discontinued.

The gentleman from Texas (Mr. WRIGHT), my friend, says, and the Speaker said just yesterday, that most of these people are elderly poor. Much of the benefit, they said, goes to women over 70 who have no other means of support.

Well, let us take a look at who these 3 million people are. One million of them are only technical beneficiaries of the minimum benefit, who are actually receiving much more than the minimum. Their benefits would not change one dime if we abolished this program.

Four hundred and fifty thousand others are currently receiving the benefits from the Federal retirement system, one of the most lucrative in the country, as well as the minimum benefit.

Fifty thousand more have retired spouses receiving benefits from the Federal retirement system as well as the minimum benefit.

Thirty thousand other recipients have working spouses earning an averge of $21,000 annually.

Still another 200,000 are receiving an amount equal to the minimum benefit as a result of what they have paid into the social security system, so their monthly check would not change one dime.

Yet another 500,000 recipients receive supplemental security income benefits, as well as the minimum. The way the SSI benefits are figured, their SSI checks would increase to make up for what they lose from the minimum benefit. In other words, their monthly checks would not change one dime.

The key difference here is that the flat minimum benefit under the Social Security Act is a real drag on the trust fund, while benefits from the SSI program are drawn from general revenues.

I find from talking to my constituents who have paid into the trust fund for years that they are incensed that in certain cases minimum beneficiaries could get $3,183 per couple each year by paying in as little as $3 into the trust fund for their entire working lifetime. Many beneficiaries who if we do not change the rules will be eligible for benefits in 1982 at age 65 have paid in less than $68 in lifetime social security taxes, an amount they will recoup in only 12 days.

On the average, a husband and wife getting an initial benefit in 1982 would be paid more than $100,000 during their retirement lifetime from the social security trust fund, which is about 300 times what they paid in. Obviously, that kind of benefit would not have been earned.

Incidentally, did you know that 35,000 social security minimum-benefit beneficiaries live outside the continental limits of the United States? Well, you tell that to your union workers at home and see how that rubs them the wrong way, along with a few of these other points I have pointed out.

Finally, there are 200,000 others who are adult students or the minor children of those receiving Federal pensions whose need for the minimum benefit has to come under question.

These people account for 2.7 million of the 3 million.

Now, if my arithmetic is good, that leaves 300,000 recipients with a real problem. It is in this category where the question of need may be most legitimate. It is at this juncture where we must decide whether it is prudent to restore the entire minimum benefit provisions or find some other means of meeting the needs of those in this category.

We are talking about people who may not qualify for supplemental security income benefits because they have cash or liquid resources in excess of $1,500 or $2,250 for a couple. Now, it could be argued that even though these individuals may have assets of this size and do not qualify for SSI, that they still have a legitimate need for Federal assistance. I am not going to argue that point. I am inclined to think that the means test for SSI eli-

gibility is too stringent. After all, it was established way back in 1972 and the economy has changed considerably since then. Congress has done nothing to upgrade the means test, despite massive increases in the cost of living. Adjusting the cash assets level would be one way of making sure minimum benefit recipients do not slip through the cracks.

It would be far wiser and far more prudent to provide an additional $100 million or so in this regard than it would be to dump $7 billion back into the minimum benefit provisions of the Social Security Act.

It should be noted here that the value of one's house does not count in determining SSI eligibility. A person could own a $200,000 home, fully paid for, and still be eligible for SSI. So let nobody claim that the elderly will be forced to sell their homes. That just is not true.

A person can own an automobile up to a value of $4,500 and household furnishings up to $2,000 and still be eligible for SSI, and maybe those are too tight restrictions, but you could move those up, because we have not done anything since 1972. There is the truth as I see it.

There is the truth as the American people ought to see it, straight out, and not through a distorting prism of political opportunism. I think it is time that we in this body face up to the fact that the social security system is in deep, deep trouble. I do not think this is the proper time to make light of those problems as this resolution does. I think it is time to end the politicking long enough to find some solutions.

We may have a solution to the minimum benefit issue in making adjustments in SSI. We can find other solutions, equally credible, for the other crises besetting social security, as long as we deliberate in reason and act responsibly.

If anyone thinks that they are going to ride the social security issue to political paradise at our expense, they have another "think" coming. I am betting that the American people will not buy it. Now you can play out your hand with this resolution.

As far as I am concerned, every Member on our side ought to either vote "present" or in favor of the resolution, not to join in the hypocrisy of it all, but to demonstrate once and for all that you are going to have to get up an awful lot earlier in the morning to make us your political pawns.

□ 1200

Mr. WRIGHT. Mr. Speaker, I yield 2 minutes to the gentlewoman from Ohio (Ms. OAKAR).

Ms. OAKAR. Mr. Speaker, I have a great deal of respect for my friend on the other side of the aisle, but I do have another scenario to play concerning who these beneficiaries really are. I do not agree with the gentleman at all on who they are.

The Washington Post has called this cut the cruelest cut of all, and they are right. Almost two-thirds of the 3 million minimum beneficiaries are over age 70; 500,000 are over age 80. Most are elderly women who did not have the opportunity to make a reasonable salary when they were in an earning position.

Approximately 2 million of these people will actually suffer an average social security benefit reduction of more than one-third next April. Only about 600,000 of them are likely to recoup their loss in the form of increased SSI benefits, if they apply. Make no mistake about it, older Americans do not believe in welfare, and they very often do not apply for the benefits, even if they are eligible.

What about the remaining 1.4 million persons, almost half of whom are aged people with incomes of less than $3,000? We could talk about how difficult it is for people to apply for SSI, even if they want to give up their dignity and they want to go through all of the questions and so forth about how old their car is, whether they use it for work, whether they use it to go to the doctor, and so forth.

Also I do not agree with the cost factor and the fact that it is saving all these billions of dollars. Statistics show from the Congressional Budget Office that the elimination of the minimum benefit in 1982 would save about $496 million and so forth. So we feel that the gentleman from Illinois (Mr. MICHEL) scenario is wrong.

In addition I want to point out that 88 percent of these people have no other pension. So I would refute that. Only 6 percent of those who receive a pension happen to be Federal employees.

Let me submit my testimony before the Senate.

I speak as Chair of the Task Force on Social Security for the Aging Committee and as a member of the Congresswoman's Caucus. One of the chief priorities of the Congresswoman's Caucus, which Congresswoman Schroeder co-chairs, is the concern over the existing and compounding inequities against women in the social security system. Furthermore, the caucus recognizes the devastating impact the new proposals have on older women, in particular. Hearings held last month on this subject by our Aging Committee's Task Force on Social Security focused on these inequities.

The benefits paid to the American people are not only their earned right, but their legal right. No wonder there is so much outrage by our elderly and disabled people.

My remarks will address the recently released 1981 Trustees Report, refinancing proposals, and the current status of women under the program. In brief, it is my belief that the dire and pessimistic projections appearing in the Trustee's Report are flawed. They additionally have the potential of forcing the Congress to act prematurely in considering issues of refinancing. I would also like to request that the Committee carefully and fully scrutinize all refinancing proposals for their impact on older women—the fastest growing poverty group in the Nation.

THE TRUSTEE'S REPORT

The Trustee's Report, released July 6th, projected the short-term and long-term balance in the individual and aggregate trust funds using the Administration's optimistic and worst case forecast in addition to the traditional economic assumptions. Traditionally, this has been a document that used three economic projections. This report uses five. In addition, although the Trustees are members of the President's Administration, the document has never been used politically to endorse a President's legislative proposals, Also curious is the timing of this report which was due in April, but came out after Gramm-Latta (which had dramatic cutbacks in social security) passed the House in the month of July and before we vote on the Budget Conference Report.

CRITIQUE OF THE TRUSTEE'S REPORT

The most startling feature of the Trustee's Report is its overemphasis of the worst case scenarios and preoccupation with the status of the Old Age and Survivors Trust Fund, rather than the combined totals.

The Congressional Budget Office issued its projections as recently as June 16. The CBO concluded that (1) sufficient reserves will remain in the OASI program up to the beginning of 1984, (2) the DI Trust Fund will improve its position substantially through 1986, with reserves increasing to 132 percent of outlays, and (3) the HI Trust Fund balance will grow to over 80 percent of annual outlays over the next five years. Of these three trust funds, only the OASI Fund is expected to experience a cash flow problem in the next several years. The CBO also projected the aggregate Trust Fund balance as a percent of outlays under alternative economic assumptions (both assumptions forecast real economic growth in each year over the coming five-year period; no further downturns in the business cycle are forecast). Under these assumptions, a surplus is projected in the combined Trust Funds up through 1984.

The extremely pessimistic projections of the Trustee's Report must be considered in conjunction with the more positive projections of the CBO. But even if we accept the Trustee's projections, there is a real question about the accuracy of their projections based on their own internal data.

Based on my own interpretation of the data appearing in the Trustee's Report, there is no immediate crisis. I would like to submit for the record two tables prepared by the staff of the Aging Committee's Subcommittee on Retirement, Income and Employment containing these projections (appendix A). The Chairman will note the surpluses using different economic assumptions including "Reaganomics."

I did not support the Gramm-Latta provisions in the House, but based on these proposals, together with the Senate budget provisions, we can reasonably forecast that there is no short-term financial problem in the combined social security Trust Funds. By the end of 1985, under the economic assumptions use by the administration, the Trust Funds would increase positively by $26.3 billion to about $69 billion. Even under the pessimistic assumptions, the Trust Funds would increase by $2.7 billion—not go down as some would have you believe. Furthermore, the situation over a 25-

year period is very optimistic. The Trustee's Report verifies this. During this period the so-called baby boom population after World War II will be paying in, and offset the number of people receiving benefits over 65. The social security system remains very stable for this 25-year period.

REFINANCING PROPOSALS

I would urge this Committee to avoid any proposals which would result in a flat benefit cutback for social security recipients. The social security program, contrary to administration proposals, is not "bankrupt", nor is it ill-conceived. It has evolved in precisely the manner the founders intended: to serve as an income security system for our Nation's retired workers and their families, and the families of deceased and disabled workers. In reality, the problem is not that the program has become too expansive, but that the program is barely able to keep retired workers and their families with a history of long-term and low-paid work in the labor force above the poverty line. We must not sacrifice their very real and dire needs to visionary economics. Our goal should be to strengthen the program, and steamline it as necessary, without sacrificing the security of those who depend on social security for their very subsistence.

Let me comment on two specific areas—the need for Inter-fund Borrowing and the need to separate social security from the unified budget.

INTER-FUND BORROWING

I believe the first issue to be addressed is the projected short-term deficit in OASI. We should not at this time act on any long-term proposals that involve drastic program changes. Even under pessimistic projections, Inter-fund Borrowing between the old-age, disability and hospital insurance funds would solve most of the short-term problems and additionally has the potential of solving long-term problems as well.

Current congressional proposals would give authority to the Funds to make loans to one another whenever one of the Funds falls below 25 percent of the amount of its disbursements for the 12 months preceding the borrowing.

Inter-fund Borrowing has been supported by a variety of social security experts. The 1980 Social Security Administration Report recommended Inter-fund Borrowing "on the condition that such loans will not jeopardize the cash position of any one fund". The Report added that this action would be sufficient to support social security through the 1980's. Stanford Ross, William Driver and Robert Ball, three former Social Security Commissioners who testified before the Task Force, have endorsed the Inter-fund Borrowing proposal.

Inter-fund Borrowing is a simple, costless solution to the current deficit in the OASI fund. It will see the fund through the lean years ahead without subjecting our elderly to further severe benefit reductions.

UNIFIED BUDGET

We should also act to remove the Trust Funds from the Unified Budget. Keeping the trust funds under the unified budget perpetuates the dangerous illusion among the people that social security expenditures are part and parcel of other Federal expenditures based on general revenue taxes. The dangers presented by including the Trust Funds in the unified budget should be obvious. It exposes the social security program to blatant manipulation by persons who would use the funds for a "Quick Fix" to balance the Federal budget. It does nothing less than balance the budget on the backs of the elderly. Social security was not originally intended to be part of the unified budget. It was included for the first time in 1969 to provide an overall fiscal picture of Government revenues and demands for credit. Robert Ball, Director of the Social Security Administration under Presidents Kennedy, Johnson, and Nixon, said this decision was "probably the greatest mistake made in the development of social security."

The financing of social security must be considered separately from the entire budget. Social Security policies are spread over long periods of time, and its financing depends on direct-line contributions and payments. This tinkering could not take place if social security was returned to its original place apart from the Federal budget. Removing the Trust Funds from the unified budget should, once and for all, distinguish social security financing from budget balancing issues.

IMPACT OF PROPOSALS ON WOMEN

As Chair of the House Aging Committee's Task Force on Social Security and Women, I can report to you that virtually most of the proposed benefit cutbacks put forth by the Administration will fall most heavily on women. I strongly urge that you pay especially close attention to the impact of any refinancing proposals on women; 72 percent of all elderly poor are women. This phenomenon has resulted in the feminization of poverty.

Women outnumber men among the elderly. Women are also the fastest growing poverty group in the Nation.

Women comprise almost 60 percent of all persons over the age of 65, and women outnumber men by 2 to 1 in the over 74 age group.

The average annual social security income for women aged 65 and older is less than $3,800, or approximately $250 a month.

About 60 percent of all women beneficiaries depend on social security as their sole source of income.

70 percent of all elderly poor are women; women comprise 72 percent of all SSI recipients, the income maintenance program for the needy aged, blind, and disabled.

Because women on average live longer than men, they are much more likely to live out their closing years alone.

One-half of all women, compared to one-fifth of all men in the over 74 age group lived alone in 1978.

In short, older women tend to be poorer than men, have fewer financial resources with which to support themselves in later life, are likely to live out their last years alone, and depend on their social security as their main source of income.

The extraordinarily high incidence of poverty among aged women stems at least in part from their variable social and work roles which are not easily accommodated under the present social security system. In other words, women are penalized—and victimized—under social security because of the conflicting roles our society ascribes to them. Contrary to the arguments of some, these problems will not disappear in coming years as more women join the work force. Rather, they must be addressed legislatively. I am enclosing with this testimony, for the record, summaries of six bills I have introduced in the House designed to resolve issues of equity and adequacy (Appendix B).

Let me briefly review the problems women face under the program: If married women work in the home they will have limited and in some cases totally inadequate protection under social security. Homemakers have no disability protection at all, even though their work has tremendous economic and social value. As paid workers, women are likely to be employed in low-paying jobs with little hope of advancement. Their social security benefits, based on past earnings, will likewise be intolerably low. Women who combine homemaking and paid work roles experience gaps in social security coverage—they may lack disability coverage in spite of their years of work in the labor force; their spousal benefits will not reflect their years of work and contribution to social security; and, their earnings records will be negatively affected by the years of zero earnings. Social security offers little protection, and in some cases absolutely no protection, to divorced spouses with a limited history of work in the labor force. Finally, the program favors one-earner couples of lifetime marriages in a period of our history when the divorce rate is climbing and the two-earner couple is the predominant family form.

I would like to list, by way of illustration, the ways in which women will be affected by current reform proposals:

1. The Gramm-Latta elimination of the minimum benefit will fall most heavily on women. Benefits will be cut by approximately 40 percent, and 85 percent of those affected will be women. Two-thirds of these recipients are between the ages of 70 and 90 years. Only 12 percent have another pension. These are the individuals that can least afford benefit reductions and will be most heavily burdened.

The Gramm-Latta elimination of post-secondary student benefits: Last year 32 percent of all benefits went to families with incomes under $5,000, and most of these families were headed by recently widowed mothers. Under this proposal the widowed mother will lose a main source of income.

3. The Administration proposal to reduce benefits for future and early retirees and their spouses will lower the already inadequate benefit for widows. Widows are among the poorest of the elderly, and most rely on social security benefits as a major source of income. The burden of this proposal will fall most heavily on single older women, the group least able to bear it.

4. The Administration proposal to reduce benefits through the addition of three more years of the retirement computation period will adversely affect women who combine homemaking and paid work roles.

5. The Administration proposal to increase the number of years needed to qualify for disability benefits and the use of medical standards only for determining eligibility will potentially disqualify more than 15 million women now eligible for disability benefits. Women, it must also be noted, are already penalized under current law if they spend more than five years out of the paid labor force rearing children.

In sum, any proposal to refinance social security which entails benefit cutbacks almost certainly will disproportionately affect women. It is they who can least afford any reduction at all in their retirement income, and it is our collective responsibility to insure that this vulnerable group is protected. In addition, there is no need for social security cutbacks if we solve our short-term problem by inter-fund borrowing. Proper assumptions must be used, not worse case scenarios used to induce blind panic about our social security insurance program which has been viable since 1935. I urge the committee to use objective statis-

tics and to seek varieties of points of views when evaluating the Social Security System.

APPENDIX A

CHART 1.—SOCIAL SECURITY TRUST FUND OPERATION FOR 1982–85 UNDER CURRENT LAW [1]

[All figures are net surplus (shortfall) in billions]

	OASDI	HI	OASDHI	Cash flow problems [2]	Funds exhausted
Economic alternatives from optimistic to worst case:					
I	(3.9)	28.8	24.9	[3]	[3]
IIA	(19.8)	21.1	1.3	[3]	[3]
IIB	(41.3)	19.0	(22.3)	1985	1986
III	(71.0)	11.4	(59.6)	1984	1985
Worst case	(93.9)	[4]	[4]	1983	1984

[1] The combined OASDHI trust fund balance is projected to be about $42 billion at the end of calendar year 1981. To find the total trust fund balance/deficit, $42 billion should be added to the above surpluses and (shortfalls); $42 billion in combined assets will continue to be a more than adequate cushion for the 1982–85 period since it represents about 21 percent of the projected $200 billion in combined benefit payments enacted in calendar year 1982 and almost 14 percent of the projected $310 billion in combined benefit payments in calendar year 1985 under the pessimistic (alternative III) assumptions.

[2] Less than 10 percent reserves.

[3] Funds sufficient.

[4] The trustees provided no "worst case" figures given for HI. Subcommittee staff estimates there would be a HI net gain of about $8.9 billion under the worst case scenario leaving a combined OASDHI shortfall of about $85 billion.

Source: Staff calculations based on 1981 annual OASDI trustees report, table 14, page 40 and 1981 annual HI trustees report, table 10, page 38. Prepared by the Subcommittee on Retirement Income and Employment of the House Select Committee on Aging.

CHART 2.—COMBINED OASDHI TRUST FUND OPERATIONS FOR 1982–85 UNDER VARIOUS CURRENT LEGISLATIVE PROPOSALS [1]

[All figures are net surplus (shortfall) in billions]

	Current law	Gramm-Latta II/Senate budget [2]	Administration [3]
Economic alternatives from optimistic to worst case:			
I	24.9	49.9	81.9
IIA	1.3	26.3	58.3
IIB	(22.3)	2.7	44.7
III	(59.6)	(34.6)	17.4
Worst case	[4] (85.0)	(60.0)	(8.0)

[1] The combined OASDHI trust funds balance is projected to approximately $42 billion at the end of calendar year 1981. This figure should be added to the above surplus or (shortfalls) to find total trust fund balance.

[2] Reliable but unofficial estimates put the savings of both the Senate and House budget bills at about $25 billion over the next 4 years. The enactment of these proposals would solve the short-run financing problems entirely under alternatives I, IIA, and IIB. Under the two pessimistic alternatives, cash flow problems would develop in 1985. Funds would become completely depleted in 1986 under worse case and later under III.

[3] According to page 7 of the May 12 HHS fact sheet, the administration's proposals result in 1982–85 savings of $57.1 under Reaganomics and $77.3 under worst case. The above figures assume savings of $57 billion under alternatives I and IIA; $67 billion under IIB; and $77 billion under III and worst case. The administration's proposals more than solve the cash flow problems under the economic scenarios.

[4] Subcommittee staff estimate. See footnote 2 of chart 1.

Source: Subcommittee on Retirement Income and Employment of the House Select Committee on Aging.

CHART 3.—SOCIAL SECURITY LONG-RANGE TAX RATE SURPLUS/SHORTFALL UNDER CURRENT LAW [1]

	OASDI 1981–2005	HI 1981–2005	OASDHI 1981–2005	OASDI 1981–2030
Economic assumptions:				
I	1.95	(0.42)	[2]	1.64
IIA	1.27	(1.18)	0.17	.30
IIB	0.43	(1.44)	(.92)	(.52)
III	(0.61)	(2.80)	[2]	(2.85)

[1] The current OASDHI tax rate is 6.65 percent each on employers and employees. Under current law it will rise in increments until it reaches 7.65 percent in 1990. A tax rate surplus is the amount by which the currently scheduled tax rate exceeds the amount needed to exactly cover expected benefits. A tax rate shortfall is the amount by which the currently scheduled tax rate falls below the amount needed to exactly cover expected benefits.

[2] Due to the volatility of long-range estimates, the HI trustees limited their estimates to 25 years. The OASDI trustees continued to make estimates for 75 years. The trustees made combined OASDHI estimates only for 25 years and only under the intermediate assumptions. Staff calculates that there would be a 1.56 surplus under alternative I and a 3.23 shortfall under alternative III.

Source: Subcommittee staff calculations based on the summary of the 1981 annual trustees reports, table 4, page 17, and table 5, page 18; the OASDI trustees report tables 26 on page 59 and G–2 on page 116; and, the HI trustees report, table 11, page 39. Prepared by the Subcommittee on Retirement Income and Employment of the House Select Committee on Aging.

APPENDIX B—SUMMARY OF SOCIAL SECURITY BILLS INTRODUCED BY MARY ROSE OAKAR (DEMOCRAT OF OHIO)

H.R. 1513—SOCIAL SECURITY MODERNIZATION ACT

(Mandatory Earnings Sharing) The combined earnings of a husband and wife during their marriage shall be divided equally between them for purposes of determining eligibility for, and the amount of, old age and disability benefits. The bill maintains the current treatment of, among others, children's benefits, requiring that all earnings be credited to the wage earner for the purpose of calculating those benefits. The bill contains a present-law guarantee that, if the combined benefits of an individual and his or her spouse would be greater without application of earnings sharing, it shall not apply. The bill also mandates periodic Congressional studies of the operation of Earnings Sharing. Full-scale Earnings Sharing (excluding present-law guarantees) will be implemented by 2010, contingent upon the assessments, evaluations, and recommendations of the Congressional studies.

H.R. 1514—INHERITANCE OF EARNINGS CREDITS BY SURVIVING SPOUSE OR SURVIVING DIVORCED SPOUSE

When a spouse dies, the surviving spouse or surviving divorced spouse automatically "inherits" the deceased spouse's earnings credits to the extent that the credits were earned during their marriage. The couple must have been married to each other for a continuous period of a least three years immediatley prior to the spouse's death or the date the divorce became final. Disabled worker benefits could be paid at any age to disabled individuals based on their records as altered by inheritance. Disabled widow(er)s who gain disability insured status only through the use of inherited credits must meet the test of disability that is presently applied for disabled widow(er)s who claim survivor's benefits. The bill contains a present-law guarantee that, if the benefits of a widow(er) would be greater without application of credit inheritance, it shall not apply. Present-law guarantees will be terminated by 2010, contingent upon the findings and recommendations of mandated Congressional studies to determine impact. Where the deceased spouse has other survivors entitled to benefits on his or her account, for benefit purposes, the Social Security Administration will treat his or her earnings as if the inheritance had not occurred.

H.R. 1515—CREDIT SPLITTING AT DIVORCE

Credit splitting at divorce will make Earnings Sharing mandatory upon application by either party following a divorce. At the time of the divorce, if the marriage lasted at least three years, either party could apply for earnings credits. The Social Security earnings credits received in the years of marriage by both spouses would be added together and each spouse would be credited with half of the combined total. Earnings credits from years before or after the marriage would be unaffected. Thus, divorced homemakers or secondary earners could gain entitlement of benefits as retired workers. Credits gained as a result of credit-splitting could be used to gain entitlement to disability benefits. In those cases where combined benefits of both spouses would be higher under present law, credit splitting would not apply.

H.R. 1516—TRANSITION BENEFIT

This bill provides for payment of a "transition benefit" to the widow(er) of an insured individual upon the wage earner's death, if the surviving spouse is at least 50 years old at the time of the wage earner's death and not otherwise immediately eligible for benefits. The benefits would be available only for the month in which the death occurred and for the next three months. The benefit would be 71.5 percent of the wage earner's primary insurance amount (PIA), or if the spouse's own primary insurance amount is higher, 71.5 percent of that amount.

H.R. 1517—DISABLED WIDOWS/WIDOWERS UNDER SIXTY

Under present law disabled surviving spouses are eligible for benefits at an actuarially reduced rate beginning at age 50, based on the deceased worker's primary insurance amount (PIA). This bill would make disabled surviving spouses eligible for benefits at any age and with no reduction.

Mr. WRIGHT. Mr. Speaker, I yield 2 minutes to the distinguished chairman of the Social Security Subcommittee, the gentleman from Texas (Mr. PICKLE).

Mr. PICKLE. Mr. Speaker, the Congress ought to reject the proposal to take away retroactively the benefits of people receiving the minimum. To do otherwise would be cruel to our 70- and 80-year-old workers. I support this resolution in principle because it is a reassertion that this House and this Congress do not wish to take away social security benefits from current recipients.

There is reason to consider the elimination of the minimum benefit for future retirees, and that is what our subcommittee has already voted in the bill we are considering. Our subcommittee ought to meet again and reaffirm our bipartisan agreement to phase out the minimum for future retirees. I expect our subcommittee to meet in the next few days and to take further action in this and other areas.

The national consternation and fear caused by this amendment should never have taken place. The retroactive proposal should never have been in the House budget. It was put there by drumbeaters who wanted to bypass the authorization and appropriation process to make deeper cuts than ordered by the original Gramm-Latta. Inevitably this proposal has to be stopped. Regrettably it now involves harsh statements by OMB Director Stockman, by the President, and by our own leadership—forcing us to take sides on an issue that need not have been raised.

Mr. Stockman and others have said that we need this cruel action for the budget. This is not so. The Ways and

Means Committee cut out $1 billion more than Gramm-Latta in social security in 1982 and cut $18 billion over the next 5 years without resorting to taking the minimum benefit away from those now receiving it.

Mr. Stockman says that no one will be hurt by the action to take away the minimum retroactively. That is not so. Everyone needy may or may not be eligible for welfare, but that is irrelevant to the effect of this amendment. My friends, half a million of those on the minimum are eligible for welfare right now—but they have never applied for it. As many as 90 percent of the current minimum beneficiaries are women. Half of them are over 70. They have made it thus far without welfare, and they are not going to go on welfare now. If they did, then Mr. Stockman would lose fully one-half of the budget savings he is looking for. Mr. Speaker, this amendment does not address any windfall, it makes savings in the most despicable manner because it counts on the pride of elderly ladies and gentlemen—it counts on the fact that even if they are made destitute at their most defenseless moments—they will still have enough pride to avoid welfare.

I salute these ladies and gentlemen; I feel for them in their fear and apprehension of what lies ahead; and I deplore a Government action that on purpose would ask someone at this stage of life to choose between dignity and welfare. It breaks a faith and a promise made for over 40 years and made repeatedly in the last campaign.

The President himself implies in his letter that these cruel savings are necessary to save social security. My friends, the simple truth is that we cannot claim to protect and defend social security by taking away the benefits retroactively of our most elderly and most defenseless wage earners. There is an incongruity in that very assertion that is astounding. It is like holding someone under water while claiming to teach them how to swim.

The administration ought to admit that they made an error in this matter; and the Congress ought not to seize on this error for political purposes.

The bipartisan solution reached in our committee remains the best approach, and what we had better do is get this behind us and get about passing a bill that will handle many of our problems in social security. Only that course will stop this headline lambasting which scares the very people we are seeking to help.

Mr. WRIGHT. Mr. Speaker, I yield such time as she may consume to the gentlewoman from Maryland (Ms. MIKULSKI).

Ms. MIKULSKI. Mr. Speaker, minimum social security benefits are exactly that—minimum. Let us not forget, we are talking about $122 a month. Think about that—$122 a month. What kind of housing could you find in the District of Columbia, or in your home district for $122 a month? Most of us could not even pay our utilities on that.

I would like to share with you a case of a woman who will be affected by a cut in the minimum benefits she is receiving. About 50 years ago, her brother's wife died in childbirth with their second child. So, Anne, as we will call her, moved in with her brother, raised his children as if they were her own, and maintained his household. She finally entered the paid work force in her late fifties, early sixties, at a job paying what you would expect it to pay to a woman in her late middle years, with no prior experience. She is now in her eighties, collecting her minimum benefit, and living with a woman friend in the house that that friend and her late husband owned. Anne contributes what she can, and gets by thanks to this friend. Unfortunately, the friend is in poor health, and will probably not live long. What is Anne to do? Her benefit will be cut. She is allowed few if any assets to be eligible for SSI, which means going downtown to apply for welfare anyway, a stigma few people want to endure.

I have a suggestion: that all those who vote against this resolution—that vote against an attempt to give our seniors a chance at a life at a level somewhere above starvation—open their homes to all those people that will have nowhere to go, prepare your extra rooms, and set another plate, because they are going to be knocking on your door.

Mr. WRIGHT. Mr. Speaker, I yield such time as she may consume to the gentlewoman from Tennessee (Mrs. BOUQUARD).

Mrs. BOUQUARD, Mr. Speaker, I would like to make a brief comment in support of House Resolution 181.

The elimination of the social security minimum benefit is one of the most unfortunate consequences of the budget reconciliation. Three million people, half of them below the poverty level, stand to lose $122 per month which they are currently receiving under the law. We have been told that these people will be provided for through SSI and other programs. But we do not know how many of them, over 80,000 of whom are in their nineties, will not make the necessary application or qualify for SSI.

Like my colleagues, I have heard from those who, currently eligible for the minimum benefit, are frightened over the hardship this cut would bring to their lives. These are the people most vulnerable to economic conditions and least able to bear this burden. What the elimination of the minimum benefit means is that we can no longer trust the Government to honor commitments that it has made to those who up to now had no reason to question the reliability of the social security system.

Mr. WRIGHT. Mr. Speaker, I yield such time as he may consume to the gentleman from New York (Mr. PEYSER).

Mr. PEYSER. I thank the gentleman and want to join in supporting his resolution. I suggest to the minority leader that he go outside and talk to the thousands of senior citizens that are affected by this. I do not think his argument will hold much water. This is one vote that the Reagan administration will lose.

Mr. WRIGHT. Mr. Speaker, I yield such time as he may consume to the gentleman from Pennsylvania (Mr. WALGREN).

Mr. WALGREN. Mr. Speaker, I rise in support of the resolution.

Mr. Speaker, I did not support the elimination of the minimum social security benefit. I opposed the Gramm-Latta amendment which eliminated the benefit. And I support this resolution today, urging that all possible steps be taken to insure that social security benefits not be reduced for those people currently receiving benefits under the system.

The Gramm-Latta proposal, swept through the House by the Reagan administration, ends the $122 per month minimum benefit in January 1982. For present recipients, the minimum benefit would end in April 1982, less than 1 year away.

Mr. Speaker, we are hardly talking about exorbitant pensions when we talk about the minimum benefit. Among the 3 million recipients, hundreds of thousands of these recipients are over 80 years old. Seventy-four percent of the over-80 group are elderly widows who have not built up enough quarters in the social security system to qualify for any more than the minimum.

The administration says that most will qualify for other kinds of Government benefits. They fail to understand that those people over 80 are often unable, because of circumstances or personal pride, to negotiate the pitfalls of qualifying for support under the program. They will simply do without, and many of our elderly will then have a standard of living that will be a disgrace to the United States.

In 1972, many members of religious orders chose to come into the social security system. These were people who had taken a vow of poverty and received no income for their work. They borrowed money and in some cases sold church assets to obtain the required number of quarters for each member of the order.

It seems blatantly wrong, in fact cruel, to now yank this minimum pension from these people. I cannot sup-

port such a harsh step, one that invites people in the system in one year and kicks them out the next.

We must address the solvency of the social security system, short term and long term. We must examine interfund borrowing, use of general funds, and universal coverage as ways to shore up the system.

Taking away this meager subsistence from the elderly is not the way.

Mr. WRIGHT. Mr. Speaker, I yield such time as he may consume to the gentleman from Illinois (Mr. SAVAGE).

Mr. SAVAGE. Mr. Speaker, I rise in support of House Resolution 181. I lend my voice in the strongest possible manner to those who are determined to right the wrong committed a few weeks ago when Congress eliminated the $122 minimum benefit for a certain class of social security beneficiaries. Those of you here will remember that this provision was part of the infamous budget reconciliation package that passed both the House and the Senate.

Mr. Speaker, yesterday I received a letter from President Reagan accusing those among us who truly care about the millions of social security recipients of politicizing the issue of social security. Well, the simple fact of the matter is that it is the President who has made this issue one purely of politics.

Consider the fact that last fall, in an effort to attract votes, he promised that he would never cut back benefits of current recipients. Consider the fact that he has echoed this promise in recent weeks. Now square that with the fact that he, along with Stockman of "Mis-Management and Cut-it," conspired, designed, and successfully orchestrated passage of a budget-cutting package that eliminates the $122 minimum for current recipients.

If anyone is playing games, as the President suggests in his letter, I submit that it is he and not those among us who have some compassion for our elderly. I am not playing games, for I have seen and been touched by the concern etched on the faces of the hundreds, if not thousands, of senior citizens who have come to the Capitol to plead their case with their Representatives. I am not playing games because I have always championed the less well placed and poor, and I know that the insecurity that comes from not knowing where your next meal is coming from is no game.

Senator MOYNIHAN put his hand on the strategy of this administration when he said that Reagan was trying to balance the budget on the backs of the poor and elderly.

During these past few months, on and off the floor of this House, on TV, radio and in my newspaper column, I have warned that the administration budget and tax cuts were not only crippling to black Americans but to all Americans who have the misfortune not to be numbered among the wealthy. Of all the evil acts perpetrated by the administration in the past 6 months through legislation, probably the most unconscionable is the removal of the $122 minimum monthly floor from social security. These minimum benefits presently go to some 3-million elderly Americans, men and women, blacks and whites alike, and represents for some the only meaningful income they have. How mean and heartless we must seem to these elderly individuals.

We should pass this resolution, thus sending an appropriate response to the President.

And, we must go from here to support Solidarity Day and every other program and project designed to return dignity and compassion to this Government.

Mr. WRIGHT. Mr. Speaker, I yield such time as he may consume to the gentleman from Ohio (Mr. SEIBERLING).

Mr. SEIBERLING. Mr. Speaker, I rise in support of the resolution.

Mr. WRIGHT. Mr. Speaker, I yield such time as he may consume to the gentleman from Texas (Mr. WHITE).

Mr. WHITE. Mr. Speaker, I thank the gentleman for yielding. When we first passed the package on budget reconciliation from this House, we should have had a grandfather clause for minimum social security recipients. I urge adoption of the resolution.

Mr. WRIGHT. Mr. Speaker, I yield such time as he may consume to the gentleman from North Carolina (Mr. HEFNER).

Mr. HEFNER. Mr. Speaker, I rise in support of the resolution.

Mr. Speaker, there is no more poignant mail coming into my office than that from senior citizens who are afraid that social security benefits are going to be cut or eliminated.

These people who have worked hard all their lives at back-breaking labor, and they have at least counted on the meager social security benefit to maintain their integrity, their independence, and their worth as human beings.

I do not favor pulling the rug from beneath the older citizens of our country who depend on their social security checks to help make ends meet. In a country as rich as ours, I believe our Government can and should afford to help those older Americans who are least able to help themselves.

Now this Government is sending all kinds of signals and omens that there is not going to be any more social security program if we do not take drastic steps. And this administration has taken the ultimate drastic step in suggesting that Congress eliminate the minimum benefit, that small $122 a month which some 2 million current social security recipients receive because of the low wages they earned throughout their working lives or because they had not been covered by the required numbers of quarters to earn a more respectable benefit.

This administration is not proposing to eliminate the benefit for those who will come on the rolls in the future and determine other ways to take care of these people. This administration is demanding that we cut off this meager resource for those who are right now receiving this small monthly benefit.

Mr. Speaker, I voted against the Gramm-Latta II budget which contained the provision to eliminate this minimum benefit, but I am proud that this body has had the foresight to reconsider this proposal and has given the Members a chance to reconsider the issue.

We cannot forsake our mothers and fathers, our elders, in this battle of the budget. We cannot allow the self-esteem of these people who have gone before us to be damaged in such a blatant way. I wholeheartedly support the resolution.

Mr. MICHEL. Mr. Speaker, I yield 2 minutes to the gentleman from Ohio (Mr. GRADISON).

Mr. GRADISON. I thank the gentleman for yielding.

Mr. Speaker, the proper focus of attention in our debate on the minimum benefit should not be the reconciliation conference but the social security law itself. The Ways and Means Social Security Subcommittee, of which I am a member, has had underway a complete review of social security, triggered by the approaching financial crisis of the system.

One of the elements in our review, of course, has been the minimum benefit. The Social Security Subcommittee, on a bipartisan basis, has tentatively decided to eliminate the minimum benefit, but on a prospective basis only. Those now receiving the minimum benefit would not be affected.

I am personally convinced that the financial needs of the social security system can be met without increasing social security taxes beyond those provided in present law, and without abruptly cutting minimum benefits, student benefits, or early retirement.

This will, of course, require other changes in benefits, not changes to cut present benefits, but to adjust the rate of increase in future benefits.

Voting for the resolution before us eases this. The more difficult task will come later, not only for the Ways and Means Committee, but for the House as well when we must balance the benefits we protect with changes in other portions of the social security system.

□ 1210

My own recommendation to our Social Security Subcommittee will be

to repeal the minimum benefit provision of the reconciliation package if it stays in the final version. This, in my judgment, is the proper way to go about dealing with this issue. And I note, in passing, that the approach I recommend will help secure House passage of a balanced package of social security changes to put the system on a sound financial basis and reassure beneficiaries that their benefits will not be cut either by the action of Congress or by the vagaries of the economy.

Mr. WRIGHT. Mr. Speaker, I yield 2 minutes to the very distinguished gentleman from Florida (Mr. PEPPER), the chairman of the Select Committee on Aging.

Mr. PEPPER. Mr. Speaker, and Members of the House, there is an old saying that the time to do a good deed or to kill a snake is when the opportunity affords.

Today we have an opportunity to redress a wrong to which we have previously been a part. And if we make the decision now, the only just complaint is that it comes tardily, not that we make it.

The people who are affected by this minimum security benefit of $122 a month—a figure fixed in 1977 by the Congress because they thought it was a fair figure—over two-thirds of these people are beyond the age of 70; 500,000 of them are over 80; and 100,000 of them are over 90. So you will not have to worry about many of them very much longer.

If America is so poor that we are threatened with bankruptcy because we cannot take care of America's elderly and her needy, many of them will relieve you of that obligation relatively soon.

No, Mr. Speaker, these people are entitled to what the law says they are to receive.

The budget cutters say, "We are not going to take benefits away from anybody now getting them."

The reconciliation resolution denies the recipients of this $122 a month now getting it April 1, 1982.

I thought we had a commitment from our President in his campaign that that would never happen.

Mr. Speaker, we have already too much endangered this great humanitarian economic, stalwart program of social security. Let us no longer jeopardize the confidence of the people of America in this meaningful institution of social security.

Mr. WRIGHT. Mr. Speaker, I yield 1½ minutes to the gentleman from Massachusetts (Mr. MAVROULES).

Mr. MAVROULES. Mr. Speaker, I rise in support of the resolution offered by the gentleman from Texas, asking that social security benefits not be reduced.

At issue here today is Government's responsibility to the American people—a social compact, especially as it pertains to the aged—whose contributions to their homeland are as longstanding as they have been significant.

Mr. Speaker, I believe that a good number of our colleagues, on both sides of the aisle, welcome the opportunity presented them by this resolution—to right a wrong recently perpetrated in the reconciliation package.

I believe that my colleagues had no intention of pulling the plug on minimum social security benefits (an action that would adversely affect 3 million Americans), many of whom are living close to the poverty level.

I believe, Mr. Speaker, that such an action—tearing at the social safety net protecting all Americans—does not truly express the sense of this Congress.

An affirmative vote on this resolution will give us that opportunity to set the record straight, and to tell the American people that Government will face up to its responsibilities to the governed.

On the other hand, if we do not move to restore minimum benefits, we will be responsible for a breach of faith, weakening one of the most basic bonds between the American people and their Government—and denying the basic right of every American to a decent retirement.

As late as this past May, we have been assured by the Reagan administration through a party newsletter that "President Reagan would keep his promise, that retirement benefits would go untouched."

Let us match these words with deeds and pass the resolution offered by the majority leader.

Let us keep Government's promise and meet our commitment to those, to paraphrase the President last February, "Who through no fault of their own must depend on the rest of us for programs they can depend on."

Mr. Speaker, I support House Resolution 181 and I urge my colleagues to do so as well.

We have promises to keep.

Mr. WRIGHT. Mr. Speaker, I yield such time as he may consume to the gentleman from Ohio (Mr. SHAMANSKY).

Mr. SHAMANSKY. Mr. Speaker, just 24 hours before the mass rally of the National Council of Senior Citizens here at the Capitol, two interesting events coincided, events related to the administration's misdirected plans for social security.

The President attacked some of us in Congress as "opportunistic" for objecting to his ill-conceived elimination of minimum social security benefits. By this proposal, the administration is saying to 3 million Americans with low earning records that their coverage now is wiped out. They must look instead to welfare. Gratuitously penalized by this shortsighted plan are thousands of priests and nuns who took vows of poverty to serve in religious orders. Their vows of service apparently prohibit them from seeking welfare.

At the same time yesterday, a House committee heard that the Clinch River breeder reactor—a technological white elephant which I and many of my colleagues voted to close out—suffers from a $2.5 billion cost over-run, and is 11 years behind schedule. The money saved by canceling this political gift to certain politicians, could greatly help make up the amount the administration claims it will save by eliminating the minimum social security benefits.

I call on the administration to work with Congress, instead of indulging in name calling, to strengthen social security, not chip away at it. Thank you.

Mr. WRIGHT. Mr. Speaker, I yield 1 minute to the gentlewoman from Colorado (Mrs. SCHROEDER).

Mrs. SCHROEDER. Mr. Speaker, as cochair of the Congresswoman's Caucus, I rise in support of House Resolution 181 which urges that steps be taken to insure that social security minimum benefits not be reduced for those currently receiving them.

The elimination of the social security minimum is aimed at double-dippers and persons with substantial income from other sources. However, Social Security Administration data indicate that only 21 percent of those eligible for the social security minimum—are entitled to public pensions. That means that four-fifths of those losing their social security minimum are not entitled to a public pension or dual benefits.

Elimination of the social security minimum will have a devastating effect on older women. It means that we are abandoning over 1 million old women in our society who depend upon this $122 monthly minimum for their very existence. When the administration proposed this cutback in social security, they attacked a vulnerable group since 85 to 90 percent of the minimum beneficiaries are women—retired and disabled workers, dependent spouses, and widows. These women are not living it up as merry widows; 60 percent of unmarried women over age 65 depend on social security as their sole source of income. What do these women do when the social security minimum is cut off?

Some of them may be eligible for SSI—if they have less that $3,100 in income and no more than $1,500 in personal assets. No one knows how many of the 1.2-million affected women will be entitled to SSI.

Eliminating the minimum will have an especially negative effect on those women who are not poor enough to qualify for SSI. The "near poor" who will suffer from the loss of this benefit

include retired workers with very low public pensions, those who worked as domestics or part-time workers, and dependents.

The omnibus reconciliation bill created a new benefit for retired workers, aged 62–64 who are not yet eligible for SSI, to permit them to continue to receive an amount equivalent to the minimum. This new benefit will apply only to some 150,000 of the 1.2 million women who will lose their minimum social security benefit.

This Congress has approved a cruel surprise for 1 million older women who happen to be our constituents. I urge my colleagues to approve this resolution which would ask that the social security minimum be continued for those already receiving it.

Mr. MICHEL. Mr. Speaker, I yield such time as he may consume to the gentleman from Pennsylvania (Mr. MARKS).

Mr. MARKS. Mr. Speaker, there are indeed several categories receiving the minimum benefit who have not earned it or deserve it. That does not give us the license to remove it from those who are truly needy. I rise, Mr. Speaker, to state that I shall vote for this resolution to protect those truly needy people.

Mr. Speaker, the issue before the House today is one of significance not only to the 3 million Americans directly affected if the House and Senate proceed to eliminate the minimum social security benefit, but to everyone who will participate in social security in the future.

Both House and Senate versions of the budget reconciliation bill contain provisions to remove the benefit—the Senate in September and the House in April 1982. Both bodies voted on the removal of the minimum benefit as part of a larger measure. There was no opportunity to give this matter the individual attention I feel it deserves.

To put it bluntly: Our method has been neither good legislative practice nor a very humane way to proceed. There are, indeed, several categories receiving the minimum benefit who either have not earned it or do not deserve it, but that does not give the Congress license to remove it from the nearly 1 million truly needy now receiving it.

I believe House Resolution 181 provides us with a vehicle to express the opposition of the House to the indiscriminate removal of this benefit.

Of the 3 million now receiving the minimum benefit, it is estimated that over 800,000 are probably without alternative sources of income. A million and a half are over 70 and about 100,000 are over 90. Should the minimum benefit continue to be paid to current beneficiaries, it will gradually decrease as a drain on both the trust fund and general revenues, which add SSI supplements to the minimum. Current trust fund payments of the minimum will gradually sink to zero over the next two decades. The decrease will be even more pronounced if only the truly needy continue to receive the minimum benefit.

The House has before it an opportunity to declare that the reconciliation process is not the best mechanism to make far-reaching changes in complex social security law. Careful and deliberate consideration by both the House Ways and Means Committees is vastly preferable to precipitate action on a catchall measure not designed to take into account distinctions between the comparative needs of various minimum-benefit categories.

Mr. Speaker, I do believe that certain categories of beneficiaries do not need, nor have they truly earned, the minimum benefit. There are 450,000 minimum recipients who receive Federal pensions averaging $900 per month; 350,000 minimum recipients have working spouses with earnings averaging $14,000 annually. But to deny minimum benefits to people in their eighties and nineties and to elderly men and women of religious orders who have devoted their lives to their fellow Americans, is not responsible legislation. To do so now, when the minimum benefit currently makes up a major portion of their total income, is also unwise.

What I am saying is that distinctions must be made between the various currently eligible categories. This must be done through the regular legislative process. I realize that in order to protect the short- and long-term integrity of the social security trust funds, we must make some retrenchments. We must place the social security system on a basis which guarantees benefits to every American who has contributed and earned them—whether he or she retires tomorrow or in the next century.

Administration officials state that the OASDI trust fund will be bankrupt come November 1982. Perhaps it would be better to say there will be a percentage decrease of benefits paid out unless steps are taken to strengthen the system financially. I am confident that the Congress and the administration will work together to provide just that type of corrective action. There is no need, Mr. Speaker, to eliminate the minimum benefit for the truly needy—for those under whom there is no safety net.

I intend to vote for House Resolution 181—not because I wish to preserve the minimum benefit for everyone now receiving it, but because I wish to see those most in need protected from destitution.

Mr. MICHEL. Mr. Speaker, I yield 3 minutes to the gentleman from Texas (Mr. GRAMM).

Mr. GRAMM. Mr. Speaker, I thank the gentleman for yielding.

I did not come to the well this morning to talk about the facts. I think the people who have studied the facts have seen that the House took a courageous action in moving to terminate the minimum benefit and doing it in such a way as to hold harmless those who are currently 60 years old and older and to focus in on denying benefits to the 800,000 people who have an average income of over $20,000 a year, who have paid on average less than $470 worth of social security, and who are nonneedy but who are imposing a burden on the social security system which will over the next 5 years deplete the reserve by over $7 billion.

One of our colleagues suggested we go outside and talk to the people who are here. I would like to say to our colleague I have done that all morning. And I want to tell you, the people who are here are the people who have worked for 40 years paying social security taxes. And when these people understand the political exercise that we are involved in here today, they are going to be mighty unhappy when they see that we are playing political football with their financial security.

Mr. Speaker, there are few issues that are better suited to playing politics with than the minimum benefit on social security. The fact that we are eliminating unearned benefits to nonneedy citizens is lost in all of this political rhetoric. And the final irony is that those who seek to reinstitute an unearned benefit to non-needy citizens cloak themselves in the righteousness which should surround those who are trying to protect those who have earned benefits and those who are in need.

I am not urging anybody to vote against this resolution. I am going to vote against it. The politics of it is clear. There are 1 million people, roughly, who will be denied this benefit who are non-needy by definition of social security, who are looking over your right shoulder. There are 30 million people who depend for their financial security on the basic strength of social security, and they are confused about the issue. They do not know whether they are affected or not, and they are not looking over your left shoulder. But in the words of Abraham Lincoln, "You can't fool all the people all the time."

□ 1220

Some day the facts are going to get through to people about the political game that we are playing here. When those facts get through, those people are going to ask the Members and they are going to ask me: "Where were you when an effort was made to deny benefits to those who had not paid taxes and who were nonneedy to strengthen my retirement? It was your vote that jeopardized my security, and

I am not a person with an outside pension. I am not a person with financial assets. I am a person that worked 40 years to pay benefits."

Mr. WRIGHT. Mr. Speaker, I yield such time as he may consume to the gentleman from Puerto Rico (Mr. CORRADA).

Mr. CORRADA. Mr. Speaker, I rise in strong support of House Resolution 181, resolution opposing minimum social security benefit cut.

Although the Ways and Means Committee section of the Omnibus Reconciliation Act did not recommend any cut in benefits for present social security recipients, both the House version, as amended by Gramm-Latta, and the Senate version of the bill, would reduce the minimum social security benefit. These changes would affect approximately 2 million current social security recipients across the Nation.

In Puerto Rico it would affect over 100,000 pensioners. These would suffer even greater hardship than the rest of the American citizens would, for they will not be able to avail themselves of the SSI benefits, since the SSI program has not been yet extended to Puerto Rico and the territories.

This substantial segment of our population generally sustains itself on a very limited income, which usually meets only the most basic necessities. To so many of them every dollar counts and as my dear colleagues are well aware of, most do not have where to reach for more, when it does not make ends meet.

They are widows, elderly, disabled citizens. They have to some extent or other contributed to the economic development and well-being of the Nation. We should not now, nor ever forget that.

Most of all, we should not now nor ever forget that the Nation as a whole has a duty to its citizens that have given it their very best, when those same citizens are no longer able to sustain themselves, when age or other circumstances reduces or ends their productivity and hence their contribution to the Nation.

To forget that duty, to ignore it or to subordinate it to other so-called priorities is unconscionable, my dear colleagues. I cannot support the proposed cut and I invite you to, deep in your consicence, consider your less fortunate constituents, living on meager present minimum benefits, recall their faces, their situation as you have seen it, and doing so I trust you will vote in favor of this resolution.

Mr. WRIGHT. Mr. Speaker, I yield 30 seconds to the distinguished gentleman from New York (Mr. BIAGGI).

Mr. BIAGGI. Mr. Speaker, I thank the gentleman for yielding.

Mr. Speaker, on June 26, when the House passed its Budget Reconciliation Act, the Nation witnessed an extraordinary tragic event. For the first time in our Nation's history—Congress voted to reduce social security benefits for current recipients. I state clearly for the RECORD that I voted against this proposal and proudly join in lending my full support to House Resolution 181 which seeks to restore the minimum benefit under social security—so callously eliminated under the reconciliation bill.

These are vexing times in Congress. True, when the House and Senate passed their respective reconciliation bills—we were responding to the will of the people who wanted reduced Federal spending. However—it was the means to this end—which is so objectionable. Is it not interesting that once the American people got a chance to look more closely at Gramm-Latta I and II how their opinions shifted. Recently I placed into the RECORD the results of a survey conducted by Louis Harris. This followed a similar one in February when people were asked if they felt the Reagan budget was harmful to the elderly and poor. At that time they said no. Just last week in a new survey the results had turned around completely. By a margin of 61 to 33 percent those surveyed believe that Reagan's economic plans will be unfair and cause hardship on the elderly.

The provision eliminating the minimum benefit for those presently on social security has evoked a national hue and cry. All one has to do is walk to the other side of the Capitol a little later and see feelings of seniors firsthand as the National Council of Senior Citizens holds its annual convention and rally.

Let us examine what the issue is here. Are we talking about some windfall for the elderly of this Nation. How many in this Chamber could even fathom living with an annual income of $1,464 a year—for a person relying solely on the minimum benefit for income that is all they would get. And despite the claims of this compassionless administration—there could be as many as 750,000 older Americans for whom the minimum benefit is the sole or majority element of their income.

Consider if you will the extraordinary letter which was sent by the President of the United States to us yesterday. Imagine the extent to which our Chief Executive is going to urge that the Congress of the United States violate a sacred trust between the Government and its older citizens. Imagine all of this to achieve projected savings of $1.3 billion a year. Is there no limit to this administration's obsession with viewing life in terms of dollar signs only?

No one quarrels with the desire to develop some comprehensive legislation to reform the social security system. However—I contend that we can do this without having to resort to cutting people's benefits who are currently on the social security rolls—we can recommend interfund borrowing—we can seek the limited use of general revenues.

Let us not underestimate the significance of this vote we will be taking here today. House Resolution 181—is a repudiation of a decision made by a majority of this House on June 26—that decision being to eliminate the minimum benefit payment for social security recipients. If this passes under suspension of the rule—it sends a very persuasive message to our House conferees to the budget reconciliation bill that we want all possible steps taken to avert the reduction in benefits as called for in Gramm-Latta II.

Mr. WRIGHT. Mr. Speaker, I yield such time as she may consume to the gentlewoman from New York (Ms. FERRARO).

Ms. FERRARO. Mr. Speaker, I thank the distinguished majority leader for yielding to me.

Mr. Speaker, I rise in strong support of the resolution offered by my distinguished colleague (Mr. WRIGHT). Although it is no secret that the fastest growing poverty segment of the population consists of persons aged 65 or older and although it is no secret that the poorest of the elderly and the oldest of the elderly depend on the minimum benefit for survival, this administration has decided to breach its promise to the people of this country and cut the minimum benefit for current retirees.

Yesterday, I received a copy of a letter from President Reagan deploring the opportunistic political maneuvering of some of those in Congress and indicating that the President will ask for time on television to inform the American people of the facts about his proposals regarding social security. Since my people will not get free TV time, I just thought I would share with you, Mr. President, what the American people in my district think about the cuts in the social security system.

One constituent writes: "I am heartbroken to learn that the Government is considering cutting off minimum social security benefits from those already receiving these benefits. I am in my sixties, half blind, and am receiving $111.50 per month minimum social security benefits." Another constituent writes: "I am asking you not to give in to what this 'jelly bean eater' wants. I can not eat jelly beans like he does. I have got to have good food." And, if the administration thinks that all the people who need the minimum benefit and will lose it can go to the SSI program—they are wrong. One man in my district writes: "They tell us we can apply for some kind of Gov-

ernment relief or welfare. What gall. What an insult."

I urge my colleagues to support this important resolution and to take a stand on behalf of the millions of Americans who depend on this minimum benefit for their bare survival. Our commitment to dignity in retirement must remain strong. Thank you.

Mr. WRIGHT. Mr. Speaker, I yield such time as he may consume to the distinguished gentleman from Florida (Mr. BENNETT).

Mr. BENNETT. Mr. Speaker, I support this resolution and point out that the matter can be resolved in the conference on reconcilation. If the conference cannot agree on either of the variants in the conference, it could then agree to strike these provisions, which is what I as a member of the conference intend to do. If this fails, then we can vote against the conference report, which I would also expect to do. Finally, if all these procedures fail, the gentleman from Florida (Mr. MCCOLLUM), and I have introduced today a measure which would solve the problem by continuing the benefits under new legislation, financed by general revenue, thus preserving the financial strength of the social security trust funds.

Mr. WRIGHT. Mr. Speaker, I yield such time as he may consume to the distinguished gentleman from Massachusetts (Mr. MARKEY).

Mr. MARKEY. Mr. Speaker, in the past 6 months I have received thousands of letters from constituents outraged and scared about the pending budget cuts. The most heart-rending letters are from elderly women and men who are struggling to make ends meet during the autumn of their lives.

These are the individuals who cannot pay for food to live on; who cannot work part time to pay the bills because of health problems and old age. These are the citizens of our Nation who cannot move to lower rent districts nor easily afford increased housing and energy costs. These are the forgotten Americans who fight to live out their days in a dignified fashion. And many of these are the workers of America who paid into the social security system with the promise and expectation of deserved benefits during their older years.

And yet—these are the very same people who will truly suffer if we allow the administration to reduce social security benefits, specifically by eliminating minimum benefits for current and future beneficiaries. In the face of this, Mr. Speaker, I am angered. I am angered and outraged and sad. No friend of the elderly could support such a callous proposal.

The minimum benefit currently provides about 3 million individuals with benefits—76 percent of these are elderly women. Two-thirds of these are 70 years or older; 500,000 are over 80 years old. Termination of these benefits will bear heavily on at least 1.3 million elderly poor beneficiaries who will be forced to find some other source of income, likely SSI or State general assistance. Termination implies an average reduction of $800 per year for each of the affected individuals. This is the first time in the history of the 46-year-old social security system that benefits have been cut for people already on the rolls, for 10, 15, even 20 years.

The retroactive elimination of the minimum benefits could literally shut down the SSA. In order to recompute the benefits, the SSA has estimated they will be disrupted for at least 1 full year. And this, while we are attempting to save money and man-hours this year.

I hope and trust that my colleagues will consider the harsh consequences of this action and will join me in opposing the elimination of these benefits. This proposal is a blatant breach of faith. To penalize individuals on social security is morally and legislatively wrong. I only hope that when I reach the grand age of 85—my country will not abandon me.

Mr. WRIGHT. Mr. Speaker, I yield 30 seconds to the gentleman from Montana (Mr. WILLIAMS).

Mr. WILLIAMS of Montana. Mr. Speaker, I thank the gentleman.

Mr. Speaker, 46 years ago the Democratic Party and America's senior citizens had hoped that social security would not be a partisan issue. However, when Franklin D. Roosevelt and the Democratic Party offered the social security program to America, 99 percent of the Republicans in the U.S. Congress voted against it.

Consistently, and without departure, the Republican Party has continued through this past almost half century to oppose social security.

In 1949, the vast majority of the Republican Party in this House, 111 Members, voted to cut social security benefits to the disabled.

In 1956, a Republican administration, opposed lowering the retirement age for women. That same year, 85 percent of the Republicans in the U.S. Senate opposed benefits for the permanently disabled.

The Vice President in that Republican Administration, Richard Nixon, refused to cast the tie-breaking vote on a measure to increase payments to our senior citizens and the blind.

Later, 85 percent of the Republicans in the U.S. Senate opposed benefits for the permanently disabled.

Twelve years later, almost 90 percent of the Republicans voted against a meager cost-of-living increase.

The Republican Party and their Representatives here in the Congress have consistently opposed every effort to improve the social security system. Yes, it is a partisan issue and Republicans, by their party line opposition to social security have made it a partisan issue.

Despite, 46 years of Republican opposition, the Democratic Party has designed and improved the social security system throughout the years. Today, there are 24 million Americans over 65 years of age. That is 11 percent of the population of this country.

Just previous to the Presidency of John Kennedy, approximately 35 percent of our retirement age citizens were below the poverty level. Today, that terrible statistic has been reduced by more than half—and that is not good enough.

We Democrats intend to continue to improve the social security system. As always, we hope to do it in a bipartisan way. However, the Reagan administration has shown, with its recommendation for drastic social security reductions, that it intends to stick to the partisan Republican line of opposing social security.

I know that our Democrats in Congress will continue to support, to improve and to protect the social security system with or without Republican help.

Mr. WRIGHT. Mr. Speaker, I yield such time as he may consume, to the distinguished gentleman from the Virgin Islands (Mr. DE LUGO).

Mr. DE LUGO. Mr. Speaker, I rise today in support of House Resolution 181 which expresses the sense of the House of Representatives that necessary steps should be taken to insure that social security benefits are not reduced for those presently receiving them.

These are hard times for our senior citizens. Just a few weeks ago this body passed a reconciliation bill which will impose severe hardships on millions of elderly persons. For example, approximately 80,000 elderly persons will lose homemaker and meal-on-wheels services under Gramm-Latta II. Approximately 322,000 fewer disabled persons, the vast majority of whom are senior citizens, will receive rehabilitation services. The list of impending hardships goes on ad infinitum.

Under that same reconciliation bill the minimum benefit under social security will be eliminated—and not just for future retirees, but for people who are currently depending on those checks every month. This is an extreme injustice that must be corrected by this House and I am pleased to see that this issue is being addressed so quickly.

Mr. Speaker, I cannot imagine how we could, in all good conscience, tell the millions of senior citizens receiving the minimum benefit that we have changed our mind, that in order to save some money in the Federal budget we would like them to make some more sacrifices. You have to

wonder sometimes what are our priorities.

I, for one, am not going to ask the thousands of elderly persons in the U.S. Virgin Islands to give up what is rightfully theirs. The high cost of living in my district already imposes very severe hardships on these people, and now they have the effects of Gramm-Latta II to look forward to.

It is time we drew the line. Taking away money from our senior citizen's pockets is unconscionable. Therefore, I urge the House to pass House Resolution 181.

Mr. WRIGHT. Mr. Speaker, I yield such time as he may consume to my colleague, the gentleman from Texas (Mr. HIGHTOWER).

Mr. HIGHTOWER. Mr. Speaker, I rise in support of the resolution.

I have been convinced during this past 6 months that Congress has been taking the right approach in the budget resolutions that we have passed. We simply must turn the economy around, for the good of everyone, and there is not a person in this body or in this country that does not acknowledge this fact. But, I am equally convinced that future budget savings should not be taken out of the purses of today's social security recipients. It is one thing to tell a person who is working at a low wage that 10 or 20 years from now he or she will only be able to get only so much in social security benefits. It is another thing entirely to take money out of the pockets of elderly people who have no other income alternatives, who cannot take the next 10 or 20 years to increase their savings and make other retirement plans to supplement their social security benefits. These people must be protected, and only by passage of this resolution can we hope to do this.

There are people here today who have called this resolution a political football, and who have said that people in this country paying into the social security system will be enraged at having their social security benefits jeopardized by continuing minimum benefits for today's recipients. That's nonsense. If our social security system is in such delicate shape that taking benefits out of the pockets of the elderly and the truly needy now is the only way we can save it, then we are in much greater trouble than we think. The people of this country are good people, charitable people, and they are not going to demand that their social security benefits tomorrow be made up of money actually taken away from the elderly receiving benefits today. I urge that the Congress adopt this resolution.

Mr. WRIGHT. Mr. Speaker, I yield 30 seconds to the gentleman from Oregon (Mr. WYDEN).

Mr. WYDEN. Mr. Speaker, I worked with senior citizens for 7 years before I came to Congress. Based on my experiences, I am convinced that the proposed cut in minimum benefits will tear one very large hole in the safety net that the low-income elderly depend on. Cutting the minimum benefit for current beneficiaries cannot be administratively carried out in a responsible fashion. The Social Security Administration has stated that publicly. Moreover, even if the cut could be implemented responsibly, research in the aging field shows that many of the older widows who now live on an economic tightrope will not be able to meet their subsistence needs without such a benefit and will eventually need to go into a nursing home. Nursing home stays in this country average $1,100 a month. The taxpayers are paying for over 60 percent of this bill. Obviously, cutting the minimum benefit in such a way is not a cost-effective budget cut. I urge my colleagues most vigorously to support the majority leader's resolution.

Mr. WRIGHT. Mr. Speaker, I yield 1½ minutes to the gentleman from Massachusetts (Mr. SHANNON).

Mr. SHANNON. Mr. Speaker, I would like to thank the distinguished majority leader for yielding to me and for introducing this resolution.

As I understand it, the main attack on this resolution, coming from both the administration and the Republicans in the House of Representatives, is that this is cynical, political maneuvering—cynical, political maneuvering to protect the neediest social security beneficiaries. I would like to ask my colleagues: What could be more cynical than to vote for a piece of legislation that cuts social security benefits for those receiving them and then to go home and say to constituents, "We did not know it was there and we are going to try to fix that in conference or in a special piece of legislation"?

What could be more cynical than to run for office in the United States of America and say, "We are not going to cut social security benefits. We are going to create a safety net for the needy"?

Then as soon as the Member is elected, to take that safety net and tear it apart?

We have heard time and time again today the so-called statistics about who receives the minimum benefit. The fact remains the Social Security Administration cannot tell you very much about them. What we do know about them is that they receive a little more than $1,400 a year in social security benefits. What we do know is that 300,000 of them are women under the age of 65 who would be otherwise unprotected by social security or SSI. What we do know is that there are half a million of them over the age of 80, 74 percent of them women. What we do know is that there are almost 15,000 retired clergy in the United States who receive these social security benefits.

We are being accused of obstructing the budget process by the Republicans in the House of Representatives. What we are really doing is defending the social security system in that process.

The SPEAKER pro tempore (Mr. BOLLING). The gentleman from Texas (Mr. WRIGHT) has 6 minutes remaining. The gentleman from Illinois (Mr. MICHEL) has 5 minutes remaining.

Mr. WRIGHT. Mr. Speaker, I yield such time as he may consume to the gentleman from New York (Mr. ADDABBO).

Mr. ADDABBO. Mr. Speaker, I rise in strong support of House Resolution 181, which opposes minimum social security benefit cuts. I urge all Members of the House to join with us today in passing this resolution overwhelmingly.

It is unfortunate that the administration seeks to balance the Federal budget by playing Russian roulette with the retirement years of millions of Americans. We have promised the American people that if they contribute to the social security system throughout their working years they can retire with the knowledge that this minimal benfit is there to supplant their own retirement program. Now the administration is saying that this is true only part of the time, that some people do not qualify for benefits that they have been receiving and that they will be dropped from the system or have their benefits greatly reduced.

In the 21 years I have served in this House I have been an unfailing supporter of the rights of senior citizens to spend their golden years in dignity. We do not offer them the plush life. We do not offer them relief from money worries. All we have offered senior citizens up to this time is the benefits they have worked to achieve and a promise that we will not let inflation destroy this little pension of theirs. Unless we pass this resolution today, we are telling them that what we have done up to now has all gone for naught and that in the name of budget cutting we have decided they are expendable. I do not believe this House is willing to do that and I believe that the American people do not want us to do it. I believe that we must stand firm against withdrawing the minimum payment and I would hope that the Congress would stand firm against all of the proposed changes in senior citizen legislation, including an increase in the retirement age, changes in the Older Americans Act and all the rest of the ridiculous proposals made by the administration so far this year.

I urge a strong vote of support for House Resolution 181.

Mr. WRIGHT. Mr. Speaker, I yield such time as he may consume to the gentleman from Connecticut (Mr. GEJDENSON).

Mr. GEJDENSON. Mr. Speaker, I rise in support of the resolution.

The President's social security proposals and the social security cuts included in the reconciliation package are a breach of contract and a breach of faith with the American people. They represent a breach of contract to those who have faithfully paid into the social security system. They also represent a breach of faith to those who trusted that, when they retire, they would receive their fair share of the benefits they believed they had earned. Now, over 2 million Americans receiving minimum social security benefits may see those benefits reduced.

I have received a flood of mail from my constitutents, angry and bitter over the proposed changes in social security. They have expressed their dismay over the Government's attempt to change the rules in the middle of the game and take away what they feel is rightfully theirs.

Consider the plight of a 70-year-old man from Middletown, Conn., who is terrified that his minimum benefits will be reduced:

> When I voted for President Reagan, he promised me that the budget cutting would affect all people equally. I feel like I'm not being treated equally. Right now, with my social security and my pension, I'm just barely getting by. Now I hear they might take away what little social security I get. My apartment is Government subsidized. What if they take that away too?

Or consider, too, the plight of a couple from Woodstock, Conn., who fear the penalty proposed for early retirement:

> My husband and I are 54 years old, and we have worked since we were 17 years old. We were looking forward to our retirement. Now all the money we put in to social security in these years, plus 8 more to reach 62 years, will go down the drain. We had expected to retire at 62, because working 45 years is a long time. How can we live on just 55 percent of our benefits?

Congress today resolved that benefits would not be reduced for those currently receiving them. I hope my colleagues in the House take this commitment seriously, because those Americans receiving social security benefits surely do. We must preserve the integrity of the system and make good our contract to the recipients of social security.

Mr. WRIGHT. Mr. Speaker, we have only one remaining speaker.

Mr. MICHEL. Mr. Speaker, I yield such time as he may consume to the gentleman from New York (Mr. CONABLE).

Mr. CONABLE. Mr. Speaker, the sporadic debate on the minimum social security benefit has been shrouded in hyperbole. Facts are not perceived easily through such an emotional fog, but let's try to find a few, anyway.

First, eliminating the minimum benefit does not mean eliminating benefits. It does mean that beneficiaries will receive exactly what will be produced by an application of the benefit formula to their average earnings under social security.

Second, the minimum already is being phased out by an action of the Congress in 1977. The minimum was frozen then at its $122-per-month level and eventually will disappear.

Third, the Congress recognized in 1972 that the minimum was being paid to many retired civil servants who had worked just long enough under social security to get a basic benefit that constituted, in effect, a windfall. Therefore, a special minimum benefit was established for those who had worked under the system for many years at low wages. That special minimum will be continued.

Fourth, those recipients of the regular minimum benefit who can meet the needs test under our supplemental security income program will not lose income because the minimum is being eliminated. Provision is made for them to be paid the difference between the supplemental security income benefit amount and the amount they would receive through the regular benefit formula.

Fifth, about one-third of those who are now entitled to the minimum benefit—and who are cited as receiving it—actually are being paid social security benefits well above the minumum and would not be affected at all by its elimination. There are, for example, many working wives of insured workers, who have had sporadic attachment to the work force, at relatively low wages. They may be entitled to the minimum, but they also are entitled to higher benefit amounts based on their spouses' earnings. They always are paid the amount based on their own earnings, plus the difference between that and the higher amount to which they also are entitled. Thus, elimination of the minimum will make no difference in their monthly social security checks.

Sixth, it has been estimated that an additional 37 percent of those now getting the minimum benefit either already are receiving supplemental security income payments or could become eligible for supplemental security income if they applied. Thus, the numbers receiving higher amounts already and the potential supplemental security income additions constitute about 70 percent of the estimated 3 million now receiving the minimum who would lose no income by its elimination.

Seventh, another 12 percent of minimum recipients are estimated to be retired Government employees, who obviously are receiving governmental annuities or other forms of pensions.

Eighth, an undetermined number of elderly persons might be eligible for benefits in other social security categories were they not receiving the regular minimum benefit. There are, for example, the beneficiaries under special transitionally insured categories, designed primarily to provide benefits for persons who had not had sufficient opportunity to earn benefits under the system.

In short, the misinformation about the minimum social security benefit is much too ample. The facts are much too obscure.

From just a quick look at the facts, it is clear that elimination of the minimum will not drive millions of Americans to poverty. The desirability of eliminating that benefit was determined by the Congress 4 years ago, and the provisions of both Houses of the Congress in conference now both confirm that earlier decision and accelerate its implementation.

Finally, Mr. Speaker, I suggest to my colleagues in the majority party that if they are truly interested in doing something for social security beneficiaries, if they really want to safeguard the system, then they should start working harder toward development of legislation to put the Nation's basic social insurance network on a sound financial footing over both the short range and the long. On this side of the aisle, we have been pushing for such action for years. We have offered one program after another to save social security. We have been rebuffed by the majority again and again.

Once more, we stand ready to work toward a comprehensive answer to the many troubles afflicting social security. We are once more ready to discuss all social security benefits as well as other aspects of the system.

The entire system needs to be strengthened, to protect the rights of all 36 million Americans who receive its benefits, and the 116 million Americans who pay for those benefits through their tax contributions.

Mr. MICHEL. Mr. Speaker, I yield 2 minutes to the gentleman from California (Mr. LUNGREN).

Mr. LUNGREN. Mr. Speaker, as I was sitting listening to the debate, I thought to myself, representing a constituency that has a large percentage of senior citizens and many social security recipients, that the best thing for me to do politically would be just to sit down and not say anything. The best thing to do would be to support this resolution. Why? Because the politics of it is that this is probably going to be played in the press as an effort to protect those who are most needy and must be protected.

Frankly, Mr. Speaker, having worked very hard to get to this House

and respecting very much what this House stands for, I do not think I have been more embarrassed by this institution than by this resolution. This resolution is not what it claims to be. This resolution does not help those who are most needy. It makes no distinction whatsoever between those who are getting a free ride on the minimum benefit and those that truly deserve and need it. When we deal within the next few years, as we must, with the integrity of the social security system and ask ourselves how we have gotten to a position in which we do not know whether we can pay out under the current system, the Members will have to think back and remember moments like this. This is one of those moments when we like to utilize our rhetoric and we like to say that we are saving the people on social security when, in fact, we are shying away from the tough decisions that have to be made.

How long are we going to stand in this Hall and say, "Yes, we will protect all the social security recipients; we will boost your benefits. We will not make any adjustments in the system. We will put it off until next year or the year after that or the year after that"?

□ 1230

When we have a bill that comes out of the Democratically controlled subcommittee that says we have got to do something about the minimum benefit sometime in the future, "but don't do it right now," I really must ask my colleagues, how long can we do this? How long can we tell the senior citizens that we are deadly serious about restoring the integrity of the system and then blink whenever we have to do something about it?

Maybe today is not the day to do it, but the die is cast.

Mr. Speaker, we know what the other side is going to say: "If you vote against this bill, you are going to be against senior citizens." But we really ought to look into our heart of hearts and decide that sometime we have to do something serious about the social security system.

Mr. MICHEL. Mr Speaker, I yield such time as he may consume to the gentleman from California (Mr. LEWIS).

● Mr. LEWIS. Mr. Speaker, one of the commitments I made when first considering service in the U.S. Congress was to work to reduce the excesses of the Federal Government. Included within those excesses is the tendency of the bureaucracy and the Congress to make promises to people and then proceed to break them.

I am absolutely, personally committed to making sure the Government maintains its commitment to the millions of Americans dependent on social security. The President has showed great courage in bringing a complacent nation to realize the severe financial crisis the system is in.

During the debate on this issue here today I think it is timely that we consider three principles to which the President is committed—principles which we as elected officials in this powerful body should all share or we have not earned the right to be here.

First, this Nation must preserve the integrity of the social security trust fund and the basic benefit structure that protects older Americans.

Second, we must hold down the tax burden on the workers who support social security.

Third, we must eliminate all abuses in the system that can rob the elderly of their rightful legacy.

It is also crucial for all of us to realize that there can be no greater destructive element in the national debate on the future of social security than partisan electioneering. To subject social security to this kind of assault for the sake of political gain may ultimately lead to the demise of the entire system. We must not let social security become a political football at a period in time when its very survival is threatened.

I absolutely agree with the President that none of us can afford to underestimate the seriousness of the problems facing social security. For generations of Americans the future literally rests upon our actions.●

Mr. MICHEL. Mr. Speaker, I yield 1 minute to the gentleman from Maine (Mr. EMERY).

Mr. EMERY. Mr. Speaker, although the focus of today's debate may be the proposed elimination of the minimum social security benefit for current recipients, I believe that the importance of the social security program dictates that we use this forum to reassure the 35 million social security beneficiaries and the 115 million workers now paying social security taxes, that Congress will not let the future of the most important social program ever created in this country remain in jeopardy. Today—right now—we must reinforce our commitment to insure that American retirees and workers can collect their checks next year and every year thereafter.

The social security system is in financial trouble. According to the 1981 annual report of the social security board of trustees, without any changes in current law, under all but the most optimistic predictions, the Old Age Survivors Insurance Fund will be unable to pay benefits by 1982—unable to pay benefits by 1982; 35 million people depend on those benefits, 115 million depend on having them there if they are disabled or when they retire, so the ramifications from a social security default would be—in a word—devastating.

While we are confident that an improved economy will reduce the inflation and unemployment responsible for the recent and dramatic erosion of the Old Age Survivors Insurance trust funds, America is aging. Short-term, stop-gap financing mechanisms can work in the short run, but the profound importance of the social security system to our current and future retirees forces Congress to look to the future health of the system and to take those steps necessary to insure that basic retirement and disability benefits will be there when they are claimed.

The power to save the social security system clearly lies with Congress. Undoubtedly, in the short run the easy thing to do would be to do nothing at all. Undoubtedly, it would be politically expedient to increase benefits, expand coverage and continue the piecemeal, incremental approach Congress has always taken to tuning the system. This policy has put us where we are today—facing potential default by 1982.

The time has come for us to put ourselves above day-to-day politics. We must forge a coalition of lawmakers capable of looking beyond the next election and ahead to stark realities which will face us if we once again place our stamp of approval on business as usual.

If we are successful in our efforts to return the system to the basic income security program it was originally designed to be and in that manner guarantee the availability of social security payments for future generations, history will look favorably on us. The 97th Congress will be remembered for having the foresight to finally accept the responsibility which comes with the job. But if we fail to recognize the problem—if we continue to let political differences color our decisions—we will be forever remembered as incapable of serving the needs of our constituency.

President Reagan has called restoring the integrity of the social security system the highest priority of his administration. It is now time for Congress to lay aside partisan politics and make those hard decisions necessary to give social security a future. We must realine the system's funding priorities and concentrate on returning the system to a basic retirement and disability insurance program. Finally, if we want to avoid further tax increases or the general revenue financing that could sever the line that separates social security from Federal assistance programs, we must get the machinery in place now for restructuring the benefit and revenue network.

If we begin now and avoid the delays—the postponements which are so easy to justify back home—we will have the luxury of time to gradually phase-in changes. Because we will not be pressured into taking a meat-ax approach to cutting costs in the face of a

default, we can provide potential retirees with the years of leadtime they need to devise adequate financial plans. We must not wait—nothing is more important to the American public than preserving this program.

Today we are voicing our collective opposition to a provision which will arbitrarily reduce social security benefits for current beneficiaries on less than a year's notice. Although the idea was born of good intentions, the delays inherent in the legislative process and the continued volatility of our economic times dictates that Congress not move so quickly. While I supported the budget Reconciliation Act on the House floor, I admit that this provision may be worthy of further consideration before implementation.

I prefer, however, not to think of the vote on House Resolution 181 as an attempt to right a wrong. I view today's debate and this vote as an acknowledgement of the need to move with deliberate speed to implement an equitable social security reform program which will preserve and protect the most important social program ever created in this country. The key is gradual change—the future can be found in guaranteeing benefits to the 35 million current retirees and the 115 million workes now paying taxes.

Mr. MICHEL. Mr. Speaker, might I inquire of the majority leader whether he intends to make a blanket request under general leave for Members to revise and extend their remarks?

Mr. WRIGHT. Yes, Mr. Speaker. As a matter of fact, if the gentleman will yield, I will make that request at this time.

GENERAL LEAVE

Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to revise and extend their remarks on the resolution under consideration.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Teaxs?

There was no objection.

Mr. MICHEL. Mr. Speaker, I yield the final 2 minutes on our side to the gentleman from California (Mr. ROUSSELOT).

Mr. ROUSSELOT. Mr. Speaker, as a member of the Ways and Means Social Security Subcommittee, I want to compliment my colleagues on the Democratic side for making real political hay out of this single-minimum-benefit issue and for making it very difficult for most of us on the Social Security Subcommittee to make a concerted effort to save this system.

Unfortunately what we have witnessed today are examples of partisan soapboxing. It is mandatory, for the sake of the present 35.6 million beneficiaries as well as future beneficiaries, that the social security's financial problem be addressed in a most careful and decisive manner, as we are presently doing in the Social Security Subcommittee. This resolution, however, fails to offer any real solutions to the system's insolvency problems. Furthermore, this type of electioneering is destructive to the work and progress being made by our subcommittee.

There can be no doubt that the social security system is in deep trouble. The simple fact Mr. Speaker, is that the social security program is losing $12,300 every single minute. The cumulative trust fund deficit of income required to meet benefits could be as high as $111 billion in the next 5 years. Without eliminating this minimum benefit as proposed by the House- and Senate-passed reconciliation bills, an additional $7 billion will be added to the projected deficit over the next 5 years. This would further threaten the possibility that 32 million people would not receive their monthly benefits in the fall of 1982, as is already projected to occur without congressional action to save the system.

Some of the Members come up here and demagog as though our President is responsible for creating this problem. He is not at fault; this Congress is! Unfortunately, Democratic leaders have voted benefits far in excess of our ability—of the system—to pay for them, and now we are paying the price for those past frivolous votes.

I want to comment quickly on this minimum benefit. It is just one benefit. The overwhelming majority of people receiving this benefit have not earned the full amount of the benefit they receive.

My colleague, the gentleman from Illinois, listed several areas where this benefit is not fully earned. For instance, 35,000 people overseas with good incomes are receiving this benefit.

In 1982, there will be beneficiaries retiring at age 65, eligible for the $122 monthly minimum benefit, who have paid less than $68 in social security taxes during their entire working history. Furthermore, the General Accounting Office has shown that there are 800,000 minimum benefit recipients who have adequate, other sources of income to rely upon. This is most unfair to the people who have paid into the system for their benefits.

But let me stress to my colleagues that even the elimination of the minimum benefit will not be pulling the rug out from under those beneficiaries who rely upon this benefit for financial support. There is a Federal safety net which provides for those low-income elderly in need. This safety net would replace the minimum benefit dollar for dollar. This social safety net for a couple receiving minimum benefits, in my State of California is $13,860 of potential payments and benefits under Federal SSI, State SSI supplements, food stamps, and medicine. It is therefore ludicrous to claim that by eliminating the minimum benefit real harm will fall on those who currently receive this benefit.

I say to my colleagues that we have a lot of support on the Social Security Subcommittee, and our chairman, the Democratic chairman of the subcommittee, the gentleman from Texas (Mr. PICKLE), very properly said that our subcommittee has already voted to eliminate this benefit and stop it prospectively in 1982. To preserve the system, it is these types of reductions which will need to be made to insure that social security payments continue to go to currently eligible beneficiaries and to make the system financially sound for future retirees.

I believe priority will have to be given to those actions which preserve the basic benefit structure of the program.

I say to the Members, "You had all kinds of things in your Democratic bill offered by Mr. JONES to cut all kinds of benefits in social security." No one talks about those cuts today; just this one minimum benefit issue alone.

Mr. Speaker, we are going to have to eventually phase it out. I think it has been pure demagoguery on the part of my colleagues to focus only on this one benefit and demagogic to the true congressional efforts to find real solutions to save the social security system.

The SPEAKER pro tempore. The time on the minority side has expired.

The Chair recognizes the gentleman from Texas (Mr. WRIGHT).

Mr. WRIGHT. Mr. Speaker, I yield such time as he may consume to the gentleman from Massachusetts (Mr. DONNELLY).

Mr. DONNELLY. Mr. Speaker, I rise in support of this resolution.

Mr. WRIGHT. Mr. Speaker, I yield such time as he may consume to the gentleman from New York (Mr. ZEFERETTI).

Mr. ZEFERETTI. Mr. Speaker, I rise in support of the resolution.

Mr. Speaker, I want to add my wholehearted support for the resolution sponsored by our distinguished majority leader, JIM WRIGHT, that would restore to those elderly who are eligible for social security to receive the minimum benefit of $122 a month.

In my opinion, one of the most negative features of the Gramm-Latta substitute this body regrettably passed on June 26 was the provision that beginning in 1982, in April, the minimum benefit would be eliminated not only for new beneficiaries but also for all beneficiaries who have been receiving benefits for as long as 20 years.

It is the first time in the history of the social security system that those already on the rolls would have their benefits reduced.

When Mr. Reagan accepted the Republican nomination for the Presiden-

cy he told the American people: "It is essential that the integrity of all aspects of social security be preserved." Yet despite this affirmation that the truly needy would be protected, the Gramm-Latta substitute abruptly slashed the earned benefits of these truly needy who have been receiving them in good faith. It is cruel and it is inhumane and I fiercely opposed this provision.

The impact of this cut on those considered the most vulnerable in our society is truly devastating—85 percent are women, two-thirds are between the ages of 70 and 90 and most do not qualify for SSI.

The social security system is based on trust, confidence, and dependability. Without these essential qualities, the system loses its integrity. I hope the conference committee will reconsider this callous cut which is a mistake and compassionately restore the benefits to 3 million of America's oldest and poorest.

Mr. WRIGHT. Mr. Speaker, I yield such time as he may consume to the gentleman from Arkansas (Mr. ALEXANDER).

Mr. ALEXANDER. Mr. Speaker, what we have here is primarily a difference in attitudes.

Mr. Speaker, I support the resolution.

Mr. Speaker, the difference between the administration's view of social security and that of the Democrats is a difference in attitude.

The Reagan administration believes social security is just another welfare program which is fair game for David Stockman's hatchet squad.

The Democrats believe that social security represents a solemn compact between the American people and their Government.

Nowhere in the public record is that difference in attitude more apparent than in the discrepancy between the assumptions used by the administration in developing their fiscal policies and their approach to social security. They use the rosiest of economic assumptions in developing their budget proposals and they used worst case assumptions in proposing changes in the social security program.

FISCAL YEAR 1982 REAGAN ADMINISTRATION ECONOMIC ASSUMPTIONS

[In percent]

	Budget policy	Social security policy
GNP increase	5.2	0.7
Projected annual interest rate	8.9	11.1
Projected inflation rate	7.2	13.6

Why would the administration use such radically different assumptions? Would not the assumptions for one program hold for all programs? We can only speculate as to the reasons, but it seems a good bet that in using worst-case assumptions for justifying its social security proposals the administration was scratching for a way to justify program changes which were unwarranted and unnecessary. Or perhaps they were merely trying to create an atmosphere of alarm and fear among the Nation's senior citizens so that their proposals would be more palatable to those who were about to be deprived of their earned benefits. More likely, the administration was merely seeking a rationale for its proposals to cut the social security program by 23 percent while, incidentally, reducing the 1982 domestic budget even further to help reduce the massive deficit which would result from its multi-year, across-the-board tax cuts.

The attitude of the administration is reflected in the remarks of OMB Director David Stockman in his testimony before the Ways and Means Subcommittee on Social Security. When asked by Chairman JAKE PICKLE, Democrat of Texas whether he believed that the administration's tax reduction program could be achieved without the proposed reductions in social security benefits, Mr. Stockman replied:

> Yes, but it would [also] require a substantial squeeze both on the non-social security domestic part of the budget—that's two hundred and forty six billion that would have to be cut substantially more—or a further squeeze on defense. It would be very difficult to do.

Chairman PICKLE replied:

> You would be achieving a balanced budget by making these eighty-two billion dollar cuts in social security. Social security would be called on to help balance the budget in 1984, at least by the tune of eighty-six billion.

Mr. Speaker, I think the administration's intent was clear then and I think it remains unchanged. On October 24, 1980, then-candidate Reagan said:

> No one presently dependent upon social security is going to have the rug pulled out from under them and not get their checks.

Yet the OMB-dictated Gramm-Latta reconciliation package pulled the rug out from under 3 million social security recipients. Among whom, incidentally, are more than 1 million persons who are over 70 years of age.

I suggest that the problems of the social security system are soluble. I suggest also that Chairman PICKLE and his subcommittee have a reasoned and viable solution to the question of reforming the minimum benefit proposals. In fact, the subcommitee has already proposed that the minimum benefit be eliminated—but in a way which does not take income away from those who are now receiving it. I suggest finally that it is the attitude of this administration that the social security system is just another welfare program.

Mr. Speaker, older Americans are not welfare chiselers and they are entitled to continue to receive their hard earned, bought-and-paid-for social security benefits in consonance with the solemn compact entered into by this Nation in 1935 when the social security system was adopted.

Mr. WRIGHT. Mr. Speaker, I have only one speaker left, a gentleman who earnestly desires to be heard, and I yield 30 seconds to the gentleman from Michigan (Mr. HERTEL), prior to my final comment.

Mr. HERTEL. Mr. Speaker, I think what we see really here today is the difference between the two parties demonstrated more clearly than at any time in the 6 months I have been here.

We are talking about compassion. We have a two-party system, and the minority party admits that today many people deserve these minimum social security benefits and other people should not get them. They would take them away from all people, those deserving or not. The minority party would take a meat ax and chop off the minimum benefits for all people.

The difference is that the majority party talks about those people who need assistance in this country, people who have only $122 per month to live on, and that they should be taken care of. The majority leader has adhered to providing these benefits, he has fought on the side of compassion.

Mr. Speaker, that is the difference between the two parties. I have never seen it more clearly demonstrated than in this debate today.

Mr. WRIGHT. Mr. Speaker, I yield such time as he may consume to the gentleman from Michigan (Mr. BONIOR).

● Mr. BONIOR of Michigan. Mr. Speaker, I would like to join many of my colleagues at this time in condemning the social security benefit cuts proposed by this administration. These cuts represent a cruel and unthinking approach to the needs and hopes of millions of our Nation's senior citizens.

Particularly unjust is the Reagan administration's attempt to eliminate the minimum social security benefit. There are some 3 million elderly who are currently receiving the minimum social security benefit of $122 a month. Of these 3 million individuals, almost two-thirds are over age 70. Many are elderly women who did not have an opportunity to earn the amount of money that would have entitled them to a larger social security pension.

The effect of this reduction, if enacted, would be a tragic reduction in the standard of living for people who are already just barely getting by.

The other focal point of the administration's social security proposal is this attempt to force people to work longer by reducing the amount of

social security benefits that beneficiaries are able to obtain under early retirement. Present law entitles workers to 80 percent of their social security benefits at age 62. The Reagan proposal would reduce that level of benefits to 55 percent. This administration, in an attempt to reduce Federal spending and balance the Federal budget by 1984, has attempted to reach its objectives by taking benefits away from people who worked for and earned those benefits through years of faithful participation in social security.

The administration has sought to stampede the Congress and the public into hastily adopting the proposed cuts by threatening a choice between massive benefit cuts and increased social security taxes. In doing so, the administration fails to note the mounting evidence that social security will be solvent and able to meet benefit needs well into 1985 without benefit reductions by simply transferring social security revenues between the trust funds.

I have received hundreds of letters from senior citizens in my Michigan district pleading for reassurance that their social security benefits will not be cut. Many mentioned the promise the President made before the election to leave the social security system and its benefits alone. They are confused and worried.

I believe it is the responsibility of the Congress to deal with the concerns of our senior citizens and serve notice to this administration that it will not abandon the social security program or the 36 million Americans who depend on its benefits. In addition, the Congress has a responsibility to the 114 million Americans who are currently paying social security taxes with the understanding that when they retire they will receive a certain level of benefits.

Social security is more than a Government program, it is a commitment to our Nation's citizens that must be kept.●

Mr. WRIGHT. Mr. Speaker, I yield such time as he may consume to the gentleman from Florida (Mr. NELSON).

Mr. NELSON. Mr. Speaker, I rise in support of the resolution.

I support the resolution expressing the will of the House of Representatives to preserve the $122 minimum monthly social security benefit. This proposal is not binding but it is our only vehicle to express the overwhelming support in the House to the House and Senate conferees on the budget reconciliation bill. The conferees should listen to this mandate and act accordingly.

This resolution is made necessary because the budget reconciliation bill backed by President Reagan, included the President's request for elimination of this minimum monthly benefit. At the time of consideration of the budget, the gentleman from Oklahoma (Mr. JONES), the chairman of the Budget Committee, had requested the opportunity to offer an amendment that would have restored the $122 minimum monthly benefit. I supported Mr. JONES' request, but it failed by a razor-thin margin of 212 to 215.

The overall budget reconciliation bill which cut $40 billion of Federal spending and which I supported, contained some spending cuts with which I did not agree—the $122 minimum monthly benefit being one of the items. Therefore, I am grateful to the gentleman from Texas (Mr. WRIGHT) for offering this resolution in order to let the House express its opposition to this social security cut.

This cut recommended by the administration would affect 3 million elderly Americans—1.8 million who are poor senior citizens, and rely on this monthly $122 check for bare subsistence. It is unfair to cut those less fortunate in our society.

I strongly urge adoption of this resolution.

● Mr. BOLAND. Mr. Speaker, the impending loss of the social security minimum benefit is a matter of grave concern for many elderly Americans.

As my colleagues know, this House on June 26 took an action without prcedent in American history—it voted to reduce social security benefits for a group of people who were already receiving them. This action will adversely affect many of our oldest and poorest citizens; individuals whose daily budgets are already stretched to the limit and to whom the minimum benefit represents an essential means of support. Approximately 3 million people currently receive the minimum benefit, but the loss will not be felt equally by all recipients. While every recipient will obviously experience a decline in monthly income, for several hundred thousand of the most needy that decline will drastically reduce their ability to provide for themselves. A disproportionate number of those most severely affected will be women and a significant number will be over the age of 80. The loss of the minimum benefit will be especially severe for individuals in these groups because they possess no ability to make up the lost income through other means.

The House Ways and Means Committee recommended that the minimum benefit be eliminated, but it realized that steps had to be taken to minimize the impact of the lost income on those least able to bear it. By eliminating the benefit only for prospective recipients, the committee acknowledged that the loss of something being received was much more harsh than the loss of an expectation to something which might be realized in the future. The committee's approach was a sound one that was unfortunately not followed in the substitute reconciliation amendments offered by the Republicans.

Mr. Speaker, we still have a chance to resolve the minimum benefit question in a more equitable manner. I would hope that the overwhelming approval of House Resolution 181 today would demonstrate a commitment on the part of the House to take the steps necessary to insure that the minimum benefit continues for those already on the social security rolls. To do otherwise would be a grave mistake and would work an unwarranted hardship on many people who cannot, and should not, bear it.●

● Mr. HOPKINS. Mr. Speaker, I rise in support of the gentleman's resolution which expresses the sense of Congress that those presently receiving the minimum social security benefits should not have those benefits reduced.

As a former member of the House Select Committee on Aging, I am very familiar with the many financial hardships forced on our elderly population.

Because of this, I cannot—in good conscience—ignore these financial difficulties and vote for what I believe to be a breach of faith between the U.S. Government and its elderly citizens. I cannot vote to cut minimum benefits for people already receiving social security benefits, for people who were lead to believe they could count on those benefits.

I believe a person should do what he says he will do, and I believe the U.S. Government should do what it has pledged. We have a contract with American workers who participate in the social security program and with retirees who rely upon social security for a portion of their income. We must not make drastic or abrupt changes which do not give workers enough time to adjust their retirement plans, and we should not change the terms of their contract after they retire.

Changes within the social security system will be necessary, and I am prepared to make the tough decisions required to save social security from pending bankruptcy. But, I do not feel it is fair to force people who are now receiving minimum benefits to step lower on an already sinking financial ladder. For these reasons, I support House Resolution 181.●

● Mr. ALBOSTA. Mr. Speaker, I rise in support of the resolution expressing the opposition of Congress to cuts in social security benefits to current recipients. I commend the distinguished majority leader for his efforts to remind this Congress and the administration that the proposed changes in social security, currently pending before a House-Senate conference committee, represent a total disregard of the commitments our Government made to people who have paid into the

social security system and are now receiving benefits.

Mr. Speaker, the House Ways and Means Committee earlier this year reported out legislation that would have eliminated the social security minimum benefit and phased out the college benefits. These changes, while severe, were designed not to affect current beneficiaries. This would have retained the trust that people have in the commitments made by the Government of the strongest Nation on this Earth.

Unfortunately, under the guise of budgetary restraint, the Ways and Means Committee approach was amended to make the changes in benefits applicable to current recipients. This represents the first time in the history of the social security program that benefits of current beneficiaries are being reduced. I think it is absolutely preposterous.

I have been very vocal in the past criticizing any backdoor ways of reducing social security benefits. For example, when numerous advisory groups were recommending that social security benefits be taxed, I introduced legislation that would amend the Social Security Act to prohibit such taxation. After accumulating over 200 cosponsors, the Ways and Means Committee reported out a resolution expressing the opposition of the Congress to the taxation of social security benefits. The House ultimately passed that resolution. While this was an important step, I feel very strongly that the law should provide for the tax-free nature of social security benefits, and insure that only Congress, not the IRS, could alter that status.

Mr. Speaker, while the taxing of benefits is a backdoor method of reducing benefits for current beneficiaries, the proposals before the House-Senate conference committee are a blatant attempt to break the promise to the millions of social security recipients who, when they retired, did so with the understanding of receiving a certain benefit. We must not violate that trust.

In addition, when eliminating the minimum benefit for current beneficiaries, we are not reducing the benefits of the most wealthy recipients, rather we are hurting most the people who receive the least; 3 million people receive the minimum benefit. While some of these individuals receive other forms of retirement income, many of them depend on that $122 check for survival. If we cut off that check, they will surely have to depend on Government social services to fill that void. After they have worked and paid into social security during their younger years, we, the Congress or the administration, should not force them to take such action. They deserve better, and they have earned better.

I urge my colleagues to support the majority leader's resolution.●

● Mr. HUGHES. Mr. Speaker, the Members of the House of Representatives have today made an important statement, a declaration that we will not abandon our elderly citizens who are presently receiving social security benefits. We will not be a party to violating our Government's contract with them.

We recognized today, in the resolution we have passed by such an overwhelming vote that those who collect the minimum benefit are not a bunch of double-dippers. We have stated that we consider it unconscionable to ask an 80-year-old widow to accept the loss of a benefit she has been receiving and which can make the difference to her between eating and not eating.

As I traveled around the Second District of New Jersey these last weeks, I have seen fear in the faces of my elderly constitutents. They fear the loss of not just this benefit but many other social security benefits. They question whether any of the money they receive as part of this program is safe and they question what their futures will be.

It is easy for us to say that we can eliminate the benefit and that those who are truly needy can go on welfare. Would anyone of us in this room, having worked all of our lives and having, for whatever reason, not been able to totally provide for our old age or for that of our spouse after our death, want to have to go, at the age of 80, to a welfare office and apply for those benefits when we believed that would not be necessary because of the social security system. I certainly would not want to make that choice or want to force my wife to do so.

Incredibly, the greatest fear that the minimum benefit was just the beginning was realized almost immediately. Fresh from the victory of the Reconciliation Act and the minimum social security benefit elimination, the administration proceeded to tell us, using the worst case economic assumptions, that the social security system was going broke and that benefits in many areas would have to be cut.

It is clear that the social security system has some problems. It is also clear to all of us here than no administration, no Congress, is going to let that system go bankrupt. However, there is a difference of opinion about how bad off we are right now with regard to social security.

The best evidence I have seen indicates that the system will remain solvent until 1985 simply by borrowing between the funds. Between now and 1985 many changes in the system can be instituted which will keep the system sound for the next several decades. They include funding some programs from general revenues.

Many solutions also are possible for the long-term problem which are not being offered by the administration. It appears that if we slow the growth rate of initial benefits by changing the index to the Consumer Price Index instead of the national average wages, the entire long-term problem could be solved. If the wage history alone were indexed to the CPI, about 80 percent of the long-term problem could be eliminated. If the bracket amounts of the benefit formula were indexed to CPI, not only would the entire deficit be eliminated, but there would actually be a surplus. In addition, the committee is exploring a 20-year phase-in of a 68-year-old-retirement age and universal coverage, among several other solutions.

Clearly panic is not the answer. In fact, the suggestion has been raised that panic was created by certain members of this administration simply to make it more palatable to cut social security benefits, a solution that a majority of Americans have indicated time and again they do not favor.

Questions have also been raised about the economic assumptions used to determine the social security shortfall. Those assumptions were the worst case assumptions. The assumptions used by this administration to determine what the effect of the tax cut would be were the best case assumptions. Therefore, it has been suggested that social security cuts may be used to try to balance the budget by 1984 since deficits are almost inevitable if the full 3-year tax cut goes through.

No one in this Congress would object to a phaseout of the social security minimum benefit. Such a phaseout was part of the original committee package. What we do object to is cutting benefits for those who are already receiving that money. They have planned their retirement based on that money and many of these older citizens cannot do without it. We must not panic our elderly and we must not use the social security benefits they received as part of an understood and accepted contract with the Federal Governemnt to balance the budget.

In the Book of Psalms, chapter 71, verse 9, it says:

> Cast me not off in time of old age, forsake me not when my strength faileth.

That is what our elderly are saying to us today. I am pleased that the Members of the House of Representatives have chosen to heed that request and I am proud to join in that effort.●

● Mr. BINGHAM. Mr. Speaker, I rise in strong support of House Resolution 181, a resolution which expresses the sense of the House that the minimum social security benefit not be eliminated. It is clear that this resolution will pass and pass overwhelmingly. I must say that I am somewhat surprised to

see the large number of Republicans who seem to be in opposition to cutting the minimum benefit. After all, many of these same Republicans supported the Gramm-Latta reconciliation package which eliminated the minimum benefit. Many of these same Republicans opposed a rule which would have allowed us the opportunity to vote to preserve the minimum benefit. Now they will join the Democratic majority in a last-ditch effort to save the benefit.

Unfortunately it may be too late to save the benefit. This resolution is not a binding one on the House conferees. The Senate conferees have not been instructed in this area. Supporting this resolution may take some of our Republican friends off the political hook but it probably will not save the minimum benefit. I would urge our Republican friends to tell the President and OMB Director Stockman to back off on this issue. Public sentiment is clear. Most Americans do not want to penalize our neediest senior citizens. Elimination of the minimum benefit will reduce the incomes of 1.5 million elderly people. Tens of thousands of Americans above 90 will be forced to the edge of poverty if we strip them of this benefit. As I have said again and again, we must not—we cannot—balance the Federal budget on the backs of our senior citizens. Eliminating the minimum benefit will not do much to balance the budget but it will greatly increase the sum total of human misery in this country. The minimum benefit must be preserved.●

● Mr. HAMMERSCHMIDT. Mr. Speaker, I cannot think of anything that would be more helpful to older Americans today than to demystify the issue of social security minimum benefits. The administration and Members of the House of Representatives and the Senate decided to eliminate the minimum benefit in the budget reconciliation process. This change was not undertaken without considerable research about its potential effect on older citizens. Removal of the minimum benefit was recommended precisely because it is an unearned benefit—a welfare type of income supplement that a recipient is not entitled to from his or her payroll tax contributions. Maintaining these unearned minimum benefits will cost $7 billion—putting unnecessary pressure on the already stressed trust funds.

It is important here to recognize that there are two different kinds of minimum social security beneficiaries. One group of beneficiaries has worked for years under social security but at low wages. The formula that is used to determine their benefits is purposefully weighted so that they can receive more than they actually should based on their payroll tax contributions. These long-term, low-wage earners receive benefits that are higher so that they can have a better standard of living after retirement. These people who have worked at least 19 years under the system are completely protected, as they should be, from any benefit changes.

There is a second group of persons who receive a minimum benefit and who are the subject of current discussion. This group has, as a rule, worked for a short time under social security at high wages. Based on total lifetime earnings, the average individual receiving this minimum benefit could have paid less than $355 in social security payroll taxes over their lifetime and receive a benefit of $2,122 in 1982. This amount would also be increased annually to reflect changes in the CPI. In certain instances, a couple could receive at least $3,183 in 1982 by paying as little as $3 in payroll taxes over their entire working lifetime. It has been found that on the average, a husband and wife getting an initial minimum benefit in 1982 would be paid more than $100,000 during their retirement lifetime from the social security trust funds. For this average couple, that would be about 300 times what they paid into the system. These cannot be considered earned benefits.

Now it is important that we are all clear about those that will be affected by the change. There are presently 3 million persons receiving the minimum benefit. Research undertaken by the General Accounting Office shows that only 17 percent of the minimum benefit recipients are truly needy and that 74 percent do not depend primarily on social security for retirement income. The General Accounting Office also estimates that 450,000 minimum beneficiaries are already receiving Federal pensions averaging $16,000 annually. In addition, 50,000 have retired spouses who are estimated to receive an average of $18,500 in Federal pensions and 300,000 have spouses who are earning an average $21,100. This accounts for 800,000 of the 3 million current minimum benefit recipients. Another 1.2 million are only technical minimum beneficiaries. Actually, these individuals received more than the minimum benefit because they are entitled to dual benefits—their total benefit payment is based not only on their own low earnings but on the earnings and social security taxes of their spouse. Their total benefit would be unaffected by elimination of the minimum benefit. Also in this group are 200,000 persons who have earned benefits that are equal to the minimum benefit. Because earned benefits would not be affected, these people would not lose any benefits. Of those receiving the minimum benefit, 500,000 are also receiving supplemental security income, which is adjusted for receipt of other income. Therefore, those people who would lose the social security minimum benefit would have that same amount replaced under the SSI program.

An important step was taken to eliminate possible hardships for many of the needy persons receiving social security minimum benefits. Under the present law, one is not eligible for SSI unless he or she is 65, blind, or disabled. Under our new proposal, when the minimum benefit is eliminated, people who are between the ages of 60 and 64 will be considered eligible for benefits under SSI if they meet other eligibility requirements.

I think it is particularly important to understand all these facts in light of the charade undertaken by the Democrats in the House of Representatives. Today, the Democrats introduced a resolution that strongly urges that the necessary steps be taken to insure that social security benefits are not reduced for those currently receiving them. They did this knowing that this resolution is not binding and has no force to bring about any change. It was used in a partisan effort to improve the popularity of the Democratic Party. Statements were continually made that 3 million needy older persons would be hurt by the elimination of the minimum benefit even though this is clearly not the case. Besides the availability of SSI, needy individuals will also be eligible for other Federal programs such as food stamps and medicaid benefits.

The administration and the Republican leadership of the House did not want to make this important effort to improve the system an emotional and partisan issue. They did not want to be placed in a negative role for their attempts to strengthen the system for the wage earners. To diffuse this growing bitterness, most Republicans including myself, will vote with the Democrats in support of the resolution.

In closing because of what I have just said I will fully understand the proposal to eliminate the minimum benefit because it is not accomplishing the purpose for which it was originally intended. Most of the people who receive it were not the low wage earners for whom it was developed. Moreover, many beneficiaries receive adequate income from other sources. I believe that it is in the broader national interest to stabilize the system and keep it viable for current and future beneficiaries. In doing so we must continue to honor our 46-year-old contract with the American worker without jeopardizing senior citizens who depend on social security as their primary means of support. If high unemployment and high inflation continue to have a negative impact on the social security system, we must attempt to correct the deficits by phasing in changes over a long enough transitional period to

allow future retirees time to make appropriate plans. This resolution today is a charade.●

● Mr. MOFFETT. Mr. Speaker, I rise in strong support of House Resolution 181, offered by the majority leader, which will put the House of Representatives on record in favor of restoring to social security recipients the minimum benefit. The minimum benefit, which is paid to 3 million of our aged and least financially solvent citizens, is repealed by the administration-backed Senate and House bills. I opposed the House reconciliation legislation—also referred to as Gramm-Latt 2—because it attempts to reduce Federal spending on the backs of deserving senior citizens.

Let us go back for a moment and reflect on how Congress got into this situation.

The budget passed by the House and Senate in May required the committees of Congress to pare $37 billion in Federal spending from programs for the 1982 fiscal year. Our committees achieved that goal without cutting the social security minimum benefit. Then the administration came along and said, "even though you achieve the savings we asked for, you must cut deeper." At that point, on June 26, the House Republicans, marching in lockstep with some of our colleagues from this side of the aisle complied. They passed a budget cutting amendment as a substitute for our committees' work—the so-called Gramm-Latta 2.

Gramm-Latta 2 eliminated the social security minimum benefit. In a bill over 1,000 pages in length, that major policy shift—that major breach of faith with 3 million Americans—was terribly apparent. The membership of the House knew what it was voting for. Nevertheless, this block of Members took off after the powerless, the segment of society that functions without heavy-hitting congressional lobbyists, and voted to eliminate the minimum benefit.

The minimum benefit started as an administration convenience. The Congress, acting some 40 years ago, voted to give not less than $10 per month to each recipient who had paid into social security without achieving the requisite number of quarters to attain a full package of benefits. But as time went on, Congress realized to whom these benefits were being paid. The population receiving benefits typically are widows, dependents who lost their sole source of income when a spouse died and who, late in life, entered the work force for a period of time which prevented them from earning full benefits.

Statistics indicate that women in the 65 and older age group are the fastest growing segments of the U.S. population. Prior to 1950, the ratio of men to women was about equal. Between 1960 and 1970, the population of women, aged 65 and older, increased at twice the rate of the population of that age. By 1977, there were 146 women to every 100 men over age 65—about 13.9 million women to 9.5 million men. These statistics indicate the problem with eliminating the minimum benefit—of course you will save money by dropping this subsistence payment, but you will be penalizing a growing number of recipients who have no other form of support.

The majority leader is offering a resolution to express the sense of the House that the minimum benefit should not be cut. He hopes, and I share this hope, that the House-Senate conferees on the budget bill will use this expression to drop the cut which endangers the minimum benefit.

I support the resolution and its intent. But it does have one unintended effect: The majority leader's resolution allows some Members of the House to have it both ways; that is, they voted on June 26 to cut the minimum benefit and now they can vote July 21 to restore it. My vote has consistently been cast to save the minimum benefit and I thank the majority leader for permitting me to vote in its support again today.●

● Mr. ANNUNZIO. Mr. Speaker, I rise to join my good friend and colleague, Hon. JIM WRIGHT, in support of House Resolution 181, and I was proud to cosponsor this bill to put the House of Representatives on record in opposition to reducing social security benefits for those who now receive them.

On June 26, by a vote of 217 ayes to 211 noes, the House voted to abolish the $122 social security monthly minimum benefit as part of the Omnibus Budget Reconciliation Act of 1981. I voted against this legislation for many reasons, but I felt that one of the saddest and most inexcusable parts of the bill was the section removing social security benefits, without warning, for many helpless, elderly people who are now on the rolls and have no other way of planning for their retirement.

The minimum benefits goes to about 3 million elderly citizens, most of whom have no other source of income. Many of them are women over the age of 70, and are dependent on that $122 payment each month to buy groceries and pay rent.

The House-Senate conference committee on the budget bill will soon meet, and I strongly urge my colleagues to give their overwhelming support to House Resolution 181, and put the House of Representatives on record in opposition to this cruel cut in social security benefits for our senior citizens who already receive them.

The conference committee must receive this crucial message from the House so that the vital mimimum social security benefit can be restored and funded in the final version of the bill.●

Mr. FRANK. Mr. Speaker, the debate on minimum benefits to social security is not a technical financing question.

We have a fundamental question that has to be asked before we go to the details of social security.

Are the elderly in this country, by and large, being given too large a share of the national income? I think the answer is manifestly no. And that is the answer that leads us to the minimum benefit question.

A few people may be getting the minimum benefit who are not very much in need, but for a large number of people, that minimum benefit is the difference between absolute, grinding poverty and some margin of existence that is tolerable.

To take away that minimum benefit from existing recipients totally without regard to need is wholly unjustified.

Let me read just one letter symptomatic of many I have received from recipients of the minimum benefit, who will now lose it and will lose their homes in consequence.

> Teachers are notably poorly paid. Consequently, how do you save for old age? We have never gone to the government for any help in our long lives. This current legislation to take away our minimum Social Security seems an unforgivable way to reward a truly admirable life.

That was written by a woman about her husband. He is going to lose the minimum social security benefits. They are going to lose their home. They will not starve to death, but they will live a minimal existence, hardly what at the age of 73 they are entitled to from this country.

● Mr. MICA. Mr. Speaker, there is a time for cooperation with every administration. There is also a time where we must draw the line. I believe that we must draw the line with regard to social security retirement benefits which are the foundation for the basic necessities of life for millions of our senior citizens.

I believe that we all agree that the social security system must be stabilized. It has been my position that any legislation involving the social security system must meet three basic criteria:

First, it must stabilize the system.

Second, it must not reduce benefits to current recipients.

Third, changes for future recipients should be several years away to allow for appropriate planning for retirement.

The senior citizens presently receiving social security benefits have paid their dues, have made their contribution and were given a contract by the Federal Government. That contract should not be violated. We have a responsibility to our senior citizens to keep our commitments.

I am presently supporting and seeking a separate vote on the social security issues included in previous budget packages. I believe such a vote is possible and necessary. I also plan to push in the future for the same type of separate vote on the twice-a-year cost-of-living increase (COLA).

Additionally, it is important to bring Members of this House and groups of organizations together who are concerned about these issues to develop a more reasonable alternative to the administration's proposal on social security.●

● Mrs. SNOWE. Mr. Speaker, I am pleased to have the opportunity to support House Resolution 181 and go on record as opposing the elimination of the minimum benefit for current social security recipients. While we must study the alternatives for reforming the social security program and must move swiftly in this direction, this can and should be done without hurting those who are already receiving the benefits for which they have planned.

Eliminating the minimum benefit for current recipients would result in an undue hardship for the majority of these older Americans. We must look closely at exactly who is receiving the minimum benefit. Most minimum beneficiaries have a history of low wages throughout their working years. In my home State of Maine, many people spend their lives working hard in low-paying jobs with little potential for increased earnings. Maine has the lowest per capita income in the Nation, and my constituents could not afford even the smallest reduction in social security benefits.

Most minimum beneficiaries are women; 76 percent of the workers receiving this benefit are women who characteristically earn lower wages or who have taken time out of the workforce to raise families. If we include dependents and survivors, we find that an estimated 85–90 percent of minimum beneficiaries are women.

Most minimum beneficiaries are retired workers, and approximately 78 percent of them are at least 65 years of age. Among workers alone, there are about 1.5 million who are over age 70, about 532,000 who are over age 80, and about 80,000 who are 90 or older.

A mere 12 percent of minimum beneficiaries have a public pension and are receiving this benefit because of short-term employment in a social security-covered job.

These retirees planned on the minimum benefit as a source of income because Congress promised it to them. They have every reason to believe that they will continue to receive this benefit. Most are already living on tight budgets and it is too late for them to plan on alternative sources of retirement income. The people of this Nation are rapidly losing faith in the social security system, and a cut in benefits to current recipients will only increase this lack of confidence.

I have heard the argument that if the minimum benefit is changed, needy recipients will be eligible for supplemental security income (SSI). While it is estimated that perhaps 80,000 would become eligible if the minimum was eliminated, it is questionable how many would choose to apply. The older people in Maine see a great difference between the social security benefits which they have earned and the SSI benefits which they view as welfare. Moreover, many needy elderly are not eligible for SSI because they have a small savings or own their home. It is very difficult to tell proud older Americans that Congress has voted to reduce their social security benefits, but that the Government will supplement their losses with SSI if they are willing to sell their home and dispose of their assets.

There is also some skepticism about whether the Social Security Administration could even administer the change in benefits for these 3 million minimum beneficiaries. The benefit formula has changed many times since the program's inception, and recomputing each person's benefit would take in excess of 6,000 staff-years to carry out.

Our support for House Resolution 181 demonstrates to the senior citizens of this country that they need not fear the reduction of their benefits and that they can continue to have faith in the social security program.●

● Mr. LUKEN. Mr. Speaker, I am voting for this resolution because I am opposed to any cut in current social security benefits. I cannot understand the administration's attempt to balance the budget by breaking faith with millions of Americans who are receiving social security retirement benefits.

Cutting the minimum social security benefits is the cruelest cut of all. Almost two-thirds of 3 million minimum beneficiaries are over age 70; 500,000 are over age 80. Most elderly women did not have the opportunity to make a higher salary when they were in an earning position.

Approximately 2 million of these people will actually suffer an average social security benefit reduction of more than one-third next April.

The benefits paid to American seniors are not only their earned right, but their legal right. No wonder there is so much outrage by our elderly and disabled people.

Already, medicare is being cut by $1.6 billion and Meals on Wheels has also been cut back. If we do not take a stand against these social security cuts now, we will be faced with many more administration proposals for reducing benefits of retired people.●

● Mr. JEFFORDS. Mr. Speaker, I have chosen to vote in favor of House Resolution 181 because it is my personal view that the House has acted too precipitously by eliminating the minimum social security benefit for all those who are currently receiving it. I am hopeful that the Congress will find some way to modify this action so that those who depend on these benefits can retain them. I feel this way for several reasons. First, minimum social security benefits have been a longtime part of the social security system and are certainly not recent add ons. Second, a change in these benefits is likely to frighten many current retirees who fear other cuts in their benefits. Finally, I am extremely concerned about the welfare of many of our older citizens who currently receive the minimum benefit and who will be offered a choice between their financial welfare and what many of them consider to be their personal respectability.

First, as I stated, the minimum social security benefit is not a recent add on to the social security system. The minimum benefit was added to social security by the 1939 amendments to the Social Security Act of 1935 and minimum benefit checks were among those first issued by the Social Security Administration. Because the minimum benefit pays benefits in excess of those for which an individual technically qualifies, it has been hotly contested almost since the day of its enactment. Many have proposed that it be removed from the social security system fund and be paid out of general revenues. This is one alternative the Congress should consider—it is a long way from the type of action that the Congress has taken.

A second problem that I have with the immediate elimination of the minimum benefit is that I am concerned that drastic and immediate cuts like this tend to undermine confidence in the social security system by both retirees and the taxpayers. Many of those who have retired have depended on the benefits that they feel they have earned. They feel that benefits have been promised and are now being withdrawn when they have no way to adequately prepare or compensate for these changes. Also, changes like this further fuel the fears of younger Americans. Many of them feel that they will never receive any return on their social security contributions.

Finally, I am concerned about the social and financial hardships that will face many senior citizens now receiving the minimum benefit. Beyond any principles or theories, I think that we need to understand the real, practical effect of eliminating the minimum benefit. Social security carries with it an appropriate aura of respectability. This is true whether one receives the

minimum or the maximum benefit. By suddenly labeling the minimum benefit as a welfare benefit, we are telling millions of Americans that they are no longer deserving of a benefit, and that they have been receiving unearned and undeserved charity. To meet the income and asset tests that apply to SSI, many of those receiving the minimum benefit must be willing to sell their property and thereby reduce their assets. Many will be faced with the most difficult decisions of their lives: Reduce their assets and apply for welfare—often, for the first time in their lives—or forgo the minimum benefit and live at a reduced standard of living. I, for one, do not want to force this choice on the 500,000 minimum benefit recipients who are over 80 years old or the 1.5 million who are over 70 years of age. I think that there are better ways to meet our social security and budget crises. Whatever the outcome of the current reconciliation conference, I am hopeful that we will find a way to give more warning about any possible benefit cuts and that we will be able to make what changes are necessary in an evenhanded and forward-looking way. Certainly, we need to consider principles, but we must not lose sight of the individuals affected by our actions.●

● Mr. HEFNER. Mr. Speaker, there is no more poignant mail coming into my office than that from senior citizens who are afraid that social security benefits are going to be cut or eliminated.

These people who have worked hard all their lives at backbreaking labor, and they have at least counted on the meager social security benefit to maintain their integrity, their independence, and their worth as human beings.

I do not favor pulling the rug from beneath the older citizens of our country who depend on their social security checks to help make ends meet. In a country as rich as ours, I believe our Government can and should afford to help those older Americans who are least able to help themselves.

Now this Government is sending all kinds of signals and omens that there is not going to be any more social security program if we do not take drastic steps. And this administration has taken the ultimate drastic step in suggesting that Congress eliminate the minimum benefit, that small $122 a month which some 2 million current social security recipients receive because of the low wages they earned throughout their working lives or because they had not been covered by the required number of quarters to earn a more respectable benefit.

This administration is not merely proposing to eliminate the benefit for those who will come on the rolls in the future and determine other ways to take care of these people. This administration is demanding that we cut off this meager resource for those who are right now receiving this small monthly benefit.

Mr. Speaker, I voted against the Gramm-Latta II budget which contained the provision to eliminate this minimum benefit, but I am proud that this body has had the foresight to reconsider this proposal and has given the Members a chance to reconsider the issue.

We cannot forsake our mothers and fathers, our elders, in this battle of the budget. We cannot allow the self-esteem of these people who have gone before us to be damaged in such a blatant way. I wholeheartedly support the resolution.●

Mr. WRIGHT. Mr. Speaker, I yield myself the remainder of my time.

The SPEAKER pro tempore. The gentleman from Texas (Mr. WRIGHT) is recognized for 5½ minutes.

Mr. WRIGHT. Mr. Speaker, we have heard some rather strange appeals here today. The distinguished minority leader, my very good friend, the gentleman from Illinois (Mr. MICHEL), made a speech in which he said expressly that the minimum benefit program does not belong in social security, and then he said at the very conclusion of his remarks that every Member on his side of the aisle ought to vote in favor of the resolution.

Now, I hope that those Members who vote for this resolution will mean it. If they do not mean it, I am not going to encourage them to vote for it, because I think the resolution should mean something. We should not try to deceive anyone. Just as I believe that our commitments in political campaigns ought to mean something, I think what we say and do on the House floor ought to mean something. Unless you intend to fulfill the commitment this resolution makes, you should not vote for it. This is not an idle gesture.

In Tampa, Fla., on October 10, President-to-be Ronald Reagan said that older Americans who are collecting their social security benefits have earned those benefits, and those benefits should be theirs.

In writing in the American Association of Retired Persons bulletin in that same month of 1980, the President-to-be said that the one overriding goal should be that the benefits of those now receiving or looking forward to receiving social security must be protected.

In a publication labeled "Senior Republicans" for April and May of 1981, the headline is: "President Reagan Keeps Promise, Retirement Benefits Go Untouched."

And now we are giving the Members an opportunity on both sides of the aisle to make good those pledges and promises of the very distinguished American who is the President of the United States.

Now, we have heard talk to the effect that some of these people who depend upon the minimum $122 benefit are not really needy. Let us just look at who they are. Most of them are women; most of them are over 70 years of age.

As to the definition of "non-needy," referred to by my friend, the gentleman from Texas (Mr. GRAMM), let us examine exactly what it is he means when he says that many of these people are "non-needy by legal definition." That legal definition is that if, including your benefits, you have as much as $284 monthly available to you, you are not "needy"; or if you possess assets of as much as $1,500, you are not "needy."

□ 1240

Surely nobody can seriously take the position that people who have no more than $284 a month available to them are not needy, or people who have as much as $1,500 in assets are not needy.

So it is a misnomer to refer to these people as nonneedy in any real sense of that term.

As a matter of fact, 500,000 of these people, I am told, already qualify for welfare in addition to the pittance that they receive from social security, but have not applied for welfare because they have too much pride to do so.

Now are we to ask these people to swallow their pride and submerge their human dignity and to go hat in hand and ask for welfare? That is what the opposition seems to suggest.

Is there not something valuable about Americans feeling that they have something as an entitlement, something as a right, because of what they have done in our society. Many of these people have worked for modest wages for many years but been covered for less than the requisite 40 quarters, because changes in the law which covers them now, came about when they were nearly ready for retirement. Domestics, for example, people working in the homes of others, for many years were not covered. Only in the declining years of their lives, just before they reached the age where they no longer could work, were many of these able to be covered at all. These are some of the people we are talking about.

A government as rich as ours does not owe everyone a living. It owes everyone an opportunity to earn a living. But it owes a chance at dignity to its elder population. It owes some freedom from want. I think surely for those in the declining years of their lives, for whom we cannot ever give back the years that they have spent and faithfully paid taxes, contributing in other meaningful ways to the build-

ing of our society, a dignified retirement free from demeaning want and humiliating dependency—that is the least we owe to them, in a Nation as rich as ours.

I know people who have gone through their entire working careers faithfully and happily paying their taxes on the anticipation that this was the promise, the good faith agreement between them and their Government.

Today by our vote for this resolution, we redeem that promise and make clear that it is our intention to keep that agreement.

Mr. WRIGHT. Mr. Speaker, I include the following:

SPEECH BY THE SPEAKER THOMAS P. O'NEILL, JR., AT THE RALLY AT THE CAPITOL SPONSORED BY THE NATIONAL COUNCIL OF SENIOR CITIZENS, JULY 21, 1981

Good afternoon and welcome to the Capitol. This is a free country—and you have a right to speak your mind.

Today will remind some people of the 1960's—the time of the anti-war rallies.

I remember another time—the 1930's.

I remember the hard times of those years.

I remember the fear people felt.

I remember a great American President—Franklin Roosevelt.

I remember what he said—that "We have nothing to fear but fear itself."

Those words were true in the 1930's.

They are true today.

Fifty years ago, our country faced a crisis. It was more than an economic crisis. It was also a spiritual crisis.

Fifty years ago, a President and a Congress met that crisis head-on. We created the greatest program in history—social security.

Social security was born because we had a President who saw a need—and they saw a way to meet that need.

Social security was born because a Congress had the compassion, the wisdom, and the vision to do the job.

It was born—most important of all—because the American people believed in social security.

A lot has changed these past 50 years. But some things have stayed the same.

Today, social security still faces challenges. But we have a Congress ready to meet those challenges.

Today the House of Representatives takes up a resolution. It is an important resolution. It says that the House of Representatives "strongly urges that the necessary steps be taken to insure that social security benefits are not reduced for those currently receiving them".

This resolution will have two important effects.

First, it protects those receiving the minimum social security benefit.

Second, it establishes a principle.

That principle is this: No one, and I mean no one, receiving social security will have their benefits cut.

Let me repeat the words of this resolution to you: The House of Representatives "strongly urges that the necessary steps be taken to insure that social security benefits are not reduced for those currently receiving them." If those words sound familiar, there is a reason. They are almost the same words President Reagan himself used.

Let me read to you from his own campaign statement: "Any reform of the social security system must have one overriding goal—that the benefits of those now receiving—or looking forward to receiving—social security must be protected."

Those words were good enough for the campaign. They are good enough now.

The President's budget office calls the minimum social security benefit a "windfall." That was their word, a "windfall".

You have to wonder about this. If a person living at the barest minimum level gets $122 dollars a month, that's a "windfall". If the administration gives a huge tax break to the wealthy it represents a "sound investment."

I don't trust this kind of thinking. I don't trust people who think like this.

Trusting them to protect social security is like trusting the fox to guard the chickens. The administration has sent a clear message: If it can cut off one group from social security, it can cut off another group.

One day, it attacks the minimum benefit.

The next day, it attacks those retiring at 62. The principle is the same. If it can cut the checks of one group, it can cut the checks for another.

I disagree with this administration. The House of Representatives disagrees with the administration.

We don't agree that the best way to save social security is to hurt those who depend on it.

We don't agree that the best way to build support for the system is to tear it down.

Fifty years ago, some people attacked social security as "socialism". A great American President defended it. He called it "American".

When others said it couldn't be done, he proved it could.

Fifty years later, we are going to prove it again. Social security is the best program ever created in this country—and it's going to stay that way.

The SPEAKER pro tempore. The question is on the motion offered by the gentleman from Texas (Mr. WRIGHT) that the House suspend the rules and agree to the resolution (H. Res. 181).

The question was taken.

Mr. WRIGHT. Mr. Speaker, on that I demand the yeas and nays.

The yeas and nays were ordered.

The vote was taken by electronic device, and there were—yeas 405, nays 13, not voting 15, as follows:

[Roll No. 145]

Dymally	Jones (TN)	Siljander
Foglietta	Mattox	Young (AK)

□ 1250

The Clerk announced the following pairs:

Mr. Mattox with Mr. Rosenthal.
Mr. Jones of Tennessee with Mr. Hawkins.
Mr. Foglietta with Mr. Dymally.
Mr. Ford of Michigan with Mr. Dicks.

Messrs. DANNEMEYER, GREGG, PRITCHARD, and JOHNSTON changed their votes from "nay" to "yea."

So (two-thirds having voted in favor thereof) the rules were suspended and the resolution was agreed to.

The result of the vote was announced as above recorded.

A motion to reconsider was laid on the table.

PERSONAL EXPLANATION

(Mr. JONES of Tennessee asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. JONES of Tennessee, Mr. Speaker, I rise today to explain my absence earlier when House Resolution 181 was the subject of debate and a vote in this Chamber. I was unavoidably detained in my district due to mechanical problems on the aircraft in which I was riding. Consequently, I was not present to vote on this important resolution.

I would therefore like to express my support for House Resolution 181 which expressed the sense of the Congress opposing reductions in social security benefits for those currently receiving them. Had I been present, I would have voted "aye" on this matter.

□ 1300

PARLIAMENTARY INQUIRY

Mr. WRIGHT. Mr. Speaker, I have a parliamentary inquiry.

The SPEAKER pro tempore. The gentleman will state his parliamentary inquiry.

Mr. WRIGHT. Mr. Speaker, it is true, is it not, that unanimous consent has been granted for all Members to have 5 legislative days in which to extend their remarks?

The SPEAKER pro tempore. That is correct.

Mr. WRIGHT. Further parliamentary inquiry, Mr. Speaker.

Our distinguished Speaker of the House, the gentleman from Massachusetts (Mr. O'NEILL) only today addressed the National Council of Senior Citizens at the Capitol. My request is, my parliamentary inquiry is, is it inappropriate to suggest that these remarks may appear just prior to the vote?

The SPEAKER pro tempore. Without objection, the speech can be included in the gentleman's own closing remarks as extraneous matter.

Mr. WRIGHT. I thank the gentleman.

SALE OF WAR PLANES TO ISRAEL

(Mr. SCHEUER asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. SCHEUER. Mr. Speaker, the administration's decision to shut off the supply of American warplanes to Israel is a shocking breach of faith with one of our strongest and most dependable allies. More than that, this decision cannot help but weaken the position of the Israeli Government as it works under the terrible strain of warlike conditions to protect its northern settlements from an ever-increasing barrage of sophisticated and devastating weaponry.

Within the last few weeks, PLO terrorists operating from bases in southern Lebanon have received new supplies of weapons from the Soviets and the Libyans.

Among those new weapons are 130 millimeter cannon, 57 millimeter radar-directed cannon, and the DM 21 multiple-rocket launching system which fires salvos of up to 40 Katyusha rockets simultaneously. All of these weapons have lately been directed with deadly effect against peaceful Israeli settlements.

In response to that buildup and in response to those attacks, Israeli forces have struck at roads, bridges, and arms depots in a defensive effort forced upon them by the latest PLO tactics.

Additionally, Israel has necessarily hit PLO command centers that direct the terrorist attacks. In warlike conditions, it is often a painful reality that civilian casualties cannot be avoided. In this case, however, civilian casualties could be avoided were it not for the PLO's craven and cowardly tactic of deliberately hiding its command centers behind the skirts of women and the playgrounds of children in civilian communities.

For years, the PLO has been bombing Israeli restaurants, movies, buses, and shopping districts, killing innocent Israeli women and children by the hundreds. The PLO's tactic of nestling its command centers among Lebanese civilian centers to make them necessary targets is characteristically despicable.

Mr. Speaker, we will make a tragic mistake if we leap to shut off the arms of our one dependable ally in the Middle East at the very moment that she faces new dangers from a ruthless enemy newly supplied with the tools of modern warfare. That policy can only embolden the PLO to increase their attacks on Israeli civilians in the border settlements, and make them even more intransigent—if that is possible—in their refusal to recognize even the existence of Israel—much less her rights to survive in peace.

We all look forward to the day when true peace will be won in the Middle East. For too long, innocent people on both sides of Israel's borders have paid the penalty of deadly combat; but we defer that day of peace when we arrive at a onesided policy that hobbles Israel's defensive capacity.

GENERAL LEAVE

Mr. BOLAND. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to revise and extend their remarks on the bill (H.R. 4034).

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Massachusetts?

There was no objection.

DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT—INDEPENDENT AGENCIES APPROPRIATION ACT, 1982

Mr. BOLAND. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the State of the Union for the further consideration of the bill (H.R. 4034) making appropriations for the Department of Housing and Urban Development, and for sundry independent agencies, boards, commissions, corporations, and offices for the fiscal year ending September 30, 1982, and for other purposes.

The SPEAKER pro tempore. The question is on the motion offered by the gentleman from Massachusetts (Mr. BOLAND).

The motion was agreed to.

IN THE COMMITTEE OF THE WHOLE

Accordingly the House resolved itself into the Committee of the Whole House on the State of the Union for the further consideration of

the bill, H.R. 4034, with Mr. LEVITAS in the chair.

The Clerk read the title of the bill.

The CHAIRMAN. When the Committee of the Whole rose on Friday, July 17, 1981, the Clerk had read through line 2 on page 25.

Mr. BOLAND. Mr. Chairman, I move to strike the requisite number of words.

Ms. OAKAR. Mr. Chairman, will the gentleman yield?

Mr. BOLAND. I yield to the very distinguished gentlewoman from Ohio (Ms. OAKAR).

Ms. OAKAR. Mr. Chairman, I rise to question section 414 of H.R. 4034, the HUD appropriations bill for fiscal year 1982.

Section 414 would prohibit payment of overtime to white collar Federal workers paid at rates in excess of GS-9s in agencies providing essential services; such as, the Veterans' Administration and its hospitals, HUD, and NASA. This section would, in effect, require employees to work overtime without overtime compensation.

While I have great respect and admiration for my colleague, Mr. BOLAND, whose subcommittee drafted this section, I have serious misgivings about the provision.

I had intended to offer an amendment to strike this section because, as chair of the Subcommittee on Compensation and Employee Benefits, my subcommittee has jurisdiction over any proposal to change overtime pay for Federal employees and my subcommittee took no part in the consideration of this section.

Before I move to offer any amendment, I would prefer first to ask my distinguished colleague, Mr. BOLAND, for his rationale for this provision because it plainly discriminates against certain Federal employees in grades above general schedule 9. What this section would do is to create a double standard of payment of overtime; that is, employees in grades GS-9 and down could collect overtime compensation, while those above GS-9 would be denied overtime compensation. Under title 5 of the United States Code, all general schedule employees are entitled to overtime pay.

This section would allow agencies to order their employees to work overtime, but would prevent these agencies from paying their employees for overtime work. I am very concerned about the impact on necessary and essential Government services if we expect Federal employees to work overtime without any overtime pay. Certainly, as just one example, vital services at VA hospitals will suffer if VA employees are forced to work overtime knowing that they will not be paid overtime.

I would like to ask my colleague, the chairman, if there is any way to resolve the difficulties I have with this section? Will Mr. BOLAND agree to modify this inflexible section? For example, would you allow the head of an agency to approve overtime under certain conditions? How will you handle the problems with this section prohibiting overtime with the Fair Labor Standards Act that allows overtime? What would happen if there is an emergency at a VA hospital and no overtime pay can be paid to nurses and pharmacists? What happens if there is an emergency requiring employees to work long and unusual hours—should they be compensated? Is this provision simply too inflexible? Are there abuses in the overtime system that could be resolved without denying justified or necessary overtime? I certainly hope so.

Mr. BOLAND. I will be delighted to enter into a colloquy with the gentlewoman. I know she has expressed, as some of the members on the Post Office and Civil Service Committee have expressed some concern with this section.

The gentlewoman raises some very valid questions and concerns dealing with section 414.

The committee's intention by including this provision in the bill was twofold. The first objective was to place some uniformity upon overtime payments for agencies funded in this bill. Currently, different agencies funded in the bill have varying cutoff points above which overtime is not paid. The committee felt these levels should be more uniform and believed that the provision would accomplish that. In addition, the limitation would result in not insignificant savings. Although it is hard to determine precisely the amount of overtime which might be paid to GS-10's and above in 1982, a rough estimate would be approximately $5 million.

However, let me assure the gentlewoman from Ohio and this committee that the Appropriations Committee did not intend to cause serious problems with this general provision. It has come to our attention that the interpretation of certain sections of the Fair Labor Standards Act would require revision if the provision is adopted in this form. Section 213 of that act states that within the Government service, administrative, executive, and professional employees are exempt from the overtime provision of the Fair Labor Standards Act. An Office of Personnel Management regulation details which specific classifications and grades are considered nonexempt under the act—and thus due overtime pay for additional work. The committee's provision as reported in the bill would require certain revisions to that regulation.

In addition, certain people have questioned the effect of the overtime provision on health care within the Veterans' Administration health system and upon responses to disasters under the Federal Emergency Management Agency. The committee certainly does not intend for the overtime provision to impair in any way VA health care or FEMA disaster relief responses.

The Appropriations Committee will review these issues very carefully and make appropriate adjustments in conference with the Senate.

I thank the gentlewoman for her concern in this area.

Ms. OAKAR. I want to thank the chairman. I know he encourages me to believe this will be worked out in the conference committee, and I certainly look forward to that.

I know, Mr. Chairman, if I may say so, I know other members of the committee, along with the distinguished gentleman from Indiana, had expressed some concerns also with this particular section. Therefore, I am very happy that we can resolve this without adding an amendment.

I thank the gentleman.

Mr. BOLAND. I thank the gentleman from Ohio.

Mr. HOYER. Mr. Chairman, will the gentleman yield?

Mr. BOLAND. I yield to the gentleman from Maryland (Mr. HOYER).

□ 1310

Mr. HOYER. Mr. Chairman, I want to join my Chair of the subcommittee on which I serve on the Post Office and Civil Service Committee in the concerns that she has expressed, and to say that I am very pleased that the chairman is going to address these concerns that she and I, and I know many other Members of the House, have with respect to overtime being paid to the grade level specified in section 414 of the bill.

Mr. BOLAND. I thank the gentleman for his remarks and for his concern.

Mr. Chairman, I yield to my friend, the gentleman from Indiana (Mr. JACOBS).

Mr. JACOBS. I thank the gentleman for yielding and his clear concern of purpose on behalf of the committee, and I commend our colleague, the gentlewoman from Ohio, for raising the question. I am sure that in the conference committee the conferees will consider the possibilities of penny wise and pound foolish in terms of contracting out, and all of the other phenomena that may occur in connection with this matter.

Mr. BOLAND. I thank my friend, the gentleman from Indiana.

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

NATIONAL SCIENCE FOUNDATION

RESEARCH AND RELATED ACTIVITIES

For necessary expenses in carrying out the purposes of the National Science Foundation Act of 1950, as amended (42 U.S.C.

1861-1875), title IX of the National Defense Education Act of 1958 (42 U.S.C. 1876-1879), and the Act to establish a National Medal of Science (42 U.S.C. 1880-1881); services as authorized by 5 U.S.C. 3109; lease of one aircraft with option to purchase; maintenance and operation of aircraft and purchase of flight services for research support; hire of passenger motor vehicles; not to exceed $2,500 for official reception and representation expenses; not to exceed $63,200,000 for program development and management; uniforms or allowances therefor, as authorized by law (5 U.S.C. 5901-5902); rental of conference rooms in the District of Columbia; and reimbursement of the General Services Administration for security guard services; $1,065,000,000, to remain available until September 30, 1983; *Provided,* That receipts for scientific support services and materials furnished by the National Research Centers and other National Science Foundation supported research facilities may be credited to this appropriation: *Provided further,* That to the extent that the amount appropriated is less than the total amount authorized to be appropriated for included program activities, all amounts, including floors and ceilings, specified in the authorizing Act for those program activities or their subactivities shall be reduced proportionally.

AMENDMENT OFFERED BY MR. WINN

Mr. WINN. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. WINN: On page 25, line 20, strike the figure "$1,065,000,000" and insert in lieu thereof "$995,000,000".

Mr. WINN. Mr. Chairman, this amendment that I am offering would, quite simply, reduce the appropriations for the National Science Foundation by $70 million. This reduction would bring the Foundation's funding down to $1,033,500,000, the level recommended by the President for the fiscal year 1982. The funding level, which is proposed in H.R. 4034 is $1,103,500,000, which represents an 8-percent increase above the fiscal year 1981 appropriations. In my opinion, this is far too large an increase for this point in time.

The Science and Technology Committee, on which I serve, provides authorization for NSF. Our committee held many long hours of hearings on the NSF request. There is absolutely nothing in this extensive record that indicates the Foundation cannot live with the administration's request. In fact, the recommended level represents a $11 million increase over the appropriation for last year. Compared to what has happened in other Federal agencies, this seems like a healthy increase. Of course, any agency wants to receive the maximum amount of funding possible and to create programs to spend that money. However, I think this House has gone on record many times in the last several months for a fiscally sound, restrained budget.

H.R. 4034 is $190 million over the President's budget. This hardly qualifies as fiscal restraint. By making the $70 million reduction contained in this amendment, we will be taking a step toward upholding the spirit of a responsible Federal budget.

I want to emphasize that this amendment is not antiscience or antitechnology. In the past I have been a consistent supporter of the National Science Foundation. They have done and continue to do very important work for this Nation. We cannot overemphasize the importance of basic research and science to the future health of our economy. But it is also important to remember, Mr. Chairman, that this amendment will not gut a single crucial program of the Foundation. It will restrain the growth in many areas. But that is a fact of life Governmentwide for 1982.

Mr. GOLDWATER. Mr. Chairman, will the gentleman yield?

Mr. WINN. I yield to the gentleman from California.

Mr. GOLDWATER. On that point, I think it is important to clarify exactly where the cuts are and to indicate there are three categories of spending. One, at about $3.5 million in the international programs. That is not going to be cut. The second one, Science Education, for about $35 million. You indicated that would not be reduced. But the only area you are talking about is in research and related activities, which you are bringing down from $1,065 million to $995 million. Is that correct?

Mr. WINN. The gentleman is correct as far as the area of reduction. However, I want to emphasize that it will be left to the discretion of the Foundation to distribute those funds.

Mr. GOLDWATER. You feel the best areas are research and related activities?

Mr. WINN. No; I am not trying to tell them where to cut it at all.

Mr. GOLDWATER. I see.

Mr. WINN. I am just trying to reduce the budget by $70 million to bring it back down to the Reagan budget. This will still be $11 million above last year's appropriation.

Mr. JACOBS. I commend the gentleman for his efforts here. I think it is important that we make some very hard, tough choices, and especially in the National Science Foundation when, in fact, even with reductions, it is an increase over 1981. I compliment the gentleman.

Mr. WINN. I thank the gentleman.

The CHAIRMAN. The time of the gentleman from Kansas (Mr. WINN) has expired.

(On request of Mr. GREEN and by unanimous consent, Mr. WINN was allowed to proceed for 5 additional minutes.)

Mr. GREEN. Mr. Chairman, will the gentleman yield?

Mr. WINN. I yield to the gentleman from New York.

Mr. GREEN. Mr. Chairman, the only reason I asked the gentleman to yield at this time was so that the House will clearly understand what it is that the gentleman is proposing, and it is somewhat different from what the administration has proposed. The gentleman is proposing to take all of the cut out of research and related activities. We did not add all of the $70 million in research and activities. We added $44.9 million in research and related activities and $25.1 million in science education. So the effect of the gentleman's amendment will be to cut research and related activities below the administration's request and to focus all of the gentleman's cuts on that area.

Mr. WINN. I appreciate the gentleman clarifying that.

I would like to finish my remarks and make some points, and then I will be glad to yield to the gentleman from New Jersey (Mr. FORSYTHE).

Mr. Chairman, I do want to point out, though, that, as I said, this amendment does not gut a single crucial program, in my opinion, in the Foundation. I think that contrary to alarmist reports that we have had over the last 10 days, NSF will be funded and funded at a very responsible and adequate level. As to the reductions, in my view those are left at the discretion of the Foundation at this time. And when the authorization comes before the House, there will be alternative recommendations as to how to approach any reductions. However, it allows them to put their funding forward toward what they consider the highest priority activities, absent other guidelines.

Mr. Chairman, I have heard all of the emotional pleas that my amendment will do irreparable harm to the NSF, that the amount of the money for the agency is just a very small fraction of the Federal budget. But I have also heard the emotional pleas of the American public who are crying for control of Federal spending. There is no way that we can get the total Federal budget anywhere near under control unless we control the individual pieces of that budget. This piece is not consistent with the spirit of Congress as expressed in the first concurrent budget resolution, and for that reason alone, I urge the adoption of the amendment.

Mr. FORSYTHE. Mr. Chairman, will the gentleman yield?

Mr. WINN. I yield to the gentleman from New Jersey.

Mr. FORSYTHE. I thank the gentleman for yielding.

Mr. Chairman, I rise in support of the amendment. We have before us an appropriations bill that is $190 million over the budget request. The National Science Foundation portion is $70 million over. It is precisely this type of

excessive Federal spending that has led the country to the economic mess we now find ourselves in. Providing appropriations packages far over the budget violates the spirit of restraint on spending that has prevailed in the Congress this year. The amendment by the gentleman from Kansas will reduce the appropriation to a reasonable level.

As a member of the Science, Research and Technology Subcommittee which has jurisdiction over NSF, I want to assure the Members that this amendment would do no irreparable harm to any programs of the Foundation. I am sure some Members are receiving letters and phone calls claiming that the Winn amendment will do great harm. This is just not the case. Even with the $70 million reduction there will be an increase over last year's appropriation. The total NSF appropriation will still exceed $1 billion. At worst, this reduction would mean a slight belt tightening at the Foundation—or that some programs may not grow as rapidly as they would like. I feel confident they can easily accommodate this.

On the other hand, this reduction would have a positive effect on the drive to hold down Federal spending. Too often we hear the cry that a certain program or agency is only a small portion of the overall budget. However, it is the sum of these so-called small programs that runs up the deficit. We can strike a blow for restraint in Federal spending by accepting this amendment. I urge the House to adopt it.

Mr. SKEEN. Mr. Chairman, will the gentleman yield?

Mr. WINN. I yield to the gentleman from New Mexico.

Mr. SKEEN. Mr. Chairman, I rise in support of the Winn amendment. This House cannot afford to go back on the commitments it made when we approved the first concurrent resolution on the budget and the omnibus reconciliation bill. Federal spending has been out of control for too long. We have taken the first step to bringing it under control in the past few months. We cannot allow spending to shoot up again by ignoring appropriations levels far above the President's request. That is what we are confronting here on this appropriation for the National Science Foundation.

I want to emphasize that no great harm will come to the foundation by adoption of this amendment. Certainly, they will be pinched a little, but they will still receive more money than they were appropriated last year. None of their programs will be severely damaged or stopped. They will simply be doing their part to contribute to an overall responsible and sound Federal budget. I ask for adoption of the amendment.

□ 1320

Mr. ERTEL. Mr. Chairman, will the gentleman yield?

Mr. WINN. I yield to the gentleman from Pennsylvania.

Mr. ERTEL. Mr. Chairman, I would ask the gentleman from Kansas, that since I originally proposed to strike the ocean marginal drilling program, would the sections the gentleman is attempting to amend—would it amend those sections which include the ocean marginal drilling program, and eliminate the moneys in this program?

Mr. WINN. I think the gentleman was here when I said that I was going to leave the breakdown of the individual projects to the National Science Foundation.

Mr. ERTEL. In other words, they will decide the priorities?

Mr. WINN. They would determine the priorities, based upon the authorization hearings that the committee has held.

Mr. ERTEL. Mr. Chairman, I thank the gentleman for responding.

Mr. WINN. Mr. Chairman, I yield back the balance of my time.

Mr. GREEN. Mr. Chairman, I move to strike the requisite number of words and I rise in opposition to the amendment.

I think we should understand that the amendment is not the administration position. We should also understand that this subcommittee did not violate any commitments in the first budget resolution. I hope the House will appreciate that under the Budget Act procedures, there are essentially two tracks that are followed in arriving at a final budget: One is the track we have been going down on the reconciliation bill where the Budget Committee instructs the authorizing committees as to where to achieve the necessary savings to meet the target in each budgetary function. That, as I say, we have done in the reconciliation process.

There is a second track to the Budget Act, however, and that involves the Appropriations Committee. It works somewhat differently, because under the Budget Act the total amount that the first budget resolution determines is to be appropriated is assigned as a block to the Appropriations Committee. The full Appropriations Committee then divides that amount and assigns those funds to its individual subcommittees, thus giving them their budget mark.

This subcommittee came in within the limit assigned us by the full Appropriations Committee as part of the Budget Act process. So we are not busting the budget in any sense with this Appropriations Subcommittee bill. We are living up to our side of the budget process.

Obviously, the two approaches, the reconciliation track and the Appropriations Committee track, at some point must indeed be reconciled. The Budget Act contains ample procedures for doing that; but I think it should be emphasized as we consider the amendment offered by the gentleman from Kansas (Mr. WINN) that we are in no sense violating the budget process or busting the budget.

Mr. LEACH of Iowa. Mr. Chairman, will the gentleman yield?

Mr. GREEN. I am delighted to yield to the gentleman from Iowa.

Mr. LEACH of Iowa. Mr. Chairman, I would like to strongly concur with the views of the gentleman from New York (Mr. GREEN) and strongly stress that what we are really attacking here is the basic research dollar of the Federal budget, and this is the exact time where basic research is under such attack in all sorts of sectors. It is the one place that the Federal Government has a very, very large responsibility.

I would hope this amendment of the gentleman from Kansas (Mr. WINN), will intended as it is, would be rejected.

Mr. Chairman, at a time when increasing importance and priority should be assigned to basic research and science education, I am compelled to express deep reservations about the amendment offered by the gentleman from Kansas.

The National Science Foundation bears a unique responsibility among Federal agencies for the health and well-being of basic scientific research in America. To eliminate virtually all remaining NSF support for the behavioral and social sciences carries grave consequences for our society. The health of our citizens, our commercial vitality, and our national security are directly dependent upon our command of fundamental scientific knowledge. The challenge posed by the amendment of the gentleman from Kansas to the worth of behavioral, social, and economic research raises unsettling questions as to what our national science policy is, and how it is decided. Budgetary dispositions, after all, should be consistent with a policy for science, and not presume to redirect it.

If the gentleman from Kansas amendment prevails, a profound imbalance in scientific inquiry in this country would occur. Most of us recognize the importance of mission-related research projects funded by various Federal agencies to improve our national defense, to improve our economic productivity and to enhance our health and quality of life. We have more difficulty measuring the impact of basic research on our lives. Studies of mathematical models and laboratory animals often seem arcane and removed from the demands of real life. Often their lengthy titles are the subject of jokes and amusement on this floor. And yet, without these basic in-

quiries, many sponsored by the NSF, the major gains we have made in biomedical research, in defense-related areas and in our space program would not have been possible.

Let me relate a brief story. In the early sixties, a remarkable scientist by the name of Charles Ferster began to work with autistic children. In those days autism was an undefined illness. Those children who suffered from its terrible effects were huddled into custodial wards of large hospitals. They did not speak; they did not relate; they did not care for themselves and no effective therapy was known for their treatment.

Working in LaRue-Carter Hospital in Indianapolis, Ind., Ferster literally broke the code of autism. He learned how to reach these distant children. He taught them how to speak, how to touch, how to play. His work on positive reinforcement literally revolutionized the treatment of those who suffer from this disorder. Clinics sprang up around the country treating for the first time the terrible consequences of autism. Today, thanks to Dr. Ferster, there is a therapy and there is hope for the autistic.

Who was Dr. Ferster? A psychiatrist? A physician? No, Dr. Ferster was a behavioral psychologist. In his day-to-day efforts, he studied the learning behavior of pigeons rather than people. His field of study was reinforcement phenomenon and the titles of his projects would probably prompt laughter here as elsewhere. Nonetheless, it was his work on reinforcement in pigeons that began this incredible breakthrough in autism.

This remarkable story about Charles Ferster was told to me by Prof. Dore Gormezano of the University of Iowa, an internationally known expert in memory and learning mechanisms. If he were not so modest, Professor Gormezano could have told a similar story about himself. Since 1960, Professor Gormezano has engaged in the most basic research on memory and learning, using animal models. His work is at the forefront of expanding the threshold of human understanding about human understanding. Using models pioneered by Professor Gormezano, researchers across the country are studying the impact of psychoactive drugs and measuring the effects of learning disabilities to forge new ways to treat disorders such as dementia in the aged and countless other problems. Like Dr. Ferster, Professor Gormezano has had the support of the National Science Foundation. His research will serve to improve the lives of our children.

These stories are important ones because they tell us an important truth about basic science. We seldom know what its outcomes will be or from where discoveries will be made, but we do know that basic science is fundamental to the economic and social progress of our country. This is why we must maintain a balance in our investment in science. This is also why scientists rather than Congressmen should determine research priorities and why professional peer groups rather than political seer groups should take final responsibility for allocating the limited scientific resources provided by Congress.

Here, it is important to distinguish between basic research and the applied research which grows from its seeds. As Dr. William G. Bowen, president of Princeton University, has noted, private sector companies and industries, however generously motivated, cannot be expected to pay fully for basic research which by its nature can lead in unpredictable directions and which, if successful, may bestow benefits so widely that no firm or group of firms can capture them entirely for private uses. Thus, profit-making enterprises which play such a prominent role in applied research simply cannot be expected to replace Government as a source of support for most research at the "basic" end of the spectrum.

While an overwhelming consensus has emerged in this Congress on the need to restrain the growth of Federal spending, selective judgment must be applied to budgetary decisionmaking to insure that the development of human resources are not eclipsed by the placement of disproportionate emphasis on the production of military hardware and the rebuilding of corporate plants and equipment.

The importance of the kind of scientific inquiry supported by the National Science Foundation is perhaps best described by Dr. Lewis Thomas, chancellor of the Memorial Sloan-Kettering Cancer Center in New York. Dr. Thomas observed:

> As long as we are bewildered by the mystery of ourselves, and confused by the strangeness of our uncomfortable connection to all the rest of life, and dumb-founded by the inscrutability of our own minds, we cannot be said to be healthy animals in today's world.
>
> We need to know more . . . not for (the sake of) technology, not for leisure, not even for health or longevity, but for the hope of wisdom which our kind of culture must acquire for its survival.

Almost 50 years ago, the Soviet Union endorsed the scientific dogma now known as Lysenkoism. The central government concluded that genetic research challenged the tenets of Marxism and therefore lacked validity. Free scientific inquiry ended for all practical purposes. Today, Soviet agricultural practices are obsolete, their health technologies limited, and their behavioral and biological sciences profoundly skewed by the prejudices of a narrow political philosophy. Politicization of scientific inquiry has stunted economic and social progress in the Soviet Union and, perhaps more importantly, led to the stultification of free thought and free inquiry.

While Lysenkoism offers an admittedly extreme example of ill-advised governmental intrusion into science, it is incumbent on all of us to take care to insure than scientific merit alone rather than religious and social philosophy remains the basis for research funding decisions in this country.

In sum, I feel that this amendment is fiscally shortsighted and scientifically unwise. The elimination of Federal support for an entire field of academic inquiry bodes poorly for our future as a country committed to pioneering academic discovery. I urge rejection of the amendment of the gentleman from Kansas.

Mr. GREEN. I thank the gentleman from Iowa.

Mr. ERTEL. Mr. Chairman, will the gentleman yield?

Mr. GREEN. I am delighted to yield to the gentleman from Pennsylvania.

Mr. ERTEL. Mr. Chairman, I was not quite sure when the gentleman spoke, is the gentleman saying the appropriations here are within the Budget Act and, in addition, within the reconciliation? Of course, we did not pass a reconciliation on NSF, but the Senate did. Are we within the numbers of the Senate and also the Budget Act?

Mr. GREEN. I think the problem is this: We do not yet have a reconciliation act, and the Appropriations Committee, if we are ever to complete our work by the start of the fiscal year, October 1, simply had to proceed. We proceeded on the basis of the testimony before us and in accordance with the Budget Act procedures that apply to the Appropriations Subcommittees.

There is a problem, however, of which the gentleman should be aware. When we in the Appropriations Subcommittees sit down to do the tradeoffs among the various programs in order to stay within the Budget Act, we are often facing subcommittee jurisdictions that are very different from the authorizing committee jurisdictions.
